On 8 Army front the main point of interest is the relief of part of 16 S.S. by 42 Jaeger Div. So far as our evidence goes only the Nothem battalion of the former has been relieved as yet though a deserter taken yesterday has a story which suggests that the Jaegers may now have taken over as far as the 418 Easting. The S.S. men themselves confirm that there is a strong rumour in the division that it is going to GERMANY; a story we have heard before of many divisions but three Alsatian deserters add corroborative detail. According to them I Bn 36 S.S. has already left for FERRARA and II Bn was expecting to go on the night 4/5 Feb (which was why they deserted). They had already seen the advance party of the relieving troops. It seems not unreasonable that the Reichsfuehrer S.S., who has just taken over the command in the vital sector of the Eastern Front, should wish to recall his own division from a secondary theatre, possibly to fill the gaps in 6 S.S. Pz Army which is also believed to be now on that front. At any rate we can accept the fact that 16 S.S. is in the process of being relieved.

Further South and West another reshuffle is taking place. 4 Para Div has taken over part of the former sector of 90 P.G. which in turn has relieved some of 715 Div and a deserter states that it intends to take over the whole of 715 Div's sector. It is not quite clear why this particular division should be relieved, especially since it means that 90 P.G. Div, a motorised formation, takes over a mountainous sector, and again the possibility presents itself that it may be required elsewhere. But there is no evidence whatever that this is so, nor even any good evidence that it has yet been wholly relieved.

Otherwise dispositions are normal. Prisoners have confirmed that it was 157 Mtn Div, as we expected, which relieved 4 Para Div West of route 65. 232 Div is still in its old position with four battalions forward and three in reserve. The 148 Division sector has been the scene of considerable vicissitudes during the past few weeks, due to political and psychological reasons rather than military. The main factor is the arrival of a regiment of ITALIA Division plus the divisional Engineer Bn; the other Regt is allegedly in the area South of PARMA and is not expected

....in the line.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in the line till March. In the early part of the period the trend was to relieve forward German battalions by Italians to allow the latter to gain experience, and the former to rest. The most important sectors, e.g. the coastal plain, were still, however, held by German troops. The experiment has not been very successful as large numbers of the Italians began to come over to the Allies at once and the trend has had to be reversed; in the last few days the Germans have been taking over from the Italians again. The general picture remains the same, with Germans and Italians intermingled under German operational command, but the actual details of dispositions are not wholly clear, nor very important.

There has been no change visible in the aspect of the German reserves. 114 Jaeger Div is still reported from time to time in the area North of Lake COMACCHIO. 26 Pz Div has not been reported since about 15 Jan, when its divisional sign was seen in the area East of FERRARA, but there is no evidence that it has left or is intending to leave. 29 P.G. Div was in its old rest area, N.W. of BOLOGNA, between CENTO and S. GIOVANNI, on 29 Jan and there is likewise no evidence that it has moved from there. So far, therefore, KESSELRING is almost as strong as ever; his front line is still solidly held and he has one mobile division in reserve behind both the Fifth and Eighth Army fronts. Like MACMAHON on the MALAKOFF Redoubt, though with rather more anxious glances over the shoulder than the gallant Franco-Scottish Marshal allowed himself, KESSELRING can still say "J'y suis, j'y reste".

2. ENEMY SUPPLIES AND COMMUNICATIONS

GENERAL

This week a fairly high degree of rail interdiction has been maintained. Medium bombers were able to operate on all but two of the past seven days and they have been supplemented by fighter-bomber attacks deep in the enemy's Italian zone of communications and attacks by heavy bombers against rail centres beyond the frontier. This pattern of attack is undoubtedly severely restricting any major enemy troop movements and demanding considerable effort by the enemy to maintain the flow of supplies into ITALY even though current administrative requirements are low. Shortage of coal, which ground sources continue to report, will also cause difficulties on steam-operated sections of the railways.

The BRENNER railway has been closed most of the week and at no one time is it likely to have been open to through traffic in excess of about 24 hours. In the Northeast all routes West of UDINE have remained blocked throughout the week at at least two points.

While reports of evacuation of ITALY by the enemy continue to be received, neither PR nor other observation of rail and road movement in the enemy rear justify a conclusion that any large scale evacuation is now in progress.

RAILWAYS

Brenner Route

The BRENNER route has probably been open to through traffic on only one complete day during the week. However, owing to the rapidity of repairs between attacks, it is likely that the line has been open a total of at least 48 hours. In any event, PR has shown the line to have been definitely blocked on 31 Jan, and on 4 Feb while perhaps the greatest degree of interdiction in some time was achieved on 5 Feb, on which date PR showed the line blocked at two, and possibly at five, points. Attacks on the 5th included an attempt to create a landslide near S. AMBROGIO at F 5267, about 15 Kms N.W. of VERONA; photos taken over an hour after the attack do not show results as far as blockage of the tracks is concerned, but at time

....of photography the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

of photography the valley was still full of smoke and/or dust, which suggests an effective attack. If successful this attack may well prevent through traffic on the BRENNER for a very considerable period.

Activity has been noted in practically every station South of BOLZANO. All major yards have been active; minor sidings have also shown a marked activity, notably at SAN AMBROGIO (F 5267) where there was a hundred percent turnover between 31 Jan and 4 Feb, while MATTERELLO (A 7717) showed a relatively large decrease of wagons. Even though the line was blocked on both 4 and 5 Jan, some movement took place between those two dates. Considerable activity was also noted on 4 Jan on the branch line between FORTEZZA (W 1901) and SPITTAL (X 6201). On this line most of the stations have shown a turnover and stores were seen at several.

North East ITALY

In the North East all routes between the PADUA and UDINE areas have been blocked at at least two, and probably three, points throughout the week. This contrasts favourably with last week when for several days the most Northerly, and most active, of the three routes was cut only at SACILE bridge (B 8407). On this Northerly route CASARSA rail diversion (C 1508) was cut on 31 Jan and though seen as repaired on 4 Jan another cut had by this date been established at PORDENONE rail diversion (B 9907), about 20 Kms to the West. (The regular bridges at both PORDENONE and CASARSA have long been impassable.) It is interesting to note that a point on the track just West of SACILE bridge which had been cratered on 31 Jan had not been repaired by 4 Feb; with repairs to more important breaks elsewhere on the same line remaining incomplete, failure to repair the track crater probably reflects the enemy policy of "maintenance of unserviceability".

There has been virtually no change for some time on either the central or Southerly routes in this area, though during last week and early this week interdiction on the Southern route was extended Eastward with the establishment of eight cuts, including four bridges, between LATISANA (H 2281) and MONFALCONE (H 6191). These cuts probably remain unrepaired, but in any event they do not appreciably affect the rail interdiction in the North East.

In as much as at least two blocks have existed since 31 Jan between the PADUA and UDINE areas, it is not unlikely that any troops which may have been leaving out of ITALY via the North East since 31 Jan, will have been forced to move by road all the way to the UDINE area before loading on trains; however they could, at considerable risk, move by rail from points in the PO Valley to as far as the TREVISO area. Supplies being brought through this area will very probably have been carried for at least 50 Kms by M.T.

Beyond UDINE the condition of the three frontier rail routes is somewhat obscure owing to lack of PR. The most Southerly route (POSTUMIA route) was last seen as definitely blocked on 29 Jan at BOROVNICA viaduct (D 2803) which probably remains cut. Also on 29 Jan BOIRES bridge (C 7223) on the central route (PIEDICOLLE route), was cut, but repairs had progressed so far at that time as to warrant an estimate of completion by the following day. It is probable, bearing in mind the importance of all rail routes in this area to the enemy at this time, that this bridge was in fact opened up shortly after the 29th; whether or not the attack of 4 Feb, claimed as successful, has again blocked this route cannot be confirmed owing to lack of PR. The Northern and most important of the frontier routes was open early in the week, but attacked at several points well North of UDINE on 2 and 4 Feb; success of these attacks cannot be confirmed owing to lack of PR.

....There has.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

There has been noted activity along the entire TREVISO - UDINE line this past week, especially in the UDINE yards. The two Southerly routes have been comparatively inactive which is not surprising in view of the numerous unrepaired cuts along them.

Po Valley and North West ITALY

Only two rail bridges are at present known to be serviceable over the PO river. They are the PIACENZA bridge (K 6216) which has been passable since 18 Jan, and the CASALE bridge (J 6432) which has been open for at least a month. South of the PO there has been little sign of appreciable rail activity though there is evidence to indicate that the railways in this area are still being used.

In the North West although there is one through line open between MILAN and the VERON. - MANTOVA area, the main Northern line is out at PASCHIERA (F 4254) bridge and diversion, which were rendered unserviceable on 4 Jan, and possibly at two other points. Through traffic between MILAN and TURIN remains possible on several routes. The VILLAFRANCA D'ASTI bridge (J 2810) just East of TURIN, where last week a span was seen missing and thought to have been removed by the enemy, is now reported by ground sources to have been destroyed by Partisans.

Rail Diversions

The enemy has been forced in numerous instances to build rail diversions by-passing badly damaged bridges or viaducts. There are in all about 20 to 25 of these diversions in ITALY. In most cases they have been constructed when damage to the original line has been so severe that construction of a short stretch of new line adjacent to the original would be easier and faster than repair work. In some cases, however, diversions have been built prior to attacks on the original bridge, and not infrequently both the original bridge and the diversion have been simultaneously repaired, thereby making interdiction more difficult. In fact it is generally more difficult to keep the diversion blocked than the original bridge, diversions being in most cases a less vulnerable target from the repair point of view. About half of all the diversions in ITALY are, as would be expected, found on the BRENNER and North East rail routes. Only two rail diversions are known to exist along the BRENNER, though one, the 12-mile diversion by-passing both ORA (A 9354) and S. MICHELE (A 7837) bridges, is by far the longest in ITALY. These two diversions by-pass the only three main ADIGE river crossings between TRENTO (A 2578) and BOLZANO (A 9870). On the surface it may seem surprising that there are only two diversions on the BRENNER while there are eight on the North East lines. However, the bridges South of TRENTO, having no diversions are all relatively small and easily rebuilt by the very fast and efficient repair system maintained on the BRENNER. This alone makes the building of diversions around individual bridges almost unnecessary, although they could be easily and quickly constructed at any time desired except during the flood season. Another reason why the stretch of line between VERON. and TRENTO is void of diversions might be the existence of the loop-line from TRENTO to CASTELFRANCO which could serve as an alternative route in event of blockage between TRENTO and VERON.

No diversions appear above BOLZANO but that is explained by the fact that BOLZANO is the farthest North that the line has been consistently attacked, and in any case the precipitous slopes would make it a difficult, if not impossible, task.

...Between UDINE....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Between UDINE and the PADUA-VICENZA area there are eight known rail diversions. Most of these were built when T.A.F. started its heavy attacks in November on these lines. It is interesting to note that none of these diversions appear on the most Southerly route between MONFALCONE (H 6392) and MESTRE (G 6397). This may be explained by the fact that any construction over the TAGLIAMENTO and PIAVE rivers along the Southern route would prove most difficult. The absence of diversions and lack of repair work along this route bears out the conviction that the enemy has virtually abandoned the line in favour of diverting the majority of his engineering and construction facilities in the area to the two Northern routes, despite the fact that one is only single track.

EVACUATION OF SPEZIA ARSENAL - APRIL 1944

A P.W. from the SONDERFUHRERTRUPP NEISS of the 307 WIRTSCHAFTSKOMMANDO, the function of which is the dismantling and despatch to GERMANY of Italian industrial machinery and material, gives the following account of this unit's activities in SPEZIA between April and October 1944.

In April 1944 the Italian directors of SPEZIA Arsenal were informed that on account of Allied bombing the German High Command had decided to remove all machinery and stores from SPEZIA to a railway tunnel near GENOA which had been prepared for its reception and installation, and in which work was to be continued. The Italian staff at LA SPEZIA was encouraged to volunteer to accompany the machinery and stores to GENOA. German personnel had previously been warned not to disclose the fact that the true destination of the material was GERMANY. The Italian directors placed 45 Italian mechanics at the disposal of the Germans and the dismantling of machinery started immediately.

At the end of April 1944, the first train-load of industrial machinery left SPEZIA and moved to the MANAROLA railway tunnel (P 5811) just North of SPEZIA where, owing to Allied bombing and Partisan activities, it remained until June. This train consisted of 15 trucks. A second train consisting of 20 truck-loads of material reached MANAROLA tunnel at the beginning of June and two days later both trains proceeded to GRONDOLA railway tunnel (P 695457) on the SPEZIA - PARMA line, in which 600 - 700 trucks loaded with industrial material were stationed. PW heard later, but could not confirm, that all these trucks left for PARMA in October 1944.

The two train-loads from SPEZIA included: 65 lathes of various sizes, 60 steel rods, 2,000 bronze rods, 30 ships' propellers, 6 truck-loads of bronze bars, one truck-load of water-piping, electric motors, spare parts and driving belts.

The above account is believed typical of a long standing German policy, namely the stripping and despatch to GERMANY of Italian industries in so far as consistent with the continuance of active production in ITALY for the benefit of GERMANY. The report is of interest in indicating the deceit of the Germans as to the future use of the dismantled machinery, i.e. that it was to be further used in ITALY. The difficulties encountered in evacuating the material by rail are also of interest and not dissimilar to the situation now existing in the BRESCIA (F 0568) area where railway cars loaded with industrial materials have apparently been tied up for a matter of months owing to the interdiction of the railways.

3. WESTERN FRONT

Von RUNDSTADT's problem this week has been to form a

....strategic reserve.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

strategic reserve which will at least in part compensate for the departure of 6 S.S. Pz Army. The four Armoured Divisions of the latter are now definitely away, although the six or seven Infantry Divisions which had been operating with them appear for the present to be staying. The destination of the armour is certainly Eastwards. If the captured document showing the move of I S.S. Pz Corps to HOLLAND was not a plant, it was at any rate outdated by events in the East. Although the farewell to the West has been a slow business with the weather and the air forces alternating in their efforts to protract it, it has none the less been final, 6 Pz Army's crowded and not inglorious hour in the West is over, though the East offers it prospects fateful as ever it has in the forests of the ARDENNES.

RUNDSTEDT's problem now, if he is allowed to keep the remaining seven Panzer Divisions, is to make them do the work of eleven or at any rate so to dispose them that he will still have some form of reserve on which to fall back when the next Allied attack starts. His first action has been to start reducing his unnecessary commitments in the West of which the COLMAR pocket was apparently judged to be the least essential. The effort has not been wholly successful. True the pocket is now virtually eliminated but the cost was probably higher than RUNDSTEDT had expected. At least two Infantry Divisions (708 and 16) have been reduced to remnants while 338 Infantry Division which had been defending the Western edge of the pocket collapsed quickly when the French attack on the VOSGES ridge started. French forces attacking from the South nevertheless have had a hard fight of it all week against 2 Mtn Div reinforced by elements of 5 Mtn Div from ITALY; harder by far than the French-American forces in the North of the pocket who took COLMAR, cut the COLMAR-BREISACH railway and reached the RHINE on a 35 mile front South of STRASBOURG against light to moderate resistance. The pocket is now half its size of a week ago and in view of the absence of any good roads, the German position West of the RHINE looks untenable. What economy RUNDSTEDT has effected by withdrawing is problematic but on the principle that every little helps, he may feel that the withdrawal has probably been worth his while.

While these operations were in progress in the South, the armour remaining in the West after the departure of 6 S.S. Pz Army was being quietly taken out of the line. In Northern ALSACE 25 P.G. and 21 Pz Divs are missing, although 10 S.S. Pz Div (NOT of 6 S.S. Pz Army) and 17 S.S. P.G. Div are still there. The former has helped the infantry of First German Army to offer surprisingly firm resistance to our attacks particularly around HAGENAU where we have made little headway. Extensive floodings, natural rather than Teutonic in origin, are adding to the difficulties in this sector. An increase in rail movement has been observed this week down the RHINE Valley from KARLSRUHE through HEIDELBERG. It need not necessarily imply further transfers from the West and probably does not, for the indications are that the RUHR is being reinforced at the expense of other areas.

The same thing has been going on all along the front. 11 Pz Division has been out of contact from the REMICH area for several days, while at the end of last week none of 5 Pz Army's armoured divisions were left in the line. The infantry remaining in the ARDENNES has fought an undistinguished but orderly rearguard in the area South of ST. VITH. Our bridgehead over the OUR river was quickly expanded and we have pushed across the German frontier to within 5 miles of PRUM, the first town of any size East of the frontier in this region. Now that we are in contact with the Siegfried defences once again, there is some stiffening of enemy resistance here.

However, RUNDSTEDT was not to solve his difficulty as easily as that. No sooner had he got a force of six armoured and three P.G. Divisions out of the line than a new crisis arose. The American First Army attack

....in the MONSCHAU.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in the MONSCHAU forest seems to have caused some confusion in the enemy ranks. Resistance on the first day was light, and offered largely by a miscellany of dubious units ranging from a Home Guard Bn to elements of 15 Army's Engineer School. Considerable progress was made. We cleared the MONSCHAU forest and the high ground to the South before RUNDSTEDT's counter-measures started. The situation must have been sadly reminiscent to him of the days before 6 S.S. Pz Army appeared on the scene, when his armour had to be rushed to and fro to plug each hole as it appeared. First of all he put 3 P.G. Division back into the line and quickly after it came 9 Pz Div accompanied by 12 Volksgrenadier Division not yet properly recovered from its ARDENNES battles. So far there has not been any great stiffening in enemy resistance, and as we are astride both banks of the ROER river it would seem that the enemy must go back to the line of the ERFT river covering the GEMUND Forest. In this attack we have penetrated to points 12 miles inside GERMANY and are well into the SIEGFRIED defences, having gained most valuable ground for any resumption of large scale attacks towards the RHINE.

There are now five armoured and two Panzer Divisions unbeated in the West - almost exactly the same number as in the week preceding RUNDSTEDT's ARDENNES attack. The situation is far from analogous however. One has learnt by now the dangers of thinking the Germans to be wholly on the defensive at any time; but if only a limited and costly success could be achieved in December with the full employment of the fresh 6 Pz Army, the prospects of even a spoiling attack are at present slight. Moreover the departed Pz Army was the better of the two and in better shape when it left than is 5 Pz Army to-day. Of the rest of RUNDSTEDT's armour, 116 Pz Div is tentatively placed in the DUREN area, and the general trend of traffic suggests that a proportion of the remainder is moving into the area West of the RUHR. Confirmation is given to this suggestion by the identification of 8 Para Div from GERMANY in the VENLO area, an indication that RUNDSTEDT is once again worried about the security of the RUHR Valley, and is taking steps to thicken up the thinly held approaches to it from HOLLAND. The brief breathing space which he may hope to have before the spring will surely be spent in resting and strengthening the defenders of the RUHR. For what was said in this Summary long before the December battles has more force to-day than it ever had. Loss of the RUHR will finally decide the issue.

4. EASTERN FRONT

EAST PRUSSIA AND POLAND

There has been an appreciable slowing down of the Russian advance in this past week. The extended L of C, with POZNAN still in German hands, a stiffening enemy opposition, particularly in East PRUSSIA, and a premature thaw in the Central sector have all contributed to the Soviet difficulties. In East PRUSSIA, the Russians have now occupied about five-sixths of the entire province, and the defence of what is still left resolves itself for the enemy into the defence of KÖNIGSBERG and ELBING. He is clearly determined to hold on to these two ports as much to deny them to the Russians as for their own worth to him. The Soviets have already this week acquired one important naval base in the shape of MEMEL; they have also developed the threat to DANZIG and GYDNIA, while STETTIN itself is only 37 miles from the front. The whole German position in Eastern Baltic waters is thus endangered - a threat which if it matured would have the gravest consequences for the twenty-odd enemy divisions at present isolated in LATVIA. Fierce enemy resistance is to be expected as the Soviets draw nearer to these naval bases and ports. However the German efforts to break through the Russian wedge which isolates East PRUSSIA seem to have abated. The measure of success achieved by these attacks is not clear. There are no claims

....or admissions that.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

or admissions that the Soviet wedge has been broken, but this proves little, for the Russians might not admit a setback nor the Germans that they were ever really firmly isolated. It is clear however that in the past week, the Russians have been able to broaden their salient to the West and are within seven miles of DANZIG. Further to the S.W. ROKOSSOVSKY has made satisfactory progress in extending the left flank of his 2 White Russian Army Group across the German frontier on a broad front S.E. of STETTIN. SCHNEIDEMÜHL at the junction of seven railway lines remains however an isolated garrison in enemy hands behind the front. This obstacle combined with the marshy lake country of POMERANIA is likely to make the advance on STETTIN a formidable business.

Marshal ZHUKOV's First White Russian Army Group continues its advance to the ODER though at a much reduced pace. If the German defences between ZÜLLICHAU and MESENITZ proved no great difficulty to the Russians, the enemy hold on POZNAN and the rapidly lengthening L of C must do so. The ODER has been reached at only two points North of the bend at FÜRSTENBERG, and the direct assault on FRANKFURT and KÜSTRIN has not yet commenced. FRANKFURT at any rate is reported to be strongly defended and the reduction of both FRANKFURT and KÜSTRIN is likely to be a difficult task. FRANKFURT itself lies on both banks of the ODER, though KÜSTRIN is largely on the East bank. In this region the ODER reaches its widest point - about 200-250 yards - and remains at this width to its mouth. The establishment of Soviet bridgeheads on the West bank will probably present considerable difficulties, although the task would be easier now than in the thaw period when the current becomes fairly rapid. However ZHUKOV at this stage is probably more concerned with closing up to the East bank of the ODER on a broad front South and if possible North of KÜSTRIN than with establishing bridgeheads on the far bank. The Soviet line has now developed into a vast salient which narrows down through Western POLAND to its tip near FRANKFURT. As such it offers the enemy possibilities of counter-attack from North and South, and ZHUKOV must be anxious to get his flanks resting firmly and without delay on the natural protection of the ODER.

From the remainder of the Central sector, the only development of importance this week has been the German report of a new Soviet attack from the bridgehead over the ODER N.W. and S.E. of BRIEG. This has now been confirmed by the Russians, showing that the relative calm of the preceding week was probably put to good effect by KONIEV in bringing up fresh forces. The attack may be intended only to broaden and deepen the Soviet bridgehead, and to cut the main highway from BERLIN to Upper SILESIA; nevertheless the important nickel mines at FRANKENSTEIN, 35 miles S.E. of BRIEG, offer a tempting prize to KONIEV now that GERMANY has already lost her main nickel supplies at PETSAMO. In any case the next few days should show whether this is the end of an old battle or the beginning of a new.

HUNGARY

There has been little change in the situation in HUNGARY. The long battle for BUDAPEST seems to be drawing nearer its end and the garrison is reduced to a small force holding the area of the castle in BUDAPEST.

South of the capital the Soviet counter-attacks against the German salient are making good progress, although it is evident from the Soviet claims of towns recaptured that the German drive of a fortnight ago made more progress in a Southeasterly direction than had previously been thought. After recapturing SZEKES FEHERVAR, the enemy seems to have driven East to the DANUBE and S.E. towards DUNAFELDVAR with his left flank resting on the SARVIZ Canal. The Soviets have now counter-attacked Northwestwards along the same ground and are within eight miles of SZEKES FEHERVAR.

.....No change in.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

No change in the enemy Order of Battle is reported from HUNGARY this week.

YUGOSLAVIA.

The main news of the week has come from DALMATIA where the enemy has carried out a strong sortie from the MOSTAR region, in the direction of the Dalmatian coast. This drive was conducted by elements of 369 Germano-Croat Division probably supported by 9 Croat Div and seems to have taken the Partisans completely by surprise. KAPLJINA (W 09) was quickly overrun and the enemy continued the attack as far as METKOVIC in the NERETVA estuary seven miles from the coast. A wedge was thus driven which prevented Partisan movement between Northern and Southern DALMATIA. A hint that the enemy occupation was not to be permanent however was given when the Germans blew the bridges over the NERETVA in the METKOVIC area. This was followed by a withdrawal from METKOVIC to KAPLJINA which was abandoned by the enemy on 4 Feb after heavy fighting. The Germans are thus almost back to their start line of a week ago. What exactly was the object of the operation is still not clear. If it was to interrupt the Partisan communications in DALMATIA a certain limited and temporary inconvenience has certainly been achieved. The Partisans however see more in the sally than this and suggest that it may have been designed to cover the withdrawal of supplies and troops from MOSTAR. Further reports have indeed been received this week of supplies leaving MOSTAR, but such stories have been coming in for nearly a month now, and stronger evidence will be needed before we can assume that the withdrawal from the SARAJEVO base has been resumed. A more plausible explanation is that the enemy wishes to tighten his hold on the bauxite mines in the MOSTAR area, and to disperse Partisan concentrations which might threaten them. Now that he has lost so much through Allied force of arms in Upper SILESIA, he may be loth to abandon voluntarily any source of economic supply, however small, in other regions.

There has also been a recrudescence of reports of heavy Eastward road movement from VISEGRAD to SARAJEVO. The only certain facts about all these rumours are that both MOSTAR and VISEGRAD are in enemy hands, and that VLASENICA, the third outpost covering SARAJEVO is being used by the enemy as a base for a new drive Northeastwards. This drive has led to the capture of DRINJACA in the DRINA Valley 50 miles N.E. of SARAJEVO, and the enemy is now advancing Northwards down the DRINA Valley in the direction of ZVORNIK. His objective here appears to be twofold; firstly to open up the L of C through the DRINA Valley to VUKOVAR; and secondly to follow last week's capture of the old VUKOVAR-DRINA mouth defence line by securing a firm Eastern flank for Army Group F in the Balkans along the line of the DRINA river.

The enemy layout in the SARAJEVO area has become clearer during the past week. H.Q. XXI Mountain Corps is at SARAJEVO with four divisions under command disposed as follows :

364 Germano-Croat Div	-	MOSTAR-TRAVNIK
104 Jg Div	-	TRAVNIK area
22 Inf Div	-	VLASENICA-DRINJACA (probably conducting the present DRINA Valley operations)
181 Inf Div	-	VISEGRAD-SARAJEVO road. (largely concerned with protecting Southern flank of 21 Corps).

H.Q. Army Group E which was at SARAJEVO appears to have left for the North and is variously reported at NOVA GRADISC and BROD, either of which would be a healthier location than SARAJEVO. Army Group F and the whole of C IN C S.E.'s staff is also said to have moved, abandoning its

....long though not....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

long though not wholly happy associations with ZAGREB for the more homely surroundings of the fatherland at GRAZ.

Other news from YUGOSLAVIA deals mainly with Order of Battle. In the SREM there appears to be some change in the chain ofcommand. A new German 41 Corps has been identified at DJAKOVO, N.E. of BROD. It seems possible that this formation has taken over command from 34 Corps. 11 G.A. Div and the FISCHER Battle Group (containing elements of 11 G.A.F., 41 Fortress and 264 Inf Divs) are certainly no longer under command of 34 Corps, and it is quite probable that the enemy may have decided to substitute a green headquarters in what now promises to be a quiet sector, thus releasing the experienced 34 Corps for a more active role. There has been some news too of 31 S.S. Division, which was identified on the DRAVA front last year and has not been heard of for some time. It is now reliably reported at MARIBOR where it is presumably refitting and training. Of 23 S.S. Division which has also been missing for several months there is still no news, and it now seems very doubtful whether this formation is still in YUGOSLAVIA or indeed whether it exists at all. It is tentatively dropped from the enemy Order of Battle in YUGOSLAVIA, thus reducing the present German garrison in YUGOSLAVIA to fourteen divisions of which three are Germano-Croat.

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 81

OF 13 FEBRUARY, 1945

(a) This Summary will NOT be distributed below H.Qs of Army Corps. Sidelined passages will not be reproduced without permission of this H.Q.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-o-

1. ENEMY SITUATION

There have been patrol actions and raids at many points along the front and a more ambitious reconnaissance in force on our part at the Western end, but no change in the dispositions of the opposing forces has been effected. Our picture of enemy order of battle is also unchanged and the general tendencies noted last week continue.

On the enemy's left it appears likely that 114 Jaeger Division is taking over part of the line S.W. of Lake COMMACCHIO. The intention no doubt is to allow 42 Jaeger Div to shorten its front since 16 S.S. must by now be all out of the line and its sector appears to be split between 42 and 362 Divs. Troops of 16 S.S. Div were probably passing through CASTELFRANCO (G 37) for TREVISO on 7 Feb and it may have been some of their equipment which was spotted by PR on the 12th at GEMONA, North of UDINE, where there were 37 flat cars loaded with AFV's. Evidence of any other Division following 16 S.S. from 10 Army is still very scanty: a prisoner has a credible story about 278 being due to leave, which might be supported by the fact that it has certainly been most inconspicuous of late but by no other evidence. There is nothing to show that 90 P.G. has taken over more of 715 Div's sector and a corpse from II Bn 735 in the area M 1420, though it may have been lying there since 4 Feb, is a slight indication that the latter Division is not after all intended for the East just yet. Going further West everything is usual; 148 Div, as expected, had to bring much more of its strength into the line to meet our thrusts in its sector. All three German regiments were identified among an assortment of Italian deserters, mainly from ITALIA Division. We took a fair number of prisoners in this area, though we failed to retain any ground gained, and the enemy must still be convinced of the necessity of keeping German troops at least available if his whole Western flank is to be prevented from dissolving.

The situation in rear remains much the same. There is further slight evidence that 29 P.G. Division was still in its old rest area N.W. of BOLOGNA on 8 Feb though a prisoner states that he saw troops from it crossing the PO on 21 Jan, alleging that they were bound for the Eastern Front. This part of his story is not considered very likely. 26 Pz Div has been reported sporadically up to 11 Feb as being in the area East and West of FERRARA; the places mentioned are fairly far apart and suggest a wide, but not improbable, dispersion. If 114 Jg Div has been definitely recommitted, as seems likely, it would leave these two mobile Divisions as the only reserve for the front: however it appears that another formation is on the way, no less than 162 Turcoman Division. According to a good source this Division left the TARO Valley, South of PIACENZA, for BOLOGNA on 5 Feb "hurriedly" and it has since been reported on 11 Feb on route 9, S.E. of BOLOGNA. Clearly the intention is to find some more active employment for the lame duck of Army Group C. It may be that the quality has been improved; according to one report recent drafts of Germans have considerably reduced the percentage of Turcomans in the Division.

.....North of the PO.....

THIS PAGE IS UNCLASSIFIED

0725

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

North of the PO there have been no important changes in the Alpine sector. In N.E. ITALY a good source puts 710 Div between UDINE and CHIOGGIA, a vague statement which suggests the Division may be engaged in the coastwatching duties to which it became so accustomed in NORWAY.

There is no change in enemy capabilities. If KESSELRING has been called on for more divisions than the two already surrendered he will no doubt comply as expeditiously as possible, but under present conditions, unless its onward journey is to be entirely by road, with consequent expenditure of precious fuel, it is calculated that not much less than fifteen days must elapse between the time a division is withdrawn from the line and the time it clears from ITALY. At this rate it will be the end of March before KESSELRING really begins to feel the pinch in ITALY and must begin to consider a withdrawal to a shorter line.

2. ENEMY SUPPLIES AND COMMUNICATIONS

While the weather has restricted our air effort during the past few days, heavy attacks were made during the first part of the week and a high degree of rail interdiction has existed throughout the week. All routes between the PADUA and UDINE areas have been continuously blocked at three or more points; in fact no through traffic has been possible in this area for about one month. However, repairs are being pushed and the main TREVISO-UDINE line may be opened to through traffic shortly unless further attacked soon. Beyond UDINE the Southern frontier route may still be out, the Central route continues blocked and the important Northern route has been closed to through traffic for at least two of the past seven days. It is almost certain that the BRENNER has been continuously closed to through traffic since 4 Feb, probably by no less than two blocks at any one time. Briefly, then, while the UDINE area has been accessible by rail from Southern GERMANY for most of the past week, the PO Valley has been wholly isolated from GERMANY in so far as through rail traffic is concerned for at least the past ten days. It is true that the Swiss rail routes have been open, but they should not be, and recent ground reports indicate that they are not in fact available for military traffic.

With the railways interdicted as above indicated considerable MT movement is to be expected, and in fact has been observed. While an appreciable portion of this road traffic can be attributed to the movement of military supplies to the front, and the continued transportation to GERMANY of industrial materials and foodstuffs, the volume is such as to indicate something more; this extra volume of road traffic might represent initial steps to a general evacuation, but, on the basis of ground reports and PR of the railways, it is far more likely to involve a troop movement, probably 16 S.S. P.G. Div departing from ITALY in as much as 356 Inf Div would appear to have cleared ITALY sometime during the first week of this month. (Further details on railways and shipping appear at Appendix 'A').

While troop movements may be making appreciable demands on enemy fuel stocks supply requirements for the present scale of fighting must be considered as very low and no real shortages are to be expected. However, PW information from FRANCE and economic considerations (see Appendix 'B') suggest that in addition to an overall fuel shortage, GERMANY is now also handicapped by a diminishing ammunition production. Though the enemy has long practised strict economy of artillery ammunition in this theatre and ammunition shortages have been reported from time to time, no evidence as yet has come to hand which directly attributes such shortages to reduced production. However, any fall-off in production is likely to have occurred subsequent to the last heavy fighting in this theatre, and hence indications thereof would not have become apparent here. So far as ITALY is concerned it is believed that the enemy holds reasonably satisfactory stocks of ammunition, but replenishment is of course always threatened by the vulnerability of his L of C.

.....3. WESTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. WESTERN FRONT

Last week saw the end of the German bridgehead in Southern ALSACE. Apart from a thinly held pocket North of CERNAY, which was quickly wiped out by French troops, the enemy succeeded in getting his forces back to the East bank of the RHINE without suffering many additional losses. However, most of the divisions which were in the pocket will have need of considerable rest before they are in any state to resume active operations. A probable exception is 2 Mtn Division which despite a notably bad performance appears to be leaving ALSACE, possibly for employment further North. The general trend of movement appears to be Northwards from Northern ALSACE as well as from the South and there are several notable absentees on First German Army's front. 25 P.G. Div is now probably in the East, while 21 Pz and 10 S.S. Pz Divs are both out of the line. This leaves twelve infantry divisions and one P.G. Div holding the First Army front between TRIER and the RHINE North of STRASBOURG. There is little evidence for the location or destination of the missing divisions. Rail movement continues N.W. from FRANKFURT as well as Eastward, suggesting that some forces at any rate are on the way to the RUHR sector.

There has been little fresh to report from the EIFEL. 11 Pz Division not conforming to the prevailing fashion in the West is still in the line and has been firmly reidentified in this past week in its old sector South of TRIER. It has in fact been indulging in limited and inconclusive aggressiveness. Further North, the infantry of the German Seventh Army continues to give ground albeit stubbornly. A notable success was gained last week when we cleared the enemy from the high ridge of the SCHNEE EIFEL overlooking the town of PRÜM. We have breached the Siegfried defences in this area and are fighting in PRÜM itself against fierce enemy opposition. The enemy seems to have been a little surprised at the comparative ease with which the Siegfried line was pierced, and has hastily brought up 2 Pz Div from reserve and 256 Infantry Division from ALSACE, both of which are now fighting in the PRÜM sector.

North of the EIFEL bulge, the stiffened enemy resistance in the SCHMIDT area following the arrival of 3 P.G. Div did not stop the American First Army reaching the ROER river along its whole front. As a result of the operations of the past three weeks we now hold all of GERMANY West of this river. A battle has now developed for the dams over the river. Although we were able to seize intact part of one dam, the enemy by blowing the outlet pipes on all three dams in the region has succeeded in raising the level of the ROER river by four feet, and a considerable stream is now running. Some flooding has been caused, and operations are proving extremely difficult.

Enemy reaction to the British attack in the REICHSWALD was at first slow, although extensive minefields were encountered. In the first five days of the attack elements of only three divisions were contacted amounting to some seven regiments in all. However with the fall of CLEVE, a considerable stiffening of German resistance has become apparent. 7 Para Div, missing from Northern ALSACE for over a fortnight, has put in an appearance; so has 116 Pz Division which had been in reserve in the DUSSELDORF area. Ground conditions in this sector, too, are difficult in the extreme, and one Allied Division at any rate is conducting its operations in assault boats.

The Western Front is now going through a transitional period. The great battles of the winter are over, and although many bitter actions are in progress at this present time they do not constitute the major battles which RUNDSTEDT must expect in the Spring and Summer. In fine weather with the ground hard the present operations on the Dutch frontier would be a serious threat to the RUHR and to the whole German line in the West. Even now when the prevailing conditions make progress of necessity slow, RUNDSTEDT has shown clearly that he is not disposed to take the threat lightly. He would probably at present like to play a waiting game, using the time still left to him to prepare for the battles of the Spring. There are at the moment out of the line one P.G. and three Pz Divisions, but little infantry.

....Nor can RUNDSTEDT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

replacements which he did at the end of last year. True two divisions (233 Pz Trg and 166 Res) are at this time leaving DENMARK, destination unknown. In December there would have been a reasonable certainty that they were Westward bound, but there can be no guarantee of that to-day, nor that no further claims will soon be made on the West. Hence, uncertain of the future, RUNDSTEDT's policy must be to keep intact as much of his armour as he can, and to try to rest the infantry. His tardy reaction to the British attack is a measure of his reluctance to commit reserves. Nevertheless he is being forced to commit them, and he is succeeding neither in keeping his armour intact nor in resting the infantry. In these circumstances the success of our present attacks is to be measured as much by the extent to which they compel RUNDSTEDT to keep or commit in the line divisions which would otherwise be resting as by the territorial gains made.

4. EASTERN FRONT

(a) EAST PRUSSIA AND EASTERN GERMANY

Notable gains in East PRUSSIA and GERMANY have marked the opening of the second month of the Soviet winter offensive. In East PRUSSIA, the capture of ELBING has reduced the German hold to a small area South of KÖNIGSBERG and to the city itself which is still being stubbornly defended, although ROKOSSOVSKY continues to make slow progress from the South. ELBING was the second largest town in East PRUSSIA, its importance lying mainly in the SCHICHAU yards which were at one time producing six submarines a month as well as M.T.Bs. 170 Inf Div appears to have taken a heavy battering at the hands of the Soviets in the course of this battle.

No further progress has been made by the Russians in their drive on DANZIG but in POMERANIA the left wing of the 2nd White Russian Army Group has been extended in the direction of STETTIN. DEUTSCH KRONE, a junction of five railways and six highroads, has been captured while troops of the First Polish Army took MÄRKISCH FRIEDLAND to the N.W. The Russians are now within 10 miles of STARGARD having by-passed and encircled ARNSWALDE. The capture of STARGARD would cut the main trunk line from STETTIN to DANZIG and would confine land communication between BERLIN and the German forces in DANZIG and N.W. POLAND to the road and subsidiary rail network passing through the bottleneck at STETTIN.

While the First White Russian Group has been able to broaden the Northern flank of the Soviet salient pointing at BERLIN Marshal KONIEV has been securing the left flank of his First Ukrainian Army Group by a break out from the STEINAU bridgehead in the direction of GÖRLITZ. This drive has made very considerable headway. After cutting the BRESLAU-BERLIN highway, the Russians took LIEGNITZ and are now within 25 miles of GÖRLITZ. BRESLAU itself is in grave danger of encirclement from a a link-up of the two large Soviet bridgeheads over the ODER on both sides of it. This drive is undoubtedly the most important development of the past week. KONIEV is now in a fair way to getting his left wing resting safely on the RIESENGEBIRGE, a natural defence considerably more reassuring than that of the ODER. The prospects of a German counter-attack against the Central Soviet Army Groups have appreciably diminished. Not only has the latest Soviet advance reduced the vulnerability of the Soviet Southern flank, but equally important, any preparations for a counter-attack which the enemy may have been making South of FRANKFURT must have been seriously disrupted by the continued Soviet progress in the direction of Central GERMANY.

Some changes in the chain of command in the East have been reported during the past week. A document captured by the Russians is signed by Col-Gen SCHOERNER as Commander of Army Group Centre. SCHOERNER was last known as commander of Army Group North. There is no news of his successor in Army Group North, but on 6 Feb the VÖLKISCHER BEOBACHTER came out with the statement that HIMMLER had an Army Group on the Central sector. Another report associates him with POMERANIA. The situation is thus a little obscure. It is of course conceivable that the disasters in the East have led

....to a rapid.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

to a rapid change of commanders similar to that in the West last summer. However SCHOERNER is a violent Nazi and would probably be regarded as a reliable General at the present time. It seems more likely in view of this that a further Army Group has appeared in the East to relieve Army Group North of part of its present three front commitment in LATVIA, East PRUSSIA and N.E. POLAND. North could then be left to deal with the Latvian and possibly East Prussian battles while HIMMLER and SCHOERNER cope with the war on German soil. Excluding YUGOSLAVIA there would then be five Army Groups on the Eastern Front.

(b) HUNGARY

The main news from HUNGARY is of the fall of BUDA. An indication that the end was near came on Feb 12 when the Soviet night communiqué reported the capture in two days of 30,000 prisoners. By the following morning came the admission from BERLIN that resistance in the capital had come to an end. Thus ends the long protracted battle which has probably cost the Germans the better part of some six divisions, not to speak of the wasted efforts expended in two fruitless counter-attacks. For the Russians the capture of the city will vastly simplify the supply problem in any further advance into Western HUNGARY since all the main roads and railways of Central HUNGARY converged on the capital. Elsewhere in HUNGARY there has been little to report. Russian counter-attacks have continued S.E. of SZEKESFEHERVAR but without making any great headway.

A number of order of battle changes are reported this week. 44 Inf Div appears to have moved from the BALATON sector to the area North of the DANUBE near KOMAROM. In the same area 211 Inf Div has been identified. This is a new arrival in Army Group South; it was last identified in October 1944 on the Central sector. It now seems clear too that 2 Pz Army has passed from command of Army Group F to Army Group South. This would be a logical development since it extends Army Group South's sphere of command down to the Hungarian Southern frontier, thus confining Army Group F's command to the Yugoslav area. 2 Pz Army is believed to control 1 Mtn, 71 Inf and 118 Jg Divisions. As a result of these changes the strength of Army Group South is now estimated to be thirty divisions.

(c) YUGOSLAVIA

Events in the BARCS bridgehead have dominated the Yugoslav scene in this past week. An attack against the two-months old Partisan-Soviet bridgehead over the DRAVA was launched from the East and South on the morning of 8 Feb, and it soon became apparent that this operation was on a very much larger scale than either of the two previous attempts to eliminate the bridgehead. Elements of at least four German Divisions took part in the attack, from right to left, 11 G.A.F., 297 Inf, a battlegroup of 7 S.S. Mtn (from the BIJELJINA area) and the STEFAN Division. The latter is an ad hoc formation believed to be equated with 284 Reserve Division which has been consistently reported in YUGOSLAVIA over the past six months. The attack made considerable headway and was taken up by 1 Cossack Division from the West capturing VIROVITICA. Since then enemy progress has been rapid and it now appears that the whole of the bridgehead has been eliminated. As a threat to the BROD-ZAGREB railway it proved of considerable value in tying up German forces, but it was in fact never reinforced or exploited by the Russians on a scale sufficient to threaten the German position in YUGOSLAVIA.

In DALMATIA, the Partisans have made a rapid come-back after the German drive in the MOSTAR area. A counter-attack launched from the S.W. led to the fall of SIROKI BRIJEG, the important strongpoint covering MOSTAR from the West, causing the enemy no little alarm. It is clear however, that the Germans have still no intention of abandoning MOSTAR voluntarily, and there is evidence that some infatry and artillery reinforcements have recently arrived there.

.....N.E. of SARAJEVO.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

N.E. of SARAJEVO enemy operations in the DRINA Valley are continuing to make progress. Having captured ZVORNIK 22 Inf Div has been pushing Northwards to the BIJELJINA area where it has been engaged in heavy fighting. Something of a set-back has been suffered however by the Partisan recapture of VLASENICE on the main SARAJEVO-ZVORNIK road. 22 Inf Div storming Northwards may have swept the Partisans off the road itself, but that was about all it did; now that the storm has passed the Partisans have had little difficulty in re-assuming occupation of VLASENICE. Presumably 181 Inf Div will now be called upon to retake the town again.

The only interesting changes in enemy dispositions this week affect 104 Jg and 237 Inf Divs. The former was operating in the TRAVNIK area in the first week of February. However by 10 Feb elements of it were certainly back in the VUKOVAR region. A report from the BIHAC area that billets were being reserved for 3,000 troops gives rise to the theory that elements of the Division were going up there to strengthen the sadly weakened garrison of XV Corps. Possibly the Division may now be operating in two battle groups, one in Western YUGOSLAVIA, the other in the SREM.

A Partisan source states that II/1047 of 237 Inf Div is at LUPOGLAV. Of the fifteen Yugoslav villages which bear this name, that at J 6618 North of SENJ is the nearest to ISTRIA and the most likely location. Elements of 237 Division may well have been sent to DALMATIA possibly to reinforce the Island of KRK or to act as a counter-attack force in the event of an Allied landing. There is some evidence that the enemy is concerned about the security of this Island, and the garrison has recently been raised to 1,200 men by the arrival of 500 Ustachi troops.

From the SISAK area further reports have been received of a concentration of Cossack troops. An earlier report has stated that 2 Cossack Division was forming in this area, and while this lacks confirmation, it appears quite reasonable.

RAILWAYS

BRENNER

The BRENNER railway has remained blocked throughout the week and in addition to attacks on the through right-of-way VERONA and TRENTO marshalling yards have been raided. All week we have kept reasonably well ahead of enemy repair efforts despite the fact that towards the end of the week weather appreciably cut down the scale of air attacks. Perhaps the most important development is that on 7 Feb we achieved for the first time in a considerable period heavy structural damage to bridges, thereby creating blocks of a more permanent nature than have heretofore existed. The number of cuts South of BOLZANO has varied between two and four; North of BOLZANO the line has remained, as usual, open. Unfortunately our attempt on 5 Feb to block the BRENNER just North of VERONA at F 5267 by creating a landslide, initially thought to have been successful, was seen on photos of 7 Feb to have failed to block the tracks.

As might be expected, in view of the existing interdiction, PR has shown little rail movement along the BRENNER South of BOLZANO. Some activity was noted on PR of 7 and 8 Feb and on the 11th two trains, moving in opposite directions were seen South of TRENTO. Good cover of VERONA marshalling yards on the 10th showed that there had been a considerable turnover of flat cars since the 29th, but whether these were cleared by way of the BRENNER is uncertain. South of BOLZANO there has been little, if any, indication of troops moving by rail; North of BOLZANO PR has not been available, but on the basis of road movement converging on the BOLZANO area it is quite possible that troops are loading here for movement to GERMANY.

N.E. ITALY

Between the UDINE and PADUA areas all rail lines remain blocked but appreciable repairs have been effected and activity has been noted. Despite repairs a high degree of interdiction appears to continue in this area but the exact railway situation is somewhat obscure. Definite activity has been noted over a relatively short stretch of open track East of PADUA though day PR shows that all bridges over the BRENTA river immediately East of a line VICENZA-PADUA are blocked. On 8 February in the area in question fighter-bombers attacked a train loaded with MT and AFVs and two lengths of wagons loaded with MT, and PR of the 13th revealed the presence of a probable troop train. Aside from these observations there is evidence to indicate that there is in fact a leak in the BRENTA river line of interdiction at the bridge immediately North of PADUA. This bridge had been repaired and been passable for a period of about two weeks when day PR of 6 Feb revealed that two spans had been removed and a few days later only one span was seen to be missing, the remaining gap being about 50 feet. Under the circumstances it seems probable that this bridge is being made passable at night by the temporary erection of the missing span.

Beyond UDINE the TARVISIO route, the most important of the three frontier routes, has been blocked at a point about 60 rail kilometres North of UDINE for at least two days during the past week, and there is fairly good evidence of troops having been transhipped around this break during the week. The central frontier route remains cut. The Southern route to LJUBLJANA has not been covered by PR since 29 Jan at which time the viaduct at BOROVNICA about 80 rail kilometres East of TRIESTE was still heavily damaged; this viaduct may, however, have been repaired by this time.

While little change in rolling stock is evident on the TREVISO-UDINE line, CASARSA (C 1508) and UDINE have shown some increase since last week; stations and yards, however, remain fairly heavily loaded, on the 8th fighter-bombers saw rolling stock loaded with AFVs and MT, and on the 13th PR showed a probable troop train at PLANZANO (B 6504). The two much

....battered routes to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

battered routes to the South of the TREVISO-UDINE line have, as usual, shown almost no activity whatsoever. Further East on 8 Feb about 40 empty flat cars were observed between UDINE and GORIZIA which is unusual for this stretch of line. Along the UDINE-TARVISIO route there has been definite activity. Whereas some 45 flat cars were noted along this route on the 4th, PR of the 8th showed that this number had doubled; on the 12th 37 flats loaded with AFVs was seen at GEMONA (C 3443) and on the following day 13 flats, of which eight were loaded with AFVs or MT, were seen a little further North. On the basis of these observations a troop movement almost certainly seems to be in progress through N.E. ITALY.

PO VALLEY AND N.W. ITALY

There is no change in the rail bridges across the PO river. PIACENZA rail bridge has been attacked but PR indicates that it is still passable.

In the area generally between VERONA and MILAN interdiction has been somewhat stepped-up both on the main MILAN-VERONA route and the lines leading South therefrom. The main MILAN-VERONA line is definitely blocked and the secondary line paralleling the PO river to the South may also be blocked by virtue of cuts in the immediate vicinity of MANTUA.

While a rather large decrease in rolling stock was observed at MILAN between 31 Jan and 7 Feb no unusual rail activity has been noted in the N.W. South of the PO there continues to be but little activity although fighter-bombers on 12 Feb claimed to have strafed ten flat cars loaded with tanks on the line between PARMA and PIACENZA.

SHIPPING

On the Ligurian coast, the ports of GENOA, SPEZIA and SAVONA continue to be active. Since 31 Jan 3 MT ships have been plying between GENOA and SPEZIA and an MV, believed to be the 1,000 ton DOMINANTE which was previously sailing between GENOA and SAVONA, has made this run at least once. A MT ship is now sailing between GENOA and SAVONA besides the usual quota of small coasters, schooners and supply barges. There were 21 F-boats and 12 barges at active berths in GENOA harbour on 8 February, and there has been both F-boat and barge activity at SESTRI LEVANTE and SESTRI PONENTE during the past week. At SPEZIA a sunken 480' MV has been raised and moved from its position in the bay to a flooded dry dock. It is probable that this vessel will be used to close the remaining 400' of open channel at the S.W. entrance to the port.

Over of the Adriatic ports has been incomplete during the past week but at least four coasters over 2,000 tons were plying between VENICE and TRIESTE up to 6 Feb and 2 MV's arrived at the latter port from POLA and the ARSA Channel on 4 Feb. Another MV had left POLA by 8 Feb. The enemy is still making use of the lagoons and inland waterways North of VENICE, and barges were seen at TREVISO (G 6476), GRADO (H 5276), PORTO NOGARO (H 3992) and MURANO LAGUNARE (H 3586) on 8 Feb.

GERMAN AMMUNITION SHORTAGE

The following information on a probable overall German ammunition shortage is extracted from SHAEF Weekly Intelligence Summary for the week ending 4 Feb '45.

---

1. PW EVIDENCE

Over the past week there is ample evidence that the shortages previously reported by prisoners of war as prevalent in Wehrmacht formations continue to make themselves felt and influence operations in the West.

Foremost among these is the fuel shortage which continues to leave tanks stranded, which forces artillery units to employ horses as motive power and which restricts the use of those motor transport still available for the supplying of forward troops. These conditions are further complicated by the prevailing shortage of serviceable motor vehicles, whose ranks are increasingly depleted by air attacks and numerous mechanical failures.

However, more difficult to appreciate are the frequent references to shortages of ammunition, particularly the most commonly used types such as LFH and MFH ammunition. While prisoners occasionally report deficiencies of heavy mortar and werfer ammunition, the frequency with which support artillery and even 7.5 cm infantry gun ammunition is reported by enemy prisoners as being in short supply gives weight to the possibility that an overall shortage of one or all of these ammunition types may exist. The practice of rationing available stocks of artillery ammunition has been noted for several months, and a statement by a recently captured prisoner from the artillery regiment of 18 Volksgrenadier Division to the effect that owing to the necessity for saving LFH ammunition only interdiction missions could be fired, is but one of many reports which indicate that economies of this nature continue in effect. Another prisoner reported that his artillery battalion ran out of LFH ammunition completely and consequently had to withdraw. While it is probably true that ammunition difficulties are most frequently a result of the breakdown of supply transport, it is worth noting that enemy infantry units engaged in the front lines are rarely stated to be suffering from small arms or mortar ammunition shortages and sometimes are even reported as having so much on hand that it proves an encumbrance. Although the supply problem in the case of artillery is complicated by virtue of the weight of the ammunition itself, it would seem reasonable to suppose that with the advantage of more open road communications and the added protection of bad weather as well as periods of darkness, adequate supplies of these important types of ammunition would be on hand if indeed such were available.

References among enemy prisoners to shortages of these main ammunition types, while in themselves not concrete evidence that an overall shortage exists, have been mentioned with such regularity over the last few months that transport difficulties notwithstanding, the possibility remains and bears close watching that an artillery ammunition shortage in the overall sense has joined fuel and motor transport shortages in limiting the enemy's operational capabilities.

This suggestion of overall ammunition shortage arising from the statements of prisoners would appear to be borne out by economic evidence presented below.

2. ECONOMIC CONSIDERATIONS

A number of recent reports have indicated that the production of

....ammunition in general.....

THIS PAGE IS UNCLASSIFIED

0733

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ammunition in general in GERMANY and German occupied territory has been on the decline. One of these reports stated that output of shells dropped during the last months of 1944, being only 12 million shells of all calibres during October, instead of 15 million required.

It is extremely difficult to check figures of this kind and to gauge their effects on the supply position. Nevertheless, the report was of interest as being the first to state that the drop in ammunition production which, on general grounds had been expected, had actually occurred.

Of the various processes involved in the production of ammunition - projectile body manufacture, high explosive manufacture, filling, etc - the one which ground reports had indicated as the weakest section of the industry up until the recent Russian occupation of the Silesian steelworks was propellant manufacture. The recent advances on the Eastern Front deprived the enemy of sources of explosive supply through the occupation of factories at PIONKI and BROMBERG. In 1942 PIONKI contributed 6 per cent of German propellant supplies for the Western theatre of war, besides an unknown proportion to supplies for the Russian front. The output of the factory was stepped up from 400 tons per month during the latter half of 1943 to nearly 700 tons per month in March 1944 and was no doubt part of a general drive by the Germans to increase production of propellants. BROMBERG contributed 6 per cent to German propellant supplies in the West in 1943, and its capacity for high explosives production and high explosives filling has been estimated to represent some 8 per cent of the German total at mid-summer 1944. At that time the factory was incomplete and had probably reached only about one-half of its intended ultimate production.

It is likely, therefore, that the loss of these two plants represents 10 to 15 per cent of German propellant supplies and about 10 per cent of German high explosives manufacturing and filling capacity at the end of 1944.

An estimated 12 per cent of the total German production of sulphite pulp, a product used in the manufacture of explosives, has been lost through the Russian occupation of the WALDHOF's mills at RAGNIT and TILSIT. It is thought that by substantially reducing sulphite pulp supplies for rayon, paper and board mill, the priority requirements of the explosives industry will probably continue to be met.

Though propellant manufacture may still remain a weak link in ammunition production, the recent loss of the Silesian steel industry will probably have created an even weaker link. It is thought that the loss of iron ore supplies may cause such a reduction in German steel output during 1945 as to interfere seriously with allocation of steel to shell production, the largest consumer. The occupation of SILESIA may well deprive German ammunition factories of at least 25 per cent of their supplies of shell bodies immediately. It seems very probable, therefore, that these factors, combined with the difficulties being experienced by the Germans in maintaining steel production in the RUHR as a result of the bombing of communications, may now mean that steel is an even more critical factor in ammunition than propellants.

-o-o-o-o-o-o-o-

1. ENEMY SITUATION

16 S.S. Div is well on its way out of ITALY and may by now be clear over the border but there is as yet no sign of any other formation following it. There is, however, some reshuffling taking place on 8 Army front, the significance of which is not clear at the moment. Elsewhere dispositions are normal and evidence of a change in strategic intentions, despite a flood of rumours, is still to seek.

On the Eastern flank there is no further evidence that 114 Jaeger Div is taking over part of the front near Lake COMACCHIO; the dead men who provided the main weight for the theory could tell no tales and have not been corroborated by prisoners or deserters. The gap left by 16 S.S. Div has been filled mainly by an extension Northwards of the sector of 362 Div which has involved a move North by 98 Div also. In what was the extreme right-hand sector of the latter's front, held by 117 G.R., three deserters on 20 Feb identify both bns of 67 P.G.R. of 26 Pz Div. The Division has not been in action since before Christmas and there is no obvious reason why it should have come in again now. 278 Div has only been holding a regiment's worth of front and could easily have taken over another two bns' worth from 98 Div and the fact that it has not may give support to the idea that it is wanted elsewhere. If 9 P.G.R. comes in on the South of 67 P.G.R. we shall be fairly certain that the frostbitten deserter's story was right and General HOPPE is going off to seek new glory on the Eastern Front. It is perhaps worth pointing out that, although the chances are against such a move in the present strategic situation, the enemy could launch an offensive down route 9 and on to FAENZA from the North with 4 Para, 90 P.G. and 26 Pz Divs. An offensive in this area might perhaps have more point if it were intended as a cover to a withdrawal movement. In the meantime another candidate for release, 715 Div, now seems firmly in place and it appears that the sidestepping of 90 P.G. Div had as its purpose only the relief of 1028 G.R. for reasons not known to us but apparently urgent.

On 5 Army front our attack in the Monte BELVEDERE area seems to have hit the right flank of 232 Div, as expected, and prisoners have been taken from 232 Fusilier Bn and both bns of 1044 G.R. We appear to have achieved a fairly complete measure of surprise and enemy reaction so far has been slow. Prisoners provide evidence that both 4 Alpine Bn and the MITTENWALD Lehr Bn are still on our front; the former appears to be between 232 and MONTEROSA Divs and the latter may have moved forward to the same area from PONTREMOLI. 1 BERSAGLIERI Regt of ITALIA has provided a large number of deserters and has now been bolstered up by a bn from 2 BERSAGLIERI Regt which does not seem of any higher quality.

Behind the lines 162 Turcoman Division continues to concentrate. A battalion of its artillery regiment which was under command of 232 Div left about 14 Feb, presumably to rejoin. None of its units seems to have come into the line on 8 Army front; possibly it is intended for coast-watching North of Lake COMACCHIO. Further North still the S.S. KARST Division appears to have acquired the more official designation of 24 S.S. Mountain Div, but there is no evidence that the change involves either an increase in numbers or improvement in quality.

...2. ENEMY SUPPLIES.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

Movement of troops continues to be the focus of interest on the enemy's L of C this week. Compared to last week there has been appreciably less road movement reported in enemy rear areas North of the PO, but this is thought attributable mainly to bad weather conditions. In any event ground sources continue to report troops on the move, and from PR of the railways it is certain that a large formation is on its way out of ITALY. The movement has been noted on both the BRENNER and Northeastern rail routes. It was known by last week that 16 S.S. P.G. Div was then in the process of following 356 Inf Div out of ITALY and the movement this week, in view of the degree of interdiction of the railways, is still believed to involve the S.S. Division and not a third formation.

As to the supply situation it can only be said that regardless of the enemy's transportation difficulties shortages are not likely to exist on the Appennine front at present in view of currently very low requirements. However, the enemy may well be having difficulty in providing sufficient fuel to move troops departing from ITALY with despatch. This is not only a logical assumption on the basis of what is known of the enemy's overall fuel position here as well as throughout German-controlled territory, but is also borne out by ground reports of troops moving on foot through rear areas and a report that MT carrying troops up the ADIGE Valley were held up when they exhausted their fuel.

As to the railways the degree of interdiction has somewhat fluctuated this week, but at no time during the week is it thought that through trains can have moved out of or into ITALY by way of any of the routes available for military traffic. Possibly the most important development during the week is the fact that our medium bombers have for the first time extended their zone of rail interdiction Northward on the BRENNER railway to a point only about 35 kilometres South of the BRENNER Pass; this deepens what has heretofore been the normal zone of effective interdiction on the BRENNER by about 50 rail kilometres and will appreciably increase enemy transportation problems on this route.

Another point of interest with respect to the railways is that the enemy has seen fit to devote what must be considerable engineering facilities to repair of the very heavily damaged large rail viaduct at BOROVNICA on the TRIESTE-LJUBLJANA railway and to the construction of a difficult rail diversion at the same point. This obviously suggests that the enemy attaches considerable importance to this line, though it is essentially of secondary importance as compared to the BRENNER and TARVISIO routes. Behind this repair effort is seen the basic vulnerability of the enemy's L of C. The TRIESTE-LJUBLJANA route is one of only four railroads available for military traffic moving to or from points outside ITALY. (The other three are the PIEDECOLLE, or Central N.E. frontier route, the TARVISIO, or Northern N.E. frontier route, and the BRENNER). We have already demonstrated our ability to block all four simultaneously for a not inconsiderable period, even under rather unfavourable weather conditions. It has further become evident that owing to a number of transportation difficulties, among which rail interdiction is of basic importance, enemy troops now departing from ITALY are moving at a snail's pace, and the enemy must contemplate the coming of Spring and improved flying conditions with considerable apprehension for his L of C, particularly if his forces become involved in a major ground battle which will demand a large increase in essential supplies.

Enemy shipping in the Ligurian Sea and Northern Adriatic shows no unusual development this week. However, over the past month an increase in activity has been noted between TRIESTE and VENICE, presumably owing to the heavy rail interdiction obtaining in the N.E.

A detailed study of the state of the railways in ITALY and of the traffic by rail and sea is at Appendix 'A'.

.....3. WESTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. WESTERN FRONT

It is said of one of our great naval commanders when presented with a high award at a critical stage of the present war that he remarked "I would rather they had given me a squadron of Spitfires". A similar thought may have passed through Field Marshal von RUNDSTEDT's mind this week when he was awarded the Oak Leaves with Swords to his Rittorkreuz. It was a recognition of great services rendered and a reminder perhaps that greater tasks have still to be carried out. It was a portent too; for in these days medals are easier to come by than troops. Last week, RUNDSTEDT's attempts to extricate sufficient divisions from the line for a refit and to form a strategic reserve were no nearer solution. Against the two Volksgrenadier Divisions, the one Para Div and one Pz Div which had been withdrawn from the EIFEL front, had to be weighed the increased demands of the REICHSWALD battle into which have been drawn elements of four more divisions, and the certainty that further armour has left the Western Front.

In the South, the week has been quiet. 2 Mtn and 338 Inf Divs of 19 Army are still unaccounted for although train movement suggests that further forces are leaving ALSACE probably for the SAAR, and these two divisions seem to be the only ones to fit the present bill. 21 Pz Div has now been identified in the East, while 10 S.S. Pz Div is still missing but prisoners have said that it is leaving for GERMANY. It may be following the other S.S. Pz Divisions which have left the West. Only two S.S. Divisions - 17 P.G. and 6 Mtn are thus left on the Western Front. Apart from these absentees, all Army Group G's divisions are still in the line, although enemy reaction to our local attack West of BITCHE between the MOSELLE and SAAR rivers was initially slow. Further North, however, a number of limited counter-attacks, never more than a battalion strong, have characterised the week. In one of these near REICH, 11 Pz Div was engaged and lost five tanks. 11 Pz Div has now been out of contact for several days and is probably in reserve.

In contrast, the EIFEL-DÜREN sector was the quietest of the whole front last week. The enemy continued to offer only moderate resistance to Allied attacks near ECHTERNACH, and seemed content to let us expand our bridgehead over the SAUER river without undue interference. The bridgehead is now about four miles deep and twice as many wide. Nor did we have very great difficulty in capturing VIANDEN which fell after a short street battle. However, the enemy has been holding very firm in the PRÜM region and to the North, and we have made little further headway. It is clear however, that here he is trying hard to have his cake and eat it, for efforts are being made to get troops out of the line without thereby allowing us to exploit our penetration of the Siegfried defences. Armour is the crying need, but the one P.G. and two Pz Divisions in the area North of PRÜM are still engaged. Two Volksgrenadier Divisions and one Parachute Division have however been extricated, and are probably resting somewhere West of the RHINE.

The bitterest fighting of the week has been in the area of the REICHSWALD. When last week's Summary was written five enemy divisions had already been engaged in the battle, and in the past week a further four have appeared. The most interesting identification has been 15 P.G. Division which was brought back after a very brief period in reserve. It was the last uncommitted P.G. Div in the West. This has been followed by elements of one parachute division and one infantry division transferred from Western HOLLAND, and one parachute division from the ROERMOND area. Of the nine divisions engaged, four are thus parachute. As a result of these developments there has been a considerable stiffening of the enemy resistance in the CLEVE-GOCH area achieved partly at the expense of the now very thinly held front in Western HOLLAND. Another dam has been blown by the enemy during the week, this time North of CLEVE, and we are confronted with the worst floods of the whole campaign. Nevertheless appreciable progress has been made and we are now fighting in GOCH itself against embittered resistance.

RUNDSTEDT's account this week thus shows a slight increase in the amount of infantry which he has in reserve, but an appreciable deterioration in his armoured reserves. There are now five infantry or parachute divisions

....unaccounted for.....

THIS PAGE IS UNCLASSIFIED

0737

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

unaccounted for in the West, but at best only three Panzer Divisions and no S.S. Divisions at all. The dummies of the Eastern Front have indeed taken their toll. Excluding the four Panzer Divisions of 6 S.S. Pz Army which are all unlocated, at least seven divisions two of them mobile, have been transferred to the Eastern front since the beginning of this year. RUNDSTEDT may thus legitimately feel that he has done his part and may hope that no further major demands will be made upon him. For his own situation is not happy. The unforgiving minutes are passing and the sombre tune to which they are played is once more called by his enemies.

4. EASTERN FRONT

(a) East PRUSSIA and Eastern GERMANY

There has been little change in East PRUSSIA where ROKOSSOVSKY is making only slow progress in the approaches to KÖNIGSBERG. The death of General CHERNYAKOVSKY, Commander of the 3rd White Russian Army Group, is a serious loss to the Soviet forces in East PRUSSIA. CHERNYAKOVSKY was the youngest Army Group Commander in the Soviet Union and in the present campaign was responsible for the capture of TILSIT and the breakthrough the INSTERBURG Gap towards KÖNIGSBERG. He was, incidentally, the first Russian commander to penetrate into German territory last November.

On the main front in POLAND and GERMANY the enemy is offering fierce resistance to the Soviet forces in POMERANIA. No further Russian progress has been made in the direction either of DANZIG or of STETTIN, but the capture of CHOJNICE just West of the German border about 70 miles S.W. of DANZIG gives the Russians control of a useful road centre. Now that SCHNEIDEMÜHL has fallen, the Russians hold a 150 mile stretch of the BERLIN-DANZIG trunk line between KÜSTRIN and CHOJNICE. Further West there seems to be little doubt that Marshal ZHUKOV has crossed the ODER on the direct approaches to BERLIN in the FRANKFURT-KÜSTRIN area. For over a fortnight the Germans have reported several Soviet bridgeheads in this area, and they now speak of KUSTRIN as being practically surrounded. The Soviets have made no official claims of crossings, but have spoken for the first time of the battle for the fortified approaches to BERLIN. 25 S.S. Div from the Eastern Front seems to have been engaged in the battle for KÜSTRIN and is reported to have suffered severe losses.

Further South Marshal KONIEV's drive into Southern GERMANY has made slower progress during the week. The QUEIS and QUBISS rivers have been crossed and the Soviets stand 8 miles from GÖRLITZ. However, the advance seems to have slowed down in the past two days with KONIEV's left flank still just short of the RIESENGEBIRGE. This may be in part due to the recent thaw, in part to the development of the battle around BRESLAU. BRESLAU, as forecast last week, was encircled by a link-up of the two ODER bridgeheads North and South of the town, and the Soviet ring is closing in on the town. To the S.W., however, the Germans still cling to their bridgehead on the East bank of the ODER South of OPPELN. As this lies very close to the vital OBERSCHLESIEN industrial region, the enemy's continued retention of the bridgehead is a little disturbing and the area needs very careful watching.

Several interesting identifications are reported by the Russians from the Central sector. 21 Panzer Division from the West and 20 Pz Div from HUNGARY have been identified under Army Group Centre, together with a curious miscellany of new infantry divisions which appear to bear titles rather than numbers. Some of these may, of course, be S.S. Divs with an S.S. number, although none has been reported. Some of the titles suggest that they may be hastily formed Volkssturm Divs. They are as follows: Infantry Divs SCHMIDT, BERLIN, BRANDT, MARKISCH-FRIEDLAND, GROSS ADMIRAL DÖNITZ and (a new venture in German divisional terminology reminiscent of Italian Blackshirt practice) P.G. Div '30th January'. We know nothing of the quality of these formations, but there is certainly need of further forces in Eastern GERMANY. 4 Pz Army seems to have taken a particularly bad knock in the Silesian fighting, while Soviet claims for the whole front suggest that enemy casualties are averaging 5,000 men a day. Casualties in the West are

....at present about....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

at present about 2,000 men per day; so that the enemy is now losing roughly the equivalent of one division every two days.

(b) CZECHOSLOVAKIA and HUNGARY

4 S.S. P.G. Div, formerly in the LOSONC area, is reported to have left for the North. Otherwise there has been no major change in the situation in CZECHOSLOVAKIA.

In HUNGARY the week has seen renewed German counter-attacks in the area North of the DANUBE. The enemy has been able to gain some ground between the NITRA and the HRON rivers, and according to one report has been able to establish a small bridgehead from the South bank of the DANUBE West of ESZTERGOM on to the North bank in the area West of the HRON. There is so far no satisfactory evidence as to the scale or objective of these operations, but it may be of significance that 356 Inf Division from ITALY has already been identified in action N.W. of BUDAPEST.

The cost to the enemy of the defence of BUDAPEST is now clearer. Total German and Hungarian casualties amounted to some 175,000 men, and the Germans lost the bulk of, if not the whole of, the following five divisions under command of 9 S.S. Mtn Corps : 271 Inf, 13 Pz, 60 P.G., 8 S.S. Cav and 22 SS Cav Divisions. After the final reduction of BUDA was completed, a number of German forces attempted to break out to the West. A few of these seem to have succeeded in getting through to the German lines West of BUDAPEST, but the majority were destroyed North West of BUDAPEST. What remnants remained of 8 S.S. Cav Division after the BUDA battle seem to have been eliminated in this last desperate attempt.

(c) YUGOSLAVIA

There is evidence that the withdrawal of Army Group E which halted about a month ago South of SARAJEVO, has once more been resumed. Last week, two of the advanced outposts covering SARAJEVO, MOSTAR and VISEGRAD fell. The former was abandoned by the enemy after a sharp battle, the latter without any interference from Partisans. Rearguards of 21 Mtn Corps, consisting probably of elements of 369 Division are now about six miles N.E. of MOSTAR, while east of VISEGRAD considerable Westward road movement is reported. TRAVNIK, its garrison fatally weakened by the departure of 104 Jg Division for the SREM is again in Partisan hands. The suddenness of the German withdrawal from the DRINA line at VISEGRAD has not been without its embarrassments, particularly to the unfortunate 22 Inf Division at ZVORNIK which, as report would have it, is now reduced to eating fodder. Prior to the German withdrawal from VISEGRAD it was already cut off from SARAJEVO by the Partisan occupation of VLASENICA. Since then it has been engaged in very heavy fighting in the ZVORNIK area and is now reported to be isolated in three main pockets in the DRINA Valley - ZVORNIK, KOSLUK (C 19) and BRANJEVO (X 20). 7 S.S. Mtn Division, only recently arrived in the SREM from the DRINA Valley, has had to send down a relief force from DJEDINA to extricate the isolated forces and will no doubt succeed in so doing with the ruthlessness which has characterised its past two years of Balkan warfare.

Fighting has also been taking place South of the DRAVA in the PAPUK Mountains to which some of the former Partisan garrison in the BARCS bridgehead withdrew after the elimination of the bridgehead. DARUVAR, F 57 has been cleared by the enemy, but the Partisans seem to be retreating in good order into the hills.

Apart from those mentioned above, there have been few changes in enemy dispositions this week. No further reports of 104 Jg Div's arrival at DJAKOVO have been received, so the division has probably all gone to the SREM. A number of reports indicate that 369 or 373 German-Croat Division or both may be leaving N.W. YUGOSLAVIA. These reports are so far unconfirmed. There is however, good evidence that a Cossack Corps is setting up from 1 Cossack Division. Lt. Gen HELMUTH von PANNWITZ, ex G.O.C. 1 Cossack Div,

....is stated to be....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

is stated to be the new Corps Commander with H.Q. at KUTINA P 15. 2 Cossack Div is setting up in the SISAK-KUTINA area where 8 Cossack Regt, formed from recent arrivals from GERMANY, is located. The presence of 8 Cossack Regt in 2 Cossack Div presupposes the inclusion of 7 Cossack Regt also.

RAILWAYS

RAIL STATE

BRENNER

The BRENNER is thought to have been blocked throughout the week raising the total number of days during which it has not been open to through traffic to 17. The major developments in the state of the BRENNER this week have been the possible opening of the VERONA-BOLZANO stretch to through traffic for the first time in about two weeks and the deepening of the zone of interdiction Northward. On 17 Feb PR North from VERONA to BOLZANO showed the line open with the exception of ALA bridge (F 668900) where, however, repairs had proceeded to such a point as to indicate that they would probably be complete within 24 hours. However, on both the 17th and 18th the VERONA-BOLZANO stretch was attacked and, while bombing conditions were difficult, fair to good results are claimed, so that it seems not unlikely that the line was never entirely opened up. In any event even though it is possible that the line between VERONA and BOLZANO may have been opened up by 18 Feb, a bridge North of BOLZANO at B 188908 near BRESSANONE was successfully attacked on the 17th and still seen to be out on the 19th, at which time repairs were seen to be in progress but damage was such as to require several days to repair. (BRESSANONE bridge had previously been attacked on 14 Feb and rendered impassable, but damage was slight and repairs may well have been completed before the attack of the 17th). The significant feature of the cutting of the BRESSANONE bridge is that it is the first time the BRENNER has been blocked North of BOLZANO in over two months and secondly, and perhaps most important, is the fact that it was done by medium bombers; before this the mediums had struck no further North than ORA (15 kilometres South of BOLZANO). Until now the enemy have had practically continuous use of the BRENNER railway North of BOLZANO, sporadic attacks by heavy bombers having been largely ineffective, but with the blocking of BRESSANONE bridge the zone of rail interdiction on the BRENNER is deepened by 50 kilometres and important rail facilities at BOLZANO become isolated. This will appreciably increase the enemy's difficulties in moving trains on this important route. Whether or not the mediums can continue to maintain effectively this deepened zone of interdiction remains to be seen, though on the basis of their past excellent performance there seems little doubt but that they can.

NORTH EAST ITALY

In the North East the degree of rail interdiction between the PADUA and UDINE areas fell off during the early part of the week. Sometime between 13 and 17 Feb it is not improbable that through traffic may have been possible for a brief period in this area assuming that either the bridge immediately North of PADUA or the diversion immediately East of CITTADELLA (G 2775) were "night operational". (As of 13 Feb a gap of 50 feet at PADUA North bridge and one of 12 feet at CITTADELLA diversion had been left unrepaired though the remainder of the bridge and diversion had been repaired for some time, strongly suggesting that the gaps seen on day photos were in fact being bridged by a span temporarily placed during the hours of darkness. Attacks on the 17th may, at least temporarily, have put a stop at these points to what has now become an obvious enemy stratagem). However attacks on 17th were very effective and the main line to UDINE was blocked at four points. After the 17th no PR has been available but limited attacks have been made on this line since and it is known that at one of the points cut on the 17th, namely POZZUOLO bridge (B 992070), damage was severe. It seems probable therefore that as of 20 Feb through traffic was still impossible between the PADUA and UDINE areas. The two alternative East-West routes South of the main line to UDINE, have, as usual, remained blocked throughout the week.

....Beyond UDINE.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Beyond UDINE all three frontier routes appear to have been blocked all week with the possible exception of the TARVISIO route which may have been open for one or two days.

On the Southern route leading from TRIESTE to LJUBLJANA the viaduct at BOROVNICA (D 2603), which was last week considered as possibly repaired, was in fact still seen as out on 17 Feb, at which time one long span of the nine destroyed on 20 December was still out. Thus this line has been impassable at this point for about two months. PR of 17 Feb also showed that considerable labour had been expended on the construction of a diversion here, but that it was in the elementary stages owing to the size of the project.

The Central frontier route was seen as definitely blocked on 11 Feb and in view of the major repairs then necessary to make it passable it probably remains out. The bridge here has been impassable ever since early January with the possible exception of two or three days at the beginning of this month.

The situation on the important TARVISIO route is somewhat obscure, but it seems not improbable that it has remained impassable throughout the week. It was attacked on the 13th and seen on photos of the 15th and morning of the 17th as blocked; since there appears to be no record of attack between the 13th and morning of the 17th, it is presumed that the bridge was out throughout this period. There has been no PR since that of the 17th, but that morning damage was such as probably to require several days to repair, and in the afternoon of the same day the bridge was again attacked with excellent results claimed; under the circumstances it is thought that the bridge is still impassable. The TARVISIO route has also been attacked at other points, but unsuccessfully.

PO VALLEY AND NORTH WEST ITALY

Lack of PR in this area makes a definite statement on the rail situation impossible. At the end of last week no through traffic between MILAN and VERONA was possible, but by virtue of repairs at MANTUA the secondary East-West line North of the PO has been opened up. It also seems probable, though PR confirmation is lacking, that the main MILAN-VERONA line is open by this time. Through traffic is possible between MILAN, TURIN and GENOA.

One point of interest is the fact that there is further evidence from PR that the bridge at LAGNAGO (F 893258) on the line between OSTIGLIA (a very important ferry and possibly pontoon bridge site on the PO) and the PADUA area is "night operational", a fact suspected and so reported by ground sources for some time.

On the PO itself the situation remains probably unchanged with PIACENZA (K 623168) and CASALE MONFERRATO (J 673322) bridges passable, the rest impassable.

Some activity has been seen South of the PO. It is of interest to note that two bridges South of the river and East of PIACENZA were repaired this week, this being further evidence of the enemy's continued reliance on rail transport in this area.

RAIL ACTIVITY

BRENNER

While loading at various stations on the BRENNER route has remained substantially the same during the past week, movement has been taking place as is evidenced by minor changes in most of the stations South of BOLZANO and moving trains at several points along the entire route. Troops definitely appear to be moving Northward on the BRENNER. On 17 Feb a total of 223 loaded and about 200 empty flats were seen between SAN AMBROGIO (just North of VERONA) and BOLZANO; it is thought that this is a considerably

...larger number of.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

larger number of flats than heretofore observed, though the excellent quality of the photos makes comparison with previous recent photo cover difficult. However, of the loaded flats seen on the 17th South of BOLZANO, only 26 can definitely be said to have been loaded with military equipment, namely AFV's, and of these 16 were part of a military train steaming North just South of BOLZANO. Undoubtedly at least some of the loaded flats observed were carrying industrial materials. Also on the 17th just North of BOLZANO, a probable military train loaded with AFV's and/or MT was picked up. Further indications of troop movement on the BRENNER were again seen on the 16th (an empty military train length South of TRENTO) and on the 19th (5 flat cars carrying guns and limbers just North of BOLZANO).

NORTH EAST ITALY

In the North East, along the main TREVISO-UDINE line, PR has not been regular enough to permit a detailed study of traffic. However the UDINE yards have shown considerable turnover, and on 17th amongst the rolling stock present were 20 light flak guns mounted on rail cars and 93 flats, while photos of 19 Feb showed a total of 121 empty flats including three military train lengths. Although this increase might be somewhat due to better quality photos, troop movement seems evident. Elsewhere on this line at least some turnover has been noted at practically all stations, indicating definite activity, though it is extremely unlikely that this turnover reflects through traffic with the possible exception of one or perhaps two days. On the two more Southerly routes almost no activity at all has been noted.

Along the UDINE-TREVISIO frontier route there has been rather pronounced activity. At VENZONE (C 3450) on 15 Feb a probable loaded military train was seen facing North; two days later another military train loaded with MT and/or AFV's again facing North was picked up at VENZONE and at the same time an empty military train length was observed a short distance South at GEMONA (C 3344). Three moving trains were also seen on the 16th and 17th Feb and a considerable number of flats has been noted at many of the smaller stations along the entire route. Cover is lacking on the other North East frontier routes but they are not thought to have been unduly active owing to blocked bridges.

SHIPPING

In the Gulf of GENOA coastal traffic continues between GENOA, SPEZIA, SAVONA and SESTRI LEVANTE. Cover of 19 Feb showed 25 F-boats and 21 S-barges at active berths in GENOA harbour. At least two MP-ships, 4 F-boats and an S-barge made the run from GENOA to SPEZIA and back during the past week, but there has been no further sign of the MV which was plying between these two ports earlier in the month. At least one schooner and an S-barge reached SAVONA during the past week, whilst three small coasters sailed from this port to GENOA. S-barge traffic continues on a small scale between GENOA and SESTRI LEVANTE.

PR of the Northern Adriatic ports shows that there has been a fairly large influx of shipping at VENICE and PORTO MARGHERA from TRIESTE in the last two weeks. Arrivals at VENICE include an MV, a MP-ship, 2 coasters and a coastal tanker, whilst a coaster and an MV have reached PORTO MARGHERA. This volume of traffic is probably due to the interdiction of the railways between PADUA and UDINE. Traffic in small craft also continues along the VENETIAN coast, two F-boats, an oil barge an S-barge and 4 river barges were seen at active berths in VENICE harbour on 17 Feb and barge activity has been noted at GRADO, PORTO MARGHERA, CHIOGGIA and on the waterways leading inland from the latter port during the past week.

In the Eastern Adriatic there has been an increase in activity in the ARSA Channel and F-boats were seen there for the first time on 16 Feb when three had arrived from POLA. Three coasters, two of which originally came from TRIESTE, were also plying between these two ports last week. At TRIESTE sailings have been much more numerous since 10 Feb; 11 F-boats and 13 S-barges were at active berths there on 16 Feb. Both TRIESTE and FIUME were attacked by air last week; in TRIESTE many fires were started in the SAN MARCO shipyards and at FIUME extensive damage was caused to the ship-building yards including the floating dock which has been left submerged.

-o-o-o-o-o-o-

1. ENEMY SITUATION

Enemy regrouping this week has been forced by our own action for the first time since January and the extent of his reaction to our attack in the CASTEL D'AIANO sector shows a certain nervousness about our intentions. The capture of the M. BELVEDERE feature and the ridge running N.E. from there to M. DELLA SPE represents a considerable territorial advantage to the Allies but the possession of this ground is still rather a long-term threat to the enemy's Appennine positions and an enemy who was thinking of a withdrawal from that position within, say, a month would scarcely have defended it with such stubbornness or counter-attacked with such violence or brought in two fresh divisions from a dwindling reserve. It looks as though there has been no change in the policy of resisting on the present line.

On 3 and 4 March Italian troops on our extreme right flank put in a limited attack to clear up some enemy positions on the Southern part of the GARIBALDI Isthmus. The operation was very successful and brought in 200 odd prisoners not only from 142 Fusilier Bn but also from 162 Division, confirming the information from prisoners of 114 Div that 162 Div had relieved them in this area. Both 303 and 314 G.R. were identified and prisoners say that 329 G.R. is also in the same area though it must have arrived there rather late since about 30 deserters came into our lines in the area L 2704 on 5 Army front having deserted on 22 Feb. 162 Div does not seem to have improved much in quality and Turcomans still represent about 60% of its strength. This was the main event on 8 Army front, apart from some bickering for the Eastern flood bank of the SENIO in 98 Div sector. We have, however, cleared up the enemy's order of battle in the area South of IMOLA; 278 Div may, as suggested last week, have taken over the Western part of 715 Div's former sector but it certainly also relieved 90 P.G. Division. Prisoners from 992 and 993 G.R. have been taken in the former area of 200 and 361 P.G.R. respectively. (Actually 4 Para Div has taken over a battalion's worth of 200 P.G.R's former sector and handed over a battalion sector on its left flank to 26 Pz Div). 90 P.G. Div appears to be in the BOLOGNA area, presumably as Central mobile reserve, a role in which it is all the more needed as 29 P.G. has been committed on IV Corps front.

The second phase of our attack S.W. of BOLOGNA opened on 3 March with an advance N.E. from M. TORRACCIA which once more seems to have caught the enemy in the middle of a relief. This time it was 721 Regt which was coming in and it lost over 500 prisoners, including the Bn H.Q. of III Bn, in fairly quick time. All three regiments of 232 Div were also identified and it appears that II Bn 1043, which had been taken out of the line in a weakened state to absorb reinforcements was rushed back in again. Our advance on 4 March continued with the capture of M. GRANDE D'AIANO, M. BACUCCO and M. della CROCE and the enemy clearly decided that a more powerful reinforcement was necessary. On 4 March heavier MT movement announced the

.....arrival of a .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

arrival of a motorised formation and on 5 March prisoners were taken from four bns of 29 P.G. Div, representing both Panzer Grenadier Regiments. They appear to have started moving off late on the evening of 3 March from S. GIOVANNI (L 7765) and came straight into action. Both regiments were committed in the area of CASTEL D'ARANO (L 6025) with 15 P.G.R. East and 71 P.G.R. West. The Tank Bn seems to have preceded them since two Mk IV tanks were claimed knocked out on 26 Feb and two more on 5 March; there is a possibility, however, that one or other of these reports may refer to the Assault Guns of 914 Assault Gun Bde which is known to have been in support in this area. The result is that both 114 Jaeger and 232 Divisions have suffered fairly heavily in prisoners and casualties and must be considered as weakened in efficiency and 29 P.G. Div may have to remain in the area for some time to come even if the enemy were to appreciate that a large-scale renewal of the attack there is unlikely.

Although rail communications between ITALY and the rapidly dwindling Great German REICH remain frantically difficult there is evidence that more troops are attempting the passage of the BRENNER. On 2 March PR for the first time since 21 Feb showed a definite movement of military trains between VERONA and the Pass; this was continued on 3 and 4 March. This can scarcely still be 16 S.S. and must be the beginning of another troop movement. There are fewer candidates for this than usual and practically speaking the only likely starter is 715 Div which has been out of the line since about 25 Feb. It is not the division which one would have expected to be sent to a more vital front (nor was 356 Div) but all the other divisions in ITALY are firmly located.

2. ENEMY SUPPLIES AND COMMUNICATIONS

Though weather has somewhat restricted air operations this week no through rail traffic has been possible between ITALY and the REICH over either the BRENNER or N.E. rail routes. In fact early in the week interdiction on the BRENNER was higher than at any time heretofore. However, toward the end of the week interdiction on both the BRENNER and N.E. rail routes fell off. On 28 Feb the BRENNER was cut at 10 points through a 200 kilometre zone extending from just North of VERONA to just South of the BRENNER Pass. The only new target of major significance on the BRENNER is the bridge about 5 kilometres North of VERONA which was hit on 28 Feb and has been out all week thereby isolating the BRENNER traffic from important marshalling yards at VERONA. However, repairs are being pushed here and the bridge may soon be passable. In the N.E. the three frontier routes to the East of UDINE continue blocked, with the heretofore most important of the three, the UDINE-TARVISIO line, blocked at five damaged bridges. On the other hand between UDINE and PADUA the situation is not quite so straightforward. All lines have remained blocked with the possible exception of the main PADUA-UDINE route where the prolific use of apparently night operational bridges greatly complicates the rail state picture.

Movement of troops out of ITALY by rail continues this week, notably on the BRENNER. From a logistical point of view it seems scarcely possible that this can still involve 16 S.S. P.G. Div which should have cleared the Italian frontier by not later than 1 or 2 March. Something else must therefore be on the way out. It is too early to say whether or not a major formation is involved in movement currently observed, but indications are that it is.

Reports on road movement North of the PO have been somewhat sporadic but on at least one night fairly heavy movement was picked up in the N.E. Heavy movement South of the PO has been seen, involving no doubt the shift of 114 and 29 Divs.

Some increase in the number of ground and PW reports of enemy shortages in fuel and ammunition has been noted recently. It is not thought that the enemy is threatened with any shortages so far as current supply demands are concerned, but that with the loss of important industrial areas in the West and East, and interdiction of the railways and troop movement here in ITALY making for transport difficulties and the consumption of precious

....MT fuel, it....

THIS PAGE IS UNCLASSIFIED

0745

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

MT fuel, it may well be that the enemy has been forced to cut ammunition expenditure and ordinary fuel consumption to the bone in order to conserve for the day when a heavy battle must be fought.

- TOP SECRET -

3. WESTERN FRONT

The battle of the COLOGNE plain is nearly over with 15 and 1 Para Armies defeated and withdrawing as best they can to the safety of the East bank of the RHINE. The enemy disorganisation apparent last week became even more pronounced as the battle developed (a measure of it is the prisoner total of 9,200 in 24 hours on 27 Feb). With inadequate forces and even these mostly of doubtful quality the enemy has not since the start been able to make any effective stand, while in the area between MÜNCHEN GLADBACH and the RHINE his front collapsed completely. The four divisions hastily brought down from the HOCHWALD sector to stem the tide were certainly too little and probably too late to be of much avail. Nor did the enemy fight East of DÜREN with the tenacity to be expected of the rather better quality troops facing us there. 9 Pz Div proved a broken reed, and made little effort to halt us on the fortified ERFT line; 11 Pz and 3 P.G. Divs fighting on the COLOGNE Autobahn made a better showing but were unable to make any effective stand on the perimeter of COLOGNE, the Western part of which is now all in our hands.

The grave shortage of troops has become more and more apparent in every move RUNDSTEDT has made this week. In the South he has taken a chance and is making heavy inroads into the ranks of 19 Army across the RHINE South of STRASBOURG. Two of its divisions have been sent to the COLOGNE sector, and a third has moved up to the SAAR to relieve 6 S.S. Mtn Div, which is probably being sent to plug the hole torn open at TRIER. This leaves four weary infantry divisions to hold 19. Army's 90 mile front. These moves seem to represent very nearly the maximum contribution Army Group G can make to the sore need of the other Army Groups, for much more thinning out would let us into the SAAR basin, a disaster very nearly as bad as that which has already taken place further North.

In the TRIER-EIFEL sector the situation is as bad. On paper there is a fair number of infantry divisions in this area - adequate perhaps to hold us if they had been up to strength. But four have already been reduced to remnants, all are weary and none seem to have any early prospect of relief from the battle apart from that which extinction may bring. Certainly not one has been able to extricate itself this week to help the hard pressed defenders of the COLOGNE Plain. TRIER fell after a brief struggle and we took a bridge intact over the MOSELLE there. Its loss opened a dangerous gap in the front covering the MOSELLE Valley which has been exploited by the U.S. 3rd Army in the direction of COBLENZ. Further North BITBURG and SCHLEIDEN are both in our hands and we are now only 6 miles from BONN.

In the COLOGNE Plain a number of reinforcements have been making their tardy appearance. Elements of 189 and 338 Inf Divs and 106 Pz Bde from 19 Army have been contacted between DÜREN and COLOGNE, and the trend of rail movement suggests that the remainder of these formations is coming up and taking position on the East bank of the RHINE near COLOGNE, which we have now entered. The enemy has blown all the RHINE bridges as far North as WESEL, and we are closing up to the RHINE all the way between COLOGNE and WESEL. Enemy resistance has been generally light all week, although German armour showed some fight on the high ground of the VORGEBIRGE earlier in the week. Further North however the enemy situation became almost a rout. MÜNCHEN GLADBACH, KREFELD, URDINGEN and NEUSS were abandoned after little more than sharp skirmishes, although mopping up of isolated enemy pockets has taken some time. So rapid was our advance that one bridge over the RHINE was found intact when we entered WORRINGEN South of DÜSSELDORF.

.....However even with.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

However even with a disorganised enemy, an intact RHINE bridge was too much to hope for, and it was not to be. The bridge went up before we were able to cross. It was not until reinforcements taken from the Canadian Army front appeared about 1 March that there was any attempt at a stand by the enemy North of KREFELD. Pz Lehr Div was the first to appear and was followed by 2 Para, 15 P.G. and 84 Inf Divs on 3 March. These, according to a captured map, hoped to hold a line from the RHINE through KREFELD to KEMPEN. They failed in this, but their arrival did at least help to re-establish some sort of a coherent front now consisting of a rapidly diminishing bridgehead covering the crossing at WESEL. With their move Southwards, only six divisions were left on the Canadian front and enemy resistance weakened considerably: contact was established between 1 Canadian Army and the U.S. 9 Army South of GELDERN, and the forces of 1 Para Army South of NIJMEGEN are now withdrawing across the RHINE via the WESEL crossing.

It has been a very bad week for RUNDSTEDT; almost a decisive week. For if he could not hold us with his inadequate but organised force before the attack what prospects has he now with his Armies in confusion and having suffered probably 100,000 casualties in a fortnight of whom about 60,000 are prisoners? From COBLENZ Northwards he may soon be able to disengage his divisions temporarily, but he cannot expect to do so for long and the next attack may be even heavier than this one. He must by now be reaching the stage where the element of desperation is entering into his strategy. For the first time there are signs of a serious decline in the morale of his troops - a tendency to surrender too early or at best to offer only feeble resistance when surrounded. Only the Panzers and Parachutists seem relatively unaffected, and they will surely fight on to the last, as too will RUNDSTEDT for he has no other choice. But there is no future in it now, nothing but final defeat, or at best the slender hope that some unexpected salvation may appear from the barren womb of time.

4. EASTERN FRONT

GERMANY, CZECHOSLOVAKIA and HUNGARY

The attack launched by the Second White Russian Army Group in the direction of the Baltic coast has achieved spectacular success. Pushing on from BUBLITZ, ROKOSSOVSKY's forces on 4 March reached the coast in the area West of KOLBERG thus cutting off the German forces in the Polish Corridor and DANZIG from those in the STETTIN area. It is not clear how firm this wedge is as yet, but to judge by Soviet announcements it appears that so far only light forces have reached the coast. The enemy put up very fierce resistance all through the week making the most of the flooded Pomeranian lake and forest terrain. 4 S.S. P.G. Div which left CZECHOSLOVAKIA about three weeks ago was heavily engaged at KOESLIN; so was a new S.S. Pz Division HOLSTEIN which has not previously been identified. The attack was taken up by the 1st White Russian Army Group operating on ROKOSSOVSKY's left which captured the two junction towns of STARGARD and NAUGARD. The former lies on the left bank of the IHNA river 22 miles East of STETTIN and is the junction of three main railways.

This operation was a necessary prelude to any large scale advance on the First White Russian front towards BERLIN. ZHUKOV's right flank is now very much more secure than before and the prospects of a successful German counter-attack from POMERANIA seem negligible. STETTIN itself stands in grave danger and if ROKOSSOVSKY can now clear up the enemy forces remaining in N.E. POMERANIA and DANZIG, his Army Group too should be in a position to play a leading part in the main assault on BERLIN. Nevertheless the operation was the end of an old battle: not the start of a new. It was the culmination of the Soviet winter offensive which has cost the enemy up to ¾ million permanent casualties. ROKOSSOVSKY has now done for ZHUKOV's right flank what KONIEV in the South has almost but not quite achieved for the left flank; he has secured for it the protection of a natural defensive barrier.

....Meanwhile along the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Meanwhile along the rest of the front in GERMANY an uneasy lull has set in affecting even the battle for BRESLAU, which the Russians have not mentioned in their communiqué for the past four days. Amongst the identifications reported by the Russian General Staff this week are 2 and 9 S.S. Pz Divs of 6 S.S. Pz Army and 10 S.S. Pz Div. No location other than that of the Central sector is given. 2 and 9 SS Pz Divs belong to II S.S. Pz Corps which had previously been contacted on the Eastern front this year, although I SS Pz Corps has already been in action in HUNGARY. 10 S.S. Pz Div was on the Western Front up to about three weeks ago and was believed to have left the East, but this is the first confirmation received of its transfer.

On the 4th Ukrainian Front, PETROV's forces have been engaged in heavy fighting in the sector ZVOLEN - BANSKA STIAVNICA (usually referred to as the ALTSOHL - SCHEMNITZ area in the German communiqués). Limited progress has been made but the enemy appears to be fighting hard, and both ZVOLEN and BANSKA STIAVNICA are still in his hands.

There has been no change in the situation in HUNGARY.

YUGOSLAVIA

The heavy Westward movement from VIROVITICA to VARAZDIN mentioned in last week's Summary has been followed up by a reliable report that 11 G.F and 297 Inf Divs have crossed the DRAVA into HUNGARY South of NAGYKANISZA. The only independent confirmation of this is an air report of heavy troop concentrations East of ZAGREB which by 1 March appeared to be moving Northeastwards towards VARAZDIN. Meanwhile the Partisans continue to gain successes North of the PAPUK Mountains and it is evident that this area is now comparatively thinly held. One reason for this apart from the move of 297 and 11 G.A.F. Divisions lies in the deterioration of the enemy situation further South. Two serious threats have now developed against the withdrawal route of 21 Mtn Corps up the SARAJEVO - BROD L of C. The Partisans who captured TRAVNIK have advanced Eastwards and cut the main road at BUSOVACA while to the North a Partisan force from the TUZLA area is advancing towards DOBOJ from which it is only 5 Kms distant. To meet this threat the ubiquitous rescuer of isolated formations, 7 SS Mtn Div, has had to despatch post haste a force from the PAPUK Mountains, elements of which have arrived to reinforce DOBOJ while further elements had pushed South by 4 March and were in the ZENICA area. It is likely that the enemy will have no little difficulty in clearing the main road, for 21 Mtn Corps is in a depleted condition and the Partisans are in some strength in this area. Last week they captured one of their biggest prizes of the war in the person of Colonel EBERLEIN, one time Police Chief at MUNICH and the commander in GREECE of a Battle Group bearing his name. He was taken near ZENICA.

NORTH DALMATIAN ISLANDS

In the North Dalmatian Islands there has been some activity in the past week. On 24 February Partisans supported by our aircraft and light coastal forces landed on PAG and penetrated to the outskirts of PAG town without opposition. The enemy soon reacted sharply however and landed a force from the mainland about a battalion strong (probably of 392 Div) on the night of 25/26 Feb. As a result the Partisans were forced to withdraw from the island, and the enemy has now followed suit. He continues to show concern however about the whole of this island group. Civilian labour is being impressed for the construction of defence works on both LUSSIN and CHERSO and Naval reinforcements have recently arrived on LUSSIN. On KRK 700 enemy troops landed at the end of February and are engaged in mopping up operations, although their prolonged stay here looks unlikely.

At Appendix 'B' is a chart showing chain of command of the principal formations in Army Group 'F' together with names of commanders and latest reported locations.

RAILWAYS

BRENNER

The BRENNER railway has remained heavily interdicted. Continuing the step-up in interdiction achieved towards the end of last week, the line between the Pass and VERONA has been cut at no less than 5 points during the period 27 Feb - 4 March inclusive. What is probably the highest degree of interdiction ever existing on the BRENNER was achieved on 28 Feb at which time the line was cut at ten points from VERONA Northwards approximately 200 kilometres; the North and South limits of this zone of interdiction were two damaged bridges, one about 10 kilometres South of the BRENNER Pass, the other near PARONA about 5 kilometres North of VERONA. (The blocking of the bridge just North of VERONA is a new and important development; aside from adding to the degree of interdiction it also denies BRENNER traffic the use of important marshalling yards at VERONA). With bad flying weather heavily restricting our air effort on 1 and 2 March, and difficult bombing conditions over the BRENNER targets on the 3rd, the degree of interdiction fell off. However, on the 4th the line was still blocked at five points beginning with the bridge just North of VERONA, where repairs were still incomplete, and extending Northward to the bridge near BRESSANONE (about 40 kilometres South of the BRENNER Pass) which had been cut since 28 Feb when hit by heavy bombers. On 5 March no attacks were made on the BRENNER and PR was very limited but the line undoubtedly was still closed to through traffic, though repair of at least two of the five blocks existing on the previous day are likely to have been effected.

A point of interest in connection with interdiction on the BRENNER is the fact that the bridge near CISMON (B 2505) on the secondary line running North from CASTELFRANCO VENETO to join the BRENNER at TRENTO was seen as passable on 4 March, and on the same day a train was seen moving South at a point not far North of the bridge. A single short span of this bridge has been missing for a long time, at least on day photos, and remained out even though cratered approaches were repaired. The bridge must either have been night operational or maintained as unserviceable in anticipation of a more important future use. The noteworthy feature of the full repair of this bridge is that it was effected at a time when VERONA and its important marshalling yards were isolated from the BRENNER by the blocking of the PARONA bridge just North of VERONA. With the CASTELFRANCO VENETO - TRENTO line opened up by the full repair of CISMON bridge, blocks between VERONA and TRENTO on the BRENNER are effectively by-passed, particularly if the BRENTA river line of interdiction in the VICENZA - PADUA area breaks down, (and as indicated below it has), in which event through traffic becomes possible between the PO Valley and TRENTO.

Although the BRENNER has remained blocked to through traffic all week, a considerable amount of movement has been seen. In addition to movement of rolling stock in general, PR has also revealed a total of at least twelve probable troop trains or troop train lengths during the week. Four of the twelve were almost certainly troop trains being loaded with MT, AFV's and other military equipment whereas another six, while empty, moved during the week. Two of the loaded train lengths were seen about 40 kilometres North of BOLZANO on 4 March, and on the same day a troop train loaded with MT was observed moving North into TRENTO. TRENTO yards and the tracks to the North and South in the vicinity thereof have been exceptionally active showing considerable turnover and much MT activity. On 3 March and again on the 5th loading or unloading of MT seemed to be taking place, possibly in connection with a transhipment. The three empty military train lengths seen at TRENTO had all departed by the end of the week.

....PERI (about 35 rail .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

PERI (about 35 rail kilometres North of VERONA) has been heavily loaded and four troop train lengths were seen in the yards; two empty train lengths seen early in the week had departed by 4 March, on which date two other train lengths were present, one of which was loaded with MT and AFV's. With the bridge about 5 kilometres North of VERONA out all week, PERI may well be a loading point for troops, though movement Northwards from here would have had to have been well timed to get past the bridge at ALA about 15 kilometres to the North. It is true that ALA bridge, frequently attacked and frequently repaired, has been out on all days during the week with the exception of 2 March; however, the attacks this week have on no occasion succeeded in doing more damage than to block the approaches, and PR indicates that these are repaired very rapidly, probably in a matter of hours. For example, on 2 March the bridge and approaches were passable; on the 3rd it was attacked and the approaches cut; on the 4th the approaches were seen as repaired on photos taken at 1130 hours, the bridge was attacked at 1230 hours, and on photos taken at 1400 hours the approaches were again seen as cut. It is obvious therefore that in addition to being passable on 2 March the bridge in at least one instance was open in between attacks made on successive days. The only block throughout the week between PERI and TRENTO has been at the ALA bridge and the fact that the bridge has been open intermittently may account for the unusual amount of activity observed at PERI and TRENTO yards.

NORTH EAST ITALY

In the Northeast interdiction has remained high though the exact situation is somewhat obscure. East of UDINE it is clear that the three frontier routes have remained, as last week, blocked. The POSTUMIA route is cut at BOROVNICA Viaduct (D 2803) where work continues on the diversion first seen under construction over two weeks ago. The FIEDICOLLE line running Eastwards from GORIZIA while not recently photographed is very probably still not open to through traffic as when last seen on 28 Feb BODRES bridge (C 7223) was still heavily damaged. The TARVISIO route is still heavily interdicted with four bridges out up to 3 March and five since 4 March. While at least two bridges are being repaired it will be some time before this important route can be opened to through traffic.

West of UDINE to the PADUA area the situation is not quite so clear. The two Southerly lines that have been closed to through traffic for so long have remained out. The enemy has been working hard at repair, but by virtue of attacks made before repairs were complete the interdiction on both routes remains high. The status of the third and most active route in this area, namely that running from PADUA to UDINE via CASTELFRANCO VENETO and/or TREVISO to UDINE, is difficult to assess. There are six bridges on this route, namely from West to East, PADUA North (G 3553) and CITADELLA (G 2373), which are complementary in that they provide mutually by-passing routes, NERVESA (G 6493), SACILE (B 8407), PORDENONE (B 9907) and CASARSA (C 1508). There are rail diversions at all these bridges with the exception of PADUA North, which, however, is a night operational bridge. (The missing span at PADUA North was seen in place on the nights of 25 and 26 Feb, and missing on day photos of the same dates, clearly showing the bridge to be night operational. Subsequent attacks did make this night use of the bridge temporarily impossible, but then the diversion near CITADELLA, which provides an alternative route around PADUA North and where on day photos only a 12-foot gap had long been the sole damage, was opened up). While these points of interdiction appear to have been out most of the week all have been seen as passable at one time or another during the week with the exception of SACILE and PORDENONE. However, a usually very reliable ground source reports that SACILE may be passable at night and there is PR evidence to support this, and PR also strongly indicates that PORDENONE may be night operational. It is just possible that for a brief period through traffic may have been possible between the UDINE and PADUA areas. From the above the ever increasing importance of night operational bridges becomes apparent and a brief photo intelligence summary thereof appears below.

.....In the VICENZA - .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In the VICENZA - PADUA - CASTELFRANCO VENETO area, five moving trains were seen during the week. In addition to normal activity a considerable number of flats has been seen at small stations just North of PADUA and in view of the numerous interdictions along the three routes to UDINE, it would seem that trains bound for UDINE were being held up or were being assembled there in anticipation of the line to UDINE being opened up. The presence of flats, although they are unloaded, suggests that troop movement might possibly be going on. Further East, little if any movement, as usual, has been seen along the two more Southerly routes. Along the main TREVISO - UDINE line, there has been limited activity, and on this line there has been some indication of rail troop movement though not to the same extent as on the BRENNER. Between CASARSA (about 25 kilometres West of UDINE) and UDINE itself, four empty troop train lengths were seen on 5 March, two of which had been first reported on 27 Feb.

The rail activity picture in the North East on the whole seems to suggest a certain amount of movement into the PADUA-TREVISO area to and from the PO Valley, transhipment from there to a point about 30 kilometres West of UDINE, with reloading and rail movement up the TARVISIO route to just South of the belt of interdiction and a further transhipment around the cuts to a point about 30 kilometres West of TARVISIO from where the line is open across the frontier.

PO VALLEY AND NORTH WEST ITALY

North of the PO the ROMANO bridge (K 622680) on the main MILAN - VERONA line has been repaired but the bridge near CHIARI at K 762686 about 10 kilometres further East lost a span without there being any record of attack. Just to the North PALAZZOLO bridge on the MILAN - BERGAMO (K 6388) - ROVATO (K 6872) loop line is said by a ground source to be night operational. Hence while day photos show through traffic to be impossible between MILAN and VERONA (possible secondary routes between MILAN and the Eastern PO Valley including VERONA are now cut by virtue of blocks at PIZZIGHETTONE (K 639501) and CREMA (K 634508) bridges), this status must be regarded with suspicion. Lines running South to the PO from the VERONA area remain open and active; aside from shifts in rolling stock evident from PR a train was seen on the night of 4 March moving North from OSTIGLIA (on the PO at F 7412). There is also considerable open trackage running South from the VICENZA - PADUA area toward the PO; one route South is blocked at LEGNAGO bridge (F 893258), which for the time being is no longer a probable night operational bridge owing to a recent attack, the main PADUA - FERRARA line is cut at a bridge just North of ROVIGO, and the most Easterly route South remains abandoned. Activity has been seen on the line between ROVIGO and the PO but any movement here is probably directed Northwest from ROVIGO toward VERONA and not along the blocked line running direct to PADUA. POLESELLA (M 2399) is one of the points where activity was noted South of ROVIGO and this is of particular interest in view of the existence of a nearby pontoon bridge across the PO which night PR on two recent occasions has shown to be assembled during the hours of darkness. POLESELLA may be a transhipment point.

Over the PO itself all rail bridges East from BRESSANA BOTTARONE (just South of PAVIA), inclusive, remain cut. To the West of this CASALE MONFERRATO (J 643322) remains open while TORREBERRETTI (J 776207) is reported by a ground source as night operational and on the basis of PR is in fact suspect.

South of the PO there has been some increase in the degree of interdiction but bombers report three moving trains in the areas just North and Northeast of BOLOGNA while ground sources report and PR indicates that the line running generally East and West immediately South of the PO is active between PARMA and SUZZARA (F 4406). Through traffic is no longer possible along the main BOLOGNA - PIACENZA line and the PARMA - SPEZIA railway is now cut.

PHOTO INTELLIGENCE SUMMARY - REPORT
ON NIGHT OPERATIONAL BRIDGES

The increased intensity of our attack on enemy rail bridges since the middle of January, has been partially met by an increase in attempted deception in the form of night operational bridges. The term "night operational" is used to include those bridges from which a span or spans are removed to make them appear unserviceable, and which are quickly made serviceable again at night, or at such time as may be desired.

Because of the missing span or spans, these bridges appear to be damaged to our air-crews who unless they are briefed to avoid the fallacy may withhold attack in favour of attacking other obviously serviceable, but possibly less important bridges.

In the last few weeks, the Bomb Damage Section of 3rd Photo Technical Squadron has reported the following bridges as night operational or very probably so : CALCINATO (F 1960), PADUA North (G 3553), TORREBERETTI (J 7720), LEGNAGO (F 8925), CISMON (B 2407), CITTADELLA (G 2373) and NERVESA (G 6493). Other bridges, namely those at SACILE (B 8407) and PORDENONE (9907), are at present under suspicion and are being observed.

The bridge at PADUA North is cited as an example to illustrate the pattern by which a night operational bridge can be recognised. A span, about 50 feet long, was seen to have been removed from the bridge between covers of 31 January and 6 February; there was no evidence of attack. The bridge was immediately regarded with suspicion. A search revealed that a crane, similar to that at CALCINATO, previously confirmed as night operational, was present at the nearby station yard. Subsequent covers showed that the approaches were persistently repaired following attack. Although a certain amount of inactive rolling stock was observed, a single track was always kept open. Activity studies revealed turnover of rolling stock on the lines on either side. Furthermore, the bridge was of the utmost importance, and a damaged span could have been easily repaired in a short time. On the basis of the accumulated evidence, the bridge was reported as night operational. Confirmation was received when a night sortie, flown the 26 February, revealed the span to be in place. Cover of that afternoon, and the following day, revealed the span to be removed.

The pattern by which a night operational bridge reveals itself is so consistently similar as to make its existence readily apparent.

1. It is usually first detected by the removal of a span or spans.

2. Subsequent damage is consistently repaired, although the missing span or spans are not replaced during the day.

3. The bridge is invariably a vital link in a line on which all other bridges are repaired following attack.

4. The spans are the standard girder type used by the enemy for construction and repair of bridges in Northern ITALY. They are of such a length that they can either be set manually or with a crane. In the latter case, the crane is often visible.

5. Although inactive rolling stock is sometimes kept on the approaches to create the impression of a block, at least a single track is kept clear.

6. Activity studies show movement of rolling stock on the lines on either side of the bridge.

It might be anticipated that should the condition of enemy communications continue to deteriorate, the greater will become his tendency

....to utilise.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

to utilise deception in maintaining his serviceable bridges. Because of the engineering requirements of railroad structures, however, it is not thought likely that the method of deception can be varied appreciably from the pattern as described, and any new attempts can be readily detected by photo interpretation.

(SOURCE: Third Photo Group Interpretation Report No. 3DS 101 dated 5 March, 1945)

SHIPPING

PR of the Ligurian ports between 23 Feb and 3 March shows that a steady traffic in coastal shipping is being maintained in the Gulf of GENOA. Three MT ships, a small coaster and a number of F-boats and supply barges have been plying between GENOA and SPEZIA, whilst 2 210' MV, believed to be the DOMINANTE, was seen to be loading in the former harbour on 28th Feb and had reached SPEZIA by 3 March. A ground source report dated 24 Feb stated that troops were being convoyed from SPEZIA to GENOA in "ammunition barges", probably F-boats. SAVONA has also been active, and traffic between this port and GENOA included at least three coasters, two supply barges and two schooners. All other ports on this stretch of coast remain inactive, except for occasional traffic to SESTRI LEVANTE.

Owing, probably, to the severe bombing to which the larger ports were subjected during the third week of Feb, shipping in the Northern Adriatic was confined almost entirely to F-boats, supply barges and other small craft between 23 Feb and 3 March, the only exceptions being the sailing of a hospital ship from TRIESTE to VENICE, and a coaster from ARSA to FIUME. However, two MV's were seen loading at TRIESTE on 27 Feb, and both these vessels, together with a coaster appeared ready to leave on 3 March. Barge activity continues at GRADO and CHIOGGIA and on the inland waterways which connect up the lagoons along the Venetian coast. The building of F-boats continues at MONFALCONE where three were almost ready for loading on 3 March.

1. ENEMY SITUATION

The rumours of an imminent German withdrawal from ITALY have continued all last week with a great show of detail but with rather less conviction and there is rather more evidence to show that some at least are German-inspired. The remainder, based on intelligent anticipation of what OKW might be expected to do with the Russians so close to BERLIN and the Western Armies of Liberation so close to COLOGNE, are dying down and the intelligent anticipators are now veering to a conception of ITALY as the granary and, in part, workshop of the Nazi Alpine redoubt. The fact remains that no further formation has followed 16 SS Div out of the country yet and, so far as is known, none has even started. There are at the moment only two German divisions uncommitted, one recently withdrawn from the line, which is not excessive in view of the improvement in the weather, and the Westerly move of 114 Jaeger Div can scarcely be reconciled with any intention to withdraw. The Italian front is still, however, held in greater strength than either its intrinsic importance or Allied capabilities here could warrant and we must be prepared for it to be called on for further contributions to other fronts.

On 8 Army front 42 Jaeger Division is now known to command the whole sector from the GARIGLIANO Isthmus to about ALFONSINE. 162 Turcoman Division has apparently taken over from 114 Jaeger the responsibility of coastwatching in the area North of Lake COMACCHIO. The reshuffle last week gives 362 Div the sector from exclusive ALFONSINE to exclusive LUGO, then 98 Div as far as two kilometres up stream from COTIGNOLA and then 26 Pz Div which has taken over the small sector previously held by 278 Div together with part of 98 Div's previous sector. Both regiments of 26 Pz Div are in the line. The sectors of 4 Para and 90 P.G. Divs remain apparently unchanged but it looks as though 715 Div has been completely relieved, partly by the extension Eastwards of 334 Div's sector and partly by the recommittal of 992 G.R. of 278 Div. It is less likely, therefore, than it seemed last week when 278 Div was being relieved, for no apparent reason, by 26 Pz Div, that the former is to move out of ITALY, while in view of past disappointments it is dangerous to predict the same of 715 Div. There must be some reason for the latter's relief, however, and it must take 278 Div's place as favourite for withdrawal.

In our BELVEDERE attack, after the initial surprise, we had a certain surprise ourselves to identify prisoners from 114 Jaeger Div, although Tac R reports of the previous day prepared us for some new arrival. Prisoners taken on 26 Feb were from 741 Jaeger Regt, all three bns of which have since been identified. It does not appear that their arrival was due to early warning of our impending attack as the first elements started to move on 12 February and, according to prisoners, the division was intended for further West - LIGURIA according to some - and was diverted down the ZOCCA road on arrival at MODENA when news of our attack was received. The Recce Bn has been identified but not 721 Regt which is presumably West of the BELVEDERE area as the divisional Artillery Regiment has been reported by ground sources in the ABETONE area. The arrival of 114 Jaeger Div will allow 232 Div to sidestep Eastwards and take over some of 94 Div's sector, up to inclusive VERGATO according to one report. Also involved

.....in unsuccessful.....

THIS PAGE IS UNCLASSIFIED

0756

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in unsuccessful counter-attacks were 4 Alpine Bn and the MITTENWALD Alpine Mtn Bn.

On the French frontier 5 Mtn and 34 Divs are still apparently in position. The Russians claim to have taken prisoners in East PRUSSIA from "a battle group of 34 Div" but we have also had prisoners from 107 G.R. of the division in the area N 7206 on 24 Feb. There is no confirmation, therefore, if reports of a withdrawal of German troops from this sector and reports of the thinning out of 5 Mtn Div in small detachments so as not to arouse suspicion can be explained by the fact that units of the division have been withdrawn to fight Partisans, e.g. in the area between ASTI and ALEXANDRIA as paybooks captured by the Partisans indicate. It is important, however, to keep a close watch on the movements of these divisions as, if the Germans are going to evacuate N.W. ITALY, they will be the first to depart.

2. ENEMY SUPPLIES AND COMMUNICATIONS

With improving weather conditions this week has been a bad one for the enemy's L of C. For the first time in a considerable period total MAAF sorties have averaged over 1,000 a day. Medium bombers have operated every day and both medium and fighter-bombers are operating over an area extending over deeper into the enemy's rear. The mediums attacked rail brid just South of the BRENNER Pass and fighters on one day paid a successful visit to the BERCHTESGADEN area. (BERCHTESGADEN is about 250 kilometres roughly due North of VENICE). As a result a very high degree of rail interdiction has been achieved and maintained this week.

The BRENNER railway has been blocked throughout the past seven days for the third and perhaps fourth successive week. Attacks have been extended still further North and as of 25 Feb two bridges were out at points about 10 and 15 kilometres respectively South of the Pass. There has been some movement on the BRENNER but no rolling stock will have gotten all the way through even by a process of shuttling past breaks in the line as they are repaired. In fact throughout the past week, while the enemy has pushed repairs, they have remained well behind our attacks with the exception of one 24 hour period when the line may have been blocked at only one point.

In N.E. ITALY the degree of interdiction is the highest ever heretofore achieved, and no through traffic has been possible at any time through a zone about 150 kilometres deep. In fact the zone of interdiction in the N.E. would extend 200 kilometres were it not for the fact that, as long suspected, the bridge just North of PADUA has been confirmed by night photos to be "night operational".

Rail activity generally has appeared slight recently on both the BRENNER and N.E. routes owing no doubt to the high degree of rail interdiction. There has been some evidence of continued movement of troops out of ITALY though very little towards the end of the week, and it seems probable that by this time 16 S.S. P.G. Div will have completed its move. Like 356 Inf Div it has taken about three weeks to get out.

No consistently heavy MT movement has been reported North of the PO this week, though on 23 Feb fairly heavy movement was seen in the ROVIGO (G 2712) - PADUA - TREVISO area. PR on two occasions also picked up a fair amount of MT parked at BOLZANO, and night bombers got many explosions out of on MT convoy in the ADIGE Valley North of VERONA; this is to be expected, however owing to the BRENNER rail interdiction. Night photos of the 25th again confirm that a pontoon bridge across the PO Northeast of FERRARA at POLESELLA (M 2299) is assembled at night; at time of photography (about 2330 hours) 10 MT and 1 motorcycle were proceeding North across the bridge.

Nothing particularly new is noted in the enemy's supply position. Reports continue to be received of a severe coal shortage in Northern ITALY - affecting both the railways and industry. A continued MT fuel shortage

.....is indicated.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

is indicated by reports of MT being towed by horses, of troops marching long distances on foot, of 16 S.S. P.G. Div having to buy petrol on the Black Market etc. One report from a usually reliable ground source states that enemy petrol reserves in ITALY are only about 130,000 US gallons which, while extremely small, may well be not far off the mark. Enemy ammunition expenditure has apparently been very low recently as is to be expected on the present scale of fighting. While there is no indication of any real shortages in ITALY further evidence of an overall German shortage of ammunition is found in a Corps order captured in FRANCE dated 1 Feb which states: "The situation on the Eastern Front forces upon us at present an economy of artillery ammunition which may seem unbearable. Especially the consumption of artillery howitzer ammunition must be reduced. The consumption of infantry howitzer ammunition must also be curtailed, although it is not as critical as the above mentioned. The same applies to mortar ammunition. The confidence of the riflemen in his weapons (MG, rifle or carbine) must be strengthened by all means. Sniper activity must be considerably increased".

3. WESTERN FRONT

HITLER, some months ago in a moment of unusual military clarity, pointed out that the great danger of a two front war lay in the fact that substantial forces are likely at any given time to be engaged not in fighting the enemy but in travelling from one front to the other. 6 S.S. Pz Army is a case in point. It was transferred to the East nearly a month ago, but played no part in halting the Russian advance, and now it is missing in the West at a critical moment when armour is in shorter supply than it has ever been.

By the end of last week RUNDSTEDT had three Panzer Divisions out of the line. They were 10 S.S. Pz, Pz Lehr and 11 Pz. No more of 10 S.S. Pz Div has been heard, and it seems likely that it has now left the West altogether. Pz Lehr Division has appeared in the REICHSWALD battle area, and 11 Pz Division moved from the Southern EIFEL up to the DUREN area. The Germans have been making determined efforts to extricate further forces from the line and during the few days preceding the Allied attack enjoyed rather greater success. 11 Pz Div was pulled out from the PRUM area and moved up to DUREN while elements of three battered infantry divisions were withdrawn from the area South of DUREN. This gave RUNDSTEDT by 25 February a mobile reserve of two Panzer and eight Infantry Divisions, of which both the Panzer Divisions have now been committed.

In the South, the Allied pressure in the SAARBRUCKEN area was beginning to tell however and two of the divisions in Army Group G reserve appeared on the First German Army front. These were 245 Inf and 2 Mtn Divisions. The latter had been in Southern ALSACE and with 338 Inf Div, was reported to be moving Northwards. Across the RHINE in Southern ALSACE there are still out of contact, apart from occasional patrol clashes, five other Infantry Divisions.

Meanwhile further North, the departure of 11 Pz Div from the MOSELLE - SAAR triangle had to be paid for. Confronted with our attack, the enemy withdrew rapidly behind the SAAR river. SAARBURG fell without difficulty, but the enemy was unable to prevent us establishing a bridgehead over the SAAR which is now 2 miles deep and four miles wide. Enemy resistance still remains moderate in this area.

In the Southern EIFEL, too, the enemy's resistance has been light. The enemy divisions in this area are now all in an extremely weary state. Most of them have had no rest since the ARDENNES offensive and they have nearly all been engaged in heavy fighting over the past fortnight. Even the arrival of 2 Pz Division from the PRUM sector did not help and there has been evidence of considerable disorganisation in the enemy ranks as we pressed home our attack. Two bridges were captured intact over the PRUM river and the fall of the road junction of BITBURG now seems to be imminent. One of the Infantry Divisions pulled out five days before has been hastily recommitted in this area.

.....The main battle.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The main battle of the week has been in the DÜREN sector where we attacked across the ROER river on a broad front North and South of DÜREN. Considerable progress has been made in this attack and for the first time since last summer there are signs of serious enemy disorganisation. The initial attack was taken by six infantry divisions all of them in their usual place, but as the attack developed, RUNDSTEDT was forced to draw more and more on his scanty reserve. 9 Pz Division which had scarcely extricated itself from the PRÜM sector was thrown in on the second day of the attack and was heavily engaged. I/10 P.G.R. provided a spectacle not seen in the West for long, when the whole Bn surrendered on 24 Feb. Since then 11 Pz Div which had only just arrived from the HERZIG area has been committed, and now 338 Inf Div from Southern ALSACE has been identified. These reinforcements have not been able to prevent an Allied break through. In the direction of COLOGNE, Allied armour operating in five columns on both sides of the AACHEN - COLOGNE Autobahn has reached ELATZHEIM, 15 miles from the HOHENZOLLERN bridge and 3 miles West of the ERFT river. The enemy may well hope to stand on this river, on which defences have long been developed. Further North, on the front North of LINNICH, Allied armour has reached a point four miles from MÜNCHEN - GLADBACH.

On the Canadian Army front the commitment of Pz Lehr Division raised to ten the number of enemy divisions engaged in the REICHSWALD battle. They present a formidable array for four are Parachute and three are good quality mobile divisions. However, with the ground to some extent drying, we have been able to make good progress, notably North of GOCH where CALCAR has been taken after heavy fighting. German resistance in the area remains heavy and so far the enemy armour is still fully committed.

RUNDSTEDT's situation is deteriorating rapidly. His lack of infantry in the REICHSWALD sector, which forced him to commit his scanty mobile reserves in that area, may cost him dear; for he can at present reckon only four somewhat doubtful Infantry Divisions and no armour at all amongst his reserves. And this, when in the really crucial sector of the front the Allies are advancing faster than they have ever done; when strong forces of his own are still fully engaged in the REICHSWALD battle; and when he is losing in prisoners alone about 3,000 men per day. It took us nearly a month of bitter costly fighting to cover the 15 miles from AACHEN to the ROER river; in three days now we have crossed one major river obstacle and gained seven miles. The road to COLOGNE was never likely to be an easy one, and there are still the defences of the ERFT to overcome, but it is becoming every day a shorter one, and RUNDSTEDT may soon be hard put to it to retain his position West of the RHINE.

4. EASTERN FRONT

Apart from the sharp battles in the area of the NEISSE river North of GÖRLITZ, there were signs last week that the great battles of the winter were over. The Soviet offensive was six weeks old on 26 February and as in the fifth week of last summer's offensive, seemed to have passed its peak. By 23 July last year, five weeks after the offensive started, the deepest Russian penetrations into POLAND had been made, and thereafter Soviet operations were primarily concerned with cleaning up the flanks, securing bridgeheads and preparing for the next major move. (Incidentally, this took place exactly four weeks later, but on a wholly different sector when the Russians attacked towards GALATZ). In East PRUSSIA last week, ROKOSSOVSKY captured ZINTEN, 18 miles South of KÖNIGSBERG, and further reduced the German East Prussian pocket by advancing across the main WORMDITT - KÖNIGSBERG road. In SAMLAND he was less successful and German counter-attacks in an Easterly direction seem to have reestablished land contact between KÖNIGSBERG and PILLAU.

In N.W. POLAND, despite an initially bitter resistance put up by the enemy along the front between encircled GRUDZIADZ and STARGARD,

.....considerable Russian.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

considerable Russian progress has been made. ROKOSSOVSKY has been able to achieve a deep breakthrough in the direction of the Baltic coast and has captured the road and rail junction of BUELITZ, about 25 miles from the coast, thereby threatening to split in two the enemy forces in the area between STETTIN and DANZIG. This move has incidentally done much to eliminate the danger to the long flank of the Russian Central Group of Armies.

Opposite BERLIN, ZHUKOV seems prepared to wait and build up for the bitter 38 miles which he must traverse to the REICH capital. Neither side leaves much doubt of Soviet preparations in this sector. If MOSCOW talks of thousands of guns and fleets of aircraft, the enemy is no less loth to concede "two huge tank armies preparing for the forthcoming assault on BERLIN". But this battle has not yet started, and a lull has fallen with the issue of the Soviet bridgeheads over the ODER still not clear; for the Germans do not claim their complete elimination, nor the Russians their very existence. Behind the front, however, POZNAN fell at last to ZHUKOV during the week.

On the First Ukrainian front, the battle for the NEISSE crossings has been bitter. Here again the Germans admit Soviet bridgeheads, while MOSCOW maintains its sphinx-like silence. Much is at stake in these operations. KONIEV's forces have maintained the impetus of their attack longer in the present offensive than any other of the Army Groups. Neither the ODER nor BOBER rivers checked them for long, and once across the NEISSE in strength only the lesser barrier of the SPREE river would stand between them and DRESDEN on the ELBE. Hence the desperate battles which have been in progress in the approaches to GUBEN and FORST, and the comparative slowness of KONIEV's progress. Behind the front the battle for BRESLAU is on, and the exhausting, costly, block by block reduction which characterised the BUDAPEST battle is apparently to be repeated. GLOGAU, too, has been encircled and may prove an additional drag on KONIEV's progress.

Further South there is little to report. The troublesome German bridgehead on the East bank of the ODER near GLEIWITZ has not yet been eliminated, although German reports of Russian attacks in the general area of RATIBOR suggest that KONIEV is continuing his efforts to eliminate this bridgehead.

There has been little interesting news of enemy dispositions this week. The bulk of 7 Pz Division seems to have been destroyed in the battle for ELBING, while the Russians report the presence of a battle group of 34 Infantry Division in East PRUSSIA. There is no confirmation, however, of this identification, and as prisoners have been taken this week from 34 Division on the Alpine front, the report looks doubtful; possibly a few diverted drafts have been encountered. Further evidence confirms that HIMMLER is commanding the more Northerly of the two Army Groups on the Central sector, as his Headquarters was at DEUTSCH KRONE on Jan 27.

HUNGARY

North of the DANUBE, the German operations to eliminate the Russian bridgehead over the HRON river have achieved their object, and the Soviets are now back on the East bank of the river from KOZAROVCE, North of LEVICE, down to the DANUBE. A startling identification was reported here last week. On 22 February the Rumanian General Staff, a normally reliable source, reported the identification of advanced units of 1 and 12 SS Pz Divs in the HRON river sector. These belong to I S.S. Pz Corps of 6 S.S. Pz Army. Whether the whole of 6 S.S. Pz Army is in HUNGARY or not, and if so, what its rôle is, we do not know. Prior to the Rumanian report, there had been some very slight indications that the Army was bound for the Southern and not, as had been expected, for the Central sector. A prisoner on the Western front said that he had heard AUSTRIA mentioned as the Army's destination, while another report has mentioned the HITLER Division as being in HUNGARY - probably a reference

....either to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

either to 1 S.S. Pz Div or to the Führer Escort Brigade of 6 S.S. Pz Army. Moreover there has been no satisfactory explanation for the heavy loadings of the GYOR marshalling yards seen a fortnight ago. There seems to be thus a prima facie case for placing 6 S.S. Pz Army in the AUSTRIA - Western HUNGARY area. Whether it has come as a replacement for armour withdrawn from HUNGARY to the Central sector or whether it is to have an offensive role is at present only a matter for speculation. The identifications on the ERON river suggest that even that limited German operation was beyond the resources of the existing enemy forces, and that 6 S.S. Pz Army had to be drawn upon for assistance. At this stage the holding of Western HUNGARY may well take a high priority in the German strategic plan. Considerations affecting this are no doubt the oil fields of S.W. HUNGARY, and the industrial areas of Eastern AUSTRIA including the a/c factories of GRAZ and WIENER NEUSTADT.

YUGOSLAVIA

The main news in YUGOSLAVIA comes from the SREM - DRAVA front, where there seems to have been a considerable thinning out in the enemy garrison. Important and surprising Partisan successes have been reported in the general area of the old BARCS bridgehead. The towns of VOCIN, HUM, PIVNICA, DARUVAR and SUHO POLJE have all been recaptured, thus largely neutralising the recent enemy gains. Immediately after the BARCS operation the enemy had a strong force of some five divisions in this area and it is quite inconceivable that the Partisans could have achieved the success they have unless a considerable thinning out had taken place. Heavy Westerly movement from VIROVITICA towards VARAZDIN has been reported, which suggests that some of the enemy forces between the DRAVA and SAVA may be about to leave the area of Army Group E. The effect this will have on the operations further South may be considerable. An early withdrawal from SARAJEVO itself seems inevitable, and H.Q. 21 Mtn Corps has already left for the North. How far the withdrawal will then go is not clear. If the SREM is to be abandoned, a halt short of the BALATON - SENJ line seems improbable. But this will probably mean the abandonment of the Hungarian oil, and is unlikely to appeal to the enemy. In present circumstances he will certainly prefer to cling to the SREM which in turn implies retention of the ZAGREB - BROD - VINKOVCI railway. The line of the SAVA South of this railway will bring the Partisans too close to it for comfort, so it is conceivable that the enemy may be planning to hold a line somewhere South of the river in sufficient depth to break up any Partisan attempt to cross it and threaten his main L of C.

NORTHERN ADRIATIC COAST

At Appendix 'B' is a sketch of enemy dispositions on the Northern Dalmatian Coast and Islands as known to date. The enemy, no doubt appreciating that the possession of KRK, CHERSO and RAB Islands would be a necessary preliminary to an Allied invasion of Northern YUGOSLAVIA, has recently shown an increased interest in the area. Garrisons have been strengthened, and defence works initiated or completed on all the most important islands as well as on the mainland.

The over-all enemy plan appears to be firstly to hold POLA as a fortress, thus denying us the use of the port, and secondly to have sufficient forces on the islands to prevent or hinder Allied landing attempts and to gain time to take counter-measures.

Not surprisingly FIUME and TRIESTE appear to be major strong points in the defence scheme. Besides their value as ports to be denied to the Allies, the system of strong points around the ports completes the VENA Mountain defence line across the neck of the Istrian Peninsula. To ensure sufficient forces for a counter-attack role on the islands and to prevent the fortress of FIUME being outflanked from the South, garrisons of varying strength have been placed between FIUME and KARLOBAG. These garrisons are situated in the small harbours on the mainland which have been turned into miniature fortresses. The bulk of these coastal garrisons

APPENDIX 'A' TO 15 ARMY GROUP
INTELLIGENCE SUMMARY NO. 83
OF 27 FEBRUARY, 45

RAILWAYS

THE BRENNER

The BRENNER railway has remained closed to through traffic throughout the week. Though on 21 Feb the line was blocked at only one point (LAVIS Viaduct and diversion just North of TRENTO) by the following day there were three blocks and as of 26 Feb the line was cut at seven points, of which two were broken bridges and one a severely cratered rail fill. As was the case last week, the most important development on the BRENNER has been the further extension Northward of medium-bomber attacks. Two bridges about 10 and 15 kilometres South of the BRENNER Pass respectively, which have been attacked several times, were last seen as down on 25th and are very probably still cut. This deepens the interdiction of the BRENNER by about 30 kilometres which means that the zone of interdiction now extends Northwards from VERONA about 200 rail kilometres. Up until about ten days ago the line had not been cut, except on very rare occasions by heavy bombers, further North than about 125 rail kilometres from VERONA. The fact that these bridges are North of the point where the FORTEZZA (W 1902) - DOBBIACO (B 6996) - SPITTAL (X 6101) line joins the BRENNER, may divert considerable traffic to this secondary East-West route, a possibility supported by fighter-bomber reports of large numbers of wagons on the line on the 26th; however, these reports have yet to be confirmed by PR and in fact are considered somewhat exaggerated.

The enemy has effected repairs on the BRENNER, but he has been unable this week to keep up with our attacks. However, while it has been impossible throughout the week to get trains all the way through, some movement has been noted along the Southern portion of the line between VERONA and BOLZANO. This activity has consisted for the most part of turnover in yards and sidings varying from only three or four wagons up to over 100 in some of the larger stations.

Indications of troop movements have also been noted on the BRENNER. A total of five, possibly six, military train lengths have been seen on the line during the past seven days, two of which were North of BOLZANO, one being loaded with either motor or horse-drawn transport. Other evidence of moderate troop movement was seen at VIPITENO (about 10 kilometres South of the Pass) where five flats loaded with possible MT initially reported on the 23rd had departed by the 25th. In addition at a small station just South of BRESSANONE about ten flats loaded with MT or AFVs were gone on the 25th having been first seen two days previously.

Many flak wagons have been noted along the entire route, although it is difficult to say whether there has been an increase since last week or more have been observed simply owing to clearer and more extensive PR. It is of interest to note that these flak wagons initially appeared in substantial numbers both on the BRENNER and in the N.E. when the enemy began to move troops out of ITALY.

NORTH EAST ITALY

In the N.E. a higher degree of interdiction has existed over the past seven days than has ever heretofore been the case. All routes from the PADUA area N.E. across the frontier have been continuously blocked at four or more points. The most important development in the N.E. is the heavy interdiction on the TARVISIO frontier route running North from UDINE which, at least up till now, has been by far the most active of the three N.E. frontier routes. This line has been cut all week and by not later than 23 Feb four bridges were down over a stretch of line 20 kilometres long about half way between UDINE and TARVISIO. However, at the opposite end of the N.E. zone of interdiction there is a leak in the BRENTA river line of interdiction which is just East of a line VICENZA - PADUA. Photos taken at 2100 hours on

.....the night of....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the night of the 25th confirm what has recently been reported by ground sources and long suspected from day PR, namely that the rail bridge immediately North of PADUA on the main PADUA - CASTELFRANCO VENETO railway is "night operational". At that time the span continually missing on day photos, was seen to be in place and the bridge open to single line traffic; by 1300 hours on the following day the span had been removed. This definitely indicates rail movement between the PO Valley and the PADUA - TREVISO area. PR confirmation is still lacking on the other possible night-operational bridges in this area, namely the bridge just East of VICENZA at G 2373 where only a 12 foot gap has long been seen on day photos.

Rail traffic in the North East along the two Southerly routes between UDINE and the PADUA - VICENZA area has remained almost wholly stagnant and the main TREVISO - UDINE line has shown a marked decrease in activity, undoubtedly owing to the high state of interdiction recently attained along this route. Almost no movement has been noted since 20 Feb between TREVISO and CASARSA (about 30 kilometres West of UDINE), and so far as troop movements are concerned only one empty possible military train length has been seen on this stretch during the week. Further East between CASARSA and UDINE, while a military train length first reported on 17 Feb had left by the 21st, two empty military train lengths initially seen on the 21st were still in the same spot four days later. However at UDINE itself the yards have shown considerable activity. In view of the military train lengths seen here (a total of five was picked up during the week) it seems likely that at least some troop movement has been taking place with troops presumably loading somewhere along the line West of UDINE, and East of CASARSA. Other evidence of troop movement has been observed along the now heavily interdicted UDINE - TARVISIO frontier line. Two empty military train lengths were reported by PR South of the belt of interdiction between GENOVA (C 3344) and PONTEDDA (C 4930), while two more were seen to the North thereof. Between 22 and 25 Feb activity was noted at stations South of PONTEDDA but PR of the 26th showed no change at all since the previous day, and it seems probable that in as much as military train lengths have appeared on both sides of this belt of interdiction that transhipment is probably going on around these cuts. While this transhipment point is only about 75 rail kilometres from the CASARSA area, which is the most Westerly point at which troops moving towards UDINE could reload on to trains, it may well be that despite the delays of loading and reloading on to trains troops and materiel are nevertheless moved by rail over this comperatively short stretch owing to inadequate supplies of MT fuel.

NORTH WEST ITALY AND PO VALLEY

In the North West no unusual rail activity has been noted though moves are rumoured by ground sources. Since 21 Feb traffic between MILAN and VERONA has been blocked on the main line and also on the BERGAMO loop line. The secondary line to the South nearer the PO has, however, been open and through trains can reach VERONA from MILAN by way of CREMONA and MANTUA. Through traffic is still possible between TURIN, MILAN and GENOA, and in fact through trains can move all the way from TURIN almost to BOLOGNA. Several lines are also open from the VERONA area South to the BOLOGNA area with the exception of the PO river crossings. Troops in fact have been recently reported to load on trains at points not far North of the PO and rail lines South of the river are also still active. The only important development on the PO itself is that more detailed study of photos has shown the important bridge at PIACENZA to have been impassable for some time, though by this time it may again be open. Unless PIACENZA bridge is in fact open, there is only one rail bridge now operating over the PO, namely near CASALE MONFERRATO at J 643322.

SHIPPING

In the Gulf of GENOA two KT ships and four F-boats are still plying between GENOA and SPEZIA. One KT ship was seen unloading into

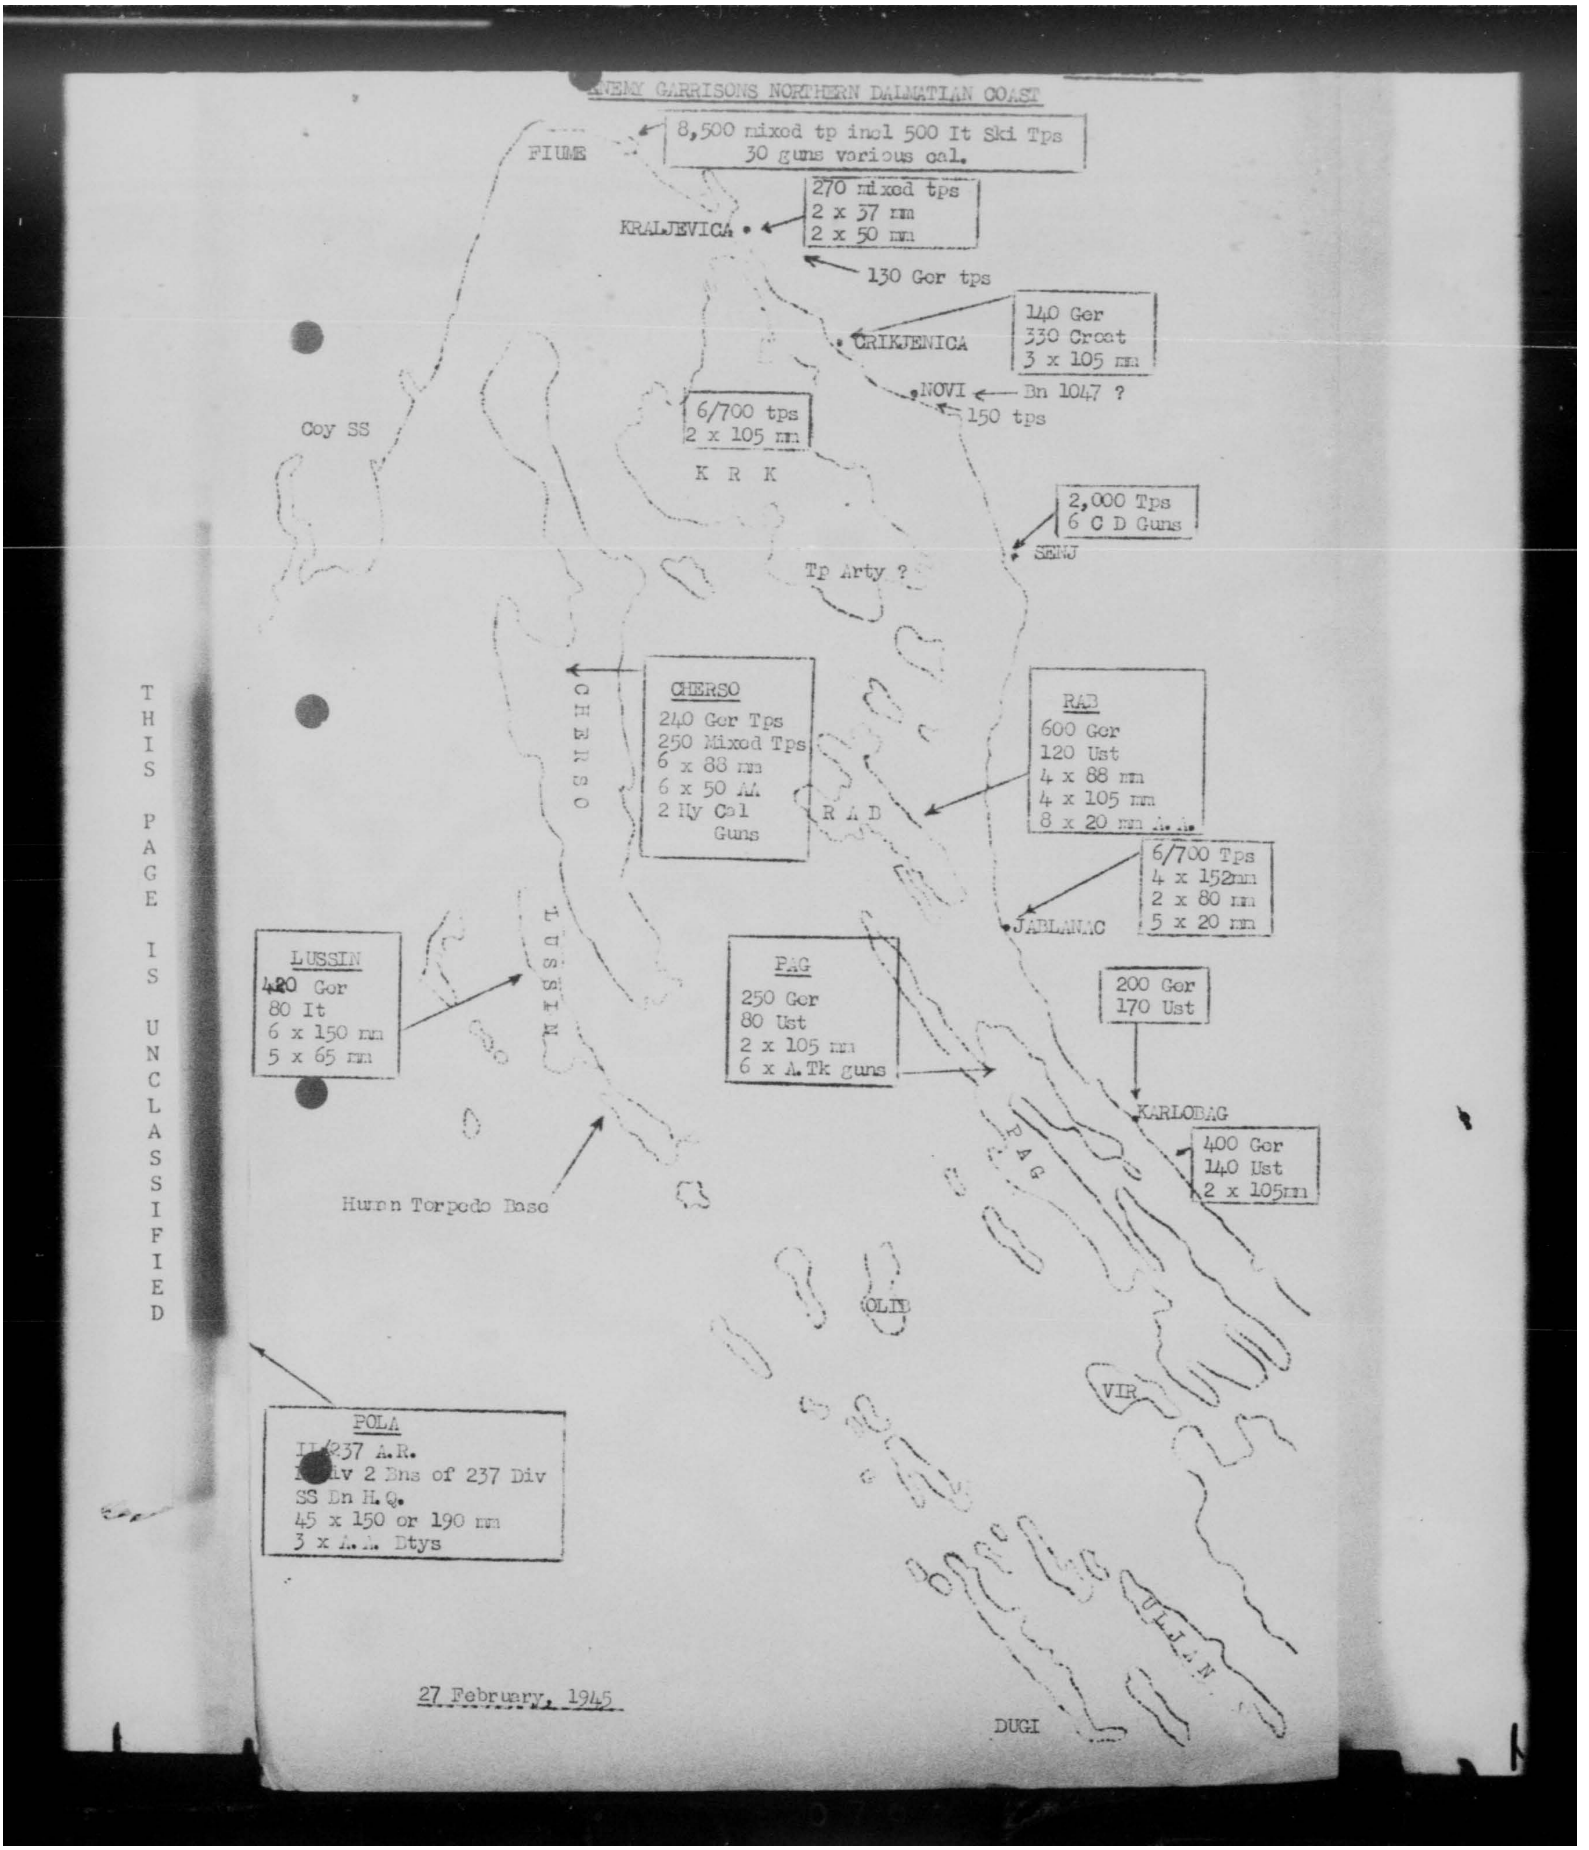
.....military wagons....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

nilitary wagons in the latter port on 23 Feb. Only one schooner and a supply barge are known to have sailed between GENOA and SAVONA during the past week, but it is probable that two small coasters which sailed from GENOA on 23 Feb were making this run. Small scale E-boat and supply barge activity was noted at SESTRI PONENTE.



In the Northern Adriatic, TRIESTE and POLA were bombed twice and FIUME three times this week, extensive damage being caused to ship yards, harbour installations and shipping. Since these attacks started there has been a noticeable drop in activity of the larger ships. Only two MVs and two small coasters reached TRIESTE from VENICE and PORTO MARGHERA between 20 and 23 Feb since when no departures or arrivals have been noted, whilst POLA, FIUME and ARSA Channel have been virtually inactive since 20 Feb. On the Venetian coast barge activity continues between VENICE and GRADO and South to CHIOGGIA.

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 83

OF 27 FEBRUARY, 1945

(a) This Summary will NOT be distributed below H.Qs of Army Corps. Sidelined passages will not be reproduced without permission of this H.Q.

(b) This Summary will be destroyed within 48 hours of receipt.

-o-o-o-o-o-o-

1. ENEMY SITUATION

The rumours of an imminent German withdrawal from ITALY have continued all last week with a great show of detail but with rather less conviction and there is rather more evidence to show that some at least are German-inspired. The remainder, based on intelligent anticipation of what OKW might be expected to do with the Russians so close to BERLIN and the Western Armies of Liberation so close to COLOGNE, are dying down and the intelligent anticipators are now veering to a conception of ITALY as the granary and, in part, workshop of the Nazi Alpine redoubt. The fact remains that no further formation has followed 16 SS Div out of the country yet and, so far as is known, none has even started. There are at the moment only two German divisions uncommitted, one recently withdrawn from the line, which is not excessive in view of the improvement in the weather, and the Westerly move of 114 Jaeger Div can scarcely be reconciled with any intention to withdraw. The Italian front is still, however, held in greater strength than either its intrinsic importance or Allied capabilities here could warrant and we must be prepared for it to be called on for further contributions to other fronts.

On 8 Army front 42 Jaeger Division is now known to command the whole sector from the GARIB/LDI Isthmus to about ALFONSINE. 162 Turcoman Division has apparently taken over from 114 Jaeger the responsibility of coastwatching in the area North of Lake COMACCHIO. The reshuffle last week gives 362 Div the sector from exclusive ALFONSINE to exclusive LUGO, then 98 Div as far as two kilometres up stream from COTIGNOLA and then 26 Pz Div which has taken over the small sector previously held by 278 Div together with part of 98 Div's previous sector. Both regiments of 26 Pz Div are in the line. The sectors of 4 Para and 90 P.G. Divs remain apparently unchanged but it looks as though 715 Div has been completely relieved, partly by the extension Eastwards of 334 Div's sector and partly by the recommittal of 992 G.R. of 278 Div. It is less likely, therefore, than it seemed last week when 278 Div was being relieved, for no apparent reason, by 26 Pz Div, that the former is to move out of ITALY, while in view of past disappointments it is dangerous to predict the same of 715 Div. There must be some reason for the latter's relief, however, and it must take 278 Div's place as favourite for withdrawal.

In our BELVEDERE attack, after the initial surprise, we had a certain surprise ourselves to identify prisoners from 114 Jaeger Div, although Tac R reports of the previous day prepared us for some new arrival. Prisoners taken on 26 Feb were from 741 Jaeger Regt, all three bns of which have since been identified. It does not appear that their arrival was due to early warning of our impending attack as the first elements started to move on 12 February and, according to prisoners, the division was intended for further West - LIGURIA according to some - and was diverted down the ZOCCA road on arrival at MODENA when news of our attack was received. The Recce Bn has been identified but not 721 Regt which is presumably West of the BELVEDERE area as the divisional Artillery Regiment has been reported by ground sources in the ABETONE area. The arrival of 114 Jaeger Div will allow 232 Div to sidestep Eastwards and take over some of 94 Div's sector, up to inclusive VERGATO according to one report. Also involved

.....in unsuccessful.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in unsuccessful counter-attacks were 4 Alpine Bn and the MITTENWALD Alpine LEHR Bn.

On the French frontier 5 Mtn and 34 Divs are still apparently in position. The Russians claim to have taken prisoners in East PRUSSIA from "a battle group of 34 Div" but we have also had prisoners from 107 G.R. of the division in the area N 7206 on 24 Feb. There is no confirmation, therefore, of reports of a withdrawal of German troops from this sector and reports of the thinning out of 5 Mtn Div in small detachments so as not to arouse suspicion can be explained by the fact that units of the division have been withdrawn to fight Partisans, e.g. in the area between ASTI and ALEXANDRIA as paybooks captured by the Partisans indicate. It is important, however, to keep a close watch on the movements of these divisions as, if the Germans are going to evacuate N.W. ITALY, they will be the first to depart.

2. ENEMY SUPPLIES AND COMMUNICATIONS

With improving weather conditions this week has been a bad one for the enemy's L of C. For the first time in a considerable period total MATAF sorties have averaged over 1,000 a day. Medium bombers have operated every day and both medium and fighter-bombers are operating over an area extending ever deeper into the enemy's rear. The mediums attacked rail bridges just South of the BRENNER Pass and fighters on one day paid a successful visit to the BERCHTESGADEN area. (BERCHTESGADEN is about 250 kilometres roughly due North of VENICE). As a result a very high degree of rail interdiction has been achieved and maintained this week.

The BRENNER railway has been blocked throughout the past seven days for the third and perhaps fourth successive week. Attacks have been extended still further North and as of 25 Feb two bridges were cut at points about 10 and 15 kilometres respectively South of the Pass. There has been some movement on the BRENNER but no rolling stock will have gotten all the way through even by a process of shuttling past breaks in the line as they are repaired. In fact throughout the past week, while the enemy has pushed repairs, they have remained well behind our attacks with the exception of one 24 hour period when the line may have been blocked at only one point.

In N.E. ITALY the degree of interdiction is the highest ever heretofore achieved, and no through traffic has been possible at any time through a zone about 150 kilometres deep. In fact the zone of interdiction in the N.E. would extend 200 kilometres were it not for the fact that, as long suspected, the bridge just North of PADUA has been confirmed by night photos to be "night operational".

Rail activity generally has appeared slight recently on both the BRENNER and N.E. routes owing no doubt to the high degree of rail interdiction. There has been some evidence of continued movement of troops out of ITALY though very little towards the end of the week, and it seems probable that by this time 16 S.S. P.G. Div will have completed its move. Like 356 Inf Div it has taken about three weeks to get out.

No consistently heavy MT movement has been reported North of the PO this week, though on 23 Feb fairly heavy movement was seen in the ROVIGO (G 2712) - PADUA - TREVISO area. PR on two occasions also picked up a fair amount of MT parked at BOLZANO, and night bombers got many explosions out of an MT convoy in the ADIGE Valley North of VERONA; this is to be expected, however, owing to the BRENNER rail interdiction. Night photos of the 25th again confirm that a pontoon bridge across the PO Northeast of FERRARA at POLESELLA (M 2899) is assembled at night; at time of photography (about 2330 hours) 10 MT and 1 motorcycle were proceeding North across the bridge.

Nothing particularly new is noted in the enemy's supply position. Reports continue to be received of a severe coal shortage in Northern ITALY affecting both the railways and industry. A continued MT fuel shortage

.....is indicated.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

is indicated by reports of MT being towed by horses, of troops marching long distances on foot, of 16 S.S. P.G. Div having to buy petrol on the Black Market etc. One report from a usually reliable ground source states that enemy petrol reserves in ITALY are only about 130,000 US gallons which, while extremely small, may well be not far off the mark. Enemy ammunition expenditure has apparently been very low recently as is to be expected on the present scale of fighting. While there is no indication of any real shortages in ITALY further evidence of an overall German shortage of ammunition is found in a Corps order captured in FRANCE dated 1 Feb which states: "The situation on the Eastern Front forces upon us at present an economy of artillery ammunition which may seem unbearable. Especially the consumption of artillery howitzer ammunition must be reduced. The consumption of infantry howitzer ammunition must also be curtailed, although it is not as critical as the above mentioned. The same applies to mortar ammunition. The confidence of the rifleman in his weapons (MG, rifle or carbine) must be strengthened by all means. Sniper activity must be considerably increased".

3. WESTERN FRONT

HITLER, some months ago in a moment of unusual military clarity, pointed out that the great danger of a two front war lay in the fact that substantial forces are likely at any given time to be engaged not in fighting the enemy but in travelling from one front to the other. 6 S.S. Pz Army is a case in point. It was transferred to the East nearly a month ago, but played no part in halting the Russian advance, and now it is missing in the West at a critical moment when armour is in shorter supply than it has ever been.

By the end of last week RUNDSTEDT had three Panzer Divisions out of the line. They were 10 S.S. Pz, Pz Lehr and 11 Pz. No more of 10 S.S. Pz Div has been heard, and it seems likely that it has now left the West altogether. Pz Lehr Division has appeared in the REICHSWALD battle area, and 11 Pz Division moved from the Southern EIFEL up to the DUREN area. The Germans have been making determined efforts to extricate further forces from the line and during the few days preceding the Allied attack enjoyed rather greater success. 11 Pz Div was pulled out from the PRUM area and moved up to DUREN while elements of three battered infantry divisions were withdrawn from the area South of DUREN. This gave RUNDSTEDT by 25 February a mobile reserve of two Panzer and eight Infantry Divisions, of which both the Panzer Divisions have now been committed.

In the South, the Allied pressure in the SAARBRUCKEN area was beginning to tell however and two of the divisions in Army Group G reserve appeared on the First German Army front. These were 245 Inf and 2 Mtn Divisions. The latter had been in Southern ALSACE and with 338 Inf Div, was reported to be moving Northwards. Across the RHINE in Southern ALSACE there are still out of contact, apart from occasional patrol clashes, five other Infantry Divisions.

Meanwhile further North, the departure of 11 Pz Div from the MOSELLE - SAAR triangle had to be paid for. Confronted with our attack, the enemy withdrew rapidly behind the SAAR river. SAARBURG fell without difficulty, but the enemy was unable to prevent us establishing a bridgehead over the SAAR which is now 2 miles deep and four miles wide. Enemy resistance still remains moderate in this area.

In the Southern EIFEL, too, the enemy's resistance has been light. The enemy divisions in this area are now all in an extremely weary state. Most of them have had no rest since the ARDENNES offensive and they have nearly all been engaged in heavy fighting over the past fortnight. Even the arrival of 2 Pz Division from the PRUM sector did not help and there has been evidence of considerable disorganisation in the enemy ranks as we pressed home our attack. Two bridges were captured intact over the PRUM river and the fall of the road junction of DITBURG now seems to be imminent. One of the Infantry Divisions pulled out five days before has been hastily recommitted in this area.

.....The main battle.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The main battle of the week has been in the DÜREN sector where we attacked across the ROER river on a broad front North and South of DÜREN. Considerable progress has been made in this attack and for the first time since last summer there are signs of serious enemy disorganisation. The initial attack was taken by six infantry divisions all of them in their usual place, but as the attack developed, RUNDSTEDT was forced to draw more and more on his scanty reserve. 9 Pz Division which had scarcely extricated itself from the PRÜM sector was thrown in on the second day of the attack and was heavily engaged. I/10 P.G.R. provided a spectacle not seen in the West for long, when the whole Bn surrendered on 24 Feb. Since then 11 Pz Div which had only just arrived from the MERZIG area has been committed, and now 338 Inf Div from Southern ALSACE has been identified. These reinforcements have not been able to prevent an Allied break through. In the direction of COLOGNE, Allied armour operating in five columns on both sides of the AACHEN - COLOGNE Autobahn has reached BLATZHEIM, 15 miles from the HOHENZOLLERN bridge and 3 miles West of the ERFT river. The enemy may well hope to stand on this river, on which defences have long been developed. Further North, on the front North of LINNICH, Allied armour has reached a point four miles from MÜNCHEN - GLADBACH.

On the Canadian Army front the commitment of Pz Lehr Division raised to ten the number of enemy divisions engaged in the REICHSWALD battle. They present a formidable array for four are Parachute and three are good quality mobile divisions. However, with the ground to some extent drying, we have been able to make good progress, notably North of GOCH where CALCAR has been taken after heavy fighting. German resistance in the area remains heavy and so far the enemy armour is still fully committed.

RUNDSTEDT's situation is deteriorating rapidly. His lack of infantry in the REICHSWALD sector, which forced him to commit his scanty mobile reserves in that area, may cost him dear; for he can at present reckon only four somewhat doubtful Infantry Divisions and no armour at all amongst his reserves. And this, when in the really crucial sector of the front the Allies are advancing faster than they have ever done; when strong forces of his own are still fully engaged in the REICHSWALD battle; and when he is losing in prisoners alone about 3,000 men per day. It took us nearly a month of bitter costly fighting to cover the 15 miles from AACHEN to the ROER river; in three days now we have crossed one major river obstacle and gained seven miles. The road to COLOGNE was never likely to be an easy one, and there are still the defences of the ERFT to overcome, but it is becoming every day a shorter one, and RUNDSTEDT may soon be hard put to it to retain his position West of the RHINE.

4. EASTERN FRONT

Apart from the sharp battles in the area of the NEISSE river North of GÖRLITZ, there were signs last week that the great battles of the winter were over. The Soviet offensive was six weeks old on 26 February and as in the fifth week of last summer's offensive, seemed to have passed its peak. By 23 July last year, five weeks after the offensive started, the deepest Russian penetrations into POLAND had been made, and thereafter Soviet operations were primarily concerned with cleaning up the flanks, securing bridgeheads and preparing for the next major move. (Incidentally, this took place exactly four weeks later, but on a wholly different sector when the Russians attacked towards GALATZ). In East PRUSSIA last week, ROKOSSOVSKY captured ZINTEN, 18 miles South of KÖNIGSBERG, and further reduced the German East Prussian pocket by advancing across the main WORMDITT - KÖNIGSBERG road. In SAMLAND he was less successful and German counter-attacks in an Easterly direction seem to have reestablished land contact between KÖNIGSBERG and PILLAU.

In N.W. POLAND, despite an initially bitter resistance put up by the enemy along the front between encircled GRUDZIADZ and STARGARD,

.....considerable Russian.....

THIS PAGE IS UNCLASSIFIED

0770

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

considerable Russian progress has been made. ROKOSSOVSKY has been able to achieve a deep breakthrough in the direction of the Baltic coast and has captured the road and rail junction of BUBLITZ, about 25 miles from the coast, thereby threatening to split in two the enemy forces in the area between STETTIN and DANZIG. This move has incidentally done much to eliminate the danger to the long flank of the Russian Central Group of Armies.

Opposite BERLIN, ZHUKOV seems prepared to wait and build up for the bitter 38 miles which he must traverse to the REICH capital. Neither side leaves much doubt of Soviet preparations in this sector. If MOSCOW talks of thousands of guns and fleets of aircraft, the enemy is no less loth to concede "two huge tank armies preparing for the forthcoming assault on BERLIN". But this battle has not yet started, and a lull has fallen with the issue of the Soviet bridgeheads over the ODER still not clear; for the Germans do not claim their complete elimination, nor the Russians their very existence. Behind the front, however, POZNAN fell at last to ZHUKOV during the week.

On the First Ukrainian front, the battle for the NEISSE crossings has been bitter. Here again the Germans admit Soviet bridgeheads, while MOSCOW maintains its sphinx-like silence. Much is at stake in these operations. KONIEV's forces have maintained the impetus of their attack longer in the present offensive than any other of the Army Groups. Neither the ODER nor BOBER rivers checked them for long, and once across the NEISSE in strength only the lesser barrier of the SPREE river would stand between them and DRESDEN on the ELBE. Hence the desperate battles which have been in progress in the approaches to GUBEN and FORST, and the comparative slowness of KONIEV's progress. Behind the front the battle for BRESLAU is on, and the exhausting, costly, block by block reduction which characterised the BUDAPEST battle is apparently to be repeated. GLOGAU, too, has been encircled and may prove an additional drag on KONIEV's progress.

Further South there is little to report. The troublesome German bridgehead on the East bank of the ODER near GLEIWITZ has not yet been eliminated, although German reports of Russian attacks in the general area of RATIBOR suggest that KONIEV is continuing his efforts to eliminate this bridgehead.

There has been little interesting news of enemy dispositions this week. The bulk of 7 Pz Division seems to have been destroyed in the battle for ELBING, while the Russians report the presence of a battle group of 34 Infantry Division in East PRUSSIA. There is no confirmation, however, of this identification, and as prisoners have been taken this week from 34 Division on the Alpine front, the report looks doubtful; possibly a few diverted drafts have been encountered. Further evidence confirms that HIMMLER is commanding the more Northerly of the two Army Groups on the Central sector, as his Headquarters was at DEUTSCH KRONE on Jan 27.

HUNGARY

North of the DANUBE, the German operations to eliminate the Russian bridgehead over the HRON river have achieved their object, and the Soviets are now back on the East bank of the river from KOZAROVCE, North of LEVICE, down to the DANUBE. A startling identification was reported here last week. On 22 February the Rumanian General Staff, a normally reliable source, reported the identification of advanced units of 1 and 12 SS Pz Divs in the HRON river sector. These belong to I S.S. Pz Corps of 6 S.S. Pz Army. Whether the whole of 6 S.S. Pz Army is in HUNGARY or not, and if so, what its rôle is, we do not know. Prior to the Rumanian report, there had been some very slight indications that the Army was bound for the Southern and not, as had been expected, for the Central sector. A prisoner on the Western front said that he had heard AUSTRIA mentioned as the Army's destination, while another report has mentioned the HITLER Division as being in HUNGARY - probably a reference

....either to.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

either to 1 S.S. Pz Div or to the Führer Escort Brigade of 6 S.S. Pz Army. Moreover there has been no satisfactory explanation for the heavy loadings of the GYOR marshalling yards seen a fortnight ago. There seems to be thus a prima facie case for placing 6 S.S. Pz Army in the AUSTRIA - Western HUNGARY area. Whether it has come as a replacement for armour withdrawn from HUNGARY to the Central sector or whether it is to have an offensive rôle is at present only a matter for speculation. The identifications on the HRON river suggest that even that limited German operation was beyond the resources of the existing enemy forces, and that 6 S.S. Pz Army had to be drawn upon for assistance. At this stage the holding of Western HUNGARY may well take a high priority in the German strategic plan. Considerations affecting this are no doubt the oil fields of S.W. HUNGARY, and the industrial areas of Eastern AUSTRIA including the a/c factories of GRAZ and WIENER NEUSTADT.

YUGOSLAVIA

The main news in YUGOSLAVIA comes from the SREM - DRAVA front, where there seems to have been a considerable thinning out in the enemy garrison. Important and surprising Partisan successes have been reported in the general area of the old BARCS bridgehead. The towns of VOCIN, HUM, PIVNICA, DARUVAR and SUHO POLJE have all been recaptured, thus largely neutralising the recent enemy gains. Immediately after the BARCS operation the enemy had a strong force of some five divisions in this area and it is quite inconceivable that the Partisans could have achieved the success they have unless a considerable thinning out had taken place. Heavy Westerly movement from VIROVITICA towards VARAZDIN has been reported, which suggests that some of the enemy forces between the DRAVA and SAVA may be about to leave the area of Army Group E. The effect this will have on the operations further South may be considerable. An early withdrawal from SARAJEVO itself seems inevitable, and H.Q. 21 Mtn Corps has already left for the North. How far the withdrawal will then go is not clear. If the SREM is to be abandoned, a halt short of the BALATON - SENJ line seems improbable. But this will probably mean the abandonment of the Hungarian oil, and is unlikely to appeal to the enemy. In present circumstances he will certainly prefer to cling to the SREM which in turn implies retention of the ZAGREB - DROD - VINKOVCI railway. The line of the SAVA South of this railway will bring the Partisans too close to it for comfort, so it is conceivable that the enemy may be planning to hold a line somewhere South of the river in sufficient depth to break up any Partisan attempt to cross it and threaten his main L of C.

NORTHERN ADRIATIC COAST

At Appendix 'B' is a sketch of enemy dispositions on the Northern Dalmatian Coast and Islands as known to date. The enemy, no doubt appreciating that the possession of KRK, CHERSO and RAB Islands would be a necessary preliminary to an Allied invasion of Northern YUGOSLAVIA, has recently shown an increased interest in the area. Garrisons have been strengthened, and defence works initiated or completed on all the most important islands as well as on the mainland.

The over-all enemy plan appears to be firstly to hold POLA as a fortress, thus denying us the use of the port, and secondly to have sufficient forces on the islands to prevent or hinder Allied landing attempts and to gain time to take counter-measures.

Not surprisingly FIUME and TRIESTE appear to be major strong points in the defence scheme. Besides their value as ports to be denied to the Allies, the system of strong points around the ports completes the VENA Mountain defence line across the neck of the Istrian Peninsula. To ensure sufficient forces for a counter-attack rôle on the islands and to prevent the fortress of FIUME being outflanked from the South, garrisons of varying strength have been placed between FIUME and KARLOBAG. These garrisons are situated in the small harbours on the mainland which have been turned into miniature fortresses. The bulk of these coastal garrisons

APPENDIX 'A' TO 15 ARMY GROUP
INTELLIGENCE SUMMARY NO. 83
OF 27 FEBRUARY, 45

RAILWAYS

THE BRENNER

The BRENNER railway has remained closed to through traffic throughout the week. Though on 21 Feb the line was blocked at only one point (LAVIS Viaduct and diversion just North of TRENTO) by the following day there were three blocks and as of 26 Feb the line was out at seven points, of which two were broken bridges and one a severely cratered rail fill. As was the case last week, the most important development on the BRENNER has been the further extension Northward of medium-bomber attacks. Two bridges about 10 and 15 kilometres South of the BRENNER Pass respectively, which have been attacked several times, were last seen as down on 25th and are very probably still out. This deepens the interdiction of the BRENNER by about 30 kilometres which means that the zone of interdiction now extends Northwards from VERONA about 200 rail kilometres. Up until about ten days ago the line had not been cut, except on very rare occasions by heavy bombers, further North than about 125 rail kilometres from VERONA. The fact that these bridges are North of the point where the FORTEZZA (W 1902) - DOBBIACO (B 6996) - SPITTAL (X 6101) line joins the BRENNER, may divert considerable traffic to this secondary East-West route, a possibility supported by fighter-bomber reports of large numbers of wagons on the line on the 26th; however, these reports have yet to be confirmed by PR and in fact are considered somewhat exaggerated.

The enemy has effected repairs on the BRENNER, but he has been unable this week to keep up with our attacks. However, while it has been impossible throughout the week to get trains all the way through, some movement has been noted along the Southern portion of the line between VERONA and BOLZANO. This activity has consisted for the most part of turnover in yards and sidings varying from only three or four wagons up to over 100 in some of the larger stations.

Indications of troop movements have also been noted on the BRENNER. A total of five, possibly six, military train lengths have been seen on the line during the past seven days, two of which were North of BOLZANO, one being loaded with either motor or horse-drawn transport. Other evidence of moderate troop movement was seen at VIPITENO (about 10 kilometres South of the Pass) where five flats loaded with possible MT initially reported on the 23rd had departed by the 25th. In addition at a small station just South of BRESSANONE about ten flats loaded with MT or AFVs were gone on the 25th having been first seen two days previously.

Many flak wagons have been noted along the entire route, although it is difficult to say whether there has been an increase since last week or more have been observed simply owing to clearer and more extensive PR. It is of interest to note that these flak wagons initially appeared in substantial numbers both on the BRENNER and in the N.E. when the enemy began to move troops out of ITALY.

NORTH EAST ITALY

In the N.E. a higher degree of interdiction has existed over the past seven days than has ever heretofore been the case. All routes from the PADUA area N.E. across the frontier have been continuously blocked at four or more points. The most important development in the N.E. is the heavy interdiction on the TARVISIO frontier route running North from UDINE which, at least up till now, has been by far the most active of the three N.E. frontier routes. This line has been cut all week and by not later than 23 Feb four bridges were down over a stretch of line 20 kilometres long about half way between UDINE and TARVISIO. However, at the opposite end of the N.E. zone of interdiction there is a leak in the BRENTA river line of interdiction which is just East of the line VICENZA - PADUA. Photos taken at 2100 hours on

.....the night of.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the night of the 25th confirm what has recently been reported by ground sources and long suspected from day PR, namely that the rail bridge immediately North of PADUA on the main PADUA - CASTELFRANCO VENETO railway is "night operational". At that time the span continually missing on day photos, was seen to be in place and the bridge open to single line traffic; by 1300 hours on the following day the span had been removed. This definitely indicates rail movement between the PO Valley and the PADUA - TREVISO area. PR confirmation is still looking on the other possible night-operational bridges in this area, namely the bridge just East of VICENZA at G 2373 where only a 12 foot gap has long been seen on day photos.

Rail traffic in the North East along the two Southerly routes between UDINE and the PADUA - VICENZA area has remained almost wholly stagnant and the main TREVISO - UDINE line has shown a marked decrease in activity, undoubtedly owing to the high state of interdiction recently attained along this route. Almost no movement has been noted since 20 Feb between TREVISO and CASARSA (about 30 kilometres West of UDINE), and so far as troop movements are concerned only one empty possible military train length has been seen on this stretch during the week. Further East between CASARSA and UDINE, while a military train length first reported on 17 Feb had left by the 21st, two empty military train lengths initially seen on the 21st were still in the same spot four days later. However at UDINE itself the yards have shown considerable activity. In view of the military train lengths seen here (a total of five was picked up during the week) it seems likely that at least some troop movement has been taking place with troops presumably loading somewhere along the line West of UDINE, and East of CASARSA. Other evidence of troop movement has been observed along the now heavily interdicted UDINE - TARVISIO frontier line. Two empty military train lengths were reported by PR South of the belt of interdiction between CREMONA (C 3344) and PONTEDDA (C 4930), while two more were seen to the North thereof. Between 22 and 25 Feb activity was noted at stations South of PONTEDDA but PR of the 26th showed no change at all since the previous day, and it seems probable that in as much as military train lengths have appeared on both sides of this belt of interdiction that transhipment is probably going on around these cuts. While this transhipment point is only about 75 rail kilometres from the CASARSA area, which is the most Westerly point at which troops moving towards UDINE could reload on to trains, it may well be that despite the delays of loading and reloading on to trains troops and materiel are nevertheless moved by rail over this comparatively short stretch owing to inadequate supplies of MT fuel.

NORTH WEST ITALY AND PO VALLEY

In the North West no unusual rail activity has been noted though moves are rumoured by ground sources. Since 21 Feb traffic between MILAN and VERONA has been blocked on the main line and also on the BERGAMO loop line. The secondary line to the South nearer the PO has, however, been open and through trains can reach VERONA from MILAN by way of CREMONA and MANTUA. Through traffic is still possible between TURIN, MILAN and GENOA, and in fact through trains can move all the way from TURIN almost to BOLOGNA. Several lines are also open from the VERONA area South to the BOLOGNA area with the exception of the PO river crossings. Troops in fact, have been recently reported to load on trains at points not far North of the PO and rail lines South of the river are also still active. The only important development on the PO itself is that more detailed study of photos has shown the important bridge at PIACENZA to have been impassable for some time, though by this time it may again be open. Unless PIACENZA bridge is in fact open, there is only one rail bridge now operating over the PO, namely near CASALE MONFERRATO at J 643322.

SHIPPING

In the Gulf of GENOA two KT ships and four F-boats are still plying between GENOA and SPEZIA. One KT ship was seen unloading into

.....military wagons.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

military wagons in the latter part on 23 Feb. Only one schooner and a supply barge are known to have sailed between GENOA and SAVONA during the past week, but it is probable that two small coasters which sailed from GENOA on 23 Feb were making this run. Small scale E-boat and supply barge activity was noted at SESTRI PONENTE.

In the Northern Adriatic, TRIESTE and POLA were bombed twice and FIUME three times this week, extensive damage being caused to ship yards, harbour installations and shipping. Since these attacks started there has been a noticeable drop in activity of the larger ships. Only two MVs and two small coasters reached TRIESTE from VENICE and PORTO MARGHERA between 20 and 23 Feb since when no departures or arrivals have been noted, whilst POLA, FIUME and ARSA Channel have been virtually inactive since 20 Feb. On the Venetian coast barge activity continues between VENICE and GRADO and South to CHIOGGIA.

-o-o-o-o-o-o-

1. ENEMY SITUATION

Enemy regrouping this week has been forced by our own action for the first time since January and the extent of his reaction to our attack in the CASTEL D'AIANO sector shows a certain nervousness about our intentions. The capture of the M. BELVEDERE feature and the ridge running N.E. from there to M. DELLA SPE represents a considerable territorial advantage to the Allies but the possession of this ground is still rather a long-term threat to the enemy's Appennine positions and an enemy who was thinking of a withdrawal from that position within, say, a month would scarcely have defended it with such stubbornness or counter-attacked with such violence or brought in two fresh divisions from a dwindling reserve. It looks as though there has been no change in the policy of resisting on the present line.

On 3 and 4 March Italian troops on our extreme right flank put in a limited attack to clear up some enemy positions on the Southern part of the GARIBALDI Isthmus. The operation was very successful and brought in 200 odd prisoners not only from 142 Fusilier Bn but also from 162 Division, confirming the information from prisoners of 114 Div that 162 Div had relieved them in this area. Both 303 and 314 G.R. were identified and prisoners say that 329 G.R. is also in the same area though it must have arrived there rather late since about 30 deserters came into our lines in the area L 2704 on 5 Army front having deserted on 22 Feb. 162 Div does not seem to have improved much in quality and Turcomans still represent about 60% of its strength. This was the main event on 8 Army front, apart from some bickering for the Eastern flood bank of the SENIO in 98 Div sector. We have, however, cleared up the enemy's order of battle in the area South of IMOLA; 278 Div may, as suggested last week, have taken over the Western part of 715 Div's former sector but it certainly also relieved 90 P.G. Division. Prisoners from 992 and 993 G.R. have been taken in the former area of 200 and 361 P.G.R. respectively. (Actually 4 Para Div has taken over a battalion's worth of 200 P.G.R's former sector and handed over a battalion sector on its left flank to 26 Pz Div). 90 P.G. Div appears to be in the BOLOGNA area, presumably as Central mobile reserve, a rôle in which it is all the more needed as 29 P.G. has been committed on IV Corps front.

The second phase of our attack S.W. of BOLOGNA opened on 3 March with an advance N.E. from M. TORRACCIA which once more seems to have caught the enemy in the middle of a relief. This time it was 721 Regt which was coming in and it lost over 500 prisoners, including the Bn H.Q. of III Bn, in fairly quick time. All three regiments of 232 Div were also identified and it appears that II Bn 1043, which had been taken out of the line in a weakened state to absorb reinforcements was rushed back in again. Our advance on 4 March continued with the capture of M. GRANDE D'AIANO, M. BACUCCO and M. della CROCE and the enemy clearly decided that a more powerful reinforcement was necessary. On 4 March heavier MT movement announced the

.....arrival of a .....

THIS PAGE IS UNCLASSIFIED

0778

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

arrival of a motorised formation and on 5 March prisoners were taken from four bns of 29 P.G. Div, representing both Panzer Grenadier Regiments. They appear to have started moving off late on the evening of 3 March from S. GIOVANNI (L 7765) and came straight into action. Both regiments were committed in the area of CASTEL D'ALANO (L 6025) with 15 P.G.R. East and 71 P.G.R. West. The Tank Bn seems to have preceded them since two Mk IV tanks were claimed knocked out on 26 Feb and two more on 5 March; there is a possibility, however, that one or other of these reports may refer to the Assault Guns of 914 Assault Gun Bde which is known to have been in support in this area. The result is that both 114 Jaeger and 232 Divisions have suffered fairly heavily in prisoners and casualties and must be considered as weakened in efficiency and 29 P.G. Div may have to remain in the area for some time to come even if the enemy were to appreciate that a large-scale renewal of the attack there is unlikely.

Although rail communications between ITALY and the rapidly dwindling Great German REICH remain frantically difficult there is evidence that more troops are attempting the passage of the BRENNER. On 2 March PR for the first time since 21 Feb showed a definite movement of military trains between VERONA and the Pass; this was continued on 3 and 4 March. This can scarcely still be 16 S.S. and must be the beginning of another troop movement. There are fewer candidates for this than usual and practically speaking the only likely starter is 715 Div which has been out of the line since about 25 Feb. It is not the division which one would have expected to be sent to a more vital front (nor was 356 Div) but all the other divisions in ITALY are firmly located.

2. ENEMY SUPPLIES AND COMMUNICATIONS

Though weather has somewhat restricted air operations this week no through rail traffic has been possible between ITALY and the REICH over either the BRENNER or N.E. rail routes. In fact early in the week interdiction on the BRENNER was higher than at any time heretofore. However, toward the end of the week interdiction on both the BRENNER and N.E. rail routes fell off. On 28 Feb the BRENNER was cut at 10 points through a 200 kilometre zone extending from just North of VERONA to just South of the BRENNER Pass. The only new target of major significance on the BRENNER is the bridge about 5 kilometres North of VERONA which was hit on 28 Feb and has been out all week thereby isolating the BRENNER traffic from important marshalling yards at VERONA. However, repairs are being pushed here and the bridge may soon be passable. In the N.E. the three frontier routes to the East of UDINE continue blocked, with the heretofore most important of the three, the UDINE-TARVISIO line, blocked at five damaged bridges. On the other hand between UDINE and PADUA the situation is not quite so straightforward. All lines have remained blocked with the possible exception of the main PADUA-UDINE route where the prolific use of apparently night operational bridges greatly complicates the rail state picture.

Movement of troops out of ITALY by rail continues this week, notably on the BRENNER. From a logistical point of view it seems scarcely possible that this can still involve 16 S.S. P.G. Div which should have cleared the Italian frontier by not later than 1 or 2 March. Something else must therefore be on the way out. It is too early to say whether or not a major formation is involved in movement currently observed, but indications are that it is.

Reports on road movement North of the PO have been somewhat sporadic but on at least one night fairly heavy movement was picked up in the N.E. Heavy movement South of the PO has been seen, involving no doubt the shift of 114 and 29 Divs.

Some increase in the number of ground and PW reports of enemy shortages in fuel and ammunition has been noted recently. It is not thought that the enemy is threatened with any shortages so far as current supply demands are concerned, but that with the loss of important industrial areas in the West and East, and interdiction of the railways and troop movement here in ITALY making for transport difficulties and the consumption of precious

....MT fuel, it....

THIS PAGE IS UNCLASSIFIED

0779

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

MT fuel, it may well be that the enemy has been forced to cut ammunition expenditure and ordinary fuel consumption to the bone in order to conserve for the day when a heavy battle must be fought.

3. WESTERN FRONT

The battle of the COLOGNE plain is nearly over with 15 and 1 Para Armies defeated and withdrawing as best they can to the safety of the East bank of the RHINE. The enemy disorganisation apparent last week became even more pronounced as the battle developed (a measure of it is the prisoner total of 9,200 in 24 hours on 27 Feb). With inadequate forces and even these mostly of doubtful quality the enemy has not since the start been able to make any effective stand, while in the area between MÜNCHEN GLADBACH and the RHINE his front collapsed completely. The four divisions hastily brought down from the HOCHWALD sector to stem the tide were certainly too little and probably too late to be of much avail. Nor did the enemy fight East of DÜREN with the tenacity to be expected of the rather better quality troops facing us there. 9 Pz Div proved a broken reed, and made little effort to halt us on the fortified ERFT line; 11 Pz and 3 P.G. Divs fighting on the COLOGNE Autobahn made a better showing but were unable to make any effective stand on the perimeter of COLOGNE, the Western part of which is now all in our hands.

The grave shortage of troops has become more and more apparent in every move RUNDSTEDT has made this week. In the South he has taken a chance and is making heavy inroads into the ranks of 19 Army across the RHINE South of STRASBOURG. Two of its divisions have been sent to the COLOGNE sector, and a third has moved up to the SAAR to relieve 6 S.S. Mtn Div, which is probably being sent to plug the hole torn open at TRIER. This leaves four weary infantry divisions to hold 19 Army's 90 mile front. These moves seem to represent very nearly the maximum contribution Army Group G can make to the sore need of the other Army Groups, for much more thinning out would let us into the SAAR basin, a disaster very nearly as bad as that which has already taken place further North.

In the TRIER-EIFEL sector the situation is as bad. On paper there is a fair number of infantry divisions in this area - adequate perhaps to hold us if they had been up to strength. But four have already been reduced to remnants, all are weary and none seem to have any early prospect of relief from the battle apart from that which extinction may bring. Certainly not one has been able to extricate itself this week to help the hard pressed defenders of the COLOGNE Plain. TRIER fell after a brief struggle and we took a bridge intact over the MOSELLE there. Its loss opened a dangerous gap in the front covering the MOSELLE Valley which has been exploited by the U.S. 3rd Army in the direction of COBLENZ. Further North BITBURG and SCHLEIDEN are both in our hands and we are now only 6 miles from BONN.

In the COLOGNE Plain a number of reinforcements have been making their tardy appearance. Elements of 189 and 338 Inf Divs and 106 Pz Bde from 19 Army have been contacted between DÜREN and COLOGNE, and the trend of rail movement suggests that the remainder of these formations is coming up and taking position on the East bank of the RHINE near COLOGNE, which we have now entered. The enemy has blown all the RHINE bridges as far North as WESEL, and we are closing up to the RHINE all the way between COLOGNE and WESEL. Enemy resistance has been generally light all week, although German armour showed some fight on the high ground of the VORGEBIRGE earlier in the week. Further North however the enemy situation became almost a rout. MÜNCHEN GLADBACH, KREFELD, URDINGEN and NEUSS were abandoned after little more than sharp skirmishes, although mopping up of isolated enemy pockets has taken some time. So rapid was our advance that one bridge over the RHINE was found intact when we entered WORRINGEN South of DÜSSELDORF.

.....However even with.....

THIS PAGE IS UNCLASSIFIED

0780

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

However even with a disorganised enemy, an intact RHINE bridge was too much to hope for, and it was not to be. The bridge went up before we were able to cross. It was not until reinforcements taken from the Canadian Army front appeared about 1 March that there was any attempt at a stand by the enemy North of KREFELD. Pz Lehr Div was the first to appear and was followed by 2 Para, 15 P.G. and 84 Inf Divs on 3 March. These, according to a captured map, hoped to hold a line from the RHINE through KREFELD to KEMPEN. They failed in this, but their arrival did at least help to re-establish some sort of a coherent front now consisting of a rapidly diminishing bridgehead covering the crossing at WESEL. With their move Southwards, only six divisions were left on the Canadian front and enemy resistance weakened considerably: contact was established between 1 Canadian Army and the U.S. 9 Army South of GELDERN, and the forces of 1 Para Army South of NIJMEGEN are now withdrawing across the RHINE via the WESEL crossing.

It has been a very bad week for RUNDSTEDT; almost a decisive week. For if he could not hold us with his inadequate but organised force before the attack what prospects has he now with his Armies in confusion and having suffered probably 100,000 casualties in a fortnight of whom about 60,000 are prisoners? From COBLENZ Northwards he may soon be able to disengage his divisions temporarily, but he cannot expect to do so for long and the next attack may be even heavier than this one. He must by now be reaching the stage where the element of desperation is entering into his strategy. For the first time there are signs of a serious decline in the morale of his troops - a tendency to surrender too early or at best to offer only feeble resistance when surrounded. Only the Panzers and Parachutists seem relatively unaffected, and they will surely fight on to the last, as too will RUNDSTEDT for he has no other choice. But there is no future in it now, nothing but final defeat, or at best the slender hope that some unexpected salvation may appear from the barren womb of time.

4. EASTERN FRONT

GERMANY, CZECHOSLOVAKIA and HUNGARY

The attack launched by the Second White Russian Army Group in the direction of the Baltic coast has achieved spectacular success. Pushing on from BIELITZ, ROKOSSOVSKY's forces on 4 March reached the coast in the area West of KOLBERG thus cutting off the German forces in the Polish Corridor and DANZIG from those in the STETTIN area. It is not clear how firm this wedge is as yet, but to judge by Soviet announcements it appears that so far only light forces have reached the coast. The enemy put up very fierce resistance all through the week making the most of the flooded Pomeranian lake and forest terrain. 4 S.S. P.G. Div which left CZECHOSLOVAKIA about three weeks ago was heavily engaged at KOESLIN; so was a new S.S. Pz Division HOLSTEIN which has not previously been identified. The attack was taken up by the 1st White Russian Army Group operating on ROKOSSOVSKY's left which captured the two junction towns of STARGARD and NAUGARD. The former lies on the left bank of the IHNA river 22 miles East of STETTIN and is the junction of three main railways.

This operation was a necessary prelude to any large scale advance on the First White Russian front towards BERLIN. ZHUKOV's right flank is now very much more secure than before and the prospects of a successful German counter-attack from POMERANIA seem negligible. STETTIN itself stands in grave danger and if ROKOSSOVSKY can now clear up the enemy forces remaining in N.E. POMERANIA and DANZIG, his Army Group too should be in a position to play a leading part in the main assault on BERLIN. Nevertheless the operation was the end of an old battle: not the start of a new. It was the culmination of the Soviet winter offensive which has cost the enemy up to ¾ million permanent casualties. ROKOSSOVSKY has now done for ZHUKOV's right flank what KONIEV in the South has almost but not quite achieved for the left flank; he has secured for it the protection of a natural defensive barrier.

....Meanwhile along the.....

THIS PAGE IS DECLASSIFIED IAW EO 13526

set in affecting even the battle for BRESLAU, which the Russians have not mentioned in their communiqué for the past four days. Amongst the identifications reported by the Russian General Staff this week are 2 and 9 S.S. Pz Divs of 6 S.S. Pz Army and 10 S.S. Pz Div. No location other than that of the Central sector is given. 2 and 9 SS Pz Divs belong to II S.S. Pz Corps which had previously been contacted on the Eastern front this year, although I SS Pz Corps has already been in action in HUNGARY. 10 S.S. Pz Div was on the Western Front up to about three weeks ago and was believed to have left the East, but this is the first confirmation received of its transfer.

On the 4th Ukrainian Front, PETROV's forces have been engaged in heavy fighting in the sector ZVOLEN - BANSKA STIAVNICA (usually referred to as the ALTSOHL - SCHEMNITZ area in the German communiqués). Limited progress has been made but the enemy appears to be fighting hard, and both ZVOLEN and BANSKA STIAVNICA are still in his hands.

There has been no change in the situation in HUNGARY.

YUGOSLAVIA

The heavy Westward movement from VIROVITICA to VARAZDIN mentioned in last week's Summary has been followed up by a reliable report that 11 G.F and 297 Inf Divs have crossed the DRAVA into HUNGARY South of NAGYKANISZA. The only independent confirmation of this is an air report of heavy troop concentrations East of ZAGREB which by 1 March appeared to be moving Northeastwards towards VARAZDIN. Meanwhile the Partisans continue to gain successes North of the PAPUK Mountains and it is evident that this area is now comparatively thinly held. One reason for this apart from the move of 297 and 11 G.A.F. Divisions lies in the deterioration of the enemy situation further South. Two serious threats have now developed against the withdrawal route of 21 Mtn Corps up the SARAJEVO - BROD L of C. The Partisans who captured TRAVNIK have advanced Eastwards and cut the main road at BUSOVACA while to the North a Partisan force from the TUZLA area is advancing towards DOBOJ from which it is only 5 Kms distant. To meet this threat the ubiquitous rescuer of isolated formations, 7 SS Mtn Div, has had to despatch post haste a force from the PAPUK Mountains, elements of which have arrived to reinforce DOBOJ while further elements had pushed South by 4 March and were in the ZENICA area. It is likely that the enemy will have no little difficulty in clearing the main road, for 21 Mtn Corps is in a depleted condition and the Partisans are in some strength in this area. Last week they captured one of their biggest prizes of the war in the person of Colonel EBERLEIN, one time Police Chief at MUNICH and the commander in GREECE of a Battle Group bearing his name. He was taken near ZENICA.

NORTH DALMATIAN ISLANDS

In the North Dalmatian Islands there has been some activity in the past week. On 24 February Partisans supported by our aircraft and light coastal forces landed on PAG and penetrated to the outskirts of PAG town without opposition. The enemy soon reacted sharply however and landed a force from the mainland about a battalion strong (probably of 392 Div) on the night of 25/26 Feb. As a result the Partisans were forced to withdraw from the island, and the enemy has now followed suit. He continues to show concern however about the whole of this island group. Civilian labour is being impressed for the construction of defence works on both LUSSIN and CHERSO and Naval reinforcements have recently arrived on LUSSIN. On NRK 700 enemy troops landed at the end of February and are engaged in mopping up operations, although their prolonged stay here looks unlikely.

At Appendix 'B' is a chart showing chain of command of the principal formations in Army Group 'F' together with names of commanders and latest reported locations.

APPENDIX 'A' TO H.Q. 15 ARMY GROUP
INTELLIGENCE SUMMARY NO. 84 DATED
6 MARCH, 1945

RAILWAYS

BRENNER

The BRENNER railway has remained heavily interdicted. Continuing the step-up in interdiction achieved towards the end of last week, the line between the Pass and VERONA has been cut at no less than 5 points during the period 27 Feb - 4 March inclusive. What is probably the highest degree of interdiction ever existing on the BRENNER was achieved on 28 Feb at which time the line was cut at ten points from VERONA Northwards approximately 200 kilometres; the North and South limits of this zone of interdiction were two damaged bridges, one about 10 kilometres South of the BRENNER Pass, the other near PARONA about 5 kilometres North of VERONA. (The blocking of the bridge just North of VERONA is a new and important development; aside from adding to the degree of interdiction it also denies BRENNER traffic the use of important marshalling yards at VERONA). With bad flying weather heavily restricting our air effort on 1 and 2 March, and difficult bombing conditions over the BRENNER targets on the 3rd, the degree of interdiction fell off. However, on the 4th the line was still blocked at five points beginning with the bridge just North of VERONA, where repairs were still incomplete, and extending Northward to the bridge near KLESS..NONE (about 40 kilometres South of the BRENNER Pass) which had been cut since 28 Feb when hit by heavy bombers. On 5 March no attacks were made on the BRENNER and PR was very limited but the line undoubtedly was still closed to through traffic, though repair of at least two of the five blocks existing on the previous day are likely to have been effected.

A point of interest in connection with interdiction on the BRENNER is the fact that the bridge near CISMON (B 2505) on the secondary line running North from CASTELFRANCO VENETO to join the BRENNER at TRENTO was seen as passable on 4 March, and on the same day a train was seen moving South at a point not far North of the bridge. A single short span of this bridge has been missing for a long time, at least on day photos, and remained out even though cratered approaches were repaired. The bridge must either have been night operational or maintained as unserviceable in anticipation of a more important future use. The noteworthy feature of the full repair of this bridge is that it was effected at a time when VERONA and its important marshalling yards were isolated from the BRENNER by the blocking of the PARONA bridge just North of VERONA. With the CASTELFRANCO VENETO - TRENTO line opened up by the full repair of CISMON bridge, blocks between VERONA and TRENTO on the BRENNER are effectively by-passed, particularly if the BRENTA river line of interdiction in the VICENZA - PADUA area breaks down, (and as indicated below it has), in which event through traffic becomes possible between the PO Valley and TRENTO.

Although the BRENNER has remained blocked to through traffic all week, a considerable amount of movement has been seen. In addition to movement of rolling stock in general, PR has also revealed a total of at least twelve probable troop trains or troop train lengths during the week. Four of the twelve were almost certainly troop trains being loaded with MT, AFV's and other military equipment whereas another six, while empty, moved during the week. Two of the loaded train lengths were seen about 40 kilometres North of BOLZANO on 4 March, and on the same day a troop train loaded with MT was observed moving North into TRENTO. TRENTO yards and the tracks to the North and South in the vicinity thereof have been exceptionally active showing considerable turnover and much MT activity. On 3 March and again on the 5th loading or unloading of MT seemed to be taking place, possibly in connection with a transhipment. The three empty military train lengths seen at TRENTO had all departed by the end of the week.

....PERI (about 35 rail .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

PERI (about 35 rail kilometres North of VERONA) has been heavily loaded and four troop train lengths were seen in the yards; two empty train lengths seen early in the week had departed by 4 March, on which date two other train lengths were present, one of which was loaded with MT and AFV's. With the bridge about 5 kilometres North of VERONA out all week, PERI may well be a loading point for troops, though movement Northwards from here would have had to have been well timed to get past the bridge at ALA about 15 kilometres to the North. It is true that ALA bridge, frequently attacked and frequently repaired, has been out on all days during the week with the exception of 2 March; however, the attacks this week have on no occasion succeeded in doing more damage than to block the approaches, and PR indicates that these are repaired very rapidly, probably in a matter of hours. For example, on 2 March the bridge and approaches were passable; on the 3rd it was attacked and the approaches cut; on the 4th the approaches were seen as repaired on photos taken at 1130 hours, the bridge was attacked at 1230 hours, and on photos taken at 1400 hours the approaches were again seen as cut. It is obvious therefore that in addition to being passable on 2 March the bridge in at least one instance was open in between attacks made on successive days. The only block throughout the week between PERI and TRENTO has been at the ALA bridge and the fact that the bridge has been open intermittently may account for the unusual amount of activity observed at PERI and TRENTO yards.

NORTH EAST ITALY

In the Northeast interdiction has remained high though the exact situation is somewhat obscure. East of UDINE it is clear that the three frontier routes have remained, as last week, blocked. The POSTUMIA route is cut at BOROVNICA Viaduct (D 2803) where work continues on the diversion first seen under construction over two weeks ago. The FIEDICOLLE line running Eastwards from GORIZIA while not recently photographed is very probably still not open to through traffic as when last seen on 28 Feb BODRES bridge (C 7223) was still heavily damaged. The TARVISIO route is still heavily interdicted with four bridges cut up to 3 March and five since 4 March. While at least two bridges are being repaired it will be some time before this important route can be opened to through traffic.

West of UDINE to the PADUA area the situation is not quite so clear. The two Southerly lines that have been closed to through traffic for so long have remained cut. The enemy has been working hard at repair, but by virtue of attacks made before repairs were complete the interdiction on both routes remains high. The status of the third and most active route in this area, namely that running from PADUA to UDINE via CASTELFRANCO VENETO and/or TREVISO to UDINE, is difficult to assess. There are six bridges on this route, namely from West to East, PADUA North (G 3553) and CITADELLA (G 2373), which are complementary in that they provide mutually by-passing routes, NERVESA (G 6493), SACILE (B 8407), PORDENONE (B 9907) and CASARSA (C 1508). There are rail diversions at all these bridges with the exception of PADUA North, which, however, is a night operational bridge. (The missing span at PADUA North was seen in place on the nights of 25 and 26 Feb, and missing on day photos of the same dates, clearly showing the bridge to be night operational. Subsequent attacks did make this night use of the bridge temporarily impossible, but then the diversion near CITADELLA, which provides an alternative route around PADUA North and where on day photos only a 12-foot gap had long been the sole damage, was opened up). While these points of interdiction appear to have been out most of the week all have been seen as passable at one time or another during the week with the exception of SACILE and PORDENONE. However, a usually very reliable ground source reports that SACILE may be passable at night and there is PR evidence to support this, and PR also strongly indicates that PORDENONE may be night operational. It is just possible that for a brief period through traffic may have been possible between the UDINE and PADUA areas. From the above the ever increasing importance of night operational bridges becomes apparent and a brief photo intelligence summary thereof appears below.

.....In the VICENZA - .....

THIS PAGE IS UNCLASSIFIED

0784

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In the VICENZA - PADUA - CASTELFRANCO VENETO area, five moving trains were seen during the week. In addition to normal activity a considerable number of flats has been seen at small stations just North of PADUA and in view of the numerous interdictions along the three routes to UDINE, it would seem that trains bound for UDINE were being held up or were being assembled there in anticipation of the line to UDINE being opened up. The presence of flats, although they are unloaded, suggests that troop movement might possibly be going on. Further East, little if any movement, as usual, has been seen along the two more Southerly routes. Along the main TREVISO - UDINE line, there has been limited activity, and on this line there has been some indication of rail troop movement though not to the same extent as on the BRENNER. Between CASARSA (about 25 kilometres West of UDINE) and UDINE itself, four empty troop train lengths were seen on 5 March, two of which had been first reported on 27 Feb.

The rail activity picture in the North East on the whole seems to suggest a certain amount of movement into the PADUA-TREVISO area to and from the PO Valley, transhipment from there to a point about 30 kilometres West of UDINE, with reloading and rail movement up the TARVISIO route to just South of the belt of interdiction and a further transhipment around the cuts to a point about 30 kilometres West of TARVISIO from where the line is open across the frontier.

PO VALLEY AND NORTH WEST ITALY

North of the PO the ROMANO bridge (K 622680) on the main MILAN - VERONA line has been repaired but the bridge near CHIARI at K 762686 about 10 kilometres further East lost a span without there being any record of attack. Just to the North PALAZZOLO bridge on the MILAN - BERGAMO (K 6308) - ROVATO (K 8872) loop line is said by a ground source to be night operational. Hence while day photos show through traffic to be impossible between MILAN and VERONA (possible secondary routes between MILAN and the Eastern PO Valley including VERONA are now cut by virtue of blocks at PIZZIGHETTONE (K 609301) and CREMA (K 634508) bridges), this status must be regarded with suspicion. Lines running South to the PO from the VERONA area remain open and active; aside from shifts in rolling stock evident from PR a train was seen on the night of 4 March moving North from OSTIGLIA (on the PO at F 7412). There is also considerable open trackage running South from the VICENZA - PADUA area toward the PO; one route South is blocked at LEGNAGO bridge (F 893258), which for the time being is no longer a probable night operational bridge owing to a recent attack, the main PADUA - FERRARA line is cut at a bridge just North of ROVIGO, and the most Easterly route South remains abandoned. Activity has been seen on the line between ROVIGO and the PO but any movement here is probably directed Northwest from ROVIGO toward VERONA and not along the blocked line running direct to PADUA. POLESELLA (M 2399) is one of the points where activity was noted South of ROVIGO and this is of particular interest in view of the existence of a nearby pontoon bridge across the PO which night PR on two recent occasions has shown to be assembled during the hours of darkness. POLESELLA may be a transhipment point.

Over the PO itself all rail bridges East from BRESSANA BOTTARONE (just South of PAVIA), inclusive, remain cut. To the West of this CASALE MONFERRATO (J 643322) remains open while TORREBERETTI (J 776207) is reported by a ground source as night operational and on the basis of PR is in fact suspect.

South of the PO there has been some increase in the degree of interdiction but bombers report three moving trains in the areas just North and Northeast of BOLOGNA while ground sources report and PR indicates that the line running generally East and West immediately South of the PO is active between PARMA and SUZZARA (F 4406). Through traffic is no longer possible along the main BOLOGNA - PIACENZA line and the PARMA - SPEZIA railway is now cut.

PHOTO INTELLIGENCE SUMMARY - REPORT
ON NIGHT OPERATIONAL BRIDGES

The increased intensity of our attack on enemy rail bridges since the middle of January, has been partially met by an increase in attempted deception in the form of night operational bridges. The term "night operational" is used to include those bridges from which a span or spans are removed to make them appear unserviceable, and which are quickly made serviceable again at night, or at such time as may be desired.

Because of the missing span or spans, these bridges appear to be damaged to our air-crews who unless they are briefed to avoid the fallacy may withhold attack in favour of attacking other obviously serviceable, but possibly less important bridges.

In the last few weeks, the Bomb Damage Section of 3rd Photo Technical Squadron has reported the following bridges as night operational or very probably so : CALCINATO (F 1960), PADUA North (G 3553), TORREBERENTI (J 7720), LEGNAGO (F 8925), CISMON (B 2407), CITTADELLA (G 2373) and NERVESA (G 6493). Other bridges, namely those at SACILE (B 8407) and PORDENONE (9907), are at present under suspicion and are being observed.

The bridge at PADUA North is cited as an example to illustrate the pattern by which a night operational bridge can be recognised. A span, about 50 feet long, was seen to have been removed from the bridge between covers of 31 January and 6 February; there was no evidence of attack. The bridge was immediately regarded with suspicion. A search revealed that a crane, similar to that at CALCINATO, previously confirmed as night operational, was present at the nearby station yard. Subsequent covers showed that the approaches were persistently repaired following attack. Although a certain amount of inactive rolling stock was observed, a single track was always kept open. Activity studies revealed turnover of rolling stock on the lines on either side. Furthermore, the bridge was of the utmost importance, and a damaged span could have been easily repaired in a short time. On the basis of the accumulated evidence, the bridge was reported as night operational. Confirmation was received when a night sortie, flown the 26 February, revealed the span to be in place. Cover of that afternoon, and the following day, revealed the span to be removed.

The pattern by which a night operational bridge reveals itself is so consistently similar as to make its existence readily apparent.

1. It is usually first detected by the removal of a span or spans.

2. Subsequent damage is consistently repaired, although the missing span or spans are not replaced during the day.

3. The bridge is invariably a vital link in a line on which all other bridges are repaired following attack.

4. The spans are the standard girder type used by the enemy for construction and repair of bridges in Northern ITALY. They are of such a length that they can either be set manually or with a crane. In the latter case, the crane is often visible.

5. Although inactive rolling stock is sometimes kept on the approaches to create the impression of a block, at least a single track is kept clear.

6. Activity studies show movement of rolling stock on the lines on either side of the bridge.

It might be anticipated that should the condition of enemy communications continue to deteriorate, the greater will become his tendency

....to utilise....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

to utilise deception in maintaining his serviceable bridges. Because of the engineering requirements of railroad structures, however, it is not thought likely that the method of deception can be varied appreciably from the pattern as described, and any new attempts can be readily detected by photo interpretation.

(SOURCE: Third Photo Group Interpretation Report No. 3DS 101 dated 5 March, 1945)

SHIPPING

PR of the Ligurian ports between 23 Feb and 3 March shows that a steady traffic in coastal shipping is being maintained in the Gulf of GENOA. Three MT ships, a small coaster and a number of F-boats and supply barges have been plying between GENOA and SPEZIA, whilst 2 210' MV, believed to be the DOMINANTE, was seen to be loading in the former harbour on 26th Feb and had reached SPEZIA by 3 March. A ground source report dated 24 Feb stated that troops were being conveyed from SPEZIA to GENOA in "ammunition barges", probably F-boats. SAVONA has also been active, and traffic between this port and GENOA included at least three coasters, two supply barges and two schooners. All other ports on this stretch of coast remain inactive, except for occasional traffic to SESTRI LEVANTE.

Owing, probably, to the severe bombing to which the larger ports were subjected during the third week of Feb, shipping in the Northern Adriatic was confined almost entirely to F-boats, supply barges and other small craft between 23 Feb and 3 March, the only exceptions being the sailing of a hospital ship from TRIESTE to VENICE, and a coaster from ARSA to FIUME. However, two MV's were seen loading at TRIESTE on 27 Feb, and both these vessels, together with a coaster appeared ready to leave on 3 March. Barge activity continues at GRADO and CHIOGGIA and on the inland waterways which connect up the lagoons along the Venetian coast. The building of F-boats continues at MONFALCONE where three were almost ready for loading on 3 March.

-o-o-o-o-o-o-

1. ENEMY SITUATION

There has been very little change in the enemy's dispositions and attitude so far as can be definitely established but there have been various small incidents and pieces of information which suggest that something is going on. What it is exactly is hard to see; on the face of it the enemy's main preoccupation should be to create a larger reserve for the main front than is at present available. The position will no doubt become clearer when the reliefs now apparently in progress are completed.

On 8 Army front 162 Div continues to lose deserters and shows itself to be even more worthless as a fighting formation than in its previous turns in the line. It is only engaged on the very narrow front presented by the isthmus between the lake and the sea but it seems to regard this not so much as a front as a funnel to the comforts of Allied PW camps and, for the Turcomans, eventual repatriation. On the SENIO front the situation is more obscure. 98 Div appears to be extending its sector Southwards to relieve part of 26 Pz Div and is being relieved in turn in its Northernmost sector by 362 Div. This may call for a complementary move South by 42 Jaeger Division, which is feasible, especially if 142 Fus Bn returns from the isthmus. More surprising is the identification of 992 G.R. in TOSSIGNANO; if we believe the deserter both bns are there, having arrived night 10/11 March. There has been a good deal of movement in this area of late though it would be surprising if 278 Div were to take over the whole of 334 Div's sector. Perhaps if the intention is to take out 334 Div 1 Para Div might extend its front Southwards to assist in the relief. It remains to be seen what the result of these moves will be but it looks as though some division or other is going out into reserve, possibly preparatory to leaving the country.

On the Western part of the front the week has been fairly quiet. Recent deserters confirm that the losses inflicted on 114 Jg Div were heavy; 721 Regt in particular, according to them, has now been reorganised as a single battalion. Both it and 232 Div, however, which also suffered severe losses, are still in the line. The position of 29 P.G. Div, on the other hand, is more obscure; the Recce Unit was identified on 7 March but since then we have had no contact with the division. It is reasonable to assume that, as soon as the immediate danger was felt to be over, the enemy would like to pull out the formation to its more natural and useful rôle of mobile reserve. 90 P.G. is, indeed, available in its old area East and Northeast of BOLOGNA but with the improvement in the weather and increasing likelihood of a resumption of the Allied offensive, a second reserve division must appear necessary.

In North East ITALY both 188 Reserve and 237 Divs appear to be taking a greater interest in Northern DALMATIA and elements from both are reported on the islands of the QUARNERO. Otherwise they have changed little; 188 still has its four regiments and must be busy at its primary job of training the young intake. ITALY is now the most favoured site for training in what remains of German-occupied EUROPE.

...2 ENEMY SUPPLIES AND COMMUNICATIONS..

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

Good weather throughout this week has enabled us to keep the railways well interdicted and again no through traffic has been possible on either the BRENNER or N.E. rail routes.

The BRENNER railway has been continuously out South of BOLZANO, the high watermark of the week being 12 March when the line between VERONA and BOLZANO was impassable at fifteen points including four bridge blocks. North of BOLZANO conflicting PR reports make an assessment difficult but one, perhaps two, bridges may have been impassable for several days. However, the enemy continues a strong repair effort and is even attempting to repair the heavily damaged long viaduct near LAVIS (A 7430). Repairs at the VERONA PARONA bridge just North of VERONA were completed this week but it was again knocked out by heavy bombers on the 10th. At no time has the enemy been able to repair as fast as we have destroyed, but the heavy concentration of flak (one third of the total heavy flak in ITALY is disposed along the BRENNER) demands its toll; on one day this week we lost four medium to the BRENNER flak and it is a rare mission that does not return from the BRENNER with at least some aircraft holed. The importance the enemy attaches to this rail route is obvious.

In the N.E. the situation at the end of last week was confused by the probable existence of a number of night operational bridges, and it is possible that for a brief period the enemy were getting trains through to the UDINE area from the PO Valley. This week, however, further attacks have sealed most, if not all, of these possible leaks. Beyond UDINE the three frontier routes remain, as last week, closed to through traffic. In the N.E., and in fact elsewhere in ITALY, with the exception of the BRENNER, there is strong evidence from PR that the enemy may be suffering from a shortage of structural members for the repair of rail bridges. A report on this appears at Appendix 'A'.

Some troop movement by rail out of ITALY has been noted recently on the BRENNER and to a very limited extent in the N.E. While such movement as has been observed has been small, the fact that it continues this week, as last, tends to indicate that a formation of at least divisional strength is on the move.

Perhaps the most important development affecting the enemy's L of C in ITALY is the announcement of an Allied economic agreement with the Swiss whereby, among other matters, rail traffic from GERMANY to ITALY via SWITZERLAND is evidently to be severely restricted. With heavy rail interdiction existing on all other railroads into ITALY, the Swiss rail routes have been of great value to the enemy in getting foodstuffs, industrial products and loot into GERMANY from ITALY, and for the importation of coal and raw materials into ITALY for industries and the railways. The enemy will be seriously embarrassed by the loss of this valuable traffic and in fact its loss has already been felt. Industrial output in Northern ITALY is reported to have been heavily curtailed owing to lack of coal and raw materials. More important from an operational viewpoint is the lack of coal for the railways which threatens the movement of essential supplies for German forces in ITALY. Ground sources report that no coal arrived from SWITZERLAND during the latter part of February and it may be more than coincidental that several coal trains have been seen recently on the already overlooded BRENNER railway. Transfer of troops out of ITALY and the lack of MT fuel will certainly make the supply problem all the more difficult.

Under the conditions above discussed it can only be presumed that the enemy's administrative position in ITALY is severely threatened. If he is now meeting current low supply requirements it is only with great difficulty and if these are substantially increased it seems unlikely that he can maintain his forces for any length of time without a large amount of MT, which at the moment at least, is not thought to be available in ITALY. In addition, and perhaps more important, is the well known acute shortage of MT fuel, and reports indicate that the enemy is making every effort to increase the

....use of MT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

use of MT fuel substitutes. Among those is Methane, of which there is a considerable amount in certain areas of the PO Valley. A Methane pipe line is known to run from MILAN South to PIACENZA and on to MODENA, and a ground source reports that it has been extended into BOLOGNA and from there up to FERRARA. While Methane is not a suitable fuel for combat vehicles, it should be adequate for rear area administrative vehicles and hence be very useful in the saving of petrol and diesel. Other substitute or supplementary MT fuels reported in use by the enemy are alcohol and benzol which can be mixed with petrol in a proportion of one unit of substitute to three units of petrol, thereby giving about a 25% saving in petrol. In addition to using these substitutes the enemy seems to find it worth his while to operate at least some of the few small oil fields in ITALY; in one recent instance he was said to be working a well which produced only about 1,000 gallons a day.

3. WESTERN FRONT

The disaster which befell 1 Para and 15 Armies a week ago has spread itself to 5 Pz and 7 Armies this week. The Allied attack has indeed developed on a classical model. To meet the attack of the Canadian Army in the REICHSWALD area, the enemy had been forced to send reserves in support of 1 Para Army. When the Allies struck North of the COLOGNE Autobahn in the direction of KREFELD, a hasty reshuffle had to be made in order to create some sort of a front covering the RHINE crossings at WESEL. Before this could be properly effected, the Americans struck in the sector North of the MOSELLE Valley, where 5 Pz Army and 7 Army were stretched tight and denuded of reserves. Of the four German armies which have been involved in the past fortnight's débacle, those in the centre have probably suffered most. In the extreme North, 1 Para Army fought with traditional vigour and efficiency and held the WESEL bridgehead long enough to get a substantial proportion of men and equipment back across the RHINE. In the South, 7 Army, though heavily battered, has been able to retain some sort of coherence as it fell back to the RHINE pivotting on 2 Pz Division, which has been fighting hard East of WITTLICH. In the Centre, however, 15 Army and 5 Pz Army have presented a sorry spectacle. The former, though it got some forces back across the RHINE, never offered much more than feeble resistance to our drive on KREFELD and NEUSS. The latter has suffered a major disaster, the full extent of which it is still too early to assess. Few elements succeeded in crossing to the far bank of the RHINE, and the remainder of the Army has found itself split into large and small pockets which are being eliminated. The extent of the disorganisation prevailing is shown by our capture intact of the bridge at REMAGEN. 167 and 326 Inf Divs have probably been wiped out and the Commander of 3 Parachute Division is in our hands. How many other divisions have been submerged in the flood and will not again come to the surface it is still impossible to say, but the cost to the enemy has been heavy.

On the Central sector of the front, two major problems confront the enemy and demand immediate solution if worse disasters still are not to ensue. The first is the elimination of the REMAGEN bridgehead, and the other is the establishment of a firm front along the MOSELLE so as to form a right flank for the SAAR. The reaction to the REMAGEN bridgehead has naturally been fierce. On the ground 11 Pz Div has been launching heavy counter-attacks and fighting extremely well; but it alone is not enough to deal with an increasingly firm Allied position, and further reinforcements are to be expected. There are indeed signs that Pz Lehr Div is also coming down from North of COLOGNE to join 11 Pz. However, by this stage it is doubtful in the extreme whether anything short of a carefully prepared counter-offensive can have a decisive effect upon the bridgehead. In addition to the intact rail bridge we now have two pontoon bridges across the RHINE and several ferries operating. The enemy artillery is shelling the crossings heavily and is causing a certain amount of interference. However, the chances of putting the crossings permanently out of action can now be regarded as non-existent. The G.A.F. has made a token effort. Almost as if a Spanish galleon had come sailing up the RHINE, and about as effective, was the appearance of three Stukas over the bridge on 10 March. It was a gesture

....reminiscent of the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

reminiscent of the Blenheims on the MEUSE crossings in 1940 and as costly. All three were shot down.

On the MOSELLE, the enemy is now trying to build up a coherent front. If, as seems possible, a proportion of 7 Army lives to fight another brief day, a temporary stand on the MOSELLE may be feasible. The enemy is reinforcing the area to the best of his ability. 159 Inf Div has moved up from FREIBURG to the COCHEM area, and 6 S.S. Mtn Div seems to have shifted Northward to take up positions covering the river N.E. of TRIER. Even so it will be a thinly held front and is in danger of being turned by Allied progress South of the MOSELLE beyond TRIER, where 2 Mtn and 79 Inf Divs are offering moderate resistance to our pressure. Elsewhere, the picture on the front is little changed and shows clearly the growing shortage of enemy reserves. On the Upper RHINE 19 Army has now surrendered four divisions and an armoured brigade since the start of the offensive and is left with three divisions to hold its 90 mile front. On the SAAR - PALATINATE front the enemy's strength is unchanged, and there are still ten divisions between SAARLOUIS and the RHINE. It is unlikely, however, that we shall see much thinning out here, for it will be hard enough to defend the SAAR on the MOSELLE line without running the risk of letting the Allies in by the front door. In HOLLAND, the front remains thinly held, and there are at least 1½ divisions holding from the RHINE mouth to EMERICH without much hope of reinforcement.

Strategically the enemy's situation has deteriorated still further by the failure to blow the bridge at REMAGEN, for he can now no longer count upon the respite he might otherwise have expected while the Allies prepared for a major crossing of the RHINE. Moreover, any stabilisation he can achieve on the Centre is at the expense of the North and South. The front in HOLLAND has long been thinly held, but that in the South has never looked as bare as at present, and the potential danger of an Allied encircling movement down the RHINE Valley from STRASBOURG is a risk which the enemy has got to accept. The dividend on the faulty strategy of the past four months has to be paid - the strategy which in November and December sent to the West to be decimated in the COLOGNE plain divisions which should have gone to the East; and which in January took away from the West to send to the East a Panzer Army which has so far never effectively operated in the East. The dividend has to be paid and RUNDSTEDT is bearing the cost.

4. EASTERN FRONT

GERMANY

The Baltic coast from STETTIN to the German frontier with the exception of the pockets at KOLBERG and N.E. of KÖSLIN has now been virtually cleared by the First and Second White Russian Army Groups, and the Soviets despite strong enemy resistance are steadily closing in on DANZIG and GDYNIA. In the past week, TCZEW, MEWHEROWO and PUCK, the latter a port of some importance in the Bay of DANZIG some 20 miles North of GDYNIA, have all fallen to the Russians. The German forces in this area are thus compressed in a narrow wedge of land between PUCK and a point West of TIEGENHOF running as far South as the almost encircled town of MARIENWERDER. DANZIG itself stands in grave danger and fighting is reported to be in progress in the outskirts. To the West the present Soviet offensive operation has been carried one stage nearer completion by Marshal ZHUKOV whose forces have closed up to the East bank of the ODER from KÜSTRIN Northwards. The Russians are now on the shores of the STETTINER HAVEN, North of STETTIN itself and the port has been rendered virtually useless to the enemy. In the fighting at the approaches to STETTIN, prisoners were taken from 1 Marine Division, a new identification, probably either a U-boat or similar formation or an ad hoc Army division scraped together from the land-locked sailors of STETTIN. Further South KÜSTRIN is in Russian hands. This is on the East bank of the ODER on the direct route to BERLIN. Despite German reports of a renewed offensive by ZHUKOV in the direction of BERLIN, there is no indication that the Russians are yet ready for the kick off, though the capture of KÜSTRIN would of course be a necessary preliminary.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The rest of the front in GERMANY has been relatively quiet. Fighting of local importance has taken place to the West of the besieged city of BRESLAU. Here the Germans claim to have encircled the Soviet forces in STRIEGAU, a claim on which the Russians have remained silent. A report received in the past week refers to an Army Group KURLAND. This is a new identification and to judge by the title is responsible for operations in LATVIA. Whether its responsibilities extend to East PRUSSIA and DANZIG is not known, but the probabilities are against it. It is none the less conceivable that there might be another Army Group in the latter area since there are at least two Armies there. On the main front, HIMMLER and SCHOERNER have again had recent mentions from the German radio as commanders of Army Groups and it is clear that "reliable" hands are still at the head of operations in Eastern GERMANY.

CZECHOSLOVAKIA

In CZECHOSLOVAKIA fierce fighting has taken place between BANSKA STIAVNICA and ZVOLEN but the Russians, apart from the capture of the former town, have made little progress. IV Pz Corps and Pz Corps Feldherrnhalle have been identified in action under Army Group South during the week.

It is now clear that the enemy is undertaking an operation of major proportions in HUNGARY. The Schwerpunkt appears to be just North of Lake BALATON where the enemy claims to have made gains on both sides of the SARVIZ Canal and no doubt hopes to reach the DANUBE. The Russians report enemy attacks in some strength to the South of the Lake and a report, to be treated with reserve, states that three Pz Divs are engaged in this area. 1 Mtn, 118 Jg and 13 SS Divs are probably engaged and there may also be present elements of 297, 11 G.A.F. and 104 Jg Divs. Simultaneously, the enemy has crossed the DRAVA at DONJI MIHOLJAC and VALPOVO and established bridgeheads on the North bank in spite of Russian and Bulgarian resistance. At the former locality the enemy has erected a pontoon bridge and it appears that his intention is to clear the whole of Southern HUNGARY up to the DANUBE. The formations employed in these crossings are believed to be 297 Inf and 11 G.A.F. Divs less those elements which may have transferred to HUNGARY.

JUGOSLAVIA

Apart from the DRAVA operation, mentioned above, there has been little activity. The situation in which XXI Mtn Corps now finds itself is very much the same as it faced in MONTENEGRO. Then 22 Inf Div was sent South to open up an escape route, now 7 SS Mtn Div "Prinz Eugen" has been alloted the same task. The precarious plight of XXI Corps is evident from the fact that 7 SS Div, probably the best division in YUGOSLAVIA, which otherwise could and probably would have been employed in the attack in Southern HUNGARY, has been sent to its aid. Fighting its way down from the DOBOJ area this veteran Balkan Div cleared the whole of the BOSNA Valley down to ZENICA. Here it was engaged in heavy fighting with the Partisans and has finally succeeded in reopening the SARAJEVO-BROD road. German counter-attacks are reported to the East of SARAJEVO; these are probably not so much an indication that the enemy intends to remain in the area as an attempt on his part to get elbow room to allow a withdrawal. 181 Inf is in the SARAJEVO area and is no doubt detailed to act as Corps rearguard.

Confused fighting continues in the BIHAC area but here the enemy situation seems to be easier than hitherto. A Partisan success was however reported near BUNIC where SALAMUNIC P 2963 fell into their hands. This village forms the Southern suburbs of BUNIC proper and straddles a road crossing of some importance.

..... DALMATIAN ISLANDS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

DALMATIAN ISLANDS

The enemy continues to show a degree of nervousness in the islands where defence work goes on apace. The latest development is the despatch of some 800 troops to LUSSIN via CHERSO. The garrison, already believed to be about 500 troops will therefore amount to 1,300 - the highest figure yet reported for the island. In this connection it is of interest that 6 Coy 1047 G.R. of 237 Inf Div was manning a strong point on the Island when our raiding forces paid a profitable visit on the night 8/9 March. It would appear that 392 Legion Div hitherto responsible for the Islands, has its hands full on the mainland and troops from Army Group C have been called upon to help. An unconfirmed report places elements of 188 Res Mtn Div on KRK, this would appear reasonable as 138 Res Mtn Regt has its main forces in the FIUME area.

RAILROADS

BRENNER

The BRENNER has, as is now usual, been closed to through traffic for the past seven days. The degree of interdiction had fallen off late last week but with good flying weather on all days this week it has been built up again and on 12 March the line between TRENTO and VERONA was blocked at 13 points, including three bridges with spans out. This is the highest degree of interdiction ever achieved on this section of the BRENNER. VERONA PARONA bridge about 5 kilometres North of VERONA, attacked and knocked out by heavy bombers on 28 Feb, was repaired by 6 March, but again attacked by a strong force of heavies and again heavily damaged. ALA bridge about half way to TRENTO, frequently attacked but never suffering greater damage than blocked approaches, was finally completely destroyed by medium bombers on the 12th. Earlier in the week, on the 8th, the mediums also made an effective attack on ROVERETO bridge (about 20 kilometres South of TRENTO) and it was still out on the 12th though at that time repairs were seen to be in progress. These three bridge blocks have been supplemented by track cuts and cratered fills, which, though rapidly repaired in most instances, appreciably add to the degree of interdiction. North of TRENTO the main line and the 12 mile diversion between ORA (A 9155) and S. MICHELE (A 7831) have been blocked all week. Further North between BOLZANO and the BRENNER Pass the status of the line has been somewhat indefinite, but it may have been blocked all week at VIPITENO bridge just South of the Pass, and for two or three days at BRESSANONE bridge some 30 kilometres to the South.

As heretofore indicated in this Summary the railway running Eastward from the BRENNER line at FORTEZZA (about 30 kilometres South of the BRENNER Pass) to join the VILLACH-SALZBURG line just N.W. of SPITTAL (X 0161) assumes increased importance with the blocking of BRENNER bridges North of its junction with the BRENNER. This line has been struck by fighter-bombers fairly recently and it was attacked on 11 March for the first time by mediums which succeeded in cutting the approaches to a bridge on the Austrian section of the line. This alternative rail route into GERMANY is definitely active, but so far no pronounced increase in activity has been noted.

The BRENNER route on the whole has been comparatively quiet during the past week. However, despite the high state of interdiction, activity has been noted. Between VERONA and TRENTO, rolling stock appears to have been almost at a standstill with the exception of TRENTO station which has shown considerable turnover. North of TRENTO there has been greater activity but no unusual amount of movement has been seen.

There seems to have been a limited amount of troop movement on the BRENNER. During the week two new empty possible troop train lengths have been seen, one about 40 kilometres North of VERONA and the other approximately 30 kilometres South of the BRENNER Pass. The four loaded troop trains and three empty troop trains seen last week have left. It is interesting to note that approximately 380 flats were seen on the route on 10 March, and although this is not an unusual number, 140 were at FORTEZZA, about 45 rail kilometres North of BOLZANO, while another 100 were on a 20 kilometre stretch of line not far North of TRENTO. In view of the existing interdictions on the Southern portion these might be possible loading points for troops.

NORTH EAST ITALY

At the end of last week there was a strong possibility that the enemy might have been getting trains from the PO Valley through N.E. ITALY to the UDINE area by use of a number of night bridges on the main PADUA-UDINE railway. Attacks this week have, however, at least for the time being created sufficient damage to make this strategem impossible. While PR has been

...somewhat limited in...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

somewhat limited in this area it seems certain that the line has at no time been open to through traffic. To the South the main MESTRE - MONFALCONE - TRIESTE line remains unrepaired and to all intents and purposes abandoned. The central single track railway, where extensive repair efforts have heretofore been observed but never completed owing to repeated attacks, has remained blocked and there are indications that this line may also have been abandoned.

To the East of UDINE all three frontier routes are blocked and have been now for just about a month. Some repair work has been done to the broken bridges on the TARVISIO line but four are still out. The PIEDICOLLE line remains blocked at BODRES bridge, and while the enemy continues to work on the uncompleted diversion around the damaged BOROVNICA Viaduct (D 2803) on the POSTUMIA route he now has another broken bridge to contend with on this line, namely the bridge just West of the frontier at J 146882 which was successfully attacked on 12 March.

In the North East, undoubtedly owing to the heavy interdiction maintained during the week, practically no movement has been seen between the VICENZA - PADUA area and UDINE. UDINE itself has shown considerable activity, but along the heavily interdicted UDINE - TARVISIO frontier route little movement has been seen. The only indication of troop movement was two empty military train lengths seen North of the belt of interdiction. The POSTUMIA route, on the other hand, has been quite active, but lack of continuous PR makes comparison difficult. No definite statement can be made on the PIEDICOLLE route because of lack of PR; however, it is thought that limited activity continues.

INDICATIONS OF A DEVELOPING SHORTAGE
IN RAIL BRIDGE REPAIR MATERIALS

There have been indications in the last few weeks that a shortage in certain types of bridge repair materials may be developing.

These indications have been in the form of unusual activities, observed from the study of photographs, at the sites of various rail bridges. They have been separated, for the purpose of this report, into three categories.

1. Girders and Piers Removed from Damaged Structures

A most striking example is the recent dismantling and removal of all seven of the remaining 30' to 35' piers at the North end of the PO bridge at PONTELAGOSCURO (M 1191). The operation took place between 13th and 20th February. At the same time, the girders, which had been on the approach since they had been stripped from the bridge early in December, have been taken away until now only three of about eighteen remain.

Another example can be drawn from the sequence of events which has recently taken place at LATISANA (H 2287). In the early part of January a single 35' pier was destroyed. By the end of January the base for a new pier had been set. The effort ceased at that time, however, and on later cover it was seen that not only had work been abandoned on the erection of a new pier, but an apparently undamaged 35' steel pier had been removed.

2. Bridges Awaiting Steel Erection

Should there actually be a steel shortage, it would explain why repairs at certain bridges are behind schedule at the present time. Two, those at PALAZZOLO SULL OGLIO (K 8076) and CHIUSAFORTE (C 4356), require high steel piers similar to that removed from the damaged structure at LATISANA.

It is estimated that repairs at PALAZZOLO SULL OGLIO should have been completed by the end of February. The base of the required new pier had been prepared for steel erection by 24 February but the necessary steel pier, (such as had been previously used on similar repair jobs to the same bridge)

....had not, as.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

had not, as of 7 March, been brought up. Since the bridge is a vital link in the by-pass route from MILAN to BRESCIA, and the line which it by-passes is out by virtue of the severely damaged bridge at CHIARI (K 7668), it is thought certain that repairs are not being deliberately delayed for the purpose of forestalling attack.

The demands of the bridge at PONTE DI PIAVE (G 7981) are slightly different, where approximately 300 feet of short steel spans remain unset since early February. It is true that the bridge has been relentlessly attacked during that time to thwart the persistent repair effort, but on at least one occasion all piers were erected, and all that remained was to set the spans, which was not done.

Although there may be other factors involved, such as overtaxed repair crews, a steel shortage might also partially explain the notoriously slow progress that has been made on those diversions under construction at LATISANA, SACILE (B 8407) and PIAZZOLA SULL BRENTA (G 2863).

3. Spans removed from the area of attack for their protection

At the PORDENONE rail diversion, bomb strike photos taken just before the recent attack on 6 March revealed that none of the four steel girder spans were in place. All piers had been completely erected by 27 February, and between that time and the attack, a varying number and arrangement of spans had been in place on intervening covers. Thus, it was obviously not a case of the bridge not having been fully repaired. It is significant too, that the girders were first removed to the approach of the diversion, and were later seen to have been removed to the main line, several hundred yards further away from the area of attack.

It is known that spans are removed from serviceable bridges to make them appear unserviceable, seeking thus to protect them from attack. It has been the practice in the past to remove only one or two spans, so that their replacement when desired can be more quickly accomplished. The operation at PORDENONE, however, is the first instance where all spans have been removed, and is an indication that, more than desiring deception, the enemy is being exceptionally zealous in safeguarding his steel girders from being damaged. It would seem that his primary interest is to protect what may be the dwindling supply of steel girders on the all-important route to TARVISIO.

If a shortage exists of repair materials, it is apparently only in its early stages, since the BRENNER line to date has not noticeably suffered from a lack of materials. The BRENNER line, however, has enjoyed a topmost priority, is near the industrial centres of supply, and would logically be the last place to show symptoms of want. It must remain to be seen from close observation in the next few weeks whether the indications of the developing shortage increase with the demands made upon stock-piles by continued attacks.

Should there actually exist a shortage of certain steel structural members, it would constitute an almost overwhelming handicap to the enemy repair organisation.

(Source: 3rd Photo Group Interpretation Report No. 3DS 108 dated 10 Mar '45)

SHIPPING

In the Gulf of GENOA PR between 3 and 12 March shows that activity between GENOA and SPEZIA continues to be lively. All four KT ships are now engaged on this run together with at least two supply barges and 4 F-boats, whilst the 1,000 ton MV which arrived in SPEZIA from GENOA on 3 March had made the return trip by the 6th. SAVONA harbour was inactive between 3 and 6 March,

.....but two coasters....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

but two coasters had arrived there from GENOA by the 8th and returned the same night. Five supply barges and two schooners are also employed on this run. Small scale barge activity continues at SESTRI LEVANTE.

Since 4 March there has been a revival of coaster activity in the Northern Adriatic. At least one coaster and an oil barge have reached VENICE from TRIESTE, and four coasters left POLA probably for TRIESTE where an increase of five was noticed on 7 March. A KT ship sailed from TRIESTE to POLA and then on to ARSA where it is now aground. Small craft activity along the Venetian coast and inland waterways between GRADO and CHIOGGIA continues normally, but PORTO MARGHERA has been inactive since 4 March.

-o-o-o-o-o-o-

1. ENEMY SITUATION

There has been very little change in the enemy's dispositions and attitude so far as can be definitely established but there have been various small incidents and pieces of information which suggest that something is going on. What it is exactly is hard to see; on the face of it the enemy's main preoccupation should be to create a larger reserve for the main front than is at present available. The position will no doubt become clearer when the reliefs now apparently in progress are completed.

On 8 Army front 162 Div continues to lose deserters and shows itself to be even more worthless as a fighting formation than in its previous turns in the line. It is only engaged on the very narrow front presented by the isthmus between the lake and the sea but it seems to regard this not so much as a front as a funnel to the comforts of Allied PW camps and, for the Turcomans, eventual repatriation. On the SENIO front the situation is more obscure. 98 Div appears to be extending its sector Southwards to relieve part of 26 Pz Div and is being relieved in turn in its Northernmost sector by 362 Div. This may call for a complementary move South by 42 Jaeger Division, which is feasible, especially if 142 Fus Bn returns from the isthmus. More surprising is the identification of 992 G.R. in TOSSIGNANO; if we believe the deserter both bns are there, having arrived night 10/11 March. There has been a good deal of movement in this area of late though it would be surprising if 278 Div were to take over the whole of 334 Div's sector. Perhaps if the intention is to take out 334 Div 1 Para Div might extend its front Southwards to assist in the relief. It remains to be seen what the result of these moves will be but it looks as though some division or other is going out into reserve, possibly preparatory to leaving the country.

On the Western part of the front the week has been fairly quiet. Recent deserters confirm that the losses inflicted on 114 Jg Div were heavy; 721 Regt in particular, according to them, has now been reorganised as a single battalion. Both it and 232 Div, however, which also suffered severe losses, are still in the line. The position of 29 P.G. Div, on the other hand, is more obscure; the Recce Unit was identified on 7 March but since then we have had no contact with the division. It is reasonable to assume that, as soon as the immediate danger was felt to be over, the enemy would like to pull out the formation to its more natural and useful rôle of mobile reserve. 90 P.G. is, indeed, available in its old area East and Northeast of BOLOGNA but with the improvement in the weather and increasing likelihood of a resumption of the Allied offensive, a second reserve division must appear necessary.

In North East ITALY both 188 Reserve and 237 Divs appear to be taking a greater interest in Northern DALMATIA and elements from both are reported on the islands of the QUARNERO. Otherwise they have changed little; 188 still has its four regiments and must be busy at its primary job of training the young intake. ITALY is now the most favoured site for training in what remains of German-occupied EUROPE.

...2 ENEMY SUPPLIES AND COMMUNICATIONS..

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

Good weather throughout this week has enabled us to keep the railways well interdicted and again no through traffic has been possible on either the BRENNER or N.E. rail routes.

The BRENNER railway has been continuously out South of BOLZANO, the high watermark of the week being 12 March when the line between VERONA and BOLZANO was impassable at fifteen points including four bridge blocks. North of BOLZANO conflicting PR reports make an assessment difficult but one, perhaps two, bridges may have been impassable for several days. However, the enemy continues a strong repair effort and is even attempting to repair the heavily damaged long viaduct near LAVIS (A 7430). Repairs at the VERONA PARONA bridge just North of VERONA were completed this week but it was again knocked out by heavy bombers on the 10th. At no time has the enemy been able to repair as fast as we have destroyed, but the heavy concentration of flak (one third of the total heavy flak in ITALY is disposed along the BRENNER) demands its toll; on one day this week we lost four mediums to the BRENNER flak and it is a rare mission that does not return from the BRENNER with at least some aircraft holed. The importance the enemy attaches to this rail route is obvious.

In the N.E. the situation at the end of last week was confused by the probable existence of a number of night operational bridges, and it is possible that for a brief period the enemy were getting trains through to the UDINE area from the PO Valley. This week, however, further attacks have sealed most, if not all, of these possible leaks. Beyond UDINE the three frontier routes remain, as last week, closed to through traffic. In the N.E., and in fact elsewhere in ITALY, with the exception of the BRENNER, there is strong evidence from PR that the enemy may be suffering from a shortage of structural members for the repair of rail bridges. A report on this appears at Appendix 'A'.

Some troop movement by rail out of ITALY has been noted recently on the BRENNER and to a very limited extent in the N.E. While such movement as has been observed has been small, the fact that it continues this week, as last, tends to indicate that a formation of at least divisional strength is on the move.

Perhaps the most important development affecting the enemy's L of C in ITALY is the announcement of an Allied economic agreement with the Swiss whereby, among other matters, rail traffic from GERMANY to ITALY via SWITZERLAND is evidently to be severely restricted. With heavy rail interdiction existing on all other railroads into ITALY, the Swiss rail routes have been of great value to the enemy in getting foodstuffs, industrial products and loot into GERMANY from ITALY, and for the importation of coal and raw materials into ITALY for industries and the railways. The enemy will be seriously embarrassed by the loss of this valuable traffic and in fact its loss has already been felt. Industrial output in Northern ITALY is reported to have been heavily curtailed owing to lack of coal and raw materials. More important from an operational viewpoint is the lack of coal for the railways which threatens the movement of essential supplies for German forces in ITALY. Ground sources report that no coal arrived from SWITZERLAND during the latter part of February and it may be more than coincidental that several coal trains have been seen recently on the already overloaded BRENNER railway. Transfer of troops out of ITALY and the lack of MT fuel will certainly make the supply problem all the more difficult.

Under the conditions above discussed it can only be presumed that the enemy's administrative position in ITALY is severely threatened. If he is now meeting current low supply requirements it is only with great difficulty and if these are substantially increased it seems unlikely that he can maintain his forces for any length of time without a large amount of MT, which at the moment at least, is not thought to be available in ITALY. In addition, and perhaps more important, is the well known acute shortage of MT fuel, and reports indicate that the enemy is making every effort to increase the

....use of MT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

use of MT fuel substitutes. Among these is Methane, of which there is a considerable amount in certain areas of the PO Valley. A Methane pipe line is known to run from MILAN South to PIACENZA and on to MODENA, and a ground source reports that it has been extended into BOLOGNA and from there up to FERRARA. While Methane is not a suitable fuel for combat vehicles, it should be adequate for rear area administrative vehicles and hence be very useful in the saving of petrol and diesel. Other substitute or supplementary MT fuels reported in use by the enemy are alcohol and benzol which can be mixed with petrol in a proportion of one unit of substitute to three units of petrol, thereby giving about a 25% saving in petrol. In addition to using these substitutes the enemy seems to find it worth his while to operate at least some of the few small oil fields in ITALY; in one recent instance he was said to be working a well which produced only about 1,000 gallons a day.

3. WESTERN FRONT

The disaster which befell 1 Para and 15 Armies a week ago has spread itself to 5 Pz and 7 Armies this week. The Allied attack has indeed developed on a classical model. To meet the attack of the Canadian Army in the REICHSWALD area, the enemy had been forced to send reserves in support of 1 Para Army. When the Allies struck North of the COLOGNE Autobahn in the direction of KREFELD, a hasty reshuffle had to be made in order to create some sort of a front covering the RHINE crossings at WESEL. Before this could be properly effected, the Americans struck in the sector North of the MOSELLE Valley, where 5 Pz Army and 7 Army were stretched tight and denuded of reserves. Of the four German armies which have been involved in the past fortnight's débacle, those in the centre have probably suffered most. In the extreme North, 1 Para Army fought with traditional vigour and efficiency and held the WESEL bridgehead long enough to get a substantial proportion of men and equipment back across the RHINE. In the South, 7. Army, though heavily battered, has been able to retain some sort of coherence as it fell back to the RHINE pivotting on 2 Pz Division, which has been fighting hard East of WITTLICH. In the Centre, however, 15 Army and 5 Pz Army have presented a sorry spectacle. The former, though it got some forces back across the RHINE, never offered much more than feeble resistance to our drive on KREFELD and NEUSS. The latter has suffered a major disaster, the full extent of which it is still too early to assess. Few elements succeeded in crossing to the far bank of the RHINE, and the remainder of the Army has found itself split into large and small pockets which are being eliminated. The extent of the disorganisation prevailing is shown by our capture intact of the bridge at REMAGEN. 167 and 326 Inf Divs have probably been wiped out and the Commander of 3 Parachute Division is in our hands. How many other divisions have been submerged in the flood and will not again come to the surface it is still impossible to say, but the cost to the enemy has been heavy.

On the Central sector of the front, two major problems confront the enemy and demand immediate solution if worse disasters still are not to ensue. The first is the elimination of the REMAGEN bridgehead, and the other is the establishment of a firm front along the MOSELLE so as to form a right flank for the SAAR. The reaction to the REMAGEN bridgehead has naturally been fierce. On the ground 11 Pz Div has been launching heavy counter-attacks and fighting extremely well; but it alone is not enough to deal with an increasingly firm Allied position, and further reinforcements are to be expected. There are indeed signs that Pz Lehr Div is also coming down from North of COLOGNE to join 11 Pz. However, by this stage it is doubtful in the extreme whether anything short of a carefully prepared counter-offensive can have a decisive effect upon the bridgehead. In addition to the intact rail bridge we now have two pontoon bridges across the RHINE and several ferries operating. The enemy artillery is shelling the crossings heavily and is causing a certain amount of interference. However, the chances of putting the crossings permanently out of action can now be regarded as non-existent. The G.A.F. has made a token effort. Almost as if a Spanish galleon had come sailing up the RHINE, and about as effective, was the appearance of three Stukas over the bridge on 10 March. It was a gesture

....reminiscent of the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

reminiscent of the Blenheims on the MEUSE crossings in 1940 and as costly. All three were shot down.

On the MOSELLE, the enemy is now trying to build up a coherent front. If, as seems possible, a proportion of 7 Army lives to fight another brief day, a temporary stand on the MOSELLE may be feasible. The enemy is reinforcing the area to the best of his ability. 159 Inf Div has moved up from FREIBURG to the COCHEM area, and 6 S.S. Mtn Div seems to have shifted Northward to take up positions covering the river N.E. of TRIER. Even so it will be a thinly held front and is in danger of being turned by Allied progress South of the MOSELLE beyond TRIER, where 2 Mtn and 79 Inf Divs are offering moderate resistance to our pressure. Elsewhere, the picture on the front is little changed and shows clearly the growing shortage of enemy reserves. On the Upper RHINE 19 Army has now surrendered four divisions and an armoured brigade since the start of the offensive and is left with three divisions to hold its 90 mile front. On the SAAR - PALATINATE front the enemy's strength is unchanged, and there are still ten divisions between SAARLOUIS and the RHINE. It is unlikely, however, that we shall see much thinning out here, for it will be hard enough to defend the SAAR on the MOSELLE line without running the risk of letting the Allies in by the front door. In HOLLAND, the front remains thinly held, and there are at least 1½ divisions holding from the RHINE mouth to EMERICH without much hope of reinforcement.

Strategically the enemy's situation has deteriorated still further by the failure to blow the bridge at REMAGEN, for he can now no longer count upon the respite he might otherwise have expected while the Allies prepared for a major crossing of the RHINE. Moreover, any stabilisation he can achieve on the Centre is at the expense of the North and South. The front in HOLLAND has long been thinly held, but that in the South has never looked as bare as at present, and the potential danger of an Allied encircling movement down the RHINE Valley from STRASBOURG is a risk which the enemy has got to accept. The dividend on the faulty strategy of the past four months has to be paid - the strategy which in November and December sent to the West to be decimated in the COLOGNE plain divisions which should have gone to the East; and which in January took away from the West to send to the East a Panzer Army which has so far never effectively operated in the East. The dividend has to be paid and RUNDSTEDT is bearing the cost.

4. EASTERN FRONT

GERMANY

The Baltic coast from STETTIN to the German frontier with the exception of the pockets at KOLBERG and N.E. of KÖSLIN has now been virtually cleared by the First and Second White Russian Army Groups, and the Soviets despite strong enemy resistance are steadily closing in on DANZIG and GDYNIA. In the past week, TCZEW, MEWEROWO and PUCK, the latter a port of some importance in the Bay of DANZIG some 20 miles North of GDYNIA, have all fallen to the Russians. The German forces in this area are thus compressed in a narrow wedge of land between PUCK and a point West of TIEGENHOF running as far South as the almost encircled town of MARIENWERDER. DANZIG itself stands in grave danger and fighting is reported to be in progress in the outskirts. To the West the present Soviet offensive operation has been carried one stage nearer completion by Marshal ZHUKOV whose forces have closed up to the East bank of the ODER from KÜSTRIN Northwards. The Russians are now on the shores of the STETTINER HAVEN, North of STETTIN itself and the port has been rendered virtually useless to the enemy. In the fighting at the approaches to STETTIN, prisoners were taken from 1 Marine Division, a new identification, probably either a E-boat or similar formation or an ad hoc Army division scraped together from the land-locked sailors of STETTIN. Further South KÜSTRIN is in Russian hands. This is on the East bank of the ODER on the direct route to BERLIN. Despite German reports of a renewed offensive by ZHUKOV in the direction of BERLIN, there is no indication that the Russians are yet ready for the kick off, though the capture of KÜSTRIN would of course be a necessary preliminary.

...The rest of.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The rest of the front in GERMANY has been relatively quiet. Fighting of local importance has taken place to the West of the besieged city of BRESLAU. Here the Germans claim to have encircled the Soviet forces in STRIEGAU, a claim on which the Russians have remained silent. A report received in the past week refers to an Army Group KURLAND. This is a new identification and to judge by the title is responsible for operations in LATVIA. Whether its responsibilities extend to East PRUSSIA and DANZIG is not known, but the probabilities are against it. It is none the less conceivable that there might be another Army Group in the latter area since there are at least two Armies there. On the main front, HIMMLER and SCHOERNER have again had recent mentions from the German radio as commanders of Army Groups and it is clear that "reliable" hands are still at the head of operations in Eastern GERMANY.

CZECHOSLOVAKIA

In CZECHOSLOVAKIA fierce fighting has taken place between BANSKA STIAVNICA and ZVOLEN but the Russians, apart from the capture of the former town, have made little progress. IV Pz Corps and Pz Corps Feldherrnhalle have been identified in action under Army Group South during the week.

It is now clear that the enemy is undertaking an operation of major proportions in HUNGARY. The Schwerpunkt appears to be just North of Lake BALATON where the enemy claims to have made gains on both sides of the SARVIZ Canal and no doubt hopes to reach the DANUBE. The Russians report enemy attacks in some strength to the South of the Lake and a report, to be treated with reserve, states that three Pz Divs are engaged in this area. 1 Mtn, 118 Jg and 13 SS Divs are probably engaged and there may also be present elements of 297, 11 G.A.F. and 104 Jg Divs. Simultaneously, the enemy has crossed the DRAVA at DONJI MIHOLJAC and VALPOVO and established bridgeheads on the North bank in spite of Russian and Bulgarian resistance. At the former locality the enemy has erected a pontoon bridge and it appears that his intention is to clear the whole of Southern HUNGARY up to the DANUBE. The formations employed in these crossings are believed to be 297 Inf and 11 G.A.F. Divs less those elements which may have transferred to HUNGARY.

JUGOSLAVIA

Apart from the DRAVA operation, mentioned above, there has been little activity. The situation in which XXI Mtn Corps now finds itself is very much the same as it faced in MONTENEGRO. Then 22 Inf Div was sent South to open up an escape route, now 7 SS Mtn Div "Prinz Eugen" has been alloted the same task. The precarious plight of XXI Corps is evident from the fact that 7 SS Div, probably the best division in YUGOSLAVIA, which otherwise could and probably would have been employed in the attack in Southern HUNGARY, has been sent to its aid. Fighting its way down from the DOBOJ area this veteran Balkan Div cleared the whole of the BOSNA Valley down to ZENICA. Here it was engaged in heavy fighting with the Partisans and has finally succeeded in reopening the SARAJEVO-BROD road. German counter-attacks are reported to the East of SARAJEVO; these are probably not so much an indication that the enemy intends to remain in the area as an attempt on his part to get elbow room to allow a withdrawal. 181 Inf is in the SARAJEVO area and is no doubt detailed to act as Corps rearguard.

Confused fighting continues in the BIHAC area but here the enemy situation seems to be easier than hitherto. A Partisan success was however reported near BUNIC where SALAMUNIC P 2963 fell into their hands. This village forms the Southern suburbs of BUNIC proper and straddles a road crossing of some importance.

..... DALMATIAN ISLANDS.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

DALMATIAN ISLANDS

The enemy continues to show a degree of nervousness in the islands where defence work goes on apace. The latest development is the despatch of some 800 troops to LUSSIN via CHERSO. The garrison, already believed to be about 500 troops will therefore amount to 1,300 - the highest figure yet reported for the island. In this connection it is of interest that 6 Coy 1047 G.R. of 237 Inf Div was manning a strong point on the Island when our raiding forces paid a profitable visit on the night 8/9 March. It would appear that 392 Legion Div hitherto responsible for the Islands, has its hands full on the mainland and troops from Army Group C have been called upon to help. An unconfirmed report places elements of 188 Res Mtn Div on KRK, this would appear reasonable as 138 Res Mtn Regt has its main forces in the FIUME area.

RAILROADS

BRENNER

The BRENNER has, as is now usual, been closed to through traffic for the past seven days. The degree of interdiction had fallen off late last week but with good flying weather on all days this week it has been built up again and on 12 March the line between TRENTO and VERONA was blocked at 13 points, including three bridges with spans out. This is the highest degree of interdiction ever achieved on this section of the BRENNER. VERONA PARONA bridge about 5 kilometres North of VERONA, attacked and knocked out by heavy bombers on 28 Feb, was repaired by 6 March, but again attacked by a strong force of heavies and again heavily damaged. ALA bridge about half way to TRENTO, frequently attacked but never suffering greater damage than blocked approaches, was finally completely destroyed by medium bombers on the 12th. Earlier in the week, on the 8th, the mediums also made an effective attack on ROVERETO bridge (about 20 kilometres South of TRENTO) and it was still out on the 12th though at that time repairs were seen to be in progress. These three bridge blocks have been supplemented by track cuts and cratered fills, which, though rapidly repaired in most instances, appreciably add to the degree of interdiction. North of TRENTO the main line and the 12 mile diversion between ORA (A 9155) and S. MICHELE (A 7831) have been blocked all week. Further North between BOLZANO and the BRENNER Pass the status of the line has been somewhat indefinite, but it may have been blocked all week at VIPITENO bridge just South of the Pass, and for two or three days at BRESSANONE bridge some 30 kilometres to the South.

As heretofore indicated in this Summary the railway running Eastward from the BRENNER line at FORTEZZA (about 30 kilometres South of the BRENNER Pass) to join the VILLACH-SALZBURG line just N.W. of SPITTAL (X 0161) assumes increased importance with the blocking of BRENNER bridges North of its junction with the BRENNER. This line has been struck by fighter-bombers fairly recently and it was attacked on 11 March for the first time by mediums which succeeded in cutting the approaches to a bridge on the Austrian section of the line. This alternative rail route into GERMANY is definitely active, but so far no pronounced increase in activity has been noted.

The BRENNER route on the whole has been comparatively quiet during the past week. However, despite the high state of interdiction, activity has been noted. Between VERONA and TRENTO, rolling stock appears to have been almost at a standstill with the exception of TRENTO station which has shown considerable turnover. North of TRENTO there has been greater activity but no unusual amount of movement has been seen.

There seems to have been a limited amount of troop movement on the BRENNER. During the week two new empty possible troop train lengths have been seen, one about 40 kilometres North of VERONA and the other approximately 30 kilometres South of the BRENNER Pass. The four loaded troop trains and three empty troop trains seen last week have left. It is interesting to note that approximately 380 flats were seen on the route on 10 March, and although this is not an unusual number, 140 were at FORTEZZA, about 45 rail kilometres North of BOLZANO, while another 100 were on a 20 kilometre stretch of line not far North of TRENTO. In view of the existing interdictions on the Southern portion these might be possible loading points for troops.

NORTH EAST ITALY

At the end of last week there was a strong possibility that the enemy might have been getting trains from the PO Valley through N.E. ITALY to the UDINE area by use of a number of night bridges on the main PADUA-UDINE railway. Attacks this week have, however, at least for the time being created sufficient damage to make this strategem impossible. While PR has been

...somewhat limited in...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

somewhat limited in this area it seems certain that the line has at no time been open to through traffic. To the South the main MESTRE - MONFALCONE - TRIESTE line remains unrepaired and to all intents and purposes abandoned. The central single track railway, where extensive repair efforts have heretofore been observed but never completed owing to repeated attacks, has remained blocked and there are indications that this line may also have been abandoned.

To the East of UDINE all three frontier routes are blocked and have been now for just about a month. Some repair work has been done to the broken bridges on the TARVISIO line but four are still out. The PIEDICOLLE line remains blocked at BODRES bridge, and while the enemy continues to work on the uncompleted diversion around the damaged BOROVNICA Viaduct (D 2803) on the POSTUMIA route he now has another broken bridge to contend with on this line, namely the bridge just West of the frontier at J 146882 which was successfully attacked on 12 March.

In the North East, undoubtedly owing to the heavy interdiction maintained during the week, practically no movement has been seen between the VICENZA - PADUA area and UDINE. UDINE itself has shown considerable activity, but along the heavily interdicted UDINE - TARVISIO frontier route little movement has been seen. The only indication of troop movement was two empty military train lengths seen North of the belt of interdiction. The POSTUMIA route, on the other hand, has been quite active, but lack of continuous PR makes comparison difficult. No definite statement can be made on the PIEDICOLLE route because of lack of PR; however, it is thought that limited activity continues.

INDICATIONS OF A DEVELOPING SHORTAGE
IN RAIL BRIDGE REPAIR MATERIALS

There have been indications in the last few weeks that a shortage in certain types of bridge repair materials may be developing.

These indications have been in the form of unusual activities, observed from the study of photographs, at the sites of various rail bridges. They have been separated, for the purpose of this report, into three categories.

1. Girders and Piers Removed from Damaged Structures

A most striking example is the recent dismantling and removal of all seven of the remaining 30' to 35' piers at the North end of the PO bridge at PONTELAGOSCURO (M 1191). The operation took place between 13th and 20th February. At the same time, the girders, which had been on the approach since they had been stripped from the bridge early in December, have been taken away until now only three of about eighteen remain.

Another example can be drawn from the sequence of events which has recently taken place at LATISANA (H 2287). In the early part of January a single 35' pier was destroyed. By the end of January the base for a new pier had been set. The effort ceased at that time, however, and on later cover it was seen that not only had work been abandoned on the erection of a new pier, but an apparently undamaged 35' steel pier had been removed.

2. Bridges Awaiting Steel Erection

Should there actually be a steel shortage, it would explain why repairs at certain bridges are behind schedule at the present time. Two, those at PALAZZOLO SULL OGLIO (K 8076) and CHIUSAFORTE (C 4356), require high steel piers similar to that removed from the damaged structure at LATISANA.

It is estimated that repairs at PALAZZOLO SULL OGLIO should have been completed by the end of February. The base of the required new pier had been prepared for steel erection by 24 February but the necessary steel pier, (such as had been previously used on similar repair jobs to the same bridge)

....had not, as.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

had not, as of 7 March, been brought up. Since the bridge is a vital link in the by-pass route from MILAN to BRESCIA, and the line which it by-passes is out by virtue of the severely damaged bridge at CHIARI (K 7668), it is thought certain that repairs are not being deliberately delayed for the purpose of forestalling attack.

The demands of the bridge at PONTE DI PIAVE (G 7981) are slightly different, where approximately 300 feet of short steel spans remain unset since early February. It is true that the bridge has been relentlessly attacked during that time to thwart the persistent repair effort, but on at least one occasion all piers were erected, and all that remained was to set the spans, which was not done.

Although there may be other factors involved, such as overtaxed repair crews, a steel shortage might also partially explain the notoriously slow progress that has been made on those diversions under construction at LATISANA, SACILE (B 8407) and PIAZZOLA SUL BRENTA (G 2863).

3. Spans removed from the area of attack for their protection

At the PORDENONE rail diversion, bomb strike photos taken just before the recent attack on 6 March revealed that none of the four steel girder spans were in place. All piers had been completely erected by 27 February, and between that time and the attack, a varying number and arrangement of spans had been in place on intervening covers. Thus, it was obviously not a case of the bridge not having been fully repaired. It is significant too, that the girders were first removed to the approach of the diversion, and were later seen to have been removed to the main line, several hundred yards further away from the area of attack.

It is known that spans are removed from serviceable bridges to make them appear unserviceable, seeking thus to protect them from attack. It has been the practice in the past to remove only one or two spans, so that their replacement when desired can be more quickly accomplished. The operation at PORDENONE, however, is the first instance where all spans have been removed, and is an indication that, more than desiring deception, the enemy is being exceptionally zealous in safeguarding his steel girders from being damaged. It would seem that his primary interest is to protect what may be the dwindling supply of steel girders on the all-important route to TARVISIO.

If a shortage exists of repair materials, it is apparently only in its early stages, since the BRENNER line to date has not noticeably suffered from a lack of materials. The BRENNER line, however, has enjoyed a topmost priority, is near the industrial centres of supply, and would logically be the last place to show symptoms of want. It must remain to be seen from close observation in the next few weeks whether the indications of the developing shortage increase with the demands made upon stock-piles by continued attacks.

Should there actually exist a shortage of certain steel structural members, it would constitute an almost overwhelming handicap to the enemy repair organisation.

(Source: 3rd Photo Group Interpretation Report No. 3DS 108 dated 10 Mar '45)

SHIPPING

In the Gulf of GENOA PR between 3 and 12 March shows that activity between GENOA and SPEZIA continues to be lively. All four KT ships are now engaged on this run together with at least two supply barges and 4 F-boats, whilst the 1,000 ton MV which arrived in SPEZIA from GENOA on 3 March had made the return trip by the 6th. SAVONA harbour was inactive between 3 and 6 March,

.....but two coasters....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

but two coasters had arrived there from GENOA by the 8th and returned the same night. Five supply barges and two schooners are also employed on this run. Small scale barge activity continues at SESTRI LEVANTE.

Since 4 March there has been a revival of coaster activity in the Northern Adriatic. At least one coaster and an oil barge have reached VENICE from TRIESTE, and four coasters left POLA probably for TRIESTE where an increase of five was noticed on 7 March. A KT ship sailed from TRIESTE to POLA and then on to ARSA where it is now aground. Small craft activity along the Venetian coast and inland waterways between GRADO and CHIOGGIA continues normally, but PORTO MARGHERA has been inactive since 4 March.

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 86

OF 20 MARCH, 45

(a) This Summary will NOT be distributed below H.Qs of Army Corps. Sidelined passages will not be reproduced without permission of this H.Q.

(b) This Summary will be destroyed within 48 hours of receipt.

-0-0-0-0-0-0-0-

1. ENEMY SITUATION

The past week has been a quiet one, and the enemy has been able to continue his regrouping undisturbed. The reason for the reshuffling which was noted along the SENIO in last week's Summary has proved to be the withdrawal of 334 Division from the TOSSIGNANO sector, and the division is now carried in unlocated reserve. Regrouping on the 5 Army front which is going on at present in the 114 Jaeger, 232 Inf and 29 P.G. Div sectors has not so far resulted in any of these divisions moving into reserve (all three have been identified in the last 48 hours) and consequently the enemy has three divisions committed in a comparatively unimportant part of the front where previously one sufficed. This is obviously a situation which the enemy will seek to remedy as soon as possible.

On the 8 Army front we have seen little of 162 Div, and the only interesting comment on its activities comes from a Turkoman Sjt-Major who said that it was rumoured that all Turkomans on the COMACCHIO Spit are to be replaced by Germans. This is hardly a surprising step in view of the unreliability of the Turkomans, and it is a little difficult to see why the enemy persists in retaining this division as a fighting formation. The identification of M.G. Bn Kesselring No.2. by a document in the area North of Lake COMACCHIO shows that this battalion is needed to stiffen the units of 162 Div holding the Northern shores of the Lake.

Along the SENIO there is further evidence to show movement Southwards by each division. 42 Jaeger Div is believed to have stretched some 2,000 yards S.W. of ALFONSINE at the expense of considerable thinning out North of the 50 grid. As a result 1060 G.R. is now the left hand regiment of 362 Div, and 1059 G.R. which has been squeezed out is rumoured by prisoners from 117 G.R. (98 Div) to be due to take over their sector between LUGO and COTIGNOLA. This will give 362 Div, with its 7 bns and the Italian LUPO Bn, a very extended front of about 11,000 yards. 98 Div would gain by this move and its sector, unless it also sidesteps to take over from part of 26 Pz Div, would be from inclusive COTIGNOLA to about the 31 Easting. 26 Pz Div is at present on a 5,000 yard front from the 31 Easting to just short of the main BOLOGNA-RIMINI railway. When 117 G.R. is relieved both divisions will have a regiment in reserve, though this may be only a temporary measure. 4 Para Div is still astride Route 9 and now probably extends as far West as ISOLA M 1622. On the 16th March II Bn 11 Para Regt carried out a strong attack on our outpost position South of the river at point 92 M 1922. The enemy raid was successful. On the 16th we counter-attacked and drove the parachutists back North of the river, capturing some eight prisoners and killing at least 20 enemy. 11 Para Regt had previously been North of Route 9 and was relieved by 26 Pz Div to move across to the West

.....flank of.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

flank of 4 Para Div to take over from 278 Div. The latter is now believed to stretch from ISOLA to the boundary with 1 Para Div on M. MIGGIORE M 0526, having relieved 334 Div. The only clue as to 334 Div's movements is the statement by a parachutist prisoner from III Bn 3 Para Regt (taken in the normal area) that he had met a friend from 756 G.R. on 12 March North of IMOLA who said his Regt had been relieved suddenly in the line and was bound for an unknown destination.

South of BOLOGNA there has been no apparent change in the enemy layout. A copy of a Mountain Unit newspaper found in the area L 7728, together with the recent statement by a prisoner from II Bn 276 G.R. (94 Div) that his battalion was expecting to be relieved in this very area by Mtn troops, suggests that 157 Div has extended slightly Westwards and that its right boundary may now be along the 77 Easting. In the area behind M. BELVEDERE and CASTEL D'ALANO various sources have reported much movement of troops, and prisoners and deserters from 114 Jaeger Div, 232 Div and 29 P.G. Div have all brought rumours of reliefs. These are now beginning to take shape. 232 Div appears to be relieving 114 Div in the area West of MONTESE L 5524 - prisoners from 741 Regt taken in that area were expecting their relief on 15 March, and since then 1044 G.R. has been placed between the 48 and 54 Eastings. On 19 March I Bn 741 Regt lost prisoners 1,000 yards N.E. of MONTESE, previously the sector of the Mittenwald Mountain Bn which has gone into reserve, and prisoners from 114 Recce Unit were taken near MONTESE on the same day. At the moment therefore, it looks as if the divisional boundary between 232 and 114 Divs is about 1,000 yards S.W. of MONTESE. 1043 G.R. of 232 Div is said to have been temporarily cannibalised to bring the other two regiments up to strength, but 1045 G.R. is not yet identified and it may come in East of 1044, thus involving a further shift Eastwards by 114 Div. How far Eastwards 114 Div extends now is unknown, nor is it known to what extent 29 P.G. Div is still in the line. Despite a rumour in 15 P.G.R. that the Regt was going into reserve East of BOLOGNA, prisoners were taken from II Bn on night 19/20 March at L 6326.

The enemy's Central reserve now amounts to two divisions - 90 P.G. East of BOLOGNA near BUDRIO and 334 Inf Div unlocated. There have been many agents' reports of movement of troops across the PO towards the BRENNER and N.E. ITALY, proving conclusively that a division is involved. Though there has been no identification of 715 Div, there is no other candidate at the present, so it is assumed that 715 Div is leaving the country. Though most of 29 P.G. Div appears to be still committed S.W. of BOLOGNA it is believed that the enemy will make every effort to withdraw this division into Central reserve, as soon as 114 and 232 Divs have been more firmly re-established in the line.

In Western ITALY, MONTE ROSA Div is reported arriving in the area N.W. of TURIN from the SERCHIO Valley, where it has handed over to the ITALIA Div (included in the hand-over is Gen CARLONI who is now said to command ITALIA Div). Its arrival in Western ITALY thickens up the defenders of the Alpine Passes, and though some of its units have replaced units of 5 Mtn Div in the line, there is nothing to suggest that these are more than routine reliefs. Both Regts of 5 Mtn have been identified on the Alps in the last week. From the Southern sector of the line there have been reports of a Northward move of part of 34 Div towards PINEROLO but it is too early to say how much truth there is in them.

In N.E. ITALY 710 Div has been identified coastwatching near the mouth of the TAGLIAMENTO river, with elements of the division engaged in fighting Partisans N.E. of GORIZIA at CHIAPOVANO C 8417. Of the progress in building up 155 Res Training Division there is no further news.

2. DAILY SHELLS AND COMMUNICATIONS

This week has seen no relief for the enemy in the many difficulties he is encountering on his L of C. In fact during the past seven days we have pushed our attacks against his already heavily interdicted rail net further North than ever before. These attacks were successfully directed against a bridge about 40 kilometres N.E. of INNSBRUCK on the main line from INNSBRUCK to MUNICH and a bridge about 10 kilometres N.W. of SPITTAL (X 6101) on the VILLACH-SALZBURG line. Both routes are highly important lines between ITALY and GERMANY, probably in fact the two most important beyond the Italian frontier. As usual the BRENNER and N.E. rail routes have continued closed to through traffic. South of BOLZANO the BRENNER was cut at many points and at least one bridge was out for several days near the BRENNER Pass. In the N.E. repairs to two rail diversions, one being night operational, has opened up the rail net sufficiently to permit through movement from the PO Valley to a point about 60 kilometres West of UDINE. However, movement will have been very limited owing to frequent cratering of the tracks. In any event, despite some repairs, the frontier routes beyond UDINE remain well interdicted.

Some troop movement by rail has been picked up this week. Definite movement of troops has been seen on the upper stretches of the BRENNER beyond BOLZANO and to a very limited extent on the TARVISIO route. This will no doubt be 715 Inf Div, which, on the basis of the present state of the railways and the rate of movement of 356 and 16 SS Divs, cannot be expected to clear ITALY before the end of March. (Further details on the railways and shipping appear at Appendix 'A').

MT movement has been seen North of the PO this week but nothing out of the ordinary. It is clear that troops departing over the BRENNER have moved by road at least as far North as BOLZANO before loading on trains, and in fact road movement has been observed even beyond BOLZANO. Aside from the ADIGE Valley, roads to the West thereof as far as MILAN continue active and a fair amount of movement is evident in the TRENTO-PADUA-VERONA area. Ground sources also report road movement through N.E. ITALY with supplies being brought by road to the front from points beyond UDINE.

The general state of the enemy's L of C is well exemplified by a PW's account of his movement to and from ITALY while on leave. Typical is the fact that owing to lack of transport it took him a week to get from TRENTO to MANUA. This is thought to be neither an exaggeration nor a case of a soldier attempting to delay his return to the front as long as possible. (Further details on this PW's movements appear at the end of Appendix 'A'). A PW from a battalion of 114 Div states that his battalion marched on foot from the CORNACCHIO area to MONTESE (L 5524), a distance of at least 100 kilometres. Other PWs report that supplies are being moved over long distances by horse drawn transport. These statements typify the difficulties existing on the enemy's L of C as a result of heavy rail interdiction and lack of sufficient MT fuel. Under present circumstances such difficulties do not vitally affect operations on this front, but they may well play an important part in the enemy's eventual defeat when heavy fighting develops.

3. WESTERN FRONT

Last week another German Army was drawn into the maelstrom of defeat which has engulfed the Western Armies this Spring. This time

.....it was the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

it was the First Army which found itself in imminent danger of a major disaster. At the time of writing last week, the Allies were closing up to the line of the MOSELLE, where the enemy might have hoped to reestablish a firm front. Events rapidly proved this to be a vain hope. No attempt was made at even a temporary stand on the river, which we crossed against negligible opposition. Yet the enemy did not lack due appreciation of the seriousness of the new threat to the PALATINATE and attempts were certainly made to stiffen and reinforce the MOSELLE front. Their failure was due to lack of forces and lack of mobility on the part of such forces as existed, rather than to any decision voluntarily to pull back. The whole line East of the RHINE is now yielding. Between KARLSRUHE and SAARBRÜCKEN the enemy retains a fairly coherent front, but has pulled back rapidly to the Siegfried defences where a certain stiffening of resistance is apparent. However, the decision whether or not to stand on the Siegfried line is likely to be dictated by developments further North where the right wing of First Army and the whole of Seventh Army have collapsed. The outwardly healthy appearance of the SAAR front, reinforced this week by one infantry division from reserve, was of small avail when a deadly virus had penetrated the interior. The American drive swept over the NAHE river as quickly as it did the MOSELLE and is rapidly eliminating all enemy North of the river where a pocket consisting of some 2,000 enemy troops has been cut off. The MAINZ - SAARBRÜCKEN railway has been cut and a very real danger exists that the remaining withdrawal routes for the First and Seventh Army fronts will be cut. There is no sign of any stabilisation on the Northern flank of the enemy pocket West of the RHINE despite the arrival of a limited number of reinforcements. These have again been largely drawn from the ranks of 19 Army. 198 and 159 Infantry Divisions have both left the Upper RHINE area leaving probably only one and at best two infantry divisions to hold the 100 mile front along the RHINE North of BASLE. Other reinforcements for the Northern flank of the PALATINATE front have been drawn at the expense of the TRIER-SAARBRÜCKEN sector, from which at least one infantry division has been transferred to the area of BAD KREUZNACH. Apart from these, the action South of the MOSELLE, in so far as it has been fought at all, has been conducted by the remnants of 7 Army's divisions, amongst which 2 Pz and 6 S.S. Mtn appear to be rather less battered and more aggressive than the rest. There is now a serious danger that the enemy may fall between two stools. Last week he had the possibility either of holding on the MOSELLE-SIEGFRIED line thus defending the SAAR basin, or of cutting his losses in the SAAR and pulling back to the shorter line of the RHINE. The first alternative has proved beyond his capabilities and he must reckon with the early loss of the SAAR, while his lack of reserves and mobility now make it doubtful whether he can withdraw to the RHINE without suffering a major disaster en route.

Meanwhile on 15 Army front the REMAGEN bridgehead has been the main cause of concern to the enemy. Despite his very determined efforts in this past week to contain it, the bridgehead has continued to expand in ominous fashion. It constitutes a double embarrassment to the enemy. In the first place the establishment of a bridgehead on the East bank of the RHINE at all is a very serious threat to the enemy position in Western EUROPE. There is more to it than that, however. Strategically the REMAGEN bridgehead is not particularly well chosen, and were it not for the windfall of the intact LUDENDORFF bridge it is doubtful whether we should ever have attempted to cross the RHINE in what is a relatively unpromising sector. Thus to a certain extent the strategy of both sides is at present governed by an unexpected chance. The point is, however, that by establishing the bridgehead at REMAGEN we have forced the enemy to make heavy inroads on the reserves which he would otherwise have been holding in readiness against Allied crossings at a later stage and in other sectors. Already eleven divisions, including four mobile, have been committed around the perimeter and the build-up is clearly still inadequate to contain the bridgehead, let alone amble the enemy to launch a decisive counter-attack.

...Indeed the enemy's...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Indeed the enemy's own rate of attrition around the bridgehead has been such that 3 Para Div has now wholly disintegrated. Its Commander and staff were captured some eleven days ago. The spell of office of their successors was brief but hectic; eight days only after they arrived to replace the original staff, both the new commander and his staff followed them into captivity. Hence, if further crossings are effected in other sectors of the front, the old dilemma resulting from his inadequacy of troops once more confronts the enemy, with as little likelihood of solution East of the RHINE as there was West of it.

The rest of the front has been quiet. It is a measure of the extensive thinning out on 19 Army's front that our patrols across the RHINE North of EMMERICH on 17 March found a casemate empty and made no contact with the enemy in a radius of a quarter of a mile. Movement behind the front shows no striking reinforcement, although it seems very probable that 1 Para Army in the North is getting a priority in replacements. This Army is now probably in better shape than any other in the West and indeed needs to be for its sector is vital. From SCANDINAVIA there are reports that another division, 199 Inf, is now on its way from NORWAY after an interval of about three weeks since the departure of 169 Inf Div. There is so far no indication of its destination.

4. EASTERN FRONT

EAST PRUSSIA AND EASTERN GERMANY

The reduction of the East Prussian garrison has been carried a stage further this week by the Russian push to the Baltic coast S.W. of KONIGSBERG. This has split the East Prussian Army Group in two. One pocket is still left holding KONIGSBERG and the SAMLAND peninsula, while the other pocket consists of a narrow coastal stretch around HEILIGENBEIL. Enemy resistance continues to be stubborn, and the HERMANN GOERING Pz Corps has been given a special mention this week by the German radio for its distinguished conduct of the operations. Further West, the Russians are still held at the approaches to DANZIG and GDYNIA, and it is clear that the enemy intends to make a determined effort to hold these two ports. GROSS DEUTSCHLAND P.G. Div has been heavily engaged in this area. It is of interest that on 1 to 4 March, on which date a serious threat was developing to GDYNIA, the pocket battleships LUTZOW and SCHEER and the 5.9" cruiser LEIPZIG were all present at GDYNIA.

In Northern POMERANIA with the reduction of the KOLBERG garrison, the whole Baltic coast between the STETTINER HAFF and the German frontier is clear of the enemy. 23 SS Division NEDERLAND was identified at the approaches to KOLBERG last week; this is an interesting identification, as 23 SS KAM Division was in the Balkans up to the end of last year when it was no longer accepted on grounds of inadequate evidence. It now seems clear that it was in fact disbanded and its SS number transferred to a newly forming SS Division.

The remainder of the German front was relatively quiet until about March 10th with the exception of heavy fighting around the German bridgehead East of STETTIN which has now been eliminated by the Russians. On 10 March, however, according to the Germans, attacks by Marshal KONIEV's forces South of CRITZEN culminated in deep penetrations on both sides of LEOBSCHUTZ and near NEUSTADT. There has so far been no confirmation of these reports from Soviet sources but there seems no reason to doubt them. The attack looks like an attempt by Marshal KONIEV firstly to eliminate the German OPPA bridgehead South East of CRITZEN and then to continue the offensive so as to establish his left flank firmly on the RIESENGEBIRGE, which his earlier efforts had failed to do. The attack may well represent too the final phase of the cleaning up operations on the Soviet flanks prior to

 ...the resumption of...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the resumption of the offensive into Central GERMANY. To judge by his public statements, the enemy considers that this will not now long be delayed.

CZECHOSLOVAKIA AND HUNGARY

In the sector North of BUDAPEST limited progress has been made by the Russians West and S.W. of ZVOLEN (C 74). The terrain is very difficult here, reminiscent of the worst sectors of the Italian front, and the enemy who has been fighting hard in the ERZGEBIRGE does not appear to be unduly concerned at the Russian pressure. German Alpine troops in this area were given a mention in the Wehrmacht communiqué on March 19, a reference probably to either 3 or 4 Mountain Division.

In HUNGARY there has been a considerable change in enemy fortunes this week. It is clear now that the operations of the past fortnight represented a large scale and carefully planned German counter-offensive which has so far proved almost completely unsuccessful. The attack had been preceded by the elimination of the Soviet bridgehead over the HRON river at the end of February thus reducing the prospects of an early Russian break through towards BRATISLAVA. This having been done, the main offensive started. It developed as a three-pronged attack. N.E. of Lake BALATON the enemy attacked on both sides of the SARVIZ Canal with at least five Panzer divisions. The five were an interesting assortment. Three of them (1 SS Pz, 2 SS Pz, 12 SS Pz) belonged to 6 SS Pz Army, all of which bar one division has now been committed. The other two divisions were 5 SS Pz, transferred South from the HRON river sector, and 23 Pz which has long been in HUNGARY South of the DANUBE. The enemy also attacked South of Lake BALATON, but there are unfortunately no identifications of the forces engaged in this sector apart from a rather vague Russian reference to three Panzer divisions. It is clear that this attack was wholly unsuccessful. Finally, Army Group F supported the operation by the establishment of bridgeheads over the DRAVA at DONJI MIHOLJAC (G 29) and VALPOVO (G 48). Elements of 297 Inf, 104 Jg and 11 G.A.F. Divs were involved.

It is evident that the Russians have reacted sharply to this offensive and have now themselves counter-attacked on a large scale. Their greatest success has been N.E. of Lake BALATON where they threaten to outflank SZEKES FEHERVAR by a thrust North of the town which has penetrated as far west as the VERTES Mountains North of AJKA (Y 81). The Russians have also been attacking hard to eliminate the DRAVA bridgeheads and have had some success as the Germans admit the loss of the DONJI MIHOLJAC bridgehead and now speak of "the DRAVA bridgehead" in the singular.

YUGOSLAVIA

It has been an unusually quiet week in YUGOSLAVIA and the only operations of any note have been in the SARAJEVO area. H.Q. 7 SS Mtn Div has moved South into the town which suggests that the division may be intended to form the rearguard for XXI Mtn Corps when the latter's withdrawal is resumed. There is no evidence however that this is imminent and indeed the indications are that the enemy proposes to cling to SARAJEVO for some time yet. 7 SS Div has been launching sharp counter-attacks South of the town and has retaken JAHLANICA (R 57) and TRNOVO (R 58).

Reports received during the past fortnight suggest that 14 SS GALIZIEN Div has arrived in the OSIJEK (D 93) area from the Central sector. The division is said to have arrived in SLOVENIA to fight Partisans and according to one report, three of its companies have already attempted to desert to the Partisans. The area in which the division is reported is roughly the same as that vacated by 31 SS Division on its departure for GERMANY

....three weeks ago,.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

three weeks ago, and like 31 SS Div, 14 SS may have arrived for a rest and refit. The evidence so far available is not altogether strong enough to accept it as a firm identification, and the total strength of Army Group F is still placed at thirteen divisions.

APPENDIX 'A' TO H.Q. 15 ARMY GROUP
INTELLIGENCE SUMMARY NO. 86 DATED
20 MARCH, 45

RAILWAYS

BRENNER

The BRENNER has remained heavily interdicted all week and no through traffic has been possible between VERONA and BOLZANO; for at least four days there could have been no through traffic between BOLZANO and INNSBRUCK. Up until the 17th the line was blocked each day at not less than ten points. Most of these cuts have, as usual, been between VERONA and BOLZANO, but many have varied more or less from day to day and in spite of the enemy's repair effort we have been able to keep this stretch heavily interdicted only by virtue of attacks constantly repeated by both medium and fighter-bombers. Not infrequently breaks are repaired overnight only to be knocked out again the next day or a new cut established elsewhere. The extent of the enemy's strong, though on the whole fruitless, repair effort is exemplified this week by the completion of repairs at the heretofore heavily damaged viaduct near LAVIS, just North of TRENTO, around which he has a frequently attacked and almost as frequently repaired two-mile diversion. The viaduct itself had been out continuously for about two months when finally opened to single line traffic on 18 March. With the prospect of it remaining passable for only a brief period and with the main line and 12 mile diversion just to the North between S. MICHELE and ORA almost constantly blocked, it is somewhat curious that the enemy should have undertaken such major repairs at LAVIS viaduct. In fact it is not wholly apparent why he attempts any repairs at all on the lower reaches of the BRENNER. For example, though the repair effort by 19 March had been such that the BRENNER remained blocked at only four points (all bridges however) as opposed to being cut at over ten points on all days between the 13th and 16th, the four blocks existing on the 19th still very effectively interdicted the line, and there is very little prospect of these four being fully repaired before they are again cut or other cuts established elsewhere. The effect of our interdiction is indicated in the very slight degree of movement South of BOLZANO and by the fact that all signs of troop movement are seen North of BOLZANO. The probable answer is that by making repairs on the lower portion of the BRENNER the enemy ties down a certain proportion of our air effort to keeping this stretch of track blocked, thereby preventing us from intensifying interdiction elsewhere. Thus, on 14 March when there were many cuts South of BOLZANO we attacked and knocked out bridges further North in the region of the BRENNER Pass; this deepened the zone of interdiction by about 50 to 60 kilometres thereby creating appreciably greater difficulties in moving both troops and supplies. (At least one of these bridges remained out until the 17th). Following up this policy on the 16th, medium-bombers penetrated further North than ever before to make a successful attack on a bridge on the main INNSBRUCK-MUNICH line at a point about 40 kilometres N.E. of INNSBRUCK. This bridge is some 300 rail kilometres North of VERONA, and while an alternative route from INNSBRUCK to MUNICH exists, troops from ITALY destined for the Eastern Front will have to make an appreciable detour in order to by-pass this bridge.

Night-operational bridges have yet to make their appearance on the BRENNER, but this line is the scene of the enemy's latest rail-status deception. Recently 15 black dots ringed with white were painted on the tracks at the North choke point of TRENTO marshalling yard. Presumably they were to give the impression that craters blocked the line. Our photo interpreters were not deceived.

.....The two secondary....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The two secondary routes leading off the BRENNER, one from TRENTO running S.E. to join the N.S. ITALY rail net at CITTADELLA (G 2957) and CASTELFRANCO (G 3978), the other running Eastward from near FORTEZZA (W 1802), have both been successfully attacked several times this week. Their exact status throughout the week is unknown owing to lack of PR but it is probable that they have remained out most of the time.

Movement on the BRENNER line South of BOLZANO has been slight this week, although in general more day to day changes have been noted than were seen last week. Towards the end of the week, the Southern portion of the lin has shown increasing activity as repair work has decreased the intensity of our interdiction. None of this movement reflects through traffic, but simply a more or less local shifting of rolling stock.

North of BOLZANO considerable movement has been noted during the entire week. Activity in BOLZANO has increased, and rolling stock in almost every station between BOLZANO and INNSBRUCK has shown a considerable turnover, while at least four moving trains have been seen on day photos. It should be noted, however, that this is the first time the Northern portion of the BRENNER has been covered extensively enough to make a day by day comparison of station loading possible.

In so far as troop movement is concerned, judging solely from PR, there seems to be some movement going on. Such indications of troop movement as have been seen, have been North of BOLZANO, and in view of the state of the railway and on the basis of PR of road activity it seems certain that troops are moving by road from the VERONA area to the BOLZANO area. In fact with the line blocked North of BOLZANO for several days this week and with the secondary line running Eastward from the BRENNER to SPITTAL (X 6401) out, troops will have had to move by road almost all the way to the BRENNER Pass or, if still loading in the BOLZANO area, transhipping after a rail movement of only 65 kilometres. Under these circumstances it is quite clear why enemy formations departing from ITALY require such a long time to clear.

NORTH EAST ITALY

In the North East the degree of interdiction has somewhat fluctuated but in general has remained highly satisfactory from our point of view. On several days all river lines of interdiction between PADUA and UDINE, namely the BRENTA, PIAVE, LIVENZA and TAGLIAMENTO, have been blocked and at the same time two or more cuts existed on the frontier routes beyond UDINE. However, on 18 March the BRENTA interdiction was broken with the opening of the diversio near CITTADELLA (G 2875), and that night photos taken at 2030 hours confirmed the suspected leak in the PIAVE interdiction near NERVESA at G 6493, where the two short spans missing from the diversion bridge during the day were seen to be in place. With the BRENTA and PIAVE bolts thus pierced, at least at night, only a 15 kilometre road transhipment around SACILE (B 8407) and PORDENONE (B 9907) bridges is necessary to complete movement between the UDINE area and the PO Valley. Thus while PR has picked up little movement of rolling stock in this area it is obvious that movement is taking place. Similar indication of use is indicated by the fact that whereas on the 14th the short stretch of track between CASTELFRANCO VENETO and UDINE was cratered and impassable at four points, it was passable throughout when next photographed on the 18th. Elsewhere between the PADUA and UDINE areas there is little new to report. Both the Central and Southern rail routes remain out at the usual points. However, it is of interest to note that on the Southern railway the enemy has begun to construct a diversion around a bridge about 10 kilometres West of MONFALCONE (H 6491) which fighter-bombers have attacked twice this week but not cut. It is also in point that a diversion is under construction around LATISANA bridge (H 220873) on the same line about

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 87 OF 27 MAR '45

NOTE: The security classification of this Summary has now been downgraded to SECRET. In view of this, the publication of "15 Army Group Intelligence Notes" has been discontinued and all recipients of the latter have been placed on the distribution of this Summary.

-o-o-o-o-o-o-o-

1. ENEMY SITUATION

Once more 29 P.G. Div is in reserve, having been relieved in the CASTEL D'ALANO sector by 334 Inf Div. The first evidence of this change was provided by two prisoners taken early on the morning of the 24th near CASIGNO L 6425. They said that 756 Regiment had come into the line on the 21st March after having marched across from IMOLA. That same night a sharp patrol encounter 3,000 yards to the West resulted in several enemy being killed and documents taken from one body identified the Engineer Bn of 334 Div in a sector previously associated with 15 P.G.R. Since then, though there have been no further contact identifications of 334 Div, we have had several reports of the divisional sign being seen in the area South of MODENA. In addition tanks of 29 P.G. Div were seen on the 24th March as far North as MIRANDOLA L 6893 while a battalion of the div was reported by O.S.S. just West of CARPI L 5281 on the same day. It is safe to assume therefore that 29 P.G. Div is in reserve in the general area North of MODENA.

There is little other news from the Fifth Army front, where activity has been confined to normal patrolling on both sides. 114 Div is still carried in and N.E. of MONTESE L 5524 with probably at least two battalions of 721 Regt still out of the line reforming. Identifications of 1044 G.R. and 1045 G.R. confirm that 232 Div has taken over West of 114 Div and its responsibilities apparently include the defence of the ABETONE Pass, where we continue to get prisoners from III Bn 5 SAN MARCO Regiment which is under its command. Within the division the lay-out is 1045 G.R. on the West and 1044 G.R. in the MAMBERE sector on the East, while the divisional boundary with 114 Div apparently runs North West from M. TORRACCIA L 5520. 1043 G.R. is unlocated and must still be in reserve reorganising. Even supposing that the whole of 334 Div is committed in the line this leaves the enemy approximately four battalions (two from 114 Div and two from 232 Div) in immediate reserve West of VERGATO.

In the SERCHIO Valley we have now identified the Recce Unit of the ITALIA Division and the whole division appears to be complete in this area. We have had no recent prisoners or deserters from MONTE ROSA Div and it can be assumed that all its elements have now left for North West ITALY. To the East of 334 Div there has been a steady trickle of deserters from 94 Div, none of them bringing any startling information but all providing useful confirmation that the divisional sector remains unchanged, except on its extreme left flank where 157 Mtn Div has apparently taken over responsibility for MONTE SOLE L 7828. We know from prisoners that the mountaineers have under their command 7 G.A.F. Bn s.b.V. which is holding from M. SOLE to the SETTA river.

From 1 Para Div sector come reports which hint at a relief on the Northern slopes of M. GRANDE. In the sector where we had previously identified II Bn 4 Para Regt, troops were seen on the 25th wearing a different type of uniform and helmet, and it is possible that some Infantry unit may have taken over from the Parachutists in this sector. Possibly connected with this is a report from a source in BOLOGNA that troops of 65 Div who had been billetted in the Southern outskirts of the city for the last two months had moved away about the

....10th March.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

18th March. 65 Div has been on its present narrow sector, with four battalions in reserve, since the end of last year and should any regrouping take place South East of BOLOGNA it would be reasonable to expect this division to assume somewhat larger responsibilities. 65 Div may, therefore, have extended Eastwards into 305 Div's sector to allow the latter to take over part of 1 Para Div's sector on M. GRANDE. This is very much in the realm of speculation, especially as there is still no good reason forthcoming as to why the Parachutists should contract their sector. East of 1 Para Div, 278 Div is now responsible for the sector previously occupied by 334 Div. Although the exact location of its right divisional boundary cannot be fixed with certainty, it is definitely North of the SANTERNO as two prisoners from II Bn 994 G.R. placed their Bn North of the river on 22 March. On the GESSO General HOFER's private force of Italians - the ARDITI of FORLI - is holding part of the cliff South East of TOSSIGNANO.

Along the SENIO the enemy has put in several sharp raids clearly with the intention of securing prisoners. One on the 26th was put in by 7 Coy 9 P.G.R. in strength of about a platoon in the area M 3030. This particular raid was singularly unsuccessful and cost the enemy two killed and five wounded and left us with fourteen prisoners including one officer. II Bn is the Northernmost one in the divisional sector and its right neighbour is I Bn 9 P.G.R. Apart from rumours that 26 Recce Unit was on the right flank of the div, we had no firm identifications until the 25th when a deserter arrived from II Bn 67 P.G.R. in the area M 2828. It is still not certain whether the other battalion of this regiment provides the divisional reserve or is also in the line. Further downstream the occupants of the sector immediately East of LUGO who had escaped identification for some time are now known to be 1059 G.R. - the right hand regiment of 362 Div. Up till the 24th only one battalion of the Regt had been forward, the other being in reserve supervising Italians constructing the SANTERNO defences. It is now rumoured by prisoners that both battalions are forward and that I Bn has relieved the Northernmost battalion of 98 Div - a relief that was expected by prisoners taken over a week ago. Whether this has occurred or not 362 Div still remains on a very extended front. Yesterday there were two useful identifications from the COMACCHIO Spit where 142 Recce Unit still has a squadron on the Western shores of the Spit while elements of the Kesselring M.G. Bn No.2. are at the mouth of the RENO. There have been no recent deserters from 162 Turcoman Div so that the story that the Turcomans were going to be relieved by Germans may well have come true.

Prisoners taken recently on the Eighth Army front from 26 Pz Div said that the enemy is expecting an Allied attack to be launched shortly either up the axis of Route 9 or directed on LUGO. The enemy is showing similar anxiety on the front S.W. of BOLOGNA where he apparently construed our attack at the beginning of the month West of VERGATO as a preliminary to the launching of a larger scale offensive in that sector. The committing of 29 P.G. Div from reserve is proof enough of this and its more recent replacement by 334 Div, probably the best Infantry Div in ITALY, shows that the enemy is still unwilling to take a risk here. In view of the enemy's anxiety as to our intentions a brief comparison of his present situation with that at the beginning of the year is not without interest. Early in January the enemy line was held by sixteen German divisions and one Italian division, while there were four divisions in immediate reserve North of BOLOGNA. Of these sixteen divisions nine held from the Adriatic to M. GRANDE, the remaining seven being on the 5 Army front. By the middle of the month 356 Div had been taken out of the line on the SENIO front and was on its way out of ITALY and one division had been switched from the 5 Army to the 8 Army front. At present there are fifteen divisions in the line, seven of which are East of M. GRANDE representing a loss of two divisions on this front between the middle of January and now, with a corresponding gain on the 5 Army front. (162 Div was switched during February from Western ITALY to North of Lake COMACCHIO but its poor fighting qualities restrict its activities to coastwatching, and its arrival merely offsets the departure for N.W. ITALY of the battalions of 710 Div previously in that sector). There are, however, only two divisions (both mobile) in reserve as compared with four early in January, the net loss being

....accounted for.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

accounted for by the departure of 16 S.S. and 715 Divs, the latter by now probably clear of ITALY. It would be misleading however to regard the departure of three divisions as implying that the enemy's fighting strength is proportionately lower now than it was at the beginning of January, since during the interim period, which has been a quiet one, the enemy has undoubtedly been able to build up again those divisions which at the beginning of the year were below strength. Although the enemy has lost some twenty battalions of infantry South of the PO, replacements for the divisions in the line and in immediate reserve will have probably very nearly made good the difference if expressed in terms of numbers of fighting men.

The situation confronting KESSELRING's successor might be a great deal worse. He has at least the satisfaction of taking over an unbroken fighting force composed of some of the best divisions now available anywhere to the German Army, and he has two good mobile divisions (29 P.G. and 90 P.G.) in reserve, which is apparently all that KESSELRING found awaiting him when he assumed the appointment of C in C West. We still lack definite evidence as to who has taken over Army Group C, but providing that the report that he was hurt in a car crash is false, Col.Gen VIETINGHOFF who deputised for KESSELRING when the latter was injured in December, is the most likely choice. Assuming that no one has been brought in from outside ITALY General LEMELSEN, G.O.C. 14 Army, would be second favourite. Whoever the successor is, it is unlikely that there will be any major change of strategy in ITALY. Despite the loss of three divisions the enemy commander has still been able to remain on the same line as at the beginning of the year (though in the ROMAGNA Plain this is not the shortest line he could choose) and he shows no sign of relinquishing it voluntarily. On the Eighth Army front he has appreciated that the main blow is likely to be struck up Route 9 or between here and FUSIGNANO, and it is on this sector that he has concentrated three good divisions (4 Para Div, 26 Pz Div and 98 Div) at the expense of thinning out to the North and South. On the key feature of M. GRANDE, despite some local regrouping is 1 Para Div, while the approaches to BOLOGNA are covered by a highly developed system of defence works. In the sector West of VERGATO, where prisoners expect a renewal of the attack, he has placed his best Infantry division - 334 - and has also at least some four battalions as local reserve should we launch an attack. In general reserve South of the PO are two mobile divisions with which the C in C S.W. may hope to influence the battle. Except for the need to keep three divisions West of VERGATO where previously one had sufficed, the enemy's dispositions are the most economical he can make with the forces available, - always provided he is not called upon to give up any more divisions. And at present there is no sign that any formation is following 715 Div out of the country.

2. ENEMY SUPPLIES AND COMMUNICATIONS

This week no major developments are apparent on the enemy L of C and railways remain well interdicted. On the BRENNER, due to bad weather on 26 and 27 March and the fact that a large portion of our medium bomber effort against the BRENNER has fallen on the upper stretches of the line, considerable repairs have been effected between BOLZANO and VERONA. It is probable that by the 28th the line may be open as far North as TRENTO. In the N.W. enemy repairs are slow and all lines from the PADUA area across the frontier are blocked at many points. Through traffic is also impossible from the middle PO Valley to MILAN.

Only slight indications of rail troop movement have been picked up recently, again on the BRENNER North of BOLZANO, and it is most probable that by this time 715 Inf Div has cleared ITALY.

North of the PO no pronounced road movement has been seen from the air and little reported by ground sources. Ground reports covering the last week of February and the first half of March show that troops going North along the axis VERONA-BOLZANO-INNSBRUCK moved largely by road, thereby confirming the effectiveness of our rail interdiction. One report shows that in late February a considerable number of troops were forced to march by road all the way to the BRENNER Pass; these troops will have been the tail of 16 S.S. Div. It is probable that a fairly large proportion of 715 Div has been forced to do the

....some thing....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

some thing. Another ground source states that large amounts of goods and materials destined for GERMANY are stored in the ADIGE Valley owing to transportation difficulties; unless moved by MT there is little likelihood that they will ever reach their destination.

No major changes have been noted of late along the PO river where all traffic West of PIACENZA continues to cross by ferry or night pontoon bridges. None of the pontoon bridges have been seen assembled this week but night PR has shown activity at CASALMAGGIORE (F 1704), BORGOFORTE (F 4911), S. MICOLO (F 5112) and OSTIGLIA (F 7411). With very few of our aircraft operating on 26 and 27 March the PO crossings may have been operating 24 hours a day.

No change is evident in the enemy's supply position. Reports continue to be received of the enemy's shortage of petrol and many indicate an extensive use of methane as a substitute. According to a PW who formerly belonged to a tank recovery unit, vehicles frequently ran out of petrol and had to wait on the road until more was brought up from their own workshops. The situation which this type of report reflects is unlikely to be remedied by the recent offer made by 90 Div to award 1,000 cigarettes to any man who returns from patrol with a can of captured petrol.

3. WESTERN FRONT

The line of the RHINE has been finally broken this week. Before the last German had been cleared from the West bank South of LUDWIGSHAFEN, new crossings had already been effected in the Northern and Southern sectors to supplement the steadily expanding Allied bridgehead at REMAGEN. Three major bridgehead areas are now discernible - in the DARMSTADT-FRANKFURT area, at REMAGEN and North of the RUHR in the WESEL sector. These are in addition to a large number of subsidiary crossings, which are being rapidly merged into the larger bridgeheads as the latter expand. The quality and degree of enemy resistance at each is in direct proportion to the success achieved by the enemy in withdrawing his forces across the RHINE in the various sectors; only the quality of inadequacy is common to all.

In the South the battle West of the RHINE ended with the almost complete destruction of the German Seventh Army and the partial elimination of the First Army. Seventh Army had definitely lost all hope of withdrawal across the RHINE by about March 19th when Allied columns striking through BAD KREUZNACH reached the MAINZ-WORMS area. Prior to that very little had been able to escape. The collapse of the Seventh Army affected the right wing and centre of the First Army holding the Siegfried line West of WISSEMBOURG, and the front folded up from North to South with very heavy losses to the enemy. Only on the extreme left of First Army did the line hold firm; here one P.G. and two infantry divisions fought very hard to cover the crossings at SPEYER and KARLSRUHE, and were themselves able to pull back over the RHINE in reasonably good order. Before this happened Allied forces were able to exploit the disorganisation of the few enemy forces in the area South of MAINZ. Meeting disorganised resistance from Volkssturm, Officer Cadet Schools and miscellaneous Rear Army units we have been able to achieve very deep penetrations into Central GERMANY. FRANKFURT AM MAIN has been by-passed, the MAIN crossed near ASCHAFFENBURG and according to enemy reports we are striking North Eastwards up the KINZIG Valley in the direction of KASSEL. There is still no sign of any effective enemy opposition and apart from the miscellaneous units mentioned above, only remnants of two low-grade infantry divisions have been contacted.

In the REMAGEN bridgehead area, the enemy's main concern has been with his Northern flank which he reinforced with two additional infantry divisions brought down from the COLOGNE plain during the week. He made some efforts to extract some armour from the line and indeed nearly succeeded in extricating 3 P.G. Div, only to recommit it hastily as the Allied armour started to exert pressure. The reinforcement of the Northern flank did not however, take into account the disastrous weakness of the centre and the Southern flank of the bridgehead. Here at least four infantry divisions had ceased to exist

...as fighting formations...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

as fighting formations. An indication of the state these forces were in lies in the fact that 26 Volksgrenadier division had three infantry divisions under its command. An average of 1,000 daily has been taken over the past seven days in the bridgehead and the inevitable has now occurred. Allied armour has broken out of the bridgehead and is pushing East against decreasing enemy resistance.

Further North, the large scale Allied RHINE crossing in the WESEL area has produced no surprises, neither for the enemy who was probably expecting the attack, nor for us in the form of unexpected identifications. In the first 36 hours three parachute and three infantry divisions were contacted by our forces; these have now been joined by the two mobile divisions held in Army Group H reserve - 116 Pz and 15 P.G. The enemy as might be expected in view of the better quality of his troops here is fighting harder than in most other sectors of the front. The trouble is that he has not enough of anything and already an ominous expansion of this bridgehead is taking place. A few more troops may perhaps be spared from HOLLAND to reinforce the area: KESSELRING has now the bulk of four divisions in the area between the Dutch coast and EMMERICH, excluding the elements of an unidentified parachute division which are reported to have arrived recently in HOLLAND. Even with all these reinforcements (and they are the best 1 Para Army can hope for) the enemy has virtually no prospect of reducing or containing the bridgehead.

KESSELRING when he arrived in the West is alleged to have informed his staff that he was the new V-3 secret weapon. He needs to be, for there is little prospect of anything else arriving in the West in time to save the situation. The courses open to the enemy are now limited. The basic choice lies between fighting until his armies are destroyed in detail or accepting unconditional surrender. There is still no indication that the enemy is in any way disposed to follow the second course and it must be assumed that he intends to fight on so long as organised resistance is a possibility. This granted, he must without delay stabilise the front, and it is now extremely doubtful whether this lies within his capabilities. Two essential conditions are needed. The first is adequate forces. It is now abundantly clear that the enemy is in no position to contain any single one of the present Allied bridgeheads let alone all of them. Only a rapid and substantial reinforcement of all threatened sectors can retrieve the position. This appears to be beyond the enemy's present capabilities. Apart from a possible two divisions in HOLLAND which might be spared, all the divisions on the Western Front are either wholly committed or destroyed. 19 Army has been drained dry and 5 Pz Army's forces in the RUHR area are of the slenderest. There are certainly outside the Western Front forces which could be spared, a dozen divisions in NORWAY, possibly half a dozen from the BALKANS, at least that number from ITALY and a few from the Eastern Front. But these are not in any true sense available. The enemy's transportation situation is such that before the first of these could make its appearance, the whole front in the West may have collapsed. It now takes a month to get a division out of NORWAY; it takes rather longer to transfer a division from East to West, and judging by the speed at which 715 Inf Div is leaving ITALY, the next military age group will have reached the call-up age before anything substantial comes from this theatre. For manpower, then, KESSELRING will have to rely on any scrapings of the Wehrkreise which may become available. It is in fact evident that there is next to nothing available. All through this week there has been virtually no important military movement behind the whole Western Front area and the RUHR area has been almost completely dead. It seems that no early reinforcement is thus to be expected.

The second essential for stabilisation is to have a defence line on which to stand. It is not easy to see where the enemy can now hope to do this. The Siegfried and the RHINE lines were the best and most economical available to him in the West. No other position now offers similar advantages. A line running from EMDEN along the EMS down to the RHINE near EMMERICH has been reported. This is in danger of being turned by the expansion of our WESEL bridgehead. Apart from this the only prepared defence line of any sort is a series of fortifications

....built in the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

built in the area East of FRANKFURT prior to the German re-occupation of the RHINELAND. The state of these is not known but it is unlikely to be very satisfactory. There is thus small prospect that KESSELRING can quickly stabilise the situation. His main hope must now be to inflict the maximum casualties upon the Allies in the hope that like the Soviet advances, our attack will lose its momentum in time for some fresh forces to come up. On the present form it now seems within our power to inflict a crippling disaster on the enemy, and so to isolate and disorganise his Army Groups that it will not be possible for him to pull any substantial forces from the Western Front back to the last ditch positions in the Austrian National Redoubt where the Germans may hope to end the war.

4. EASTERN FRONT

EAST PRUSSIA AND GERMANY

There have been few developments of importance in this past week. South of KÖNIGSBERG, the enemy pocket around HEILIGENBEIL has been eliminated, but little further headway has been made towards KÖNIGSBERG itself by the Third White Russian Army Group. In the area of GDYNIA and DANZIG stiff enemy opposition continues and ROKOSSOVSKY's forces have been held to small gains, although by the capture of ZOPPOT, a wedge has been driven between GDYNIA and DANZIG. One of the pocket battleships which was at GDYNIA at the start of this month has now been transferred to SWINEMUNDE and it is possible that the other has followed it.

There has been no activity of importance on the main front in GERMANY as far South as the Upper Silesian region. In this latter area, progress has been made by Marshal KONIEV's forces towards the SUDETEN Mountains, but without knowing the full extent of KONIEV's objectives, it is difficult to assess the success of this attack. The German bridgehead over the ODER S.E. of OPPELN has been eliminated, itself a development of some significance. Apart from that however no success of major strategic importance seems to have been achieved, nor has KONIEV yet got his flank resting firmly on the SUDETEN mountains. Moreover it is clear that by the time the Russians gave the news of the attack, it had in fact virtually come to an end, and little further progress has been made in the past few days. The attack may of course be the prelude to an all-out offensive by the First Ukrainian Army Group across the SUDETEN mountains towards OLMÜTZ and the Bohemian plain. To judge by the comments of German military spokesmen, this is a Soviet capability which the enemy considers to be current and likely.

CZECHOSLOVAKIA AND HUNGARY

The Czechoslovak and Hungarian region has seen the most important Soviet progress on the Eastern Front in the past week. North of BUDAPEST, the enemy, possibly fearful of deep Soviet penetrations into his rear across the SUDETEN mountains, has been pulling in the Southern flank of his long salient in SLOVAKIA. The pace of the German withdrawal has been rather less leisurely than in previous weeks and he seems to have abandoned the road centre of BANSKA BISTRICA (C 76) in the heart of the Slovak mountains in some disorder. An interesting development has been the transfer of 3 SS Pz Division from the area South of the DANUBE to the HRON river sector North of the DANUBE.

South of the DANUBE, the enemy has suffered a heavy set-back this week. The Russian counter-offensive North of Lake BALATON has made very considerable headway. Striking initially North Westwards, the Russians reached the DANUBE at DUNAÚJVÁROS (Y 95) thereby forming a German pocket South of the DANUBE between DUNAÚJVÁROS and ESZTERGOM (Z 27). This has now been virtually eliminated. Meanwhile driving West and South West other Soviet forces have captured the road and rail centres of SZÉKESFEHÉRVÁR and PÁPA (Y 30), the latter 30 miles from the Austrian frontier and are reported to be pushing on to SZOMBATHELY (C 78), 65 miles S.E. of VIENNA. Latest reports place the Russians less than 30 miles

....from the Austrian.....

THIS PAGE IS UNCLASSIFIED

0822

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

From the Austrian border. Considerable casualties have certainly been inflicted on the enemy, although the Russian claim virtually to have destroyed 6 SS Pz Army as a fighting formation is probably somewhat exaggerated. 350 Inf Div, formerly North of the DRAVA, has been heavily engaged in the Lake BALATON area, while 6 Pz Div has been identified in the same sector. At least six German Pz divisions have thus been recently identified on the 20 mile front between Lake BALATON and SZEKSZARD.

The events in HUNGARY are likely to have a very profound influence on the whole German position in South-Eastern EUROPE. It seems clear that the enemy retreat has not been voluntary, and suggestions that he is pulling back to a shorter line so as to release 6 SS Pz Army for re-transfer to the Western Front are not at present supported by any independent evidence. What has happened in fact is that after an ambitious and unsuccessful counter-offensive, the enemy with fairly heavy losses to himself has been forced off one of the few defensive lines he held forward of the Inner German Fortress. By withdrawing to a defence line in the SOUTH EASTERN area. They will have forced the enemy to reconsider his whole basic strategy in the SOUTH EASTERN area. Having failed to move his DRAVA-BALATON-DANUBE front forward to the line of the DRAVA, the enemy can now have no logical or strategical reason for continuing to cling to the extended front he still holds in YUGOSLAVIA. Unless the situation in N.W. HUNGARY deteriorates still further he may temporarily try to hold a defence line in Southern HUNGARY from Lake BALATON down to the DRAVA so as to cover the Hungarian oil fields, although even this is now becoming difficult. In YUGOSLAVIA however a withdrawal from the SAVA and the SARAJEVO salient would now appear probable and prudent. It would not be without its disadvantages, particularly with regard to the administrative and economic difficulties likely to arise with the Croats. It would have the disadvantage too of giving the Partisans much greater freedom of movement between Eastern and Central CROATIA on the one hand, and BOSNIA and SLOVENIA on the other hand. Nevertheless a front running from Lake BALATON to the DRAVA at EROS (A 61, thence South Westwards towards the Adriatic coast at SAW (G 70) would have the double advantage of leaving the Germans still in possession of the NAGY KANIZSA oilfields and of being infinitely easier to hold than the present awkward front. It would entail too a certain, though not a large economy in forces.

YUGOSLAVIA.

There are signs that the policy outlined above is now being put into effect in YUGOSLAVIA. Throughout the past week considerable Northward road movement has been seen along the SARAJEVO-BROD (G 12) Highway, and 1st Inf Div is reported to be moving up to BROD. A number of small villages in the area 5 - 10 miles South of SARAJEVO have been abandoned and everything now seems ready for a rapid withdrawal from the town whenever the word is given. On 25th March too, there was heavy movement West and South West from the SARAJ towns of OSIJEK (G 67) and DONJ MIHOLJAC (G 29) towards NASICE (G 26). It is still too early to assess the full extent of this movement, but it may imply the start of a transfer out from the SARAJ area. It is likely that some of the forces involved in the above are going to the DRVAR (F 40) area where the Partisans last week launched a highly successful offensive from the S.W. leading to the fall of DRVAR and the capture of over 500 prisoners with much booty. Enemy reactions to the attack have so far been moderate, but it is to be expected that some reinforcement for the demoralised Croat forces in the area will soon appear. The possibility of a Partisan attack Northwards from DRVAR towards ZAGREB is one which the enemy cannot rightly ignore.

from the Austrian border. Considerable casualties have certainly been inflicted on the enemy, although the Russian claim virtually to have destroyed 6 SS Pz Army as a fighting formation is probably somewhat exaggerated. 356 Inf Div, formerly North of the DRAVA, has been heavily engaged in the Lake BALATON area, while 6 Pz Div has been identified in the same sector. At least six German Pz divisions have thus been recently identified on the 20 mile front between Lake BALATON and SZEKSZARD.

The events in HUNGARY are likely to have a very profound influence on the whole German position in South-Eastern EUROPE. It seems clear that the enemy retreat has not been voluntary, and suggestions that he is pulling back to a shorter line so as to release 6 SS Pz Army for re-transfer to the Western Front are not at present supported by any independent evidence. What has happened in fact is that after an ambitious and unsuccessful counter-offensive, the enemy with fairly heavy losses to himself has been forced off one of the few defensive lines he held forward of the Inner German Fortress. By yielding the BALATON position, the Soviets have done more than force the Germans off one defence line on to another. They will have forced the enemy to reconsider his whole Grand strategy in the South Eastern area. Having failed to move his DANUBE-BALATON LINE front forward to the line of the DRAVA, the enemy can now have no logical or strategical reason for continuing to cling to the extended front he still holds in YUGOSLAVIA. Unless the situation in N.W. HUNGARY deteriorates still further he may temporarily try to hold a defence line in Southern HUNGARY from Lake BALATON down to the DRAVA so as to cover the Hungarian oil fields, although even this is now becoming difficult. In YUGOSLAVIA however a withdrawal from the SAVA and the SARAJEVO salient would now appear probable and prudent. It would not be without its disadvantages, particularly with regard to the administrative and economic difficulties likely to arise with the Croats. It would have the disadvantage too of giving the Partisans much greater freedom of movement between Eastern and Central CROATIA on the one hand, and BOSNIA and HERZEGOVINA on the other hand. Nevertheless a front running from Lake BALATON to the DRAVA at EROS (X 61, thence South Westwards towards the Adriatic coast at SAK (G 70) would have the double advantage of leaving the Germans still in possession of the NAGY KANISZA oilfields and of being infinitely easier to hold than the present awkward front. It would permit too a certain, though not a large economy in forces.

YUGOSLAVIA

There are signs that the policy outlined above is now being put into effect in YUGOSLAVIA. Throughout the past week considerable northward road movement has been seen along the SARAJEVO-BROD (G 12) highway, and 1st Inf Div is reported to be moving up to BROD. A number of small villages in the area 8 - 10 miles South of SARAJEVO have been abandoned and everything now seems ready for a rapid withdrawal from the town whenever the word is given. On 25th March too, there was heavy movement West and South West from the SARAJEVO towns of OSIJEK (G 67) and DONJI MIHOLJAC (G 29) towards MASICI (G 26). It is still too early to assess the full extent of this movement, but it may imply the start of a withdrawal not from the SARAJEVO area. It is likely that some of the forces involved in the movement are going to the BIHAC (F 40) area where the Partisans last week launched a highly successful offensive from the S.W. leading to the fall of BIHAC and the capture of over 500 prisoners with much booty. Enemy reactions to the attack have so far been moderate, but it is to be expected that some reinforcement for the demoralised Croat forces in the area will soon appear. The possibility of a Partisan attack Northwards from BIHAC towards ZAGREB is one which the enemy cannot lightly ignore.

THIS PAGE IS DECLASSIFIED IAW EO 13526

RAILWAYS

The BRENNER has remained blocked to through traffic all week, although in general our belt of interdiction on the Southern portion was seen to be breaking down on photo cover of 25 March, and may by 28 March be serviceable. The blocks on the Northern stretch of the route seem to be holding up quite well.

Through traffic between VERONA and TRENTO was impossible at least to the 25th by virtue of the PARONA (F 6158) bridge and the SAN AMBROGGIO bridge (F 5164) remaining out. On 20 March there was a total of six blocks on this section of line, one of which had been repaired by the following day. Attacks of the 22nd again raised the total of cuts to six, but by the following day repairs had rendered two points of interdiction passable. On the 24th while repair work continued, no change was noted except that another block was effected. Photos of the 25th, the most recent available cover, showed that two cuts had been made passable but three bridges still were down effectively blocking through traffic. Between TRENTO and BOLZANO both the S. MICHELE bridge and diversionary line remained cut all week, while between BOLZANO and INNSBRUCK on the Northern stretch of the BRENNER, PR of 25 March showed two bridges were still out, one having been impassable all week.

Complete overcast on 26 and 27 March held MAAF's operations to a minimum, no attacks being made on the BRENNER line, and it is probable that the line will be open to through traffic from VERONA to as far North as TRENTO by the 28th.

North of INNSBRUCK the ARZBERG (E 1279) bridge on the main INNSBRUCK-MUNICH line was attacked and badly damaged on 22 March and was seen to be still out on 25 March; it is probably still out. On the alternative INNSBRUCK-MUNICH route the bridge at MURNAU (D 6261) was seen on the 22nd to have cratered approaches which did not appear to have been repaired by the 25th.

The BRENNER, while closed to through traffic all week, has shown a certain amount of localised movement. Just North of VERONA a decrease of rolling stock has been noticed between the destroyed S. AMBROGGIO bridge (F 5164) and the VERONA PARONA bridge (F 6158). In view of the fact that the PARONA bridge needs very little repair work to render it fully serviceable, all factors point towards its being "night-operational".

As the enemy repairs our interdictions on the BRENNER South of BOLZANO activity, as is to be expected, increases. TRENTO yards, for example, show more movement than last week, but are by no means as active as they were at the beginning of the month. North of BOLZANO the line is appreciably more active though some drop in overall movement has been noted over the past seven days, owing no doubt to stepped-up interdiction.

Troop movement along the BRENNER line this week continues on a limited scale. Some flats loaded with AF have been noted on the Northern portion and although empty flats have shown a certain amount of activity, it is not possible to state definitely that this ties in with troop movement.

In the VICENZA-PADUA-TREVISO area there were on 25 March a total of ten blocks effectively cutting all lines in the sector, with all the BRENTA river bridges impassable. This is the heaviest interdiction accomplished in this area for some time. The main TREVISO-UDINE line is also heavily interdicted and no through traffic has been possible on the line for at least a month. Although PR of 25 March is the most recent cover available, the line is believed to have been still impassable as of the 27th.

.....The main TREVISO.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The main TARVISIO frontier route was seen blocked at four bridges on the 25th and it does not seem likely that the route could be open yet. The PREDIGOLIM route remains closed to through traffic by virtue of an impassable bridge, while two heavily damaged bridges block the POSTUMIA route.

The PADUA-VICENZA-TREVISO area has remained quiet during the week, although some movement has been noted on the line between CASTELFRANCO VENETO and TREVISO. Further East along the routes to UDINE activity continues to be slight. The main TREVISO-UDINE line has shown almost no movement as far East as CASARSA (about 25 miles West of UDINE). Activity has, however, been noted between CASARSA and UDINE itself. This activity undoubtedly reflects rail movement between C.SARSA and GEMONA (C 3240) just South of our belt of interdiction. UDINE yards have shown slight movement during the week; ten loaded flats were seen here on 21 March and 20 loaded flats in another yard on the 25th. The Central and Southern routes West of UDINE are now beginning to show activity on a very limited scale.

The TARVISIO frontier route has been in use both North and South of our belt of interdiction while the POSTUMIA and PREDIGOLIM routes lack adequate PR for any definite statement.

SHIPPING

In the Gulf of GENOA 4 MT ships continued to move rapidly in pairs between GENOA and SPEZIA from 19 to 24 March, and there has also been the usual turnover of F-boats and S-barges. SAVONA, however, has apparently been inactive since 22 March.

There has been no photo cover of the Northern Adriatic ports since 23 March, but two coasters reached VENICE from TRIESTE between 19 and 22 March, while a MV and another coaster arrived from PORTO NOGARO during the same period. At TRIESTE on 20 March two coasters arrived from VENICE and one from MARENZO, whilst a further coaster had arrived from VENICE by the 22nd. Both POLA and ARSA Channel were inactive up to 23 March and there was only light ferry and F-boat activity at FIUME. There was the usual barge activity along the Venetian coast.

MAIN ENEMY DUMPING AREAS NORTH OF RIVER PO

1. Upper ADIGE Valley. There are a considerable number of dumps and installations of all kinds along the main BRENNER railway line between TRENTO and BOLZANO and the branch line from BOLZANO to MERANO. Further North there are a few installations scattered along the line which runs East from FORTEZZA (W 1502) to LIENZ (X 1505). South of TRENTO as far as VERONA there are no important installations except for two large dumping areas round the stations of ROVERETO (A 7043) and RORI (A 6701) which are adjacent to the Northern end of Lake GARDA.

There are at least five MT parks, two workshops and a spare-parts depot scattered throughout the above area. The spare-parts depot is situated at LAIVES just South of BOLZANO and there are workshops at MERANO (A 8190) and MAIA of BRENNO at A 729475, and a park at A 790409 which contained 150 MT on 9 Jan '45. In the far North there is an MT park, reported to be No. 575, North of BRUNECKEN (B 1890) and two more along the FORTEZZA-LIENZ road. South of TRENTO there is a possible MT park at ROVERETO.

2. VERONA. Owing to its geographical condition, VERONA is the ideal off-loading and forwarding point for stores coming down the BRENNER railway and thus, in the area VERONA - S. AMBROGGIO - PESCHIERA there is the largest single concentration of dumps in the whole of enemy occupied ITALY. It is notable, however, that there are very few fuel dumps in this area, those are mainly scattered over the Lombardian plains or South of the River PO. West of VERONA along

....the road....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

the road and railway line to MILAN there are small concentrations of dumps and installations at both BRESCIA and BERGAMO, and the road tunnels on the West shore of Lake GARDA are all reported to be used for storage or workshops.

Only two of the MT installations reported by ground sources in the VERONA area and confirmed by PR are still active; these are the SPEER vehicle park at ZEVIANI (F 4254) and an MT stores depot at F 711545. Besides these there is a possible MT park at F 711545 and a block of barrack buildings known to exist at F 6354 is reported to contain a Base Ordnance Workshop. It is also possible that some of the many installations which are known to be active but whose function and contents cannot be identified by PR are workshops or spare-parts stores. West of Lake GARDA there is an MT park at DESENZANO and another at CAVRIANO (F 2271) whilst an installation at FORNO D'ALLIONE (A 1528) is reported by a PW to be the 115 Central Spare-parts Depot. North of BERGAMO at ALBINO (K 7394) there is an MT workshop which was extensively damaged in Dec 44.

3. MILAN In the industrial areas of MILAN, MONZA and BUSTO ARSIZIO (J 98), and as far North as the line VARESE (D 8.06) - COMO - LECCO (E 4305) there is a considerable number of installations of all kinds. These include a relatively large amount of fuel. Ground source reports, which cannot be confirmed by PR, indicate that the railway tunnels on the net work of secondary lines in the MONZA - COMO-LECCO triangle are being used to store fuel and ammunition. N.E. of MILAN along the railway and road that runs East from COLICO (E 4330) to TIRANO (.. 0443) there is a row of ten permanent installations the contents of which are not known.

In the area round MILAN there are MT depots near BUSTO GAROLFO (J 8295) and MONZA (K 3478) and a large one at K 255620. In addition there has been a number of MT parks and workshops reported in MILAN itself which cannot be confirmed, and it is probable that the large factories such as ISOTTA FRASCHINI, BIANCHI and ALFA ROMEO are all working for the enemy as well as the WAFF and other maintenance depots.

4. The Plain of LOMBARDY There are 66 confirmed installations of all types, 25 of which are fuel dumps, refineries or alcohol refineries scattered over the plain North of the River PO and South of the MILAN-VERONA-PADUA road and railway line. Of these the majority cling to the main lateral CREMONA-MANTUA-PADUA road and the roads running South to the River PO crossings from MILAN, BRESCIA, VERONA and PADUA with a small concentration at MANTUA which forms the main communications centre of the central plain.

There appear to be very few workshops or other ordnance installations in the plain. The main ones believed to be active at present are an anti-tank artillery depot at CREMONA, an MT spare-parts depot at CASTELFRANCO SUL GARIGLIO (F 1524), an MT park at GOITO (F 3935) and a reported transit park for MT and AFVs at LONIGO (F 9647).

5. N.E. ITALY There is a fair number of installations, including a relatively large quota of fuel dumps in the PADUA-VICENZA-BASSANO-VERONA quadrilateral with a small concentration of fuel and ammunition at PONTEDA. (B 4100). There is a further concentration, mainly ammunition, immediately West of the River TAGLIAMENTO North of CASARSA on the main UDINE-TREVISO railway line and about a dozen spread out along the Valley North of UDINE as far as TOLMEZZO (C 2358). There are also two fuel, one ammunition and a general stores dump on the railway line North of GRADO (M 5277) from where stores are shipped by barge to VENICE.

North of UDINE there is an MT park and workshops near CAMPOROSSO at C 648689 and a park at TOLMEZZO (C 2456). There are also workshops and a large park at OSOPPO (C 2841). S.W. of UDINE there is an MT repair depot at BASILIANO (C 3113), and in the TREVISO-VICENZA area there is an MT workshop at S. FLORIAN near TREVISO and an artillery workshop at MONTE BELLUNA (H 4969).

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 88 38

DATED 3 APRIL, 1945

1. ENEMY SITUATION

On 2 April a small scale attack was made by 8 Army against enemy positions on the COMACCHIO Spit. Two forces crossed the S.E. corner of the lagoon to land on the Western shores of the Spit while a third force pushed up the tongue of land between the RENO and the sea, captured the small island at M 6358 from a squadron of 236 Recce Unit (162 Div) and struck West across the river. By the end of the day all enemy resistance had ceased between the RENO and the small ditch which runs East and West on the 605 Northing. An extremely successful operation brought in a bag of about 800 prisoners; some 300 are Turkomans and twelve are German officers. Today our forces advanced North across the ditch, and reached the Canale VALETTA at PORTO GARIBALDI meeting negligible opposition on the way and picking up only 30 prisoners.

This attack has brought in no surprising identifications. 142 Recce Unit lost heavily, and the Bn Commander is a prisoner and most of his officers either killed or captured; a Company of KESSELRING M.G. Bn 2 was badly knocked about; and 162 Div provided a large number of Turkomans from I Bn 314 G.R. and 236 Recce Unit. A Russian officer prisoner gave some interesting information: he placed two bns of 162 Div along the Northern shore of the Lake between COMACCHIO Village and OSTELLATO M 3774 and confirmed that II Bn 329 G.R. remained behind in the PIACENZA area when the rest of the division moved Eastwards. 303 G.R. is believed to be coastwatching North of PORTO GARIBALDI. Our troops met stiffer opposition when they reached the banks of the CANALE VALETTA this evening, and the enemy must be expected to resist strongly any further attempt on our part to develop an outflanking movement Westwards along the Northern shore of Lake COMACCHIO. Tac R has revealed no reaction to this attack on the part of 90 P.G. Div in the BOLOGNA area and the enemy is obviously not prepared to commit his reserves prematurely. But Tac R on the evening of 3 April noticed about 30 MT and 12 AFVs moving North West along Route 16 from ALFONSINE passed ARGENTA, which does suggest that 42 Jaeger Div may be detaching a reserve battalion with some armoured support to move round to the Northern shores of the Lake. On the 42 Div front the difficult nature of the terrain favours defence, and this would probably allow the division to thin out to the extent of a battalion.

Along the SENIO the front has been quiet and there have been no major changes in dispositions. 362 Div is at last confirmed as having taken over from the Northernmost battalion of 98 Div and its right boundary is now on the 37 Northing. The Italian battalion under command of 362 Div just East of LUGO has been identified as the N.P. (Parachute) Bn of the 10 FLOTMAS Inf Div: it apparently replaced the LUPO Bn now resting North of the PO. 362 Div has also an Italian artillery bn (COLLEONI) under command. 98 Div has a bn of 117 G.R. in reserve and the division is now on a 7,000 yard sector between the 37 and 32 Northings. It is still not clear whether all four infantry bns of 26 Pz Div are in the line, but the Recce Bn is definitely in reserve. Astride Route 9, we have only one identification from 4 Para Div (I Bn 12 Para Regt in its normal area) and a trace of our positions between the 17 and 22 Eastings headed "Positions in front of 4 Regt", taken off an Italian saboteur captured near CUFFIANO M 2023, has given rise to much speculation. This may refer to 4 Para Regt which has been unlocated since relieved on M. GRANDE by 305 Div. It is not impossible, therefore, that part of it at least is now on the SENIO under 4 Para Div, though the reason for this curious move is obscure. At any rate a prisoner from I Bn 993 G.R., the left hand Regt of 278 Div, has placed the divisional boundary between 4 Para Div and 278 Div on the 170 Easting, so it is clear that 4 Para Div has taken over no further commitments.

.....The indications....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The indications of a relief of the parachutists on the Northwestern slopes of M. GRANDE noted in last week's Summary, were confirmed by the capture of a prisoner from II Bn 578 G.R. (305 Div) at L 9832 on 1 April. This Regt was previously on the Western flank of 305 Div, and it has apparently been relieved in that sector by 65 Div because II Bn 146 G.R. was identified on the same day on the 918 Easting. In short, 305 Div has taken over a two-battalion sector from 1 Para Div and 65 Div has had to extend its left boundary to include the former sector of 578 G.R. This should still leave 65 Div with two bns as local reserve astride the main BOLOGNA-FLORENCE road.

On the rest of 5 Army front little change has been noted, and from East to West the enemy line is held by 157 Mtn, 94 Inf, 334 Inf, 114 Jaeger, 232 Inf, ITALIA and 148 Inf Divs. The enemy is still anxious lest we should renew the attack Northwards from CASTEL D'AIANO and 334 Div has directed civilians to evacuate all buildings South of a line L 5828 - L 6330 by 5 April. The reason given was that this area is likely to become one of heavy fighting early in April.

The enemy general reserve remains two P.G. Divisions. 90 P.G. Division is still carried in the area North and North East of BOLOGNA, but we have received a number of reports from agents on the activities of 29 P.G. Div. It moved as we saw last week out of the line into the area between MODENA and the PO, where elements of the division took part in a successful anti-Partisan drive near CARPI L 5381 late last month. As early as the 23rd however, movement started Northwards across the PO, and one source has reported 3,000 troops with supporting arms (with the 29 P.G. Div sign) crossing the PO between the 23rd and the 26th. This amounts to about a regimental group. Destination was given as the area MIRAN.R. F 9822 - MONTAGNANA G 0130. Since then there have been other reports of units of the division moving North from the area MIRANDOLA L 6893, but it is not clear whether these are delayed reports on the earlier move or whether they indicate that more of the division has crossed over. According to one source units of the division were due to move on beyond the PO Plain 300 Kms to the North, but this is as yet unconfirmed by any other agents, and it seems more likely that the enemy is placing the division where it can intervene either on the main front or near VENICE, should we try a seaborne landing. Agents in N.E. ITALY have sent in many reports which imply that the enemy is extremely worried about a possible Allied landing in the Northern Adriatic: civilians have been evacuated from the coastal strip GRADO-LIGNANO (and troops are also reported arriving in this area) while flooding precautions have been taken between LISOLO G 9461 and GRADO H 5276. In addition many current rumours indicate that we intend to carry out a seaborne operation. To meet this the enemy has 237 Div in ISTRIA, with some of its troops reported South of FIUME, 188 Div in the TRIESTE area and 710 Div in UDINE Plain. We have less evidence for troops in the VENICE area. 155 Training Div has according to one source moved down from the BELLUNO area toward TREVISO, but it is not known whether it is yet sufficiently strong to undertake any active rôle. The move of 29 P.G. Div North of the river may therefore be explained by anxiety lest we should land near VENICE, thereby threatening the whole enemy forces South of the PO. (Its role may also be to prevent any Allied airborne force from seizing the PO bridges). This same preoccupation with his coastal flanks was very evident last year before the May offensive, and the enemy may fear that a landing is intended in the Northern Adriatic to link up with the Russian drive into AUSTRIA. The recent talks between Field Marshals ALEXANDER and TOLBUKHIN may have given rise to this anxiety.

From N.W. ITALY there is little to report: 5 Mtn and 34 Inf Divs are still in Western ITALY, and though there has probably been some local readjustment of sectors, there is no sign that either division intends to leave its present area.

.....2. ENEMY SUPPLIES AND COMMUNICATIONS..

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

The bad weather which set in at the end of last week continued until 29 March and consequently rail interdiction dropped off, notably on the BRENNER which might just possibly have been open all the way from VERONA to INNSBRUCK on one, perhaps two, days. In any event attacks on 29 March closed the BRENNER and on 2 April, the date of the most recent cover, the line was out at four points South of BOLZANO and three to the North. While it was thought that the enemy would be able to open a through route between the PO Valley and UDINE this now seems improbable particularly since PR shows that at least two rail diversions were washed out owing to rising water in the river. Beyond UDINE all three frontier routes remain blocked and there is evidence to indicate that the enemy may have abandoned his effort to repair the TARVISIO route which hitherto has been the most important of the three frontier routes.

In the PO Valley rail interdiction has been appreciably stepped up. As of 1 April only three of the twelve lines running South to the PO between VENICE and MILAN were open; the three open were the VERONA-ROVIGO, VERONA-OSTIGLIA and MILAN-PIACENZA lines. The MILAN-PIACENZA line does remain out at the PO river bridge and all other PO bridges West of the one South of PAVIA inclusive remain down. Railways South of the PO are still active. A report places an enemy railhead at VIGNOLA (L 6347) and another states that the railway running Southeast from FERRARA to RAVENNA operates as far South as the RENO river, thus indicating a continuance of the enemy's policy of running trains well forward.

The cutting of the railway running Southwest from VIENNA in the WIENER NEUSTADT area by the Russians is unlikely to affect the situation in either ITALY or YUGOSLAVIA. If, however, the line is out further South in the area West of GRAZ, which would entail about a 70-kilometre advance by the Russians, the only rail lines available between GERMANY and both ITALY and YUGOSLAVIA will be the BRENNER and the SALZBURG-VILLACH (C 8880) lines. That they will be adequate seems at best extremely doubtful, particularly in view of the damage done to and the attacks continuing against railways in Southeastern EUROPE by heavy bombers of the 15th Air Force, a report on which appears at Appendix 'B'.

At the Western end of his L of C the enemy already appears to be fairly well strangled owing to heavy restrictions on railway traffic through SWITZERLAND. According to an official report from LONDON, under the agreement with the Allies on March 8th, the Swiss have added coal, iron, steel and scrap iron to the list of goods which they will not accept for transit from GERMANY to ITALY. In addition, they have agreed to limit such traffic as is permitted in any one month to the tonnage which passed in February, 1945 - that is about 8,200 tons per month Southbound. In regard to the Northbound traffic from ITALY to GERMANY, all traffic will be regarded as "loot" or "goods sold under pressure" and therefore prohibited until the contrary is proved; the maximum Northbound traffic permitted in any one month will be 5,900 tons. For practical purposes the Germans have now lost the use of the Swiss routes by which in the first half of 1944 the average monthly tonnage of transit traffic was 404,000 tons Southbound and 56,000 tons Northbound.

From an operational viewpoint the above is significant in that no longer will the enemy be able to bring coal into ITALY via SWITZERLAND. There already exists in ITALY an acute coal shortage and according to reliable reports this is affecting operation of the railways.

There is little new information of significance on the enemy overall supply position. With current requirements very low and a brief partial breakdown of rail interdiction, supplies in ITALY may have increased but no major change is likely to have occurred. Reports continue to indicate a rather extensive use of methane as a substitute MT fuel, but attacks are now being made on the methane distribution system which should shortly effectively deny to the enemy this source of fuel. The enemy continues to take material, including foodstuffs, out of ITALY, but the amount must be strictly limited owing to rail interdiction. In connection with the general German food situation it is reported that two million Italian workers and "internees" are returning from GERMANY owing to shortage of food; because of lack of transport they are said to be coming by foot - a long walk!

.....3. WESTERN FRONT.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. WESTERN FRONT

The disintegration of the German Armies in the West has continued all week. For the enemy it has now become a question of offering effective local resistance whenever enough forces can be scraped together, rather than of attempting to build up any sort of coherent continuous front. Two major strategical developments in the enemy situation have occurred during the week. One is the encirclement in the RUHR of Army Group B; the other is the apparent decision to pull out of HOLLAND. The full extent of the disaster which has overtaken Army Group B cannot yet fully be assessed. Probably up to 100,000 men comprising elements of as many as twenty-five different German divisions have been cut off including possibly the Army Group Headquarters and its commander Field Marshal MODEL, branded as a war criminal by the Russians. In HOLLAND there have been clear indications that the enemy is pulling back although there is not yet sufficient evidence to assess the full extent of the withdrawal. If he withdraws at all, it looks as if he must go back to the fortified line of the EMS river. Defences have, it is true, been reported running South Eastwards from the ZUIDER ZEE to ARNHEM. Unless however, the enemy's intention is to hold Western HOLLAND as a fortress, it is unlikely that he will stand on such a line. The present Allied thrust in HOLLAND is in a Northerly direction just West of the German frontier, so that any forces facing Westwards and trying to hold the ARNHEM-ZUIDER ZEE line would already find themselves outflanked. The enemy still disposes of two divisions between ARNHEM and the Dutch coast, while six divisions are in contact between ARNHEM and MUNSTER.

In the central sector of the front it is now possible to see something of the plan KESSELRING adopted to meet the situation arising from the Allied breakthrough. His main object was to hold the flanks of our penetration. Hence the strongest resistance we have encountered has been in the area of ASCHAFFENBURG to the South of the U.S. Third Army's breakthrough, and along the SIEG river on the Northern flank of First U.S. Army's old REMAGEN bridgehead. The former area was held by 2 Mtn and 6 S.S. Mtn Divs, the Northern area by a force which contained the remnants of at least four Panzer divisions and five infantry divisions. Having secured the flanks, it seems probable that KESSELRING hoped to blunt the Allied drive North and N.E. towards PADERBORN and FULDA by shifting the armour on the SIEG river Eastwards and attacking the left flank of the great Allied salient extending up to PADERBORN. On paper it was not a bad plan, as good as could be devised in the circumstances of the moment. On the ground it was completely valueless for although the enemy achieved a measure of relative stability on our flanks at ASCHAFFENBURG and SIEGEN, there were no forces at all to stem or even oppose the Allied forces which covered the 55 miles from North of FRANKFURT to the PADERBORN area in one day. When the enemy eventually attempted to shift his armour Eastward to attack the left flank of our penetration, he only involved himself in worse trouble, for the remnants of the armoured divisions were merely swept aside by the impetus of our advance. Elements of 11 Pz Division were contacted over an area of 60 miles. On the front of one Allied armoured division alone, no less than elements of seven different German divisions were contacted in one day. By this time any hope KESSELRING may have had of carrying out the plan suggested above will have vanished with the link up between Allied forces at LIPPSTADT and our penetration into SIEGEN which has greatly weakened the enemy resistance on our North flank.

In the confusion which is general along the Western Front it is impossible to draw any clear picture of the enemy's present dispositions, certainly on the Central sector of the front. In the South it looks as if the remnants of Army Group G have been pushed Southwards as the result of the Allied breakthrough North and N.E. of FRANKFURT. Indeed one of the reasons for the relatively feeble resistance which the enemy offered in the FRANKFURT sector was that Army Group G, having got its remnants back across the RHINE, was much too far South when the breakthrough occurred to play any effective part in the battle. Of the twenty six divisions originally in Army Group G, twelve have probably been destroyed completely, and of the remainder it is doubtful if more than two are even of average strength. Nevertheless with Army Group B written off as nothing more than a delaying factor to the Allied advance, Army Group G is now probably the stronger of the two Army Groups left to KESSELRING.

..... So far as.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

So far as the enemy's prospects of obtaining [illegible] concerned, the situation in the West has changed since last week only in its further deterioration, not in the emergence of any new factors. One new division has been contacted this week, but it was a case of the mountain division coming to Mahomet: 166 Res Division did not come up to the front; the front overran it. Other than this nothing new has appeared. The rail network in Western and N.W. GERMANY during the week has been almost completely dead. The only movement seen was on 30 March when a little traffic was moving West on railways into the RUHR. The journey for which no return tickets were necessary. Moreover, even if there had been no major disaster in the West this Spring it is doubtful whether the enemy would have been able to procure much in the way of replacements from Central GERMANY. Total replacements in the West for February were only 12,000 compared with an average of 30,000 per month over the previous eight months. For March the figure was probably smaller still and perhaps no one will ever know the figure for April. It is no exaggeration to describe the situation as desperate, and there is little KESSELRING can do to remedy it. A situation has arisen where he is Commander in Chief in name only for he has neither a central reserve nor the power to influence the battle decisively by transferring forces from one Army Group sector to another.

4. EASTERN FRONT

EAST PRUSSIA AND EASTERN GERMANY

The fall of DANZIG has been one of the principal events in an extremely quiet week. Enemy resistance in the port proved tough, and according to prisoners, the garrison had received orders from HITLER to hold on to the last. Enemy casualties in killed alone were estimated by the Soviets at 40,000 while 10,000 PW were taken in the town. KÖNIGSBERG remains now the only garrison holding out behind the Northern half of the Eastern Front.

There has been no change on the main front opposite BERLIN. The Commander of 402 Adn Divisional Staff has been captured recently in this sector and states that a number of military schools in POMERANIA have been brought up to the front and incorporated in existing divisions. Further South, Marshal KONIEV has scored two notable successes this week in the reduction of GLOGAU and the capture of RATIBOR. BRESLAU is now the only fortress left in GERMANY behind the Russian rear. The capture of RATIBOR gives the Soviets a road and rail centre of considerable importance for any advance Southwards through the OSTRAVA gap into CZECHOSLOVAKIA. An interesting identification on the First Ukrainian front this week has been that of both regiments of 715 Inf Div (which left ITALY in March) in the area of SORAU (North of GÖRLITZ) on March 27.

CZECHOSLOVAKIA AND HUNGARY

Although there has been a lull in the fighting in CZECHOSLOVAKIA during the week, Soviet progress in HUNGARY has been such that further German withdrawal from the Slovak salient is now very likely. The enemy still has the tip of his salient based on the High Tatra Mountains and may well be holding this natural defensive position and the Niske Tatry Mountains further South to cover an extensive thinning out.

In HUNGARY it has been a very bad week for the Germans. The Soviet offensive last week extended to the North bank of the DANUBE where MALINOVSKY has made surprisingly rapid progress along the axis of the ESZTERGOM - BRATISLAVA - VIENNA railway. The enemy seems to have been badly disorganised and offered little effective resistance on either the NITRA or VAH rivers. Soviet forces are now some seven miles from BRATISLAVA and only 27 miles from the oil field at ZISTERSDORF (S 63) 30 miles N.E. of VIENNA. This has a maximum annual capacity of 1¼ million tons and following the loss of the NAGYKANIZSA fields becomes an increasingly important factor in the enemy's present oil situation.

....South of the DANUBE....

- SECRET -

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

South of the DANUBE the Soviets are advancing on two main axes - along the GYOR - VIENNA railway and the SOPRON (X 63) - VIENNA highway. The former thrust is not yet across the Austrian border but the latter has thoroughly pierced the enemy's frontier defence line running from the NEUSIEDLER SEE Southwards through KÖRMEND (C 76) and has led to the fall of WIENER NEUSTADT (X 34). Further South there are some indications that the Russians have effected a deep penetration into the Upper MURA Valley towards GRAZ (B 86). PR of 1 April saw fighting in progress at FELDBACH (C 25), 22 miles East of GRAZ, and on the following day all towns in the area East of GRAZ were seen to be burning, as too was WIENER NEUSTADT. It is clear that the enemy intends to adopt a scorched earth policy in AUSTRIA as he withdraws. Meanwhile South of Lake BALATON the Russians have captured NAGYKANISZA (A 26) and are penetrating into the BUDAFAPUSZTA and LOVASZI oil region. The exact importance of these fields is difficult to assess. By the end of 1943 it is probable that they were producing as much as 1,800,000 tons of crude oil annually. By this year bombing and transportation difficulties will appreciably have reduced output, but they may still have been worth a million tons annual crude oil to the enemy.

A very serious situation with far reaching implications has thus arisen for the enemy. Quite apart from the complete loss of the Hungarian oil fields which may be expected in the coming week, the Soviet advance open up a grave threat to the main supply routes from GERMANY into ITALY. The Russians are now only a few miles from the main railway line South from VIENNA to BRUCK (B 69); if they cut it, all Yugoslav and some of the Italian rail traffic will have to be routed to BRUCK via subsidiary lines West of VIENNA. Moreover if the Russian drive along the MURA Valley continues to make headway there is a likelihood that the Soviets may soon be across the BRUCK-MARIBOR (E 27) railway - the only double track main line into YUGOSLAVIA. Russian progress further West still into the BRUCK - ST. MICHAEL (D 48) area which is now only about 50 miles behind the front would make the use of the North Eastern routes into ITALY extremely difficult for the enemy, especially as Army Group E would be using the VILLACH and KLAGENFURT junctions for its own traffic. An attempt at a stand by the enemy East of BRUCK is therefore likely, but with the defensive positions on the Austrian frontier pierced, it is not thought that the enemy has any prepared defence lines left in AUSTRIA. It is possible that he may try to hold the Russians in the mountainous terrain South of VIENNA then along the FISCHBACHER Alps as far as the MURA river somewhere East of BRUCK, thence Southwards along the MURA river. This would entail the loss of the BRUCK-MARIBOR railway but would keep the Soviets away from the rail junctions at LEOBEN (B 59) and ST. MICHAEL where subsidiary lines from the area West of VIENNA join the VIENNA-KLAGENFURT line.

The only interesting identification reported from HUNGARY this week comes from the Roumanians who place 16 S.S. P.G. Division (ex ITALY) in the area of Army Group South. No location has been reported but it has probably been incorporated into 6 S.S. Pz Army whose Commander Sepp DIETRICH has been entrusted with the defence of VIENNA.

YUGOSLAVIA

The heavy Westward road movement from the SREM reported last week has continued throughout this week. 297 and 11 G.A.F. Divs are reported to be associated with the movement, but it is likely that in fact all the German forces are beginning to thin out from the SREM. The curious thing is that there has been no sympathetic withdrawal from the SARAJEVO salient. It is clear that the thinning out of the SREM front leaves 21 Mtn Corps for the third but undoubtedly the last time in danger of complete isolation from the rest of Army Group E; none the less there are no fresh indications that the enemy is going to abandon SARAJEVO yet.

So far no firm destination is apparent for the troops leaving the SREM apart from the elements of 104 Jg Div which have gone to BELG. On 2 April, the

...trend of.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

trend of of traffic in N.W. YUGOSLAVIA appeared to be generally Northward. At this late stage it is improbable that the enemy will send any forces across the DRAVA or MURA into HUNGARY to support 2 Pz Army. More probably he is trying to build a front along the DRAVA or MURA in anticipation of the Soviet arrival on the North bank.

More of 104 Jg Division from the SREM has arrived in the BIHAC sector this week. The initiative in this area however is still in Partisan hands. They have advanced some 25 miles North of BIHAC along the BIHAC-KARLOVAC (K 25) road and have reached a point 22 miles from KARLOVAC. 373 Germano-Croat Div is reported to have suffered very heavily in the recent battles.

3 April 1945.

RAILWAYS

BRENNER

The BRENNER railway probably remained blocked all last week though owing to poor flying weather the enemy undoubtedly came very close to getting it open to through trains all the way from VERONA to INNSBRUCK. The bad weather which set in on 26 March continued for three consecutive days during which air operations were severely restricted and no attacks were made on the BRENNER. The weather broke sufficiently on 29 March to permit fighter-bomber attacks on this vital railway, but the medium bombers were unable to attack until the 30th and even then only a limited effort was possible. In fact it was not until 2 April that the mediums were able to put up a good effort against the BRENNER having been forced until then to attack less vital railways as alternate targets. Lack of PR early in the week makes day by day assessment of the status of the BRENNER impossible, but it is clear that interdiction dropped off appreciably; by the end of the week, however, interdiction had been built up again.

The first PR since 25 March was on the morning of the 29th, at which time the line was seen as open from VERONA up to within about 30 Kms of BOLZANO, with the exception of PARONA bridge just North of VERONA, which, however, is confirmed as operational when desired (see below). The block South of BOLZANO on the 29th was between S. MICHELE (A 7837) and ORA (A 9254) at two bridges on the main line and 12 mile loop-line respectively; since photos of the 25th also showed these two bridges as impassable and no attacks were made between the 25th and 29th it is presumed that the BRENNER was continuously blocked at these points. However, it seems curious that at least one of these bridges was not repaired in view of repairs made elsewhere on the BRENNER, and it is suspected that the S. MICHELE main line bridge may be operational when desired; PR of this bridge tends to support this suspicion. In any event it is now known that there is at least one bridge on the BRENNER which is operational when desired. As indicated above this is the PARONA bridge over the ADIGE just North of VERONA at ? 611505; this bridge, twice knocked out by heavy bombers, has been suspect for some time and night photos taken at 2150 hours on 2 April showed the two 60 foot spans, invariably missing on day photos, to be in place and the bridge passable to single line traffic. If the S. MICHELE bridge, like PARONA bridge, was in fact operational when desired the BRENNER was open almost all the way to the Pass for at least part of the time between 25 and 29 March. However, of the three bridges in the area of the Pass itself (one to the South and two to the North) seen as blocked on the 25th, at least one probably remained blocked up until the 28th. Thus, in as much as fighter bomber attacks of the 29th blocked the lower stretches of the BRENNER, it is very unlikely that the line was open throughout, i.e. from VERONA to INNSBRUCK, for more than one day, perhaps two at the most, even if it is assumed that S. MICHELE bridge was operational. In any event the BRENNER has been blocked continuously since the 29th South of BOLZANO and since the 31st North of BOLZANO. On the latest available cover, that of 2 April, the line was seen as cut at four bridges between VERONA and BOLZANO, not including the PARONA bridge which operates at night, and beyond BOLZANO approaches to one bridge just South of the Pass were cut while North of the Pass two bridges were impassable, one with cratered approaches the other very severely damaged.

The two bridges beyond INNSBRUCK, one to the N.W. the other to the N.W. are now known to be passable.

Though the BRENNER may have been blocked to through trains all week, it has shown a great deal of activity. This movement, which has been noted for the most part North of BOLZANO, undoubtedly reflects the movement of

.....material along...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

material along the axis of the railway by means of transhipment. Due to adverse weather conditions, no photo cover was available between 25 and 29 March, but cover on the 29th revealed an unusual amount of movement since the 25th along the entire line, while subsequent daily cover has continued to show considerable activity, and it is evident that the enemy took full advantage of the several days of bad flying weather. No signs of rail troop movement have, however, been picked up. More activity than usual was also noted on the secondary railway running Eastward from the BRENNER at FORTEZZA (W 1802), though this line appears to have been blocked for most of the week.

NORTH EAST ITALY

The rail state in the North East remains highly satisfactory with all routes cut at many points. While PR was not available for several days and it was thought possible that through rail traffic might have been possible from the PO Valley to the UDINE area early in the week, subsequent PR indicates that this is extremely unlikely. That the interdiction has held up, however, is probably largely due to the fact that our rail interdiction effort has been materially assisted by rising rivers which have partially washed out two diversions on the main TREVISO-UDINE line. It is also now evident that beyond UDINE all the frontier routes remain cut. In fact there is evidence to indicate that the enemy has abandoned his effort to keep the TARVISIO route open; four bridges still effectively cut this line. It is interesting to note that progress still continues on the rail diversion around the heavily damaged viaduct at BOROVNICA on the line to LJUBLJANA which was recently seen as 75% complete, though considerable work remains to be done.

Relatively little rail activity is evident in the North East. Although the VERONA-VICENZA-TREVISO line has been in use during the week, no unusual activity has been seen, while the general PADUA-VICENZA-TREVISO area has remained only very moderately active. The main TREVISO-UDINE line has been quiet, as is to be expected in view of the heavy interdiction, while the Central route remains little used. Traffic on the Southern route is still stagnant West of CERVIGNANO (H 4693), but East of the ISONZO River interdictions an unusual amount of rolling stock has arrived on the line going towards TRIESTE.

The main UDINE-TARVISIO frontier route, while it has remained closed to through trains all week, has, like the BRENNER, been quite active both North and South of the belt of interdiction. This activity undoubtedly reflects transhipment around these cuts. The PREDICOLLE and POSTUMIA routes have both been in use though no unusual activity was noticed.

APPENDIX 'B' TO H.Q. 15 ARMY GROUP
INTELLIGENCE SUMMARY NO. 68 DATED
3 APRIL, 45

MAAF BOMBERS AID SOVIET ARMIES

The devastating blows which aircraft of Mediterranean Allied Air Forces are striking against the enemy in Southeastern Europe aim at paralyzing rail, road and river traffic carrying troops and supplies to the Wehrmacht on the Red Army fronts. At the same time, crippling blows have been dealt the enemy's few remaining sources of fuel in Austria and Hungary. This article, taken from "15th Air Force - Operations in Southeastern Europe," gives the overall plan behind these attacks.

In November, 1944, the Fifteenth Air Force, realizing that the drive of the Russian armies through Hungary provided an exceptional opportunity to utilize its striking power to prevent the adequate and timely supply, replacement and reinforcement of the defending axis troops south of the TATRA mountains, undertook a detailed analysis of the rail transportation systems in Austria, Western Hungary and Yugo-slavia. A comprehensive photo reconnaissance program was initiated, and the resulting information, combined with reports from ground agents and prisoners of war, had by the end of the year, revealed a reasonably clear picture of the flow of traffic to meet the urgent needs of the hard pressed axis forces in Southeastern Europe.

On 23 December, the Russian High Command requested Strategic bombardment of rail lines leading from the Linz area in Northwestern Austria to Hungary and Yugoslavia, and connecting lines to Northeastern Italy. Plans were made immediately to comply with this request. The rail system analysis showed clearly that no major lines of interdiction, such as the DANUBE or TIZA rivers, existed in Austria or Western Hungary. However, it did seem possible at the appropriate time to sever the rail connections between Yugoslavia and Hungary at the DRAVA river, thus supplementing the isolation of the axis forces in Italy achieved by the Italy-based Tactical Air Force. In view of weather uncertainties and the then relatively light scale of ground activity, it was decided to postpone this program until a time when temporary interdiction by bombardment of bridges would seriously affect the mobility of the enemy forces. Another limitation on the scope of the original plan was the bomb line, which excluded targets in Hungary from strategic attack.

The plan as finally developed involved the immobilization of marshalling and major handling facilities at the rail centers on the main lateral double-track rail line running from VIENNA through WIENER NEUSTADT, BRUCK A.D. MUR, GRAZ and MARIBOR to ZAGREB, from which virtually all lines to the front branch to the East and Southeast; followed by the progressive destruction of supplies, rolling stock and facilities in the rail yards west of this lateral line as military trains backed up following the initial attacks. The execution of this plan was hampered by extremely adverse weather during January, but attacks were made whenever possible. Starting 13 February improved conditions permitted a series of heavy blows which virtually immobilized most of the rail yards from VIENNA to ZAGREB. As had been appreciated, traffic immediately backed up in the LINZ area, where attacks were then commenced. At the same time, occasional attacks on the line connecting BRUCK A.D. MUR with Northeastern Italy served to strain further the enemy's available repair effort and hamper the use of by-pass lines.

As the attacks progressed, certain tactical factors became clear. Interdiction of through lines by bombardment of rail yards was temporary at best. Likewise, destruction of repair facilities caused only inconvenience, as abundant alternative facilities were available in most areas. However, it was soon found that a heavy density of bombs in a crowded yard caused maximum destruction of rolling stock and in many cases immobilized for some time all undestroyed stock.

.....Thus, while.....

- SECRET -

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Thus, while a through line could generally be put in operation in a few hours, in many cases no substantial amount of rolling stock was moved in or out for one to three weeks. It therefore became the policy of the Air Force to select fleeting targets - the yards most heavily loaded with military supplies as revealed by current daily photography - and to concentrate on each a sufficiently heavy tonnage to immobilize it while the remaining yards in the same system were attacked in similar fashion. Thus, each attack, by restricting handling capacity in the area, automatically tended to set up another good target.

By the end of February, most of the important rail centers in the areas selected had been attacked and their handling facilities severely damaged. The efficient German repair system had been strained too far. Repairs were lagging far behind the damage being caused, and drastic alternatives came into use. Stock piled up in the Hungarian yards east of the main lateral line, with every indication that supplies were being pushed through the blasted belt between LINZ and the Hungarian border, and reclassified into divisional trains in Hungary. At the same time, the Russian High Command requested the attack of the major rail centers along the two main lines running east from VIENNA, north and south of the DANUBE. This request was supplemented on 12 March with the addition of targets in north Yugoslavia and Austria.

Forthwith, a supplemental photo reconnaissance program was initiated, giving almost daily coverage of the Hungarian rail system, and a plan for the immobilization of handling facilities between the VIENNA - ZAGREB line and the front was put into operation. The major portion of this plan has been carried out.

Recent reports indicated that strong formations of axis troops have been moving from Yugoslavia north presumably to join in the German offensive northeast of Lake BALATON. Consequently the DRAVA interdiction program has been put into operation and partially completed by the virtual destruction of the rail bridge at PTUJ and a successful strike at the VARAZDIN yard.

Bombardment was not the only available weapon. The inherent weakness of the German defensive fighter force resulting from the 1944 all out strategic bombing of the fighter aircraft and fuel industries, combined with the committment of the available fighters in the Southeastern area to ground cooperation tasks, reduced the necessity for large scale escort for our bombers and permitted the use of strategic fighters for strafing and dive bombing. The dive bombers have been used to attack pinpoint targets not readily identifiable from high altitude. The strafing plan, carried out in conjunction with virtually every bombing attack, was designed to add to the mounting total of destroyed locomotives and rolling stock, and in addition to achieve a major degree of traffic interdiction by wrecking moving trains at numerous points on the main lines.

Communications were the principal targets. However, attacks on industrial installations contributed materially to the success achieved. In line with strategic bombardment policy, the communications plan was supplemented by attacks on fuel and tank production and storage facilities in Southeastern Europe, which it was clear were producing primarily for the axis troops in that area.

The rich Hungarian oil fields, whose crude oil yields an exceptionally high percentage of gasoline, were still in German hands. Refining capacity in the VIENNA area, including the large new plant at MOOSBIERBAUM, was capable of a monthly output of over 10,000 tons of gasoline, enough to support a substantial scale of effort on the Hungarian plain. During the course of attacks on these plants, intelligence revealed that the modern SZONY and ALMASFUZITO refineries near KOMAROM,

.....heavily bombed.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

heavily bombed last year, had been repaired and were capable of substantial production. It seemed probable that these plants, ideally situated near the active front, were processing Hungarian crude oil for the supply of the attacking panzer forces northeast of Lake BALATON. Forthwith they were attacked.

Several large tank depots, repair and production plants had been spotted by photo reconnaissance - notably at VIENNA, whose great arsenal was teeming with tanks, at LINZ and in the KAPFENBURG area. These two felt the destructive weight of aerial bombs, for the Germans could not transport to the front products destroyed before they started.

Thus, the plan has unfolded, always flexible and capable of alternation to fit current intelligence and the enemy's defensive moves, always directed at a single overall objective; to prevent axis men, weapons and supplies from reaching the Russian armies.

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 89

OF 9 APRIL, 1945

1. ENEMY SITUATION

On both flanks of the Appennine Line we have in the past week mounted successful limited attacks. The operations on the GARIBALDI Isthmus came to a close on the 4th by which date the whole spit of land South of the Canale VALETTA had been swept clear of the enemy, the total prisoners reaching the figure of 850, of which over half were Germans and the remainder Turkomans. The Northern bank of the Canal is now held for the most part by the Kesselring M.G. Bn 2, with 303 Regt (162 Div) as lay-back along the Adriatic coast to the North. On the 5th, we captured four small islands in the Lagoon which the enemy had used as O.Ps. This resulted in an interesting identification the following day. Three boats put out from COMACCHIO Village to investigate what was going on on the islands, and we captured the crew of one boat, which included three men from 129 Recce Unit as well as a couple of signallers from 162 Div. The first was a somewhat surprising identification, as reports from various ground sources had suggested that 29 P.G. Division had transferred North of the PO in the latter part of March and the first days of April. But the prisoners soon allayed our fears: they said the Recce Bn was about to cross over the river to join the rest of the division which was already North of it, when the plans were changed and it was sent early on the 4th to take up positions along the North shore of the Lake between COMACCHIO Village and the 50 Easting. Although we have no further information the battalion is probably still there as the enemy obviously does not trust the ability of the Turkomans to hold unaided the left flank of the line. An unidentified Italian battalion is reported to be East of the Recce Unit.

Disaster has overtaken another battalion of 42 Div. Having lost the greater part of its Recce Unit in the Spit operations, it has now had III Bn 25 Jaeger Regt cut to pieces by an attack we launched across the RENO in the S.W. corner of the lake. We have advanced some 4,000 yards and pushed the enemy back behind the Navigation Canal between the Lake and the RENO. This attack has brought in about 250 prisoners, nearly all from III Bn, and has forced the rest of 25 Jaeger Regt to pull its main positions back to the SENIO. In the circumstances a prisoner's statement that most of the Field Replacement Bn was due to move into the front line on 8 April is hardly surprising. The enemy shows every sign of nervousness as to our intentions on Route 16 and in the Lake area.

On the rest of the 8 Army front there has been no change in dispositions, and between 42 Div and M. GRANDE the enemy holds with from East to West, 362, 98, 26 Pz, 4 Para, 278 and 1 Para Divs. The first three divisions have each a bn in reserve while 4 Para may have up to two out of the line. There have been plenty of signs of jumpiness on the enemy's part along the SENIO and prisoners say that they have been warned to expect operations to start any moment. They also say that divisions have been on continuous alert since about the 2 April. On the night of the 6th the enemy was particularly windy and put down heavy defensive fire and counter-battery fire both North and South of Route 9. This same apprehension has already been noted on 334 Div front, while reports from N.E. ITALY bring further confirmation that steps are being taken to meet an expected Allied landing there.

South of BOLOGNA prisoners taken on the 910 Easting from I Bn 147 G.R. provide further evidence of 65 Division's extension Eastwards to relieve the right hand regt of 305 Div which in turn took over from 4 Para Regt on M. GRANDE.

...Confirmation is still.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Confirmation is still lacking that 4 Para Regt is on the SENIO under command 4 Para Div, but as it has not reappeared on 1 Para Div's sector its reported move Eastwards may well be true. There is clearly considerable reorganisation going on in the parachutist divisions. Prisoners from 12 Para Regt stated that III Bn had left about three weeks ago for Northern ITALY to provide a nucleus for a new division, and it is reported that the other two regiments also had to give up a battalion. Ground sources have reported movement of parachutists Northwards towards the PO and in one case stated that three trainloads arrived in INNSBRUCK over the BRENNER from ITALY. At the same time we have received reports of parachutists arriving in ITALY, and the only reasonable deduction is that 1 Para Corps has had to give up some of its seasoned warriors in exchange for recruits. Exactly to what extent that has affected the fighting quality and strength of 1 and 4 Para Divs it is too early to say.

West of 65 Div, identifications yesterday of 1057 Recce Unit and 296 Mtn Regt show that 157 Mtn Div is unchanged, and 94 Div to its right is still believed to be on an extended front across the RENO Valley. The third regiment of 334 Div (755 G.R.) is still unidentified but it has not taken over any part of 114 Div's sector. The latter division has at the moment three battalions forward on a 4,500 yard front (114 Recce Unit and I and II Bns 741 Jaeger Regt) while two independent sources place the other regt (721) between SASSUOLO (L 4455) and MODENA where it is said to be reforming with recently arrived replacements. 232 Div, West of 114 Div, is still believed to be reduced to two regiments of two bns each, persistent reports having come in that 1043 G.R. has been dissolved.

On the night of 4th April we launched an attack against 148 Div in the Coastal Plain forward of MASSA and along the high ground overlooking it. M. CARCHIO P 9501 was captured the following day, from where we exploited to seize M. BELVEDERE (P 9401) against strong opposition. At the same time our forces in the Plain had advanced their positions astride Route 1 to within 2 miles of MASSA. By the 8th MONTIGNOSO was in our hands and we had reached the outskirts of MASSA, and that night troops in the plain withdrew behind the FRIGIDO River. This operation has so far brought in about 400 prisoners. Opposition was entirely by German units - 281 G.R. and I Bn 285 G.R. - reinforced on the 7th by the Kesselring M.G. Bn No.1. which came down from the SPEZIA area. Otherwise there has been no important reaction to our attack.

If our interpretation of agents reports is correct there is now only one mobile division left in reserve South of the PO - 90 P.G. Div - of which we have heard very little apart from one report that troops of the division are immediately West of BOLOGNA astride Route 9. Following the move reported last week of a regimental group of 29 P.G. Div into the area N.W. of ROVIGO, one source has told us that the Divisional H.Q. was to move on the night 2/3 April to BONDENO, a route followed by other units of the division crossing the PO. Since then agents have reported movement of troops in considerable numbers N.E. as far as PIAVE River (29 P.G. Div is not specifically associated with these troops but from the reports a motorised formation appears involved) while one source has gone a step further and said that troops of 29 P.G. Div which staged in the area MERLARA F 9822 - MONTAGNANA G 0130 about 24 March, continued on toward TARVISIO. We have however, still no firm evidence that 29 P.G. Div is leaving ITALY, and the only other explanation for its move must be a very real fear of an Allied seaborne landing in the Northern Adriatic. Ground reports bear out that the enemy is particularly sensitive to this threat and is at the moment putting into effect anti-invasion preparations. For the present therefore, 29 P.G. Division is carried North of the PO, its exact location unknown but suspected to be N.E. of ADRIA. Its Recce Unit has remained behind and it is possible that some of its armour has also not crossed the PO.

The departure of 29 P.G. Div on the eve of 8 Army's attack is most opportune for us. VIETINGHOFF, who is believed to be C in C South West, has now to make a ticklish decision. Is he justified in assuming that no landing will in fact take place and that the whole weight of 15 Army Group is to be thrown against his forces South of the PO, or must he wait a few days to find out whether the 8 Army attack is not merely meant to distract his reserves? Having moved 29 P.G. all the way by road, a costly incursion into his limited petrol resources, he may well

....hesitate to rush.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

hesitate to rush it down South of the river straightaway. One way or another the choice is a gamble, and a faulty decision may jeopardise his forces South of the PO.

Nearer at home the enemy is faced with much the same decision in respect to 90 P.G. Division. Is he to commit the whole division against 8 Army thus leaving no mobile reserve opposite 5 Army? If the battle goes right for us he is almost certain to have to send at least a regimental battle group across to the SANTERNO. Immediate reinforcements for the threatened sector are otherwise limited to battalions or even regiments which might be withdrawn from quiet parts of the line to stiffen resistance at the key points. Parachutists are likely candidates for such a rôle. One thing seems clear, there is no sign that the enemy intends to fight a delaying action and withdraw across the PO. He appears to have committed himself to another battle of attrition, along the lines of those we have previously met in ITALY, and he will only withdraw under pressure. Once again he hopes to be able to wear down our attack and finally bring our offensive to a halt. If he fails he risks the major part of his Armies South of the PO.

2. ENEMY SUPPLIES AND COMMUNICATIONS

During the past week the rail situation has remained difficult for the enemy. No through trains have moved over the BRENNER and all three of the North East frontier routes have remained cut. Interdiction between the PADUA-VICENZA area and UDINE has held up during the entire week, though repair activity seems to be making some progress here. All rail bridges as far West as PAVIA remain cut on the PO river where ferries and pontoon bridges continue to be active. Night photos showed the pontoon bridge at POLESELLA (M 2299) completely assembled on two nights out of the four it was covered. North of the PO interdiction in the plain remains effective though the important lines leading South from VERONA to OSTIGLIA and ROVIGO are still open. South of the PO attacks by both medium and fighter-bombers have blocked some of the lines leading into the general area of BOLOGNA.

The BRENNER railway has been blocked throughout the week under continuous attacks by heavy, medium and fighter-bombers and high water in the ADIGE river has been slowing up repair activity. (See Appendix 'A' for effect of recent high water-levels on enemy communications). Photos of 8 April showed the BRENNER to be cut at no less than fourteen points, the majority of these cuts being the result of that day's attacks. Interdiction extends as far North as the VIPITENO bridge about 15 rail kilometres South of the frontier. Most of these cuts are cratered tracks and bridge approaches, but three bridges are down on the main line and an additional two bridges block the ORA - S. MICHELE diversion South of BOLZANO. If weather conditions were to prevent further attacks on the BRENNER (this is highly improbable), it is thought that the existing interdiction would prevent through traffic till 11 or 12 April. On the TRENTO - CASTELFRANCO loop line the CISMON bridges (B 2407) remain cut while further North the line running Eastward from the BRENNER at FORTEZZA has been impassable all week by virtue of the damaged bridge at PERCA (W 4608) as well as the cut approaches to the OB DRAUBURG bridge (C 2295).

Activity on the BRENNER railway has been moderate with movement decreasing towards the end of the week in inverse proportion to increasing rail cuts. TRENTO continues to be one of the more active stations while ORA and BOLZANO have also shown a fair turnover. Practically all of the smaller stations have shown at least some increase or decrease during the week, undoubtedly reflecting localised movement. North of BOLZANO the tempo of activity seems to have definitely decreased as compared to previous weeks. It is believed that no large turnover has been taking place on the BRENNER for a considerable period though it is of interest to note that whereas in February rolling stock between inclusive BOLZANO and exclusive VERONA totalled about 1,500 wagons, this increased during March to between 3,000 to 3,500 and the average so far for April is roughly the same.

In the N.E. rail activity has been on an extremely small scale. Between the PADUA and UDINE areas little movement has been noted and both the POSTUMIA and PIEDICOLLE frontier routes appear to be relatively inactive. On the

...TARVISIO route however.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

TARVISIO route however definite signs of activity have been noted. On 8 April a number of apparent troop train lengths including about 50 flats loaded with MT or HDV and equipment were seen in UDINE and on the following day at least some of these were picked up further to the North on a point not far South of the TARVISIO route interdiction belt. This strongly suggests that troops are moving out of North East ITALY by way of the TARVISIO route but it is too early as yet to state how many troops may be involved.

With the railways disrupted and MT fuel in short supply it is considered that the enemy in ITALY faces our Spring offensive with a vulnerable administrative position. No early collapse is expected by reason of lack of supplies, but it is expected that with rising supply demands appreciable difficulty in moving the necessary tonnage to meet battle requirements will develop.

For the past eight months the German Command in ITALY has done everything in its power to cut down on the consumption of petrol and diesel, both by the use of substitute fuels, heavy reliance on horse-drawn transport, movement of troops on foot and other varied economy measures. However, the continual dislocation of the railways during the past several months has nevertheless forced him to use a large number of MT. It is also known that for some time no major MT fuel reserves have existed in North ITALY. These facts coupled with the overall German fuel position and air attacks on fuel dumps and production centres in ITALY are believed to have reduced fuel stocks in North ITALY to a critical level.

Since 1 April our aircraft have been paying considerable attention to the enemy's substitute fuel sources. Attacks have been carried out against oil and gas fields, and methane compressor plants in the PIADENA-PIACENZA area and the ROVIGO-FERRARA area. The attacks on compressor plants have destroyed at least four and done considerable damage to others. A methanol plant near BOLZANO and a sugar refinery in the ADRIA (G 4508) area, believed to be producing alcohol, were also attacked with good results during the past week.

As regards ammunition the enemy is very much better off than he is for MT fuel. There are a relatively large number of ammunition dumps both North and South of the river PO and the enemy has been making use of Italian production facilities. Furthermore during the past few months his expenditure has been negligible so that while it is not thought that he has built up large ammunition reserves he now does probably have in North ITALY about a month's supply of ammunition for hard fighting. Distribution, however, to meet the demands of heavy fighting is likely to be affected by the shortage of MT fuel.

A report from a usually reliable source states that since March 1944 all rations for the German forces in ITALY have been drawn from Italian resources. These supplies are normally requisitioned by the Republican Government but major German formations are in the habit of taking direct action to ensure their own ration supply by commandeering what they need and German units on the move are in the custom of requisitioning as they go. In addition to the regular consignments of foodstuffs supplied by the Republican Government for shipment to GERMANY, the Germans have in the last two months alone carried off from the PO Valley 100,000 tons of corn, 50,000 head of cattle and large quantities of pork and fats.

3. WESTERN FRONT

The enemy's efforts to stabilise the front in the West have enjoyed little more success this week. Such slowing down as has occurred in the Allied advance has been in the main due to factors other than enemy resistance. Only in limited sectors has KESSELRING been able to build up any sort of coherent front and even there the structure is flimsy and liable to topple quickly under pressure.

Such a sector is that part of Army Group G's front covering STUTTGART and NURNBERG. The original plan of Army Group G after the initial Allied breakthrough in the FRANKFURT sector was probably to build up a front based on the MAIN, the ODENWALD and the NECKAR, with the main defensive effort at ASCHAFFENBURG. Apart from some strong resistance at ASCHAFFENBURG itself this plan proved completely

....beyond the enemy's...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

beyond the enemy's resources, and KESSELRING had to resort to a modified version of the original plan. Scraping together all the elements and remnants of the Army Group's weakened divisions, he tried and to some extent succeeded in establishing a coherent, if not a stable front, covering STUTTGART and NÜRNBERG. Elements of sixteen divisions have been identified between KARLSRUHE and WÜRZBURG. The state of some of these is shown by the fact that 47 Volksgrenadier Division last week had three other divisions under command. The main weight of Army Group G is now concentrated in the area North of STUTTGART where we have encountered moderate to heavy resistance this week. Heavy fighting is however the one thing which the enemy must avoid and already there are signs that he is paying the price for his brief moment of coherent battle. To the East of HEILBRONN the front has once more sagged and we have advanced 25 miles to capture the road junction of CRAILSHEIM. In the KARLSRUHE region too, resistance is less stiff and we have penetrated into PFORZHEIM. A document captured on Army Group G front this week is of some interest. It is dated March 26th and is an authorisation from 11 SS Pz Army at NÜRNBERG for Ersatz Bns of 9 and 12 SS Pz Divs going to 17 SS P.G. Division to draw fuel on the way. This is the first identification of 11 SS Pz Army. Its function is not wholly clear, for it is certainly not operational, nor would there at the present time appear to be need for a further Army headquarters on any front. Its interest in Ersatz Bns may imply some connection with the handling of replacements while its location in Southern GERMANY might have some bearing on recent reports of S.S. troops arriving in the National Redoubt. In this connection a statement by a PW in the GOTHA area may be relevant. He says that on 31 March all higher headquarters in the GOTHA and OHRDRUF areas were ordered to move South to join the Wehrmacht Führungstab in the KIRCHTASGADEN area.

On the front that used to be Army Group B's responsibility before the latter's unfortunate isolation in the RUHR pocket, enemy resistance continues to be disorganised. Only in the KASSEL area where 166 Res Div made ineffectual but determined efforts to break through to the RUHR pocket, has there been any semblance of organised opposition. Otherwise resistance has been offered by the now conventional assortment of Homeguard, NCO's schools and other miscellany which have so far not been given the usual formality of a divisional number. There are some indications that sterner stuff may be on the way however. A prisoner has said 18 SS P.G. Division is coming up to the Western Front from the East and there is some support for this from the trend of rail movement in Central and West Central GERMANY. Moderate loadings were apparent in the BERLIN area on 6 April, while nearer the Western Front, considerable activity was seen on the GÖTTINGEN and NORDHEIM yards West of LEIPZIG. The only identification so far on the ground is one regiment of 356 Inf Div in the GOTHA area. This should be treated with reserve as a second regiment of 356 Div was identified in the VIENNA area on 4 April. Nevertheless some fresh arrivals may be expected on the Central sector during the week.

North of KASSEL and as far over as the line of the ISSEL river in HOLLAND, the enemy completely lacks the initiative and is at present in no position to recover it. Our most rapid advances have been in the direction of BREMEN and HANNOVER but good progress has also been made in HOLLAND between the EMS and IJSSEL rivers. Further West the enemy has offered stubborn resistance along the IJSSEL line to our attempts at pushing Westwards into Western HOLLAND. It is too early yet to say that a decision has been made to hold Western HOLLAND as a fortress. However a certain amount of reorganising and incorporation of administrative units into divisional frameworks is at present in progress in Western HOLLAND, and at this late stage it is unlikely that the enemy would follow such a course of action unless he intended to hold at least the ports of Western HOLLAND as fortresses.

Two interesting identifications are reported from HOLLAND this week. The Dutch S.S. Division is now known to be 34 S.S. Div, while PW have been taken from a regiment of 11 Para Div, the first identification of this formation on the ground. It is interesting that one PW taken in HOLLAND this week said he belonged to a Division GERICKE. GERICKE was commander of 11 Para Regt in ITALY and is thought to have left ITALY fairly recently, possibly to take charge of the setting up of 11 Para Div.

...In the RUHR.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In the RUHR pocket, on the basis of identifications during the past week it now seems unlikely that more than twenty divisions are isolated. The bulk of the armour consisting of four Panzer divisions plus an armoured brigade has been concentrated in the N.E. corner of the pocket and initially made determined efforts to break out. With the failure of the attacks, and the consequent abandonment of all hope of escape, the enemy has gone back on to the defensive and his resistance appears to be weakening slightly although he still maintains a coherent front and is making a fight for every inch of ground gained.

To sum up, the events of this week have clearly shown that the enemy is still unable effectively to build up and maintain a coherent front line. There are however at last indications that forces are being transferred to the Western Front from the East. Whether they will arrive in time and in adequate quantities to stabilise the front is questionable. What is beyond doubt however is that this is a policy of despair. Not only is it a confession that KESSELRING is at the end of his resources, it is an illustration of the desperate shortage of available reserves that the only source apparently capable of assisting the Western Front is the inadequately held East Front. The enemy's policy cannot even be described as one of buying time, since it is too late now for forces transferred from East to West to have any decisive effect on the Western battle, and the only effect thinning out from the Eastern Front is likely to have is to precipitate the final Russian assault.

4. EASTERN FRONT

EAST PRUSSIA AND EASTERN GERMANY

In East PRUSSIA the Russians have captured the fortress of KÖNIGSBERG. The attack was launched on 8 April after a three hour artillery barrage and met at first considerable opposition from the extensive belt of fortifications around the town which includes 13 large forts. The reduction of the fortress was however completed within 36 hours.

North of GDYNIA, Soviet forces have cleared the last pocket of enemy resistance in POLAND, a small group of which was holding out on the TUNZINGER WICK.

The rest of the front has been quiet apart from considerable enemy air activity against Soviet troop concentrations in the KUSTRIN area, which suggests some enemy nervousness about the progress of the Russian build-up in this area.

CZECHOSLOVAKIA AND HUNGARY

This week the enemy has started pulling back the flank of his long salient in SLOVAKIA without apparently being unduly troubled by Soviet pressure. It is not clear whether the HIGH TATRA mountains are still in enemy hands: in any case he must soon abandon them in view of his withdrawals West of the HIGH TATRA along the ORAV and NITRA Valleys. Further West the Soviet advance along the North bank of the DANUBE has led to a further crossing of the post-MUNICH Czech border in the BRATISLAVA-TRNAVA region. Both the latter towns have fallen to MALINOVSKY's forces who have now cut the VIENNA-BRNO railway N.W. of BRATISLAVA. So far as can be seen the Second Ukrainian Army Group is advancing in two main directions. One force is pushing Northwards along the BRATISLAVA-BRNO railway towards BRNO, making slow progress in difficult country and against tough resistance. A second force North of the DANUBE is attacking due West towards VIENNA and has linked up with the Third Ukrainian Army Group in the VIENNA region.

South of the DANUBE, the main Russian thrust has been in the direction of VIENNA and has outflanked the capital by a drive which has reached the DANUBE N.W. of the city. It seems clear that the enemy is resolved to let VIENNA share the same fate as BUDAPEST, although the Russians are making

....such satisfactory headway....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

such satisfactory headway that this plan may be frustrated. 6 S.S. Pz Army is believed to be defending the capital with the assistance of elements of the 6th Army which includes 356 Inf Div identified in the VIENNA region this week.

Further South the Russian thrust down the RABA Valley towards BRUCK has not developed during the week although South of the river some progress has been made in the high ground East of the FISCHBACHER Alps. It seems evident as was suggested in last week's Summary that the enemy will attempt to hold us in the high terrain covering BRUCK (B 69), GRAZ and MARIBOR (E 27). 2 Pz Army is now right across the Yugoslav frontier and appears to be falling back to the DRAVA river as no attempt was made at a stand on the MURA river South and S.W. of MAGYARMISZA. The Russians supported by Bulgarian forces have in fact established a bridgehead over the DRAVA near the confluence of the DRAVA and MURA rivers. However the Soviets have in the past been noticeably reluctant to operate in the area South of the DRAVA and may be content to leave operations here in the hands of the Bulgars while they concentrate on the situation in Eastern AUSTRIA.

YUGOSLAVIA

The tempo of the enemy withdrawal has quickened as the enemy situation deteriorates in AUSTRIA and HUNGARY. The heavy Westward road movement from the SREM has continued all the week and there can be little doubt that the enemy will soon have to abandon this area completely. Meanwhile the thinning out on this front had by last week reached a stage where the enemy forces further South in the SARAJEVO salient stood in serious danger of isolation from the rest of Army Group E, and on the morning of 5 April the last German forces pulled out of SARAJEVO. Considerable damage was done to enemy traffic moving Northwards along the SARAJEVO-BROD road and it is likely that XXI Mtn Corps will have no easy passage back North. As the road bridges at both ZENICA (H 12) and BROD have been destroyed considerable bottlenecks are likely to arise in the course of the withdrawal.

In N.W. YUGOSLAVIA the Yugoslav offensive is making rapid headway. Last week another important enemy base - GOSPIC (F 05) fell to the Yugoslavs who are now advancing along the GOSPIC-SENJ road towards the Adriatic coast. A second Partisan force advancing along the West road has captured KARLOBAG (0 85) and is reported to be 12 miles due South of SENJ. On 4 April the Yugoslavs with Allied artillery, air and naval support, landed on PAG island, opposite KARLOBAG and in an extremely successful operation cleared all enemy from the island within 48 hours.

APPENDIX 'A' TO 15 ARMY GROUP INTELLIGENCE SUMMARY NO. 89 DATED 9 APRIL, 1945

THE EFFECTS OF RECENT HIGH WATER LEVEL ON ENEMY COMMUNICATIONS

The recent high water level reached by many of the rivers and streams in North ITALY has joined MTAF in further disrupting enemy communications. This assistance, not totally unexpected, has been manifested in two forms, namely the destruction of existing bridges, diversions, and roads, and the hindering of repairs to already damaged lines and structures. Two outstanding examples of the former can be seen in damage inflicted upon the NERVESA (G 6493) and CITTADELLA (G 2373) rail diversions.

The diversion at NERVESA, an important rail crossing over the PIAVE river, was severely damaged when the swollen current washed several spans away and undermined and destroyed much of the fill embankment.

Night photographs of CITTADELLA taken on the 29th of March showed that the rising of the BRENTA river had inundated approximately 400' of the existing rail diversion, swept away part of the diversion under construction, and almost completely submerged the road diversion to the North. Photographs taken after the water had receded showed 250' - 260' of the existing diversion completely washed away and another 100' damaged by the current. Fifty feet of the new uncompleted diversion had been destroyed and the road diversion cut and left partially submerged.

Other interesting examples include the road diversions at CASARSA, which had about 1,000' of its length submerged by high water, and at PONTE DI PIAVE, where a smaller section was also under water when last photographed.

Although the extent to which repairs have been retarded cannot be gauged, it is very probable that high water has created a difficult soil condition on the sites of certain damaged rail bridges and fills on the BRENNER route, and retarded repairs which were underway. The situation was probably aggravated by the fact that in performing quick repair jobs the enemy has not always provided adequate drainage facilities at the repair sites. Considerable difficulty has apparently been encountered by repair crews at the SAN MICHELE (A 8141) rail diversion bridge, and at ROVERETO (A 6903). In other cases, such as MONTEBELLO (F 9755), where repairs were underway, water has backed up on the formerly dry river bed and hindered repair crews working on the base of a new pier.

Although unfavourable weather at the end of March grounded many of our medium fighter-bombers thus preventing our customary strikes against enemy communications, the high water which occurred during this period certainly had somewhat of a compensating effect.

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 90

OF 17 APRIL, 1945

1. ENEMY SITUATION

GENERAL

The Allied spring offensive has started inauspiciously for Army Group C. Since the beginning of the month VIETINGHOFF, confirmed by a captured document as successor to KESSELRING as C in C South West, has lost close on 10,000 prisoners (6,000 of whom have fallen to 8 Army in the last eight days), at least four of his divisions have been badly cut up (148, 42 Jaeger, 98 and 362) and he has been forced to dig into his meagre reserve and commit both 29 P.G. and 90 P.G. Divisions. At the time of going to press 10 Army is being pushed relentlessly back to the IDICE river line while on the 14 Army front after two days of very stubborn fighting the enemy suddenly cracked yesterday on the right wing of 94 Div and we have now advanced rapidly along the mountain ridge West of the RENO to capture M. MOSCOSO L 6935. On the West coast what started out as a minor attack has developed into a very successful operation leading to the capture of CARRARA, and we are still on the move. Only immediately South of BOLOGNA where an attack yesterday made very little progress, has the enemy any solid grounds for satisfaction. Nor can the successful development of operations for the Allies be ascribed to any sudden break in enemy morale, due to the disaster on the Western Front: the enemy has fought hard and at times desperately and the only difference between his fighting spirit today and that of last May is that when cut off or threatened with being cut off the German soldier surrenders more easily. War weariness and a sense of the futility of the struggle against overwhelming material superiority lead him to give in more readily, but it would be dangerous to see in this any sign of an imminent collapse in morale. As has been pointed out so often the divisions in ITALY represent some of the best troops left in the German Army, and while they have weapons and ammunition to fire we must expect no easy victory. They are likely to fight with what KESSELRING in his last Order of the Day called the "old unbowed bearing of the German troops in ITALY".

EIGHTH ARMY MAIN FRONT

Our attack on the SENIO came as no surprise to the enemy. The troops in 76 Pz and 1 Para Corps had been alerted since the beginning of the month, and a renewal of the offensive from the CASTEL D'ALANO sector was expected. On both coastal flanks the anti-invasion scare has been in full swing: all troops along the Ligurian coast were alerted in the first week of April, and in the Northern Adriatic the enemy was so sensitive that he considered it necessary to move 29 P.G. Div North across the PO into the PADUA area. The weight of our attack, preceded by carpet bombing by heavies in the immediate rear of the front line and supported by a concentrated artillery bombardment and by extensive use of flamethrowers, shook the troops which bore the brunt of our attack. For the third time in the last seven months 98 Inf Div, a Crimean veteran, has been badly cut up. On the evening of the 9th we seized a considerable bridgehead West of COTIGNOLA on the front of 289 G.R. and 290 G.R., and another one N.E. of LUGO in the 362 Div sector. Some 700 prisoners were taken in the first 12 hours. Meantime our Southernmost assault was meeting very stubborn resistance from 26 Pz Div North of Route 9. By the afternoon of the 10th FUSIGNANO, LUGO and COTIGNOLA were clear and that evening we had reached the SANTERNO on a 3½ mile front. By then 98 and 362 Divs had each lost some 600 prisoners. 26 Pz Div continued to fight fiercely, but in the

...bulge South of...

- SECRET -

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

bulge South of IMOLA the enemy began to withdraw as early as the night 10/11th. This was a notable step because a year ago the parachutists would certainly have held on to their positions considerably longer and not withdrawn till the last moment. But on this occasion the enemy changed his policy and the reason is clear - by pulling back in the bulge the enemy could find much needed reinforcement for the main battle area. That is in effect what happened and 278 Div was squeezed out between 1 and 4 Para Divs and by the evening of the 12th was already largely in reserve. By the 14th it was again in the line having relieved 98 Div astride the MEDICINA-MASSA LOMBARDA railway opposite the bridgeheads we had by then seized over the SILLARO river. Withdrawal to the SILLARO, carried out on the 13th, had been forced on the enemy by his failure to drive in our bridgeheads over the SANTERNO: in the resulting confusion we were able to get a tenuous foothold on the West bank of the SILLARO. Even the arrival of a fresh formation (278 Div) failed to reduce our hold and bitter counter-attacks against our bridgeheads all morning on the 14th met with no more success than previous attempts to drive us back over the SANTERNO.

THE ARGENTA GAP

Meantime at the Northern end of the line amphibious operations across the COMACCHIO Lake were started on the 11th, where we landed near MENATE M 4158 and quickly pushed inland to capture some 200 PW from 42 Jaeger Div. At this time the enemy was already withdrawing voluntarily from the ALFONSINE sector. Starting on the 12th 42 Div began to pull back its forces into the ARGENTA Gap, the name given to the narrow strip of land astride Route 16, with flooded areas to East and West. 42 Div offered stubborn resistance in this withdrawal, especially at FILO M 3557, while troops of the division were engaged in heavy fighting for the BANDO bridge M 3362 near which we made another landing on the 13th. The fighting for this bridge continued for three days and it was not captured till early on the 17th. It was near here that the first prisoners were taken from 29 P.G. Div on the 13th. All six infantry battalions of this division have now been identified in the ARGENTA Gap, as well as the Recce Unit. It is known from prisoners' statements that I Bn 15 P.G.R. did not leave the PADUA area till the evening of the 11th while other units of the division are believed to have come from further North-east. The division has taken over the ARGENTA area allowing at least part of the battered 42 Div (it has lost 1,400 prisoners) to join 362 Div in the marshy ground West of Route 16. Against stubborn opposition we have made good progress in the Gap. ARGENTA was captured tonight and our troops have crossed the MARINA Canal. We are now up against the Genghis Khan position at its Northeastern extremity and the enemy cannot fail to be anxious lest we should break through at this point towards FERRARA, thus threatening all his forces South of the PO. 29 P.G. Div is likely therefore to get assistance from 42 Div and if needed from one of the divisions refitting (98 Div or 26 Pz).

THE IDICE LINE

Immediately West of Route 16 is an area of floods, extending as far over as the 10 Easting and garrisoned at present by 362 Div and elements of 42 Div - both divisions badly knocked about but still able to hold a sector which is unlikely to see heavy fighting. From MEZZOLARA M 0758 to Route 9 the Genghis Khan Line follows the IDICE River and defences have been well developed. Having been pushed back off the SILLARO and across the MEDICINA Canal (in the process of which the infantry of 26 Pz Div were squeezed out into reserve between 278 Div and 4 Para) the enemy is tonight back on the GAIANA River from the marshes South to Route 9. Although the enemy will continue to offer stubborn resistance on the canals forward of the IDICE it is doubtful if he can now make a determined stand till he reaches the IDICE itself. To hold the line between MEZZOLARA and Route 9

...S.E. of BOLOGNA....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

S.E. of BOLOGNA he will have 278 Div (at the moment being cut up and having already lost 600 prisoners), 4 Para Div, 1 Para Div and 305 Div, the latter anchoring the III CE position on to the defences South of BOLOGNA. The only other reserve available is either 98 Inf or 26 Pz Div so that the enemy will have none too many troops to hold this last line covering the city. True, he has two untouched Parachutist Divisions, but both have recently had to give up fairly large drafts of trained personnel, which will inevitably affect to some extent their fighting quality.

FIFTH ARMY MAIN FRONT

South of BOLOGNA there has been little change. 305 Div has been unaffected by the offensive, but to its West 65 Div was involved in an attack launched by us yesterday morning. It resisted very strongly and we made only small gains. On its right it is now known that 157 Mtn Div has been renumbered 8 Mtn Div for some reason best known to the German Command. Only the Western wing of the division has so far been drawn into the battle, where we have captured M. SOLE L 7829 and M. RUMICI L 8428 from 296 G.R. after encountering very extensive minefields. Early on the 14th, 5 Army attacked North from CASTEL D'AIANO. Heavy opposition was encountered all day from 334 Div but by the evening we had pushed forward 2 Kms, while on the 94 Div front we had entered the Southern outskirts of VERGATO. To the West 114 Div was driven out of MONTESE. All the following day very bitter fighting raged with 334 Div and 94 Div, with heavy casualties to both sides. But on the 16th the right wing of 94 Div collapsed and capturing TOLE L 6530 we advanced rapidly N.E. to reach M. MOSCOSO L 6935 early next morning. Here prisoners were taken from 190 Recce Unit, and later in the day II Bn 361 F.G.R. was identified some 3,000 yards to the West at S. PROSPERO L 6634. Despite the deteriorating situation East of BOLOGNA the enemy had stolidly refused to move 90 P.G. Division from the area IMOLA-FAENZA, where it had been placed in evident anticipation of a renewal of the 5 Army attack. In view of the heavy losses suffered by 334 and 94 Divs it is not surprising therefore that 90 P.G. should move down to assist, apparently coming into the line between the two of them. Operations on this front have now resulted in the capture of VERGATO and progress has been made up the West bank of the RENO as far as the 30 Northing, while striking N.E. from TOLE Allied troops are tonight reported to have reached M. TRAMONIO L 7434. N.W. of CASTEL D'AIANO 334 Div still holds M. RIGHETTI L 6029 where 754 G.R., the Westernmost Regt has been [illegible] attack. In the MONTESE area there has been little further activity. The enemy now has both 232 and 114 Divs sitting in the mountains off the main axis of our attack, and since reinforcements will be badly needed soon between the SAMOGGIA and RENO rivers, we may expect to see some thinning out from their sectors West of M. BELVEDERE. 721 Jaeger Regt (114 Div) which has been resting for a month may well reappear South of CASTELFRANCO. Total prisoners in the 5 Army attack so far is believed to be about 2,000.

WEST COAST

On the West coast we have now captured some 1,400 prisoners since 5 April when operations started. On the 11th Partisans captured CARRARA and our troops advancing from MASSA linked up with them the same day. Since then enemy resistance has been scrappy, despite the despatch of a battalion of 90 P.G. Div (I Bn 361 F.G.R.) which came down to counter-attack on 13 April and lost some 40 prisoners. We are now some 8 - 10 Kms beyond CARRARA due East of SARZANA and just short of FOSDINOVO P 8112; further inland we are on TOMMGGIORA P 8514. 148 Div has taken a bad knock, despite the assistance of various units [illegible] - the M.G. Bn Kesselring 1, 4 High Mtn Bn, I Bn 361 F.G.R., and I Bn 286 G.R. (brought from the SERCHIO Valley). There are now signs that the Italians in the SERCHIO Valley are beginning to thin out, and their front may well be pulled back to conform with the present line on the coast.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

ENEMY RESERVES

The enemy situation is becoming critical. Within eight days of the start of the Allied offensive both reserve divisions have been committed and in exchange the enemy has only managed to withdraw from the line one battered division (98 Div) and one wounded division (26 Pz). Both are held at the moment opposite 8 Army, where they are probably absorbing replacements from the divisional replacement battalions which were believed to be up to strength before the battle. They are unlikely then to be out of the line for long. Apart from divisional replacement units there appears to be no immediate sign of any further reinforcement for the main front. Both 5 Mtn and 34 Divs are probably fully occupied in Western ITALY, particularly following the start of a French offensive over the Alps, and in N.E. ITALY there are only 155 Div and 710 Div available. Fear of an Allied landing must retain at least one there, while recent photo cover has noted troop movement over the TARVISIO route from the UDINE Plain so that it is possible that either or both of these divisions are being called on to provide units for the Austrian front. In other words, 8 Army has to be held on the IDICE with the enemy's present resources, and now that 90 P.G. Div has been committed West of BOLOGNA the enemy can only draw on units from unaffected parts of the line to hold off 5 Army from the Plain.

ENEMY POLICY

If VIETINGHOFF persists in his present policy of trying to wear down our attacks he must accept heavy losses with the prospect, should he fail to halt us, of being so crippled as to be unable to withdraw his armies intact across the PO. The alternative is to decide now, for time is short, on a fighting withdrawal to the PO. Such a decision would be contrary to previous policy, and its implementation will depend primarily on whether the German Command merely intends to stand and fight to the last man, or whether it will disregard prestige (which could not matter less at this stage of the war) and try to withdraw Army Group C North of the PO, possibly with an eye to employing it in the Redoubt. Supply problems and petrol shortage may influence the decision, especially if we are to believe a normally reliable ground source that the enemy has only sufficient petrol to get 10 and 14 Armies to VERONA and Army Liguria to BRESCIA. Other agents report several high powered meetings early this month, at one of which, attended by VIETINGHOFF and MUSSOLINI, it was decided to withdraw to the ADIGE. This report is completely without confirmation from other sources but we cannot ignore it entirely as a withdrawal is an enemy capability. At present the enemy's policy continues to be one of fighting hard for every feature and every delaying position. The next few days should show whether he intends to alter that policy, or fight it out to the finish.

2 ENEMY SUPPLIES AND COMMUNICATIONS

There has been no radical change in the overall rail picture in enemy occupied ITALY during the past week. Although close support targets in connection with the ground offensive have greatly reduced the medium and fighter bomber effort on the railways, they have by no means been neglected, especially in the NE and along the BRENNER where the heavy bombers have done good work.

The BRENNER line remains well blocked South of BOLZANO and the three NE routes between the PADUA - VICENZA area and UDINE continue to be heavily interdicted. The three NE frontier routes are also closed to through traffic. (For the status of enemy railways as of 16 April see map attached.) Traffic on the BRENNER line has been normal this week and though transhipment is still necessary at several points between VERONA and BOLZANO, through traffic has been possible on most days from BOLZANO North. In the NE there has been an exceptional amount of traffic on the UDINE - TARVISIO

..... line .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

line and PR reveals strong indications of a movement of troops Northwards from the UDINE area, with transhipment taking place at the three damaged bridges about half-way between UDINE and TARVISIO. Although it is as yet too early to make any definite statement as to what is moving, it would appear to be a fairly large formation, possibly as much as a division.

All permanent road and rail bridges over the river PO East of PAVIA remain impassable. Night activity has been noted at pontoon bridge and ferry sites, but only one of the four pontoon bridges heretofore seen to be operating during the past week, and no pronounced increase in the volume of traffic crossing the river has been noted. However, night PR is of necessity limited in its scope and 29 P.G. Div was able to cross undetected. Some increase in traffic has undoubtedly occurred, but to what extent it is impossible to state. In any event it is apparent that so far the enemy has not been forced to use the river crossings during the hours of daylight to any appreciable extent.

With successful attacks on MT substitute fuel resources and the continued blocking of the railway routes from the REICH, shortage of fuel continues to be the enemy's main supply trouble, and now that the battle necessitates a heavier expenditure and, consequently a large demand for ammunition by the forward troops, the position is undoubtedly deteriorating. On 10 April a ground source reported that in the case of a general withdrawal fuel stocks were then only enough to take 10 and 14 Armies' vehicles as far as VERONA and those of Army LIGURIA to BRESCIA. This report is considered reasonable, and the estimate presumably made no allowance for fighting which might occur meanwhile.

Second only to the shortage of fuel is the shortage of coal. Practically no coal is produced in Northern ITALY, and except for a small amount from ISTRIA, all the coal required by both the German armies and the Italian industries and railways has to be imported from the REICH. Up to 1 March the majority of this coal supply was directed through SWITZERLAND; however on or about that date the Swiss Government placed an embargo on the passage of coal, and by mid-March it was reported that only one fifth of the daily requirements were reaching ITALY. Coal stocks in the country were at that time reported to be sufficient for 30 to 40 days and it is probable that they are now much lower. In any event it is known that railway steam engines have been forced to burn wood.

Two reports have lately been received to the effect that all the ammunition for the German Armies on this front is now being manufactured in ITALY, and, whilst this is not believed to be correct, it is thought that the enemy has for some time been making use of Italian factories and filling plants for certain types of ammunition. These have been attacked from time to time. On 14th April the ammunition factories at AVIGLIANO (H 8131), SPILLIMBERGO (C 1526), MILCONTENTE (G 6019) and ANDRUZZA (G 5206) were attacked by heavy bombers with excellent results, whilst on 10 April a shell filling plant at PIACENZA was completely destroyed by fighter-bombers.

Enemy supply difficulties are not confined to ammunition and fuel nor to this theatre. A captured order dated 10 Feb of 47 Volksgrenadier Div (now fighting in South GERMANY) shows that rations and clothing have been in short supply on the Western Front. Extracts from this order appear at Appendix 'A'.

3. WESTERN FRONT

Two new developments have altered the situation in the West this week. One is the growing proximity of the West Front to the East Front

....which has made....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

which has made the transfer of enemy forces from one to the other a relatively simple process: the other, connected with the first, is the division of responsibility between KESSELRING and BUSCH. Both are the direct result of the collapse on the central sector of the Western Front. The picture of enemy resistance has not materially altered during the week. In the main it has changed only in its deterioration. In the South the tenuous coherence of Army Group G's front is breaking. No fresh divisions have been contacted North of the STUTTGART-NÜRNBERG line, and those that are there have been heavily engaged. The greatest weakness is apparent in the NÜRNBERG rather than the STUTTGART area, and we are now fighting in the outskirts of NÜRNBERG. If the enemy has any intention of withdrawing into a National Redoubt in AUSTRIA, it must be a major concern of KESSELRING to keep intact the forces of Army Group G. They alone of the troops in the West can be expected to make any substantial contribution to the Redoubt. It may be of significance that 19 Army, the most Southerly of the German Armies in the West, has recently acquired a new commander in the form of an SS Obergruppenführer - one KEPPLER by name. Vague reports have been circulating in the past week of heavy movement back to the Austrian area. These so far lack any reliable confirmation from the air.

The centre of the front remains a wide open gap. In the earlier part of last week it looked as if the enemy was trying to build up a front somewhere East of KASSEL, where we identified two Panzer and two Parachute divisions. The attempt was vain. Before this small concentration of forces was able to take any offensive action, 166 Res Div in the KASSEL area crumbled, and the enemy concentration was dispersed. Since then the situation on the Central sector has been completely out of hand. Such resistance as has appeared comes from miscellaneous independent battalions of whatever shape or size is currently available. Some fight well - officer or NCO schools can always be relied upon to put up stubborn local resistance. Others less well: the calibre of such units as the Stomach Battle Group contacted last week is perhaps not all it might be. However until we reached the ELBE there was little coherent resistance of any kind. We crossed the great river without undue difficulty but on the East bank the enemy has fought harder. Identifications of units operating East of the river show them to be in the main ad hoc formations operating under the courtesy title of a division. Divisions SCHARNORST, POTSDAM and VON HUTTEN have been contacted. In view of the proximity of the Western Front to the East these are probably made up in part of rear units servicing the Eastern Front. Far behind the front Army Group B in the RUHR pocket has already lost over 200,000 PW and appears to be near the end of its resources. The Army Group Commander, Field Marshal MODEL, is reported to have avoided the sombre fate which threatened him as a war criminal by taking his own life.

There is still coherent enemy resistance along the front from South of HAMBURG to HOLLAND. Two parachute and elements of four Infantry divisions are in contact and show no disposition to give ground unless forced to. Only between the EMS and the IJSSEL has opposition been relatively weak and in the corridor between the two rivers we have been able to push on to the North sea. Further West, the decision has been taken to retain Western HOLLAND as a fortress, and very heavy resistance has been encountered by our forces attacking Westwards over the IJSSEL river. The reorganisation of coast defence units into divisional frameworks mentioned in last week's Summary has now produced at least six new divisions. These represent no increase in real strength, but may represent some increase in the enemy's capabilities for organised resistance.

No official details have yet been received of the new division of command in the West. Field Marshal BUSCH who is reported to have command of the Northern half of the front, commanded Army Group Centre in the East

....until June of...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

until June of last year. The split in the command is certainly in anticipation of an early link up of the Anglo-American and Soviet forces, which would substitute for the present East and West fronts, receding Northern and Southern fronts. The assumption cannot however be excluded that there is a more sinister significance to it than that. With reports of the National Redoubt now being received from all quarters, the choice of an expert in defensive mountain warfare to man the Southern part of the Western Front is ominous. If they are going back to the Redoubt it is time now for the Nazis to make their final arrangements. There is not much future left in the West. Last February, we know from a captured document, the enemy was preparing to set up the 33rd wave of new divisions which was to be ready about the end of May or early June. These will be comprised in the main of the 1928 class. A number of these divisions were setting up in DENMARK and it is significant that many of the miscellaneous battalions recently contacted in the West have come from DENMARK. The implication is that the embryo divisions have been milked of their drafts to meet the requirements of the deepening crisis. It looks unlikely that we shall see any of the 33rd wave. Meanwhile the thinning out from NORWAY continues at the tantalisingly slow pace which Allied anti-shipping strikes have imposed. 199 Inf Div has now started disembarking in DENMARK. It is to be followed according to one report, by 7 Mtn Division. After that there will be ten more divisions to leave at the rate of one a month. Their prospects are not bright.

4. EASTERN FRONT

EAST PRUSSIA AND GERMANY

Enemy resistance continues on the SAMLAND peninsula, where the port of PILLAU is still in German hands.

Details of operations on the ODER front come so far wholly from enemy reports. According to these, the Russians have attacked on both sides of FRANKFURT AN DER ODER on an 80 mile front between FÜRSTENBERG and SCHWEDT. Fighting is reported at SEELOW, 10 miles West of the ODER and 30 miles from the centre of BERLIN. The two Soviet bridgeheads at KIENITZ and LEBUS reported by the enemy over a month ago are said to have joined up near SEELOW.

A captured document has clarified the lay-out of Army groups in the East. LATVIA is the responsibility of Army Group VISTULA, and the East Prussian battle was conducted by Army Group North under the command of Col-Gen RENDULIC formerly commander of 20 Mtn Army in FINLAND. On the main front in GERMANY there are two Army Groups. In the Northern half of the front is Army Group VISTULA under HIMMLER, while further South is Army Group Centre commanded by Field Marshal SCHOERNER. CZECHOSLOVAKIA and AUSTRIA are the responsibility of Army Group South.

CZECHOSLOVAKIA AND AUSTRIA

While the enemy accelerates his withdrawal from the high terrain of Eastern SLOVAKIA the Soviets appear to be developing their offensive in Southern SLOVAKIA along the Northwesterly axis of the LUNDENBERG - BRNO road and railway. Enemy resistance is so far moderate. Now that the Germans have given up the HIGH TATRA and NISKE TATRY mountains, the rest of the terrain through which they must withdraw from SLOVAKIA slopes gradually downwards to the MORAVSKA OSTRAVA gap, and is generally less suitable for defence than that which they have abandoned. In view of this, the enemy's plan may now be to pull right back behind the gap to the mountainous terrain of Central MORAVIA, thereby ironing out his Slovak salient and eliminating the danger of a link up between the First and Third Ukrainian Army Groups. Some thinning out of the German forces in SLOVAKIA is already in progress and 3 Mtn Div formerly in the Slovak region has recently been transferred to Southern AUSTRIA.

...In AUSTRIA, the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

In AUSTRIA, the reduction of VIENNA was accomplished rather more easily than had been expected. While there is no evidence of any serious demoralisation on the part of the German armed forces, it seems clear from all reports that the Austrian civilian population is not showing that degree of hostility and fear towards the invaders which has characterised the occupied provinces of Eastern GERMANY. North of the DANUBE, the Russians have now captured the large oil field at ZISTERSDORF. This has an annual capacity of 1¼ million tons and was the last major source of natural crude oil now available to the enemy. The whole of 6 SS Pz Army has been identified in the VIENNA region during the past week. II SS Pz Corps with 2 and 9 SS Pz Divs, as well as 3 SS Pz Div, and possibly 6 Pz and elements of 13 Pz Division are all believed to be operating North of the DANUBE and are trying to block Soviet progress Northwestwards towards the Czechoslovakian frontier. South of the DANUBE the enemy forces appear to be less strong, probably because the ground is more suitable for defence than it is North of the river. 1 and 12 SS Pz Divs are believed to be in the ST POLTEN area and 37 SS Cavalry Division was identified in the same area on 12 April. This is a new formation and bears the highest number yet contacted. It is believed to include those remnants of 8 and 22 SS Cavalry Divs which escaped from BUDAPEST. So far the enemy has not been able to bring the Soviet progress along the LINZ gap to a halt, and it seems likely that he has underestimated the Russian strength in this area. The picture of his dispositions suggests more concern with the Russian progress towards CZECHOSLOVAKIA than towards LINZ which is nevertheless ultimately of far greater significance. Further reinforcement may be on the way, however. 10 SS Pz Div was reported to be moving Southwards from PRAGUE on 9 April and may be destined for Army Group South. Its arrival would raise the total of SS Divs in Army Groups South and E to eleven.

Between the DANUBE and GRAZ the enemy is resisting strongly in the high terrain of the FISCHBACHER Alps covering the BRUCK - MARIBOR railway. Some Soviet progress has however been made along the RAAB Valley where FELDBACH (C 15) 24 miles from GRAZ is in Russian hands. PR shows several sectors of anti-tank ditch recently constructed along the general line MARIBOR-GRAZ. Probably the enemy is prepared to give ground gradually under pressure forward of this line but he will try to hold the Russians on a line covering the railway.

YUGOSLAVIA

In YUGOSLAVIA there has been no change in the situation along the DRAVA. The enemy's withdrawal from the SREM and the SARAJEVO areas is now well under way. In the SREM 41 Inf and 11 G.F Divs appear to be conducting the retreat North of the SAVA with 22 Inf Div to the South of the river. OSIJEK, VINKOVCI and DRCKO are now all in the hands of the Yugoslavs who are however, following up the enemy retreat rather than driving him out. The only area where Yugoslavs are really troubling the enemy's withdrawal is in the DOBOJ (M 28) sector. This town lies on the main SARAJEVO - BROD highway and its capture would cut off the forces of XXI Mtn Corps still fighting their rearguard action in the area of ZEPCE (M 24). Heavy fighting has been in progress to the East of DOBOJ all this week, but the town still remains in enemy hands. In general it looks as if the enemy withdrawal from both the SREM and SARAJEVO areas is going rather better than might have been expected. Although sporadic sharp engagements are reported, the enemy has been able to avoid heavy fighting except in the DOBOJ area, and seems able to conduct the withdrawal in his own time and without undue Partisan interference.

It is not so in Western CROATIA. Here the Yugoslav 4th Army's offensive is in its fourth week. This is the largest and most successful operation which has ever been mounted by Tito's forces. Considerable

....territorial gains have...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

territorial gains have been made and at least two enemy divisions - 392 and 373 Legion - have both been badly battered. Two Yugoslav thrusts are now apparent, and each is being countered by a division which was not in Western CROATIA when the offensive started. It is in fact clear that the enemy can no longer place any reliance upon the Legionary divs which are near disintegration, and is having to call upon proper German formations. One Yugoslav column is pushing Northwestwards along the coast road to FIUME and has now reached CRIKVENICA 15 miles S.E. of FIUME. Elements of 237 Inf Division have come down from the FIUME area and 1048 G.R. has now been contacted near CRIKVENICA. The second Yugoslav thrust is in a North Easterly direction towards KARLOVAC (K 25). Here the enemy seems to have the situation rather more in hand and 104 Jg Div is offering stubborn resistance about 12 miles S.W. of KARLOVAC. Meanwhile further successes have been achieved in the QUARNERO island group and RAB was captured by the Yugoslavs last week.

APPENDIX 'A' TO H.Q. 15 ARMY GROUP INTELLIGENCE SUMMARY NO. 90 DATED 17 APRIL, 1945

EXTRACTS FROM CAPTURED DOCUMENT

47th VOLKS-GRENADIER DIV
The Commanding General

Div GP, 10 Feb 45.

SUBJECT: General Supply Situation

++++++++++++++++++

The supply situation, which continues to grow more and more serious, necessitates utmost economy and retrenchment in all classes of supplies. I reproduce below the instruction of Army Group G for the benefit of subordinate commanders, to acquaint them with the supply situation. I expect units to appreciate the prevailing conditions and use supplies as thriftily as possible. This instruction will be destroyed after having been received and noted by the persons concerned. Its contents will be disseminated orally to the commanders of lower formations and units. Report of execution will be filed with Div QM by 15 Feb 45.

"According to a report by the German Army QM on the supply situation, based on the 1944 harvest and the stocks of raw material for clothing and equipment available after the loss of the enemy-occupied territories in the EAST and WEST, it appears that the supply situation must be regarded as critical:

"The following appears to be the picture as presented by the above report:

1. Rations

As rations decrease, increasing stress must be placed on the complete utilization of all available food and on increased care in its preparation. ++++++++++++++++

It is not permissible to ask automatically for increased rations when a unit is subjected to added strain. ++++++++++++++++++++

According to the yield of the grain and roughage harvest it can be expected that fodder rations will be further reduced. ++++++++++++++++++

2. Clothing and Equipment

At the end of our withdrawals it was clearly demonstrated to what extent the combat efficiency of an army is dependent upon the state of its clothing.

Losses, such as suffered last summer by faulty orders or neglect, must not occur again, since the scarcity of raw materials prohibits replacement. The soldier is punished if he loses his weapon. Appropriate measures will be taken in future if clothes and equipment are lost. ++++++++++++++++++++

Unfortunately the soldier cannot be issued a second pair of boots which would allow him to change and facilitate repairs; all that can be used for this purpose are the modest unit reserves. Therefore the footgear in possession of the individual must especially be cared for; the necessary leather grease has been issued.

There is sufficient basic winter equipment for every soldier. Extra winter equipment for the WEST has not been authorised; substantial quantities have nevertheless been issued, but these are destined for the combat troops only. No extra winter equipment may therefore be used in rear of regtl Hqs. If every soldier realises that clothing is obtainable at home almost exclusively for bomb casualties, he will take the right attitude toward these measures.

.....3. Quarters .....

- SECRET -

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

3. Quarters

The general shortage of raw materials for textiles also affects the available supplies for quarters, especially blankets and sheets. ++++++++++
The difficulties in the supply of greases necessitate far reaching economies in the use of candles of all kinds." +++++++++

(signed) DORK, Maj-Gen,
Commanding.

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 91

OF 24 APRIL '45

74

1. ENEMY SITUATION

On the evening of the 20th the enemy suddenly started a general withdrawal from the BOLOGNA area. But VIETINGHOFF had already fallen between two stools - he had not ordered (or more likely Hitler's intuitive genius for strategical misappreciation had not allowed him to order) a fighting withdrawal to the PO and he had not succeeded in halting the Allied offensive on the Appennine line. Consequently, when withdrawal was forced upon him as the only alternative to annihilation South of the PO, he found that his Armies were already battered, he had no reserves, and his pace of withdrawal was limited to that of the foot soldier. As a result of the heavy casualties he had endured in trying to blunt our offensive he had not the force left to prevent 5 Army breaking through 90 P.G. and 94 Inf Divs and fanning out into the plain to the West and N.W. of BOLOGNA. He rapidly lost control of this part of the front and with it his chance of conducting an orderly withdrawal to the PO. Only by such an orderly withdrawal could he have hoped to offset our high morale, our greater mobility and overwhelming armoured and air superiority. Although further East 76 Pz Corps and 1 Para Corps have conducted a skilful and desperately fierce withdrawal the enemy is paying a bitter price for the collapse of 14 Pz Corps. It is still too soon to tell the extent of the disaster which has befallen the enemy, but at the moment of writing he has lost over 50,000 prisoners, large quantities of equipment and very many vehicles. We have seized several crossings over the PO, and the escape route of 51 Mtn Corps from the PARMA area and of the German forces from Western ITALY is gravely threatened. Army Group C is experiencing its most crushing defeat in the Italian campaign and one that bids fair to be decisive.

The critical moment of the battle prabably came when 8 Army smashed through the Genghis Khan positions in the ARGENTA Gap on the 18th and advanced rapidly up to PORTOMAGGIORE and the canal running East and West through the town. At this time the enemy was still holding firm South of BOLOGNA though in the mountains to the West of the city our attack was gaining momentum despite the attempts of 90 P.G. Div to halt it. A breakthrough to FERRARA from ARGENTA would have endangered the bulk of his armies South of the PO and the divisions then available to 76 Pz Corps (29 P.G. Div, 42 Jaeger Div, which had already lost 2,000 prisoners, and 362 Div, roughly handled in our attacks on the SENIO and S.INTERNO) could not have prevented this break out unaided. The only reserve the enemy had was 98 Div, resting and refitting near S. NICOLO FERRARESE after suffering heavily in the first few days of the offensive, and 26 Pz Div, still comparatively fresh and undamaged after four days of fighting in the BUDRIO area. Both were at once committed against the right wing of 8 Army, leaving the enemy with no Central reserve. This weakness soon became glaringly apparent. Making much swifter progress through the mountains than the enemy obviously thought would be possible, 5 Army tore a great hole in 94 Div, and brushed aside 90 P.G. Div. The only reinforcement the enemy had time to bring up was the Fusilier Bn of 65 Div. He had probably intended bringing round 114 Div or part of 334 Div from the West, but movement out of the mountains was very slow and we did not contact 114 Recce Bn until we had crossed route 9.

Fifth Army reached the highway just before midday on the 20th, and although the enemy forces ahead of us were broken and disorganised, 90 P.G. Div harassed the Eastern flank of our thrust all day. South of BOLOGNA 65 Div had withdrawn under pressure on to the HERMANN line (running along the 28 Northing) the previous night. N.E. of the town, 1 Para Corps had been pushed off the MEDICINA Canal, and after a temporary pause on the GAINA river had been thrown back into the Genghis Khan positions along the IDICE river on the night 19/20. By midday on the 20th we had

..... seized small .....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

seized small bridgeheads across the IMOLA. Faced with a breakthrough N.E. and West of BOLOGNA, the enemy abandoned the city that night. Leaving the two Para divisions and 278 Div to fight their way back towards the RENO bend North of CENTO, VIETINGHOFF tried desperate measures to stop 5 Army breaking out across the plain. 305 Div was rushed through BOLOGNA on the night 20/21 April in an attempt to bring it round West of the RENO into the area S. GIOVANNI in PERSICETO.

8 Mtn and 65 Divs, both of which had had heavy casualties, also tried to withdraw to cover 1 Para Corps' flank. But these moves came too late and could not prevent a break out Northwestwards between route 9 and S. GIOVANNI towards the PANARO, where only miscellaneous and isolated battlegroups opposed our advance. By the 22nd we had reached the PO at GUASTALLA L 3598 and S. BENEDETTO F 5810 and had seized a crossing at the latter point. The enemy armies South of the PO were split.

The collapse of 14 Pz Corps uncovered the flanks of 1 Para Corps and 51 Mtn Corps. The two parachute divisions conducted a skilful withdrawal towards the RENO bend North of CENTO, but there found themselves threatened from both flanks. 362 Div had been unable to hold an armoured column which swept out from ARGENTA along the North bank of the RENO to POGGIO RENATICO; we captured the latter on the night 21/22 April despite the arrival of assistance from 362 Div's right neighbour 278 Div. By the following night we had reached the outskirts of BONDENO through which ran 1 Para Corps' axis of withdrawal. On the Western flank of the parachute divisions the remnants of 65 Division (whose Commander Gen PFEIFFER was killed on the 22nd), of 8 Mtn Div (which had many of its guns overrun) and of 305 Division fought bitterly to keep the escape route for the parachutists open. A desperate battle took place on the 22nd in the Northern corner of the RENO pocket and between the RENO and the PANARO N.E. of CENTO. Our tanks inflicted heavy damage on enemy columns trying to fight their way along the corridor to the only escape route across the PO remaining to the Para Corps - between OSTIGLIA and BONDENO. Fighting is still going on for this bridgehead to-day and we cannot yet tell exactly how much damage has been done to the enemy. But the capture of the G.C.C. of 305 Div, Gen SCHELLWITZ, with his Artillery Commander, in his car while looking for a crossing over the PO, gives some idea of the confusion that reigns. The enemy has no bridges he can use, only ferries, and there is a fair chance that a large part of 1 Para Corps will not reach the North bank of the river.

To the West 90 P.G. Div, 114 and 334 Divs have been slowly withdrawing up Route 9 towards PARMA covering the withdrawal of 232 and 148 Divs from the mountains. The latter was still offering stubborn resistance near SARZANA on the West coast on the 22nd, and only seems to have started its withdrawal the following day. Our patrols entered SPEZIA on the 24th. It is a long and weary trek through Partisan infested country to the crossings North of PARMA, and the capture of REGGIO may force 148 Div to use those still further West. Meantime troops are urgently required in the MANTUA area to seal off our bridgehead which is steadily expanding. As quickly as 51 Mtn Corps can transfer troops across the PO they will march Eastwards.

The enemy's situation is desperate. We have a substantial bridgehead across the PO at S. BENEDETTO, we are in process of establishing another one at OSTIGLIA and patrols have crossed North of FERRARA. He is not only preoccupied with evacuating 76 Pz Corps across the river East of FERRARA and withdrawing what he can of 1 Para Corps between BONDENO and OSTIGLIA, but he still has to extricate 51 Mtn Corps as well as get his forces out of Western ITALY. (Various ground sources report that 75 Corps did not start its withdrawal till the 23rd and that the German garrison of GENOA began its move Northwards on the same day). And his major worry must be that unless he can seal off our bridgehead at S. BENEDETTO he is faced with a potential threat to MANTUA followed by a drive North to Lake GARDA which would cut off his troops to the West and also make havoc of the extensive dumping area around VERONA. We have so far only identified opposite the S. BENEDETTO bridgehead Flak units, convalescents rushed straight from hospital, training units and parachutist companies, made up of recruits who have arrived in ITALY to replace the cadres sent away by 1 and 4 Para Divs in March. Some 3-4,000 of the latter

....are said.....

THIS PAGE IS UNCLASSIFIED

0862

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

are said to have reached ITALY. Apart from ad hoc units it is difficult to see where reinforcement can be obtained apart from 51 Mtn Corps, but some of 5 Mtn Div may intervene if it can move across quickly enough from the TURIN area. To the East 1 Para Corps and 76 Pz Corps are probably too preoccupied with their own worries to give any help.

We cannot yet estimate exactly how seriously the enemy divisions crossing between MANTUA and the Adriatic have been cut up. 8 Mtn Div has lost over 3,600 prisoners (most of them combat troops) and is in no position to fight as a division, 94 and 65 Divisions have also had heavy losses. 278 and 305 Divs have both probably suffered considerable casualties in the fighting for the 1 Para Corps bridgehead, and of the two Para divisions 4 Para is known to have lost over 1,200 prisoners alone. The losses of the parachute divisions in killed is believed to be heavy. We do not know how many of them escaped, but 1 Para Corps as a whole undoubtedly lost heavily in equipment. In 76 Pz Corps three of the infantry divisions had had heavy losses before they reached the PO - 42 Jaeger, 98 and 362 Divs, while the fourth 162 Div has only two regiments (329 G.R. being West of PIACENZA), and has so far escaped comparatively lightly. 26 Pz and 29 P.G. Divs have been covering the withdrawal of 76 Pz Corps across the Po with infantry units probably under command; and these mobile divisions have had considerable though not crippling losses. In addition the enemy has lost heavily in armour on the 8th Army front: 27 Tigers and 13 Panthers are in our hands which is about two thirds of the total with which the enemy is believed to have started the battle.

The battered state of his divisions makes it quite impossible for the enemy to hold the PO as a defence line. He would undoubtedly like to make it a delaying line until he can withdraw 51 Mtn Corps and the troops in Western ITALY East of the line MANTUA - Lake GARDA. But 1 Para Corps and 76 Pz Corps are dangerously extended between the Adriatic and OSTIGLIA, while 14 Pz Corps at MANTUA is still trying to scrape together a fighting force. It is doubtful if either of these three Corps can withstand a major attack, and attacks launched simultaneously against all three will force the enemy to fight a withdrawing action to the Venetian Line - running along the line of the lower ADIGE to FORGOFORTE C 3719, thence N.W. to MONSELICE and the twin hills of EUGANEI and BERICI, and from here West along the foothills of the Alps to Lake GARDA. We have in the past appreciated that the enemy would require at least eleven divisions at full strength to hold this sector of the line with another division plus some attached independent mountain bns to hold from Lake GARDA to the Swiss frontier. The enemy should get a nominal 12 - 14 divisions back on to this line from 1 Para, 14 Pz and 76 Pz Corps, but it is doubtful if their combined infantry strength even allowing for rapid absorption of L of C units, battle schools and Replacement units etc. will amount to much more than six divisions. Their artillery regiments will also be below strength. The only divisions the enemy can bring up to assist are 155 Div, and that has already given off quite considerable numbers of replacements to 98 Div, and a low category formation, the S.S. KARST Division, which is coastwatching in the UDINE Plain. 710 Division which would have been a candidate is now known to have left ITALY early this month and has been identified on the Russian front. Divisions in YUGOSLAVIA are fully engaged trying to keep TITO's forces from reaching FIUME and no immediate reinforcement seems available from there, though 188 Mtn Div might send some replacements to 8 Mtn Div. It is therefore imperative for the enemy that he gets what is left of 51 Mtn Corps East of MANTUA before it is cut off. It looks as if 148 Div and 232 Divs are unlikely to make the grade in time, but we may expect elements of 114, 334, and 90 P.G. Divisions to turn up. If he fails to stop us from cutting across to Lake GARDA the forces in the West will have only two ways of escape, North from MILAN through the VAL TELLINA and North of BERGAMO to EDOLO and then round to TRENTO. Troops using this circuitous route are unlikely to reach the Venetian Line in time to influence the battle. Of the Italian Republican Divisions only small numbers of troops are likely to reach the new line: the rest will disperse on the way back. Despite the strength of the Venetian line defences, which have been worked on continuously since last August and are believed to be the strongest yet encountered in ITALY, the enemy is going to find himself in grave danger of being jumped on this line owing to insufficient troops with which to successfully man it.

....2. ENEMY SUPPLIES AND COMMUNICATIONS...

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. ENEMY SUPPLIES AND COMMUNICATIONS

During the past week it is believed that the enemy supply position had rapidly deteriorated. In his retreat to the PO crossings he must have been forced to use up a large part of his already very low MT fuel stocks. At the same time he has lost or is about to lose the PO Valley methane resources, the distribution system of which had already been heavily damaged by air attack. In addition such alcohol producing factories as have not been bombed but should for the most part shortly fall into our hands and he therefore can no longer count on alcohol to stretch his meagre stocks of petrol. Producer gas probably remains the only substantial source of substitute MT fuel but its use will be limited to rear areas. Barring the arrival of considerable stocks of petrol and diesel from GERMANY 10 and 14 Armies must be very close to a point where continued large scale MT movement will be impossible. What the fuel position of Army LIGURIA may be is not known, but the ground report that it had enough fuel to get its MT back to the BRESCIA area probably still holds good.

It is extremely improbable that the enemy will have been able to evacuate any substantial amount of the supplies which he held in dumps South of the river PO and thus a large part of 10 and 14 Army ammunition stocks will have been expended or overrun. While it is doubtful whether the enemy has either the transport, the fuel or time to evacuate the dumps in the N.W., the majority of the dumps North of the PO are in the VERONA area, along the Upper ADIGE Valley and along the North Eastern road and rail networks between the PADUA-VICENZA area and UDINE. Ammunition stocks in these areas are estimated to be sufficient to maintain ten full strength divisions for one week to ten days of hard and continuous fighting. That this situation can be saved by stopping up deliveries from GERMANY seems unlikely and whether or not ammunition available in Northern ITALY can be moved to the right place at the right time in the required amount is problematical.

During the past few days the enemy has been forced to move a considerable number of vehicles during the hours of daylight, and, taking advantage of this, our aircraft on 22 and 23 April destroyed or damaged a total of 2650 MT and 1,250 MW. (These figures are reminiscent of last spring and bring the total of vehicles destroyed or damaged since 9 April by air attack alone to 3,371 MT and 1,983 MW). This is a rate of loss which the enemy can not long stand. In addition the amount of transport overrun or destroyed by our ground troops must be considerable. Thus, though a shortened L of C will to some degree compensate for the losses suffered, the enemy may well be threatened with a shortage of transport.

Aside from the loss in transport the enemy's road net is being showed up by air attack. There is such an extensive road net in the PO Valley that road interdiction perhaps achieves in most instances no more than a local effect. However, except for possibly one, all of the road bridges over the ADIGE from VERONA inclusive to the sea have been knocked out and the enemy is now forced to get across this major barrier largely by the slow process of ferrying. Just how laborious a method of crossing this can be we have seen on the PO the last few days, where thousands of prisoners and considerable amounts of equipment and vehicles have fallen into our hands because they were unable to get across the river. In addition the BRENTA river crossings are now under attack. With the BRENNER and N.E. rail routes still well interdicted the enemy cannot count on the railways to relieve the present situation. (For details on the state of the railways see Appendix 'A').

3. WESTERN FRONT

The enemy's strategy in the West is governed by his expectation of an early Russo-American link up in the Central part of the front. Here resistance has been light, but on his Southern and Northern flanks the enemy is still striving to maintain the coherence of his front. Fearful of Allied exploitation along the axis NURNBERG-LINZ, he has transferred the main weight of

....his forces.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

his forces in Army Group G from the Upper RHINE area to the sector South and S.E. of NÜRNBERG. On the enemy's extreme left, French forces have advanced against crumbling resistance to the Swiss border, cutting off some Volkssturm and Fortress troops under 805 Adm Div in the area East of the RHINE. The reshuffle in Army Group G was not rapid enough to prevent the fall of NÜRNBERG while STUTTGART was occupied after a sharp battle. The enemy's left flank is now swinging back rapidly to the Lake CONSTANCE area and the whole line S.W. of NÜRNBERG seems to be going back to the DANUBE. It is doubtful in the extreme whether the enemy can achieve any prolonged stabilisation of the front on the DANUBE, especially as we have already crossed it in the ULM region. Between Lake CONSTANCE and the DANUBE at DONAUWÖRTH there are some ten nominal divisions all in a very weakened state. Nearer NÜRNBERG the enemy situation is brighter. His traditional skill in producing divisions out of a hat has not failed him and at least three z.b.V. or Mobilisation divisions have appeared in the general area South of NÜRNBERG. These represent an effort on the enemy's part to bring some sort of order into the confusion of miscellaneous battalions which has existed over the past three weeks. With their help some coherence has been achieved in the front line both South and North of the Western Czechoslovak tip.

North of CHEMNITZ enemy resistance has been weak and he now appears to be reconciled to an early Allied link up in the area of LEIPZIG and DRESDEN. The front is still desperately thin all the way from LEIPZIG to WITTENBERG. The only arrival of note during the week has been Pz Div CHEMNITZ, an ad hoc formation consisting of good quality Pz Training Units which put up a stiff fight for the town of DESSAU and also launched a sharp counter-attack last week in the area N.E. of BRUNSWICK. Otherwise there has been the usual conglomeration of training units and Home Guard battalions, most of which are suffering heavily, particularly when engaged in open country. In the towns and villages, resistance is usually heavier. A point which has become evident lately is that in the towns the enemy seems to be having difficulties in sorting out the chain of command as between Army and Party. When the Party prevails, resistance tends to be tougher and the enemy's readiness to surrender less apparent. In the area behind the Central sector of the front, the enemy pocket in the HARZ Mountains has been eliminated yielding a good prize in the form of 50,000 PW and the Commander of 11 S.S. Pz Army which arrived in the West from the Eastern Front only a month ago.

In the North the enemy has continued to offer stubborn resistance before the North Sea ports. It is to be expected that he will try to hold these as fortresses, with the aid of newly mobilised naval units. Nor is the picture greatly different in HOLLAND. Here the incorporation of Coast Defence and Marine units has so far produced six nominal new divisions. German resistance is heavy and the enemy has a powerful weapon at his disposal in the shape of flooding. He has already breached the ZUIDER ZEE causeway, and it lies within his capabilities to flood virtually the whole of HOLLAND still remaining to him apart from a narrow coastal strip.

The enemy must this week expect a link-up between the Western Allies and the Soviet forces in the general area S.E. of LEIPZIG. When this has occurred, he is likely to hold for the time being in the South a front running along the Northern frontier of CZECHOSLOVAKIA thence Southwestwards covering MUNICH down to the DANUBE. The state of the frontier defences built by the Czechs in the pre-MUNICH days is not known but they may still be in good enough condition to enable the enemy to fight a delaying action. The crucial sector is, however, that between the Western tip of CZECHOSLOVAKIA and the DANUBE. Here the enemy line is still not being held, and here it must be held, for he cannot afford to see another Allied link-up in the LINZ area in the immediate future. We are likely then to see a determined effort on the part of KESSELRING to halt the Allied advance on Army Group G's front before it draws much nearer to the Redoubt area. He may even be able for this purpose to make some call on the resources of Army Group South whose front has for the time being been stabilised.

The reduction in the past week of the enemy pockets on both sides of the GIRONDE estuary has drawn attention once more to the existence of the various fortress ports of FRANCE which are still in enemy hands. Throughout the

....winter the.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

winter the Germans have held five pockets, four of which cover the ports of DUNKIRK, LORIENT, ST. NAZAIRE and LA ROCHELLE, while the fifth, now eliminated, controlled both banks of the GIRONDE estuary covering the port of BORDEAUX. DUNKIRK, whose dockyards are largely destroyed, is held by a garrison now estimated at 10,000 (two thirds its original strength) and its defences include dense minefields and extensive flooding. The garrison lives on very short commons - 250 kg of bread daily with a little pulse and occasionally a little horse-flesh; but fortunately the town's civilian population was evacuated by agreement before the winter.

At the submarine base of LORIENT, an area some 230 Kms wide and 12 Kms deep and including the ISLE DE GROIX is defended by a well organised garrison of 25,000 men collected by Arty General FARNBACHER (formerly commander of the LORIENT garrison) from troops dispersed during the NORMANDY campaign as well as from A.A. units, Marines and submarine crews. Morale and supplies are excellent, while 500 arty pieces provide a formidable defence against attack from land, sea or air.

Between the LORIENT pocket and the neighbouring pocket of ST. NAZAIRE sea communications are still maintained under cover of the CD batteries on the ISLE DE GROIX and BELLE ISLE. The latter island is part of the ST. NAZAIRE pocket which measures on the mainland some 60 Kms wide by 45 Kms deep. But the perimeter is less definitely marked than that of the LORIENT pocket and the investment looser. The garrison, some 30,000 strong, has been able to make several forays to collect food from the surrounding country; and supplies appear plentiful. Evacuation of the sick and wounded among the civilian population, and of the aged and young, has taken place on several occasions under the auspices of the Red Cross.

The LA ROCHELLE pocket extends for about 20 Kms between the MARINS and the CHARENTE and includes the islands of RE, OLERON and AIX. Its garrison has been continuously on the defensive and many attempts have been made by both sides to negotiate an armistice but they have failed owing to the Germans' unwillingness to surrender their arms to the F.F.I., and their fear of reprisals at home. Meanwhile the VICHY appointed Prefect of LA ROCHELLE is retained in office by the Germans and acts as intermediary between the besieged and besieging forces in their negotiations for civilian supplies and evacuation.

The fifth pocket, liberated by French forces early this month occupied the area between MORENNES and ROYAN on the North bank of the mouth of the GIRONDE estuary and the PTE DE GRAVE on the South bank. It was held by a garrison of 10,000 men, whose positions North of the estuary were defended by a system of concrete pillboxes and bunkers and on the South by an anti-tank ditch running right across the PTE DE GRAVE. There were also strong A.A. defences. The elimination of this garrison which had been ordered to hold out to the last opens to the Allies the only intact French port and one capable of handling a very large volume of supplies at a cost of 15 francs per ton as against 170 francs per ton at MARSEILLES. It should do much to ease the French supply situation.

4. THE NATIONAL REDOUBT

Reports received on the National Redoubt during the past week indicate a continued build up of dumps and supplies mainly in the SALZBURG and BREGENZ (V 53) areas. Recent reports lay more emphasis on activity in the region of the Swiss frontier South of BREGENZ than on fresh developments around SALZBURG, possibly because enemy preparations in the latter region are nearer completion. Reports on the BREGENZ sector mention the requisition of hotels and large buildings, and the utilisation of spinning mills for food depots.

A report from 12 Army Group indicates that elements of OKH may have arrived in the SALZBURG area, while an interesting message from SWITZERLAND quotes an alleged order of C in C Home Army dated 1 March that 45% of all recruits from Wehrkreis V (STUTTGART) are to be sent to AUSTRIA. These recruits are said to be receiving special training.

.....A limited amount...

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

A limited amount of PR is now available on the Redoubt, but shows no major defensive activity. Some 69 cave and tunnel entrances in the VORARLBERG, the Upper Inn Valley and the SALZKAMMERGUT between BERCHTESGADEN (Z 90) and BAD ISCHL (V 51) were covered during the first ten days of April. All but 13 showed varying degrees of activity which might be consistent with continued ground reports of underground installations.

The announcement that HITLER and GOEBBELS are still in BERLIN raises several questions regarding the enemy's plans in the Redoubt. If the Führer in fact does choose to stay in the capital to the end (which, be it noted, he has not promised to do), the Redoubt would be, to say the least, a poorer place without him, and much of the enthusiasm of its future occupants is likely to diminish if they have to fight there without the inspiration of the Führer's presence. It is significant that the Nazi public press and radio announcements have never made any reference to continued resistance in the Redoubt, while all reports received have laid constant emphasis on the SS nature of the Redoubt. HIMMLER is apparently not in BERLIN - HITLER and GOEBBELS are. In these circumstances consideration should be given to the possibility that the Führer is either unaware of or does not associate himself with the Redoubt; that in fact the scheme in so far as it exists at all is one sponsored and fostered by HIMMLER who hopes to continue his resistance there even if all around him fall.

5. EASTERN FRONT

EASTERN GERMANY

The resumption of the Russian offensive across the ODER found the Germans in little better shape to resist it than they were two months ago when ZHUKOV came to a halt on the great river obstacle before BERLIN. Between STETTIN and BERLIN, the Russians have established bridgeheads in the area of GREIFENHAGEN but have not exploited them. The main Soviet offensive has developed in two major thrusts. The 3rd White Russian Army Group attacked due west along all roads to BERLIN between FRANKFURT and SCHWEDT; its left neighbour, the 1st Ukrainian Army Group, developed its offensive in the form of a right hook which was launched initially Westwards towards DRESDEN and then swung Northwards to make contact with ZHUKOV's forces in the area S.W. of BERLIN. A very grave situation has thus arisen for the enemy. In the North his capital city has been entered. So far Russian progress in BERLIN's Eastern suburbs has been reasonably swift, and there are indications that the enemy is concerned at the tendency of the civilian populace to hang out white flags whenever they deem the Russians to be near. Nevertheless, the enemy has had time to prepare defences in the capital, and the example of BUDAPEST has shown just how prolonged and difficult a task the Russians may have ahead of them. A factor of some importance is the attitude which the Nazi leaders are likely to adopt. GOEBBELS has publicly announced his intention of staying in BERLIN and HITLER according to an official spokesman is still in the capital, but we have no guarantee that he will stay there. Meanwhile in Central GERMANY an early link-up between Soviet and American forces is imminent.

CZECHOSLOVAKIA AND AUSTRIA

There are indications that the enemy is going to put up a stiff fight to defend BOHEMIA and MORAVIA. According to the German radio HITLER regards the defence of both BERLIN and PRAGUE as vital for the continued existence of EUROPE, and the present German attitude in the field is consistent with this attitude. In the North the natural protection of the SUDETEN Mountains has for many months prevented any Soviet incursion into Czechoslovak soil and the Russians still stand far from the frontier. To the East, Army Group Centre is still withdrawing, but in its own time and without losing grip of the situation. As was suggested last week an eventual withdrawal behind the MORAVSKA OSTRAVA gap may be envisaged by the enemy; this however will still leave the rest of BOHEMIA and MORAVIA in his hands. From the South the picture of enemy dispositions shows a determination to block the Russians on a line running S.W. from BRNO to the DANUBE, thus preventing any Soviet exploitation along the VIENNA-PRAGUE axis.

....Between BRNO and.....

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

between BRNO and the DANUBE there are probably six Panzer divisions and as many infantry divisions. These are believed to include one Panzer division transferred from Army Group Centre. With this force the enemy has succeeded in effecting a temporary stabilisation of the front North of the DANUBE. In the DANUBE Valley the threat to communications between CZECHOSLOVAKIA and BAVARIA has for the time being diminished, now that the enemy has been able to hold the Soviets at ST. POLTEN. A similar attempt to prevent Allied incursion into CZECHOSLOVAKIA and to keep open communications Southwards from PRAGUE is apparent on the Western Front. One reason for this anxiety to hold CZECHOSLOVAKIA may be a desire to retain the SKODA works in the PILSEN area. It is not known to what extent these are still functioning. However, heavy traffic Southwards along lines South from PRAGUE during the past week may imply the removal of supplies and industrial equipment from the Czechoslovak armaments industry to AUSTRIA. Until their intentions in this respect have been carried out the Germans are likely to make determined efforts to prevent an Allied breakthrough into CZECHOSLOVAKIA.

There has been little fresh from AUSTRIA. A captured map shows that Army Group South's right boundary now stretches down to the DRAVA river. On its right is 2 Pz Army on a sector between the DRAVA and RABA rivers. 6 Army is between the RABA and MURA rivers and 6 SS Pz Army between the MURA and the DANUBE. 6 Army holds the front from the DANUBE to the boundary between Army Groups South and Centre in the area West of BRNO. No further details are available regarding the progress of defences between KARLSOR and GRAZ but North of the DANUBE some defences have been seen between KREMS (R 80) and HORN (R 83), which might conceivably form part of a defence line running North from GRAZ. The Russians this week have reported the identification of 710 Inf Div (from N.E. ITALY) in the Southeastern area, but so far give no more detailed location. In view of the enemy's attempts to thicken up 2 Pz Army with infantry and mountain divisions in the Alpine foothills West of GRAZ, he may have decided to employ it in that area.

YUGOSLAVIA

The Yugoslav offensive in Western CROATIA has made further progress this week. On the mainland the enemy has been forced back along the coast to the immediate approaches to FIUME. SUSAK, the Eastern suburb of FIUME, is in Yugoslav hands, and demolitions are reported in the FIUME port area. These operations, now in their fifth week, are proving a serious drain on the enemy's resources. Two Germano-Croat Divs have almost ceased to exist as effective fighting formations. 237 Inf and 104 Jg Divs which were brought up to take their place have been heavily engaged and are alone unable to check the Yugoslavs. A report this week says that another enemy formation is due to arrive shortly in the area. This seems likely. It is known that 91 Corps H.Q. from the SKEN has been transferred to CROATIA and it is unlikely to come alone.

From the rest of YUGOSLAVIA, the story is of a rapid and relatively unhindered enemy withdrawal from what remains of the SREM-SARAJEVO salient. It is now three weeks since SARAJEVO was evacuated and within another week the whole enemy salient West of a line from VIROVITICA to the SAVA river should be eliminated. On the whole the enemy may feel well satisfied with the success of his withdrawal movement. Casualties have been relatively light and even 369 Germano-Croat Division has been saved from complete disintegration by the precaution of putting it at the head and not the rail of the withdrawing column. It may not have lived to fight another day, but at least it has lived.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Despite the enemy's feverish repair activity, the BRENNER railway has remained blocked to through trains for another seven days. Notwithstanding well-dispersed interdictions, the rolling stock has continued to be moderately active with most of the movement seen to be North of BOLZANO. This activity does not reflect through traffic, but it is probably localised stock movements and/or transhipment. Each of the three lines leading towards Central GERMANY from INNSBRUCK is blocked by a badly damaged bridge.

In N.E. ITALY the main TREVISO-UDINE line, on which there appears to have been very little movement, had by the end of the week been repaired to a point where only one bridge blocked through traffic. The bridges at SACILE (B 8407) and PORDENONE (B 9909) have now been repaired to a point where they could be made "operational at will", leaving NERVESA bridge (G 6493) as the only block on this line; west of TREVISO, however, all bridges over the BRENTA river are out. The two more Southerly routes remain well interdicted with traffic appearing to be almost stagnant.

The TARVISIO frontier route remains interdicted by virtue of three badly damaged bridges and although activity continues to be evident, no definite signs of troop movement have been seen since around 20 April. Ground sources report that the formation picked up by PR some time ago moving out of N.E. ITALY was 710 Inf Div, and this division has in fact been identified on the Russian front. No statement concerning activity on the interdicted PIEDICOLLE or POSTUMIA routes is possible owing to lack of PR: however, it is safe to assume that small scale movement continues. Work on the rail diversion by-passing the destroyed BOROVNICA Viaduct (D 2303) is nearing completion, and the POSTUMIA route might thus be re-opened during the next week barring further attacks. In the PO plain North of the river there was little overall clearage except for repair of a bridge near MANTUA and the return of LEGNAGO bridge over the ADIGE on the OSTIGLIA-LEGNAGO stretch to night operational status. (For status of enemy railways as of 25 April see attached map).

15 ARMY GROUP INTELLIGENCE SUMMARY NO. 92

OF 1 MAY, 1945

1. ENEMY SITUATION

Army Group 'C' is smashed, and only battered remnants of VIETINGHOFF's well equipped and experienced divisions have escaped back into the foothills of the Alps. The defeat inflicted on 10 and 14 Armies South of the PO is greater than we had at first imagined, not so much in the numbers of prisoners taken as in the crippling losses suffered in armour and equipment South of the river. In the stretch between PONTELAGOSCURO and POLESELLA alone, where 76 Pz Corps crossed, 900 vehicles, 100 guns of all calibres and 59 Mk IV tanks were counted on the Southern bank of the PO; and this Corps probably escaped in better shape than either 1 Para or 14 Pz Corps. With no reserves, very short of infantry replacements and having lost over 500 guns and the major part of his armoured force (some 200 tanks and assault guns), VIETINGHOFF was powerless to prevent us exploiting across the PO, and once we were across in strength he was totally unable to hold any coordinated line of defence.

The course of the battle in the last week can be told quite briefly. VIETINGHOFF must have realised only too well how great was the danger precipitated by 5 Army's rapid seizing of bridgeheads S.E. of MANTUA, for unless he could seal off our advance here he was faced with an Allied thrust to Lake GARDA which would split his armies in two. But he was completely unable to scrape together a force sufficient to meet this threat; 1 Para Corps and 76 Pz Corps were too busy desperately trying to save their own skins to spare troops for the MANTUA area and 51 Mountain Corps was being pushed further and further West in its vain attempts to find crossings over the PO. All that could be brought up to the MANTUA area were miscellaneous battlegroups composed of rear area and training units. 5 Army, quick to seize its opportunity, crushed the enemy opposition and swept North to reach VERONA on the 25th. By the following day all lateral communication between the German forces in the plain was cut and the only route of escape left open to 51 Mountain Corps and Army LIGURIA was by way of MILAN and BERGAMO into the Alps. But even this corridor was short-lived. The enemy tried to bring 51 Mountain Corps across the PO between PIACENZA and PARMA to cover the flank of Army LIGURIA but only a battlegroup of 90 P.G. Div reached the REGGIO area and the other formations of the Corps (334, 114, 232 and 148 Divs) were still struggled across the plain, or else on the axis of route 9 South of the river or, in the case of 148 Div, still in the mountains S.W. of PARMA. The enemy was completely unable to offer any real resistance to our armoured columns which pushed through BRESCIA and REGGIO to reach GENO on the 28th. Meantime, GRAZIANI had started the withdrawal of Army LIGURIA on the 23rd with orders that all his forces were to be behind the TICINO-PO line by 6 May. That the German Command should have left the withdrawal in the West so late, shows how completely by surprise the enemy was taken by the rapidity of our drive across the PO and the ensuing exploitation Westwards. By the 28th, when all escape from Western ITALY Northwards into the Alps was cut, 5 Mountain Div had not started its move from West of TURIN where it had been waiting for 34 Div to evacuate S.W. PIEDMONT.

....It was by.....

SECRET

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

It was by then apparent that the enemy had not the strength to attempt a coordinated attack Northwards to force a passage into the Alps or to menace the long open flank of 5 Army. The formations of 51 Mountain Corps were strewn on both sides of the PO and were being mopped up in thousands each day. There was complete disorganisation which culminated in the surrender of almost the whole of 148 Div S.M. of PARMA on the 29th with 1,000 MT and 6,000 troops led by its Commanding General. The garrison of GENOA was hemmed in on all sides by Partisans and after a couple of days of negotiations, Major-General MEINHOLD finally surrendered all his troops on the 27th. At the moment of writing all effective resistance in Western ITALY has ceased: 5 Mtn Div is mainly West of TURIN and 34 Div is by now South of the city and spreads Eastwards to ALESSANDRIA, and both divisions are adopting an attitude of passive resistance until Allied forces arrive to whom they can formally surrender. Any account of the battle in Western ITALY would be incomplete without a reference to the magnificent cooperation of the Partisans who seized many key points in advance of the Allied troops and effectively helped to harrass and block the enemy escape routes.

East of VERONA progress was initially slower. Here we were faced with the possibility that the Germans would try to delay us on the Venetian Line running behind the ADIGE river. Though his forces were totally inadequate for a determined stand on this line - the effective strength of 1 Para, 14 Pz and 76 Pz Corps at this stage probably did not exceed that of seven full strength divisions, where as it had been estimated that at least eleven would be required to man the positions - it did seem the enemy's last chance of holding any sort of line forward of the Alps. 1 Para Corps had however, suffered such heavy losses that it could not take up its positions astride the VERONA-VICENZA road in time and 76 Pz Corps, with its two mobile divisions, was still struggling to cross the ADIGE and so could not spare any reinforcement for the Northern part of the line. By the 27th we had bridgeheads across the ADIGE, not only East of VERONA but also opposite LEGNAGO, where stiff resistance was encountered from the Parachutists, and also North of BADIA and ROVIGO. By the next morning, when we attacked towards VICENZA, negligible resistance was encountered until we reached the city and it was apparent that the enemy had abandoned the ADIGE line and was withdrawing his forces in haste to the North. That same day PADUA was entered and the next morning we were across the BRENTA, advancing towards VENICE which was by this time mainly in Partisan hands. Confused as identifications were it was clear that the bulk of 76 Pz Corps was withdrawing directly Northwards towards the foothills of the Alps leaving 362 and 162 and elements of 155 Divs to offer ineffective opposition to our push along the Adriatic shore. By the 30th we had crossed the PIAVE and reached PORTO GRUARO meeting scattered resistance from coastal units trying to cut across the line of our advance and reach the Alps; further inland our troops were probing into the foothills of the Alps and captured BELLUNO on the 1st May.

The battle of ITALY is over, and the remnants of VIETINGHOFF's once proud divisions have taken to the Alps. Of the divisions which have defied us so long in ITALY probably only four have reached the Alps as fighting formations fit to give battle: these are the two Para Divs, (though 4 Para Div has suffered very heavy casualties) and 26 Pz and 29 P.G. Divs. The two mobile divisions, in particular 26 Pz, have fought magnificently but by now probably have next to no tanks left. The other mobile division, 90 P.G., has been destroyed for the second time in the Mediterranean Theatre and Von MEHR the

...divisional commander....

SECRET

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

HD

divisional commander is a prisoner in our hands. Of the remaining divisions 8 Mtn, 42 Jaeger, 162 Turkoman, 148 Inf, 232 and 305 Inf Divs can now be considered destroyed though some elements may have escaped to the North. In addition, 65, 94, 98, 114, 156, 278, 334 and 362 Divs have either been completely destroyed or else are so battered that they are unable to fight as formations. 5 Mtn and 34 Divs wait to surrender in toto. In the N.W. what is in effect probably merely a low category brigade (24 S.S. KURSK Division) has not yet been contacted but is now probably in full retreat towards the TARVISIO Pass. Of the two divisions in ISTRIA 188 and 237 Divs are now known to have passed with 97 Corps to command of C in C S.E. about the middle of April. In any case they are being cut up by the Yugoslav drive which has cut off FIUME and has reached the outskirts of TRIESTE.

The total count of prisoners and captured equipment is not yet complete but we know that over 150,000 only are already in our hands and there are many more to be rounded up in Western ITALY. Some 13 Generals have fallen into our hands in the last ten days including the Commander of Army LIGURIA (GRAZIANI) and his Chief of Staff (Lt.Gen FRANKEL), the Commander of 76 Pz Corps, Gen von SCHLEBRIN, who decided on the 25th that the German Armies in ITALY were broken and so surrendered to our troops South of the PO, Lt.Gen BOEHLKE Commander 334 Div, Lt.Gen FRETTER PICO, 44 Div, and several generals holding administrative and L of C appointments. All testified to the helplessness of the situation and to the utter confusion which existed in the latter stages of the battle. We now look to see whether VIETINGHOFF will try to collect his remaining forces for the defence of the Southern Alps, on what is virtually the perimeter of the Redoubt; Von SCHLEBRIN said that as long as telephonic communication existed with HITLER's Headquarters VIETINGHOFF would continue to resist, but since HITLER has decided to stay in BERLIN and HIMMLER has been associated with proposals for surrender to the Western Allies, it looks as if the German High Command has abandoned any intention it may have had of holding the Southern Redoubt. Suffice it is to say for the moment that our troops who have advanced up both sides of Lake GARDA are now encountering stubborn resistance from the Northern end of the Lake, but that on the far side of the Alps American forces have broken into the perimeter of the Redoubt and are now within 13 miles of INNSBRUCK. From a purely military point of view the enemy's chances of holding the Southern Redoubt begin to look a bit thin. Troops which should have provided the most stalwart garrison for it - those of Army Group 'C' - have been decisively smashed and with them has probably been smashed also such fanciful ideas as may ever have existed of holding the Southern fortress.

2. NORTH GERMAN ZONE

The great enemy pocket created in North GERMANY and DENMARK as a result of the Allied link-up at TRAVE, is shrinking steadily. To the East, Marshal ROKOSSOVSKY is advancing on a broad front running Southwards from the Baltic coast to West of BERLIN against decreasing resistance, while ZHUKOV's Third White Russian Army Group completes the reduction of the German capital. Meanwhile S. of BERLIN the long German salient which protruded as far South as LEIPZIG is being progressively worn down by successive links-up between American and Soviet forces. The exact number of German divisions in the Northern pocket is not known. Excluding NORWAY and the Dutch pocket there are unlikely to be more than 40 nominal divisions. These probably include some fourteen mobile divs, three from the West and eleven from the East, and at least four parachute divisions of reasonably good quality; in addition a number of embryo divisions may now be setting up

....in DENMARK. .....

SECRET

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

in DENMARK. From the information available on allocation of drafts and recruits, it seems likely that up to six new divisions are now being set up in DENMARK. The enemy's present attitude is consistent with a determination to fight for the North German ports as long as possible and as for South as possible. His resistance is at its weakest against the Russians who are further from the major ports of GERMANY than the other Allies. It is at its stiffest around HAMBURG and at the approaches to WILHELMSHAVEN where 1 Para Army, making the most of difficult marshy country and extensive minefields, is causing our progress to be slow. There has been a certain amount of rail movement from DENMARK Southwards towards HAMBURG during the week, suggesting that the enemy is determined to make an even stiffer fight there than he did at BREMEN. New identifications during the past week have largely reflected the results of the fusion of the two fronts. North of the link-up, apart from a number of miscellaneous battlegroups, three divisions which had formerly been fighting the Russians have appeared on the Anglo-American front. The reshuffle of enemy divisions appears so far to be wholly Westwards and we have no evidence that enemy divisions have moved to the Russian sector which had previously been on the Anglo-American front.

Meanwhile further North the move of 199 Inf Div from NORWAY to DENMARK should now be nearly complete, and the next formation due to come over, reported to be 7 Mtn Div, may be forming up. The difficulties of transfer across the SKAGERRAK are likely to increase sharply from now on as the number of targets available to the Allied Air Forces decreases. The morale of the garrisons in NORWAY is reported to be low in the extreme. Many of them Austrians, lacking both the stiffening presence of S.S. formations, and the stimulus of battle conditions, they are likely to be of limited value when organised German resistance in Central EUROPE has ended.

3. SOUTH GERMAN ZONE

CZECHOSLOVAKIA AND AUSTRIA

The enemy is still showing considerable determination to prevent Allied incursions into BOHEMIA and MORAVIA although few new factors have emerged in the Czechoslovak situation during the week. Army Group Centre is conducting a skilful withdrawal from SLOVAKIA, suffering relatively few casualties as it pulls back. The main enemy weakness has been near the boundary between Army Groups Centre and South at BRNO. This is a fairly recent alteration in boundary, and 29 Corps which as a result passed from Army Group South to Centre seems to have been a little unsettled by the change, for it gave up BRNO rather readily. Army Group South now under the command of Col-Gen RENDULIC, one time commander of 20 Mtn in FINLAND, continues to offer stubborn resistance along the whole front from BRNO to the DANUBE. In the DANUBE Valley the front has remained quiet and the main development has been the transfer of 2 S.S. Pz Div from East to West. It has moved from the ST. POLTEN sector to PASSAU where it has been in contact with the Seventh U.S. Army. In the ST. POLTEN area the Soviets have now identified all three regiments of 10 Parachute Div. What appears to be its sister formation, 11 Parachute Division, is reported to be in the GRAZ area. Between the DANUBE and the DRAVA a certain amount of reshuffling is taking place on 6 Army and 2 Pz Army front, the effect of which has been to strengthen the approaches to GRAZ along the RABA Valley at the expense of the MARIBOR sector. 2 Pz Army whose sector lies between the RABA and DRAVA rivers is believed to have passed back to command of Army Group E from Army Group South.

.....t the Western....

SECRET

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

At the Western approaches to AUSTRIA, the 19 Army in the Black Forest has completely collapsed. The small pocket believed to contain miscellaneous elements of 805 Administrative Staff was encircled and speedily eliminated and the enemy is no longer offering any effective resistance along the Swiss frontier. Nor is the situation on the remainder of Army Group G's front much healthier. The temporary show of coherence which had been achieved as a result of the switch over of forces from the Upper RHINE to the NUREMBERG area was short lived. New divisions such as 20 S.S. NIEDERWEN composed largely of 17 year olds with two weeks training have appeared; so too have a few ad hoc mobilisation divisions: but they have been of little avail in stemming the Allied advance. For the first time there have been indications of serious internal unrest amongst the Germans and about 28 April an attempt at seizing control of the MUNICH Radio Station seems to have been made by the representatives of the so-called Bavarian Freedom Party. No reliable details of this are available; in any case the city was in Allied hands two days later.

The enemy situation on Army Group G's front has deteriorated most rapidly in the region East and N.E. of Lake CONSTANCE. Here our forces advancing into Alpine terrain North of INNSBRUCK have so far met only scattered opposition, and demolitions on terrain have imposed more serious delays than any resistance. Latest reports put them some 10 miles North of INNSBRUCK which is well into the area reported to constitute the National Socialist Redoubt. There are however reports that the enemy opposition is stiffening in the area of MITTENWALD (D 67), although no reliable identification of the enemy forces offering the resistance has been reported. North of MUNICH opposition is at its stiffest along the ISAR river, but in general there is no coherence about the enemy's resistance and isolated units are left to fight on long after the others have withdrawn. There is still the framework of at least 26 divisions within Army Group G and this includes four ad hoc divisions which have appeared within the past few days. The enemy's skill at pulling new divisions out of the bag is shown by the appearance on the Anglo-American fronts (including the fortress of West HOLLAND) of fifteen new divisions in the past three weeks. This compares with the appearance of only seven divisions formerly opposing the Russians.

YUGOSLAVIA

In SLAVONIA, the story is of a rapid and successful enemy withdrawal not seriously hampered by Yugoslav action. The enemy line between the DRAVA and SAVA rivers is held by 15 Cossack Corps to the North and 21 Mtn Corps to the South with 1 Cossack, 11 G.A.F., 41 Inf, 7 S.S. Mtn and 22 Inf Divs all in contact with the Yugoslavs. It now seems improbable that the enemy will halt until he is back in the LJUBLJANA area and the whole of the Balkan salient has been finally eliminated.

Meanwhile on the 4th Yugoslav Army front spectacular headway has been made. A landing was effected at PARENZO (J 11) on the East coast of ISTRIA on 26 April and drove Westwards as far as PISINO (H 92) and Northwards to BUZET (H 23) against light enemy resistance. Meanwhile, striking North of FIUME, the main Yugoslav force has cut across the neck of the Istrian peninsula with remarkable speed. TRIESTE has been captured after the bulk of the Istrian garrison had pulled back into the city. Virtually all ISTRIA apart from POLA is now lost to the Germans. Further South, FIUME itself has fallen. The Yugoslavs believe that the bulk of the 188 Mtn Div had moved down to FIUME from the TRIESTE area, and that this like 237 Inf Div was trapped in FIUME.

....Apart from those....

SECRET

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Apart from these two divisions there have been no identifications of note in the past week. The division which has recently arrived in the KARLOVAC (H 25) area from the SREM is reported to be 181 Inf Div.

THE NATIONAL REDOUBT

Developments on Army Group C's front have seriously affected the enemy's capabilities of prolonged resistance in the Redoubt. The deep penetration in the direction of INNSBRUCK strikes into an area where according to one source the supreme headquarters of the Redoubt is to be located. It is too early yet to say that the concept of the Redoubt is nullified by these developments; but the speed of our advance has been such that it is doubtful whether the enemy will have time to withdraw any substantial forces back into AUSTRIA before the Allies are there. Already the BREGENZ area, consistently reported as a large headquarters and dump region, is outflanked to the East. Nevertheless supplies are still coming in to AUSTRIA from CZECHOSLOVAKIA, and the heavy Southward movement along the PRAGUE - LINZ line has continued throughout the week. There has been no further photographic evidence of defensive measures nor of dump construction, while ground reports on the build-up of stocks become progressively wilder as the war draws nearer its end. KESSELRING and SCHORNER (of Army Group Centre) vie for place as the C in C of the Redoubt according to ground reports, with the odds slightly on KESSELRING. From the mass of reports available it does seem fairly certain that a major headquarters, possibly O.K.W., is now in the SALZBURG area. A report from SHAEF suggests that OKH and OKW have now both split into two distinct commands, North and South, and it is at least feasible that the Southern halves should set themselves up in the reasonably central location of SALZBURG. The suggestion is confirmed by air reports of hutted camps being built near SALZBURG. However all reliable reports received latterly deal with headquarters and personalities and not with troops; and without troops the Redoubt will not be of much value. Moreover with HIMMLER now toying with the idea of peace, the fanatical enthusiasts to man the Redoubt may be hard to come by. The German soldier is losing heart everywhere and he will not much relish the Redoubt idea now. The end of the war is imminent and he has lost it. And he knows it.

SUBJECT: Report of Operations.

TO : Adjutant General, Washington, D. C.

1. In accordance with the provisions of paragraph 10 of Army Regulations 345-105, as changed to include March 9, 1943, there is submitted herewith the report of operations of the United States Seventh Army in the Sicilian campaign. This report includes the planning phase as well as the operations. The operations phase covers, specifically, the period July 10 to August 17, 1943.

2. Inasmuch as this report on operations is reproduced by multiple copy methods, the original records called for in paragraph 11 of the Army Regulations above cited, are being submitted to your office only. They have not been reproduced for the general distribution being given this report.

For the Commanding General:

ROBERT E. CUMMINGS,
Colonel, G.S.C.,
Deputy Chief of Staff (A)

FOREWORD

HEADQUARTERS SEVENTH ARMY
APO # 758
U.S. Army

Palermo, Sicily
15 September 1943.

This report is submitted in considerable detail in that it describes a complete operation of the Seventh Army from its inception to its victorious conclusion.

During the course of this campaign every type of operation, every type of arm - some improvised - was employed, and every sort of obstacle surmounted.

As is ever the case, the success was achieved through the untiring efforts of the staff; through the brilliant leadership of our officers from corps and division commanders to platoon leaders - but chiefly and above all, through the disciplined heroism and tireless devotion of that incomparable fighting man - the American Soldier.

G. S. Patton, Jr.

G. S. PATTON, JR.,
Lieut. General, U. S. Army,
Commanding.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The scheme followed throughout this report is for each staff section to submit a complete report of the activities as apply to the section concerned. Part I, "Summary of Operations", is followed by "Lessons Learned" from the Army point of view. In all other cases, in Part II the conclusions and recommendations have been included in section sub-reports. However, for the purpose of emphasis, it is deemed advisable to preface this report by outlining in brief some of the basic and common mistakes which have been obvious in the two amphibious operations conducted by this Headquarters, namely, TORCH and HUSKY.

I - CHANNELS OF COMMAND

Definite channels of command should be set up immediately after the conception of the operation. The channel of command, from the task force commander to the highest authority, should be definite and direct. No subsidiary or adjacent headquarters should be included in this command channel.

II - ASSIGNMENT OF TROOPS

All troops selected for the operation should be placed directly under the command of the task force commander. This command should be all-embracing. Troops should not be under one command for training, and under another command for administrative purposes.

III - T/O STRENGTH

All combat units should be brought up to T/O strength, plus 15% for enlisted men and officers of junior grade, and all personnel frozen. This is of vital importance if the small combat units such as boat teams, platoons, etc., are to go into action full strength. It should be a recognized fact that due to sickness and other reasons, approximately 10 to 15% of any command will not be available to the commander on D-day. Therefore, in order to have completely trained teams made up of men accustomed to working together, an over-strength must be provided at the earliest possible moment.

IV - JOINT PLANNING

In operations of an amphibious nature, it is absolutely essential that all services represented, i.e., Ground, Air and Navy, should be housed together or adjacent to each other during the entire planning stage. Failure to do so results in confusion, inefficiencies, and unwarranted delay.

V - FORCES NEEDED

Competent authority should decide exactly what forces are needed to accomplish the mission, and then shipping should be provided to lift the forces, rather than the customary method of reducing the forces estimated to be needed to fit the shipping available.

VI - OFFICIAL OBSERVERS - VISITORS

The exact number of official observers and/or visitors from higher headquarters should be known to the commander well in advance of D-day; this, in order that proper accommodations and space may be allotted to them on the different ships, and in order to prevent last minute interruptions and changes.

VII - VISITORS TO COMBAT AREA

No official observers or visitors should be allowed to come to the combat area without receiving prior authority from the force commander. Reports made by said observers should be submitted through the headquarters of the force commander.

VIII - G-2 ACTIVITIES

All persons connected with intelligence activities should be placed under one head, namely, the task force commander, who would exercise this authority through his Assistant Chief of Staff, G-2. It is worthy of note that in the HUSKY operation there were many uncorrelated G-2 activities which resulted in no little confusion.

IX - MESSAGE CENTERS

The message center of the force commander is the nerve center of the entire operation. It should be in charge of at least two officers of field rank, and officers of mature and seasoned judgment.

X - HEADQUARTERS

Headquarters, whether on land or sea, must be adequate in size to accommodate all personnel concerned, and the communication set-up must be ample to handle the heavy traffic that normally accompanies amphibious operations, both during the planning and the operational phase.

XI - MILITARY DISCIPLINE-COURTESY, UNIFORM REGULATIONS

Higher headquarters should make clear to all services, and to all Allied Forces, where applicable, that the task force commander is responsible for, and will make rules concerning, good order, military discipline, courtesy, uniform regulations, etc., within the theater of operations.

XII - REPLACEMENTS

In order to provide proper means for handling of replacements and for the handling of men released from hospitals, a Replacement Battalion should be assigned to the force and should be brought into the combat zone as soon as practical. The number of replacements needed should be anticipated well in advance of the operation. Replacements should be available to task force commander well in advance of D-day and throughout the entire operation so that units can be kept up to efficient operational strength.

Hobart R. Gay

HOBART R. GAY,
Brigadier General, U. S. Army,
Chief of Staff.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

The United Nations' transition from the "end of the beginning" to the "beginning of the end" is spanned by the history of the United States Seventh Army.

For though it had a new name - acquired at sea as its embattled convoys bore down upon the Sicilian coast - the Seventh Army was not a new organization. The same Commander, essentially the same staff, and many of the same troops had once before shared the title "greatest amphibious force in history." As the Western Task Force, they had ended the beginning with the assault on North Africa in November, 1942. As the Seventh Army they began the end with the attack on Sicily that opened the first breach in the European fortress.

That continuity of history had a profound effect on the success of the Sicilian assault for the staff as well as the troops had had the benefit of experience. Lessons of the "Torch" operation were well learned; its mistakes were rectified, and the result was an operation as well planned and as smoothly executed as the uncertain fortunes of war permit.

The Torch operation was hardly three months past, its lessons were still being studied, when the decision to put that experience to a new test was made. The Western Task Force had reassumed its old name, the I Armored Corps. It was based at Casablanca, French Morocco, in January, 1943, when at that very place, though unknown to most of its members, its future was being decided.

In the suburb of Anfa, President Franklin D. Roosevelt and Prime Minister Winston Churchill met to discuss the future conduct of the war. They and their staffs, looking months ahead to the successful conclusion of the North African campaign, planned the knock-out of Italy - to start with the invasion of Sicily in July.

Less than three weeks after the end of the Anfa Conference, the complex machinery of planning had been set in motion. On February 12, Planning Instruction No. 1 was issued by Force 141, the planning headquarters set up in Algiers under General Sir Harold Alexander.

The "favorable July moon" was designated as the target date. The forces were to be of sufficient strength to guarantee success and were to consist of:

Combined Allied Forces

Commander in Chief	General Eisenhower
Force 141 (Combined Allied Ground Forces)	General Alexander
Force 545 (One British Field Army)	General Montgomery
Force 343 (American Task Force)	Lt. General Patton
American and British Naval Forces	Admiral Cunningham
American and British Air Forces	Air Chief Marshal Tedder

Although the planning instruction anticipated that I Armored Corps' planning work would be done initially at Casablanca, then probably at Oran, an interim move to Rabat was already under way when the instructions were issued. An advance detachment had left on the ninth of February and had chosen the Chamber of Commerce building in the Moroccan capital for the headquarters. On the 23rd the move was completed.

By this date, chiefs of the principal staff sections had been informed that the headquarters was entering a planning phase, and on the fifth of March a letter from Allied Force Headquarters designated the units to be assigned to Force 343, for an amphibious operation to begin as soon as possible after the end of the Tunisian Campaign.

They were: Headquarters, I Armored Corps; Headquarters, VI Army Corps; one Combat Command of 2nd Armored Division; 3rd Infantry Division; 36th Infantry Division; 45th Infantry Division from the United States and the 1st or 9th Infantry Division.

On March 11, the G-2 section opened the special planning room in the basement of the headquarters building in Rabat and began assembling research material on Sicily. This section was the first to detail personnel on a full time basis to the HUSKY plan, realizing that it would have to lay intelligence groundwork before other sections could begin planning. One officer, a draftsman and a stenographer became the nucleus of a planning staff which, within a few months, was to total hundreds of workers.

This group began work on an "Outline of Intelligence Information on Sicily", known to the staff as the "Black Book". Composed principally of extracts from secret reports, the Black Book summarized all information available at that time. It covered general topography, communication and transportation facilities, beaches, defenses, military resources and battle order, and financial, political and social factors.

To point up essential features of the island, an early G-2 project was the preparation of special overlays for general display. Drawn in color on translucent acetate sheets, the overlays showed terrain, roads, railroads and disposition of enemy troops. They were made to fit over the standard 1:100,000 map of the island, but a more impressive use of them was on a specially-built backlighted frame that made it possible to view at once any desired combination of features. Used by G-2 itself for making estimates of enemy capabilities, the overlays were also kept on permanent display for the use of any member of the planning staff.

Hardly less important, in the early phase, was G-2's responsibility for securing of the headquarters and its growing files of military secrets. The principle established was that the personnel informed of the plan should be kept to a minimum and that those informed should be given only such information as their particular duties required. A classification system, covering both officers and enlisted men, was set up, and the Provost Marshal section provided special guards for the planning room to which only classified personnel were admitted. The list was lengthened whenever necessary, but even at embarkation time, there were still some members of the headquarters who did not know where they were going.

The reversion of Western Task Force to a type corps had involved the loss of a substantial portion of its experienced personnel. The new assignment imposed on G-1 the task of bringing all sections up to the strength required by rapidly growing duties. On March 18, G-1 directed the staff sections to submit personnel requirements, together with names of those specially desired. On the 27th, the first large request was submitted: 14 officers by name from the Fifth Army, 13 from Atlantic Base Section, 11 from other units; and 17 by qualification from units or replacement depots. Soon afterward, arrangements were made with ABS and MBS depots for lists of available officers and for personal interviews by G-1. NATOUSA gave authority to select any in grade of Captain and higher. On April 6, T/O 110-1, modified, was approved for the headquarters, authorizing a strength of 178 officers. Actual strength at that time was 85.

Probing both past and future for data on which to base an estimate, G-1 on March 26 submitted its first requisition for medals for the Sicilian Campaign. They ranged from eight Medals of Honor to 15,000 Purple Hearts and 125,000 African Campaign Medals and battle stars. These represented one-half of the estimated requirements.

INITIAL PLAN

Meanwhile initial plans for the assault were being developed. A preliminary discussion was held at Force 141 headquarters on March 18 where Forces 141, 343, and 545 were represented. One week later the outline plan was issued. (See Plate 1) It called for a British assault on Southeastern Sicily, between Augusta and Gela, on D-Day, and two distinct American assaults: The ENSA Force (3rd Division Reinforced) was to attack the Sciacca-Mazara area of Southwestern Sicily on D plus two; and on D plus five, the FISH Force (36th Division) was to land in the Castellamare area; the HOOK Force (45th Division) in the Capaci area, and the GROG Force (1 RCT of 36th Division and 1 RCT of the 45th Division) in the Trappeto area, all in Northwestern Sicily. 82nd Airborne Division, less parachute elements assisting ENSA, was to be prepared to assist the western assault on call after D plus two.

This entire plan was predicated upon the North African Campaign ending by April 30. The sustained drive of the British Eighth Army across Libya, the operations of the American II Corps and British First Army in Tunisia, were closely followed by the Force 343 planning staff - not only because the outcome of that campaign would have a decisive effect on their own, but also because there were many specific lessons to be learned.

One of the most important of these was the necessity for being able to pass minefields, planted profusely by retreating German units. The Engineer Section, early in the planning period, undertook an extensive program of mine training and experimenting. During March the 17th Armored Engineers were experimenting in the use of bangalore torpedoes to clear minefields and at the end of the month an Engineer detail was also sent to the Eighth Army mine school at Tripoli to study British methods. A special convoy was sent to Tunisia to collect German mines for experiment and training. So important was this type of training considered that it was proposed to fly sufficient mines to the United States to enable the 45th Division to load them on its transports for study during the trans-Atlantic crossing. This plan was found impractical. Throughout the planning period close liaison was maintained with the Fifth Army mine school and with mine instruction at the Fifth Army Invasion Training Center, and during June officers of the Engineer Section visited all Army Engineer Units to supervise mine, as well as camouflage, training.

OTHER SPECIAL TROOPS

Other special Army troops also engaged in training programs throughout the Spring. Pending arrival from the United States of the motorized chemical battalions assigned to the operation, tests of white phosphorus shells, colored smoke grenades and flame throwers were conducted by units already in North Africa. On orders of the Commanding General efforts were made to obtain as large a supply as possible of WP smoke grenades. Following the arrival of the three chemical battalions, demonstrations of the 4.2 inch chemical mortar, firing high explosive and white phosphorus, were held for the Chief of Staff. To reduce the weight carried by assault troops, the Chemical Section also arranged for all troops in the assault to be equipped with training gas masks, in place of the bulky service masks.

Basic first aid training was checked in all units by the Medical Section, which also made complete studies of intelligence material on Sicily to prepare for special medical problems likely to be encountered during the operation. All hospitals, as well as hotels and schools that might serve as emergency hospitals, were listed, and information on diseases peculiar to the island was studied. Army medical units were requisitioned and assembled for training, and plans for evacuation of casualties drawn up.

The training of Signal troops presented a problem during the planning phase because only one Signal battalion and two division Signal companies had had any combat experience. The units which took no part in the Tunisian Campaign had been operating the communication agencies at various headquarters and had little or no opportunity to carry on an adequate Signal training program. Most of the available Signal training schools had lengthy courses (six weeks to three months), and it was felt that there was not enough time to send troops to these schools.

The training of all radio operators in Link sign procedure, as ordered by AFHQ, was begun with two one-day schools at Mostaganem. Representatives of most of the Signal units attended.

Training in the use and maintenance of the British Speech plus Simplex and Speech plus Duplex equipment was given at the request of the Signal Officer, I Armored Corps, for members of the 1st Armored Signal Battalion to whom the equipment was to be made available.

Training in the installation, operation and maintenance of Signal Corps carrier equipment was given at a seven day school conducted by the Mediterranean Base Section for a limited number of men.

In the selection of Quartermaster troops for the operation, training of units had to be taken for granted. Those already in the theater were engaged in the same type of work expected of them in the operation, but under different conditions. Those enroute to the theater arrived too late to enter into any comprehensive training program.

ASSAULT UNITS

The movement, training, and staging of major assault units scheduled for the HUSKY Operation during the planning phase was centered about the Fifth Army Invasion Training Center at Port Aux Poules, Algeria (Arzew Area). This area was made available for the amphibious training of the 1st Infantry Division, 9th Infantry Division, 3rd Infantry Division, 2nd Armored Division, 1st Engineer Amphibious Brigade, and later, the 45th Division. The 82nd Airborne Division did not move into the Arzew area, but moved directly from Casablanca to its training area near Oujda and finally to the staging area near Kariouan, Tunisia.

The 45th Division was combat-loaded in the United States and reached Oran on June 22nd. This division conducted its rehearsal in Arzew gulf on June 24-25, and after five days' conditioning training at the Fifth Army Invasion Training Center reloaded for the operation. Movement of assault units attached to the various sub-task forces was accomplished during the period May 1 to June 22, 1943. This movement involved the use of road, rail, water, and airborne transportation facilities from one end of Africa to the other.

The special training for the operation consisted of amphibious full scale rehearsals by the separate sub-task forces. Amphibious training by units consisted of loading units with all personnel and equipment into ships and craft (as planned for the operation), and then approaching a selected beach and debarking under simulated combat conditions during daylight and in darkness. These exercises were conducted at least once by each unit while training at FAITC, and more than once by most units.

SECRET

Various types of training for small units in special operations were conducted in conjunction with amphibious training. Other special training included the use of live ammunition, simulating battle conditions to such an extent as to give the individual soldier the maximum of preparation for battle, Beach defenses were constructed to give the troops opportunity to by-pass such obstacles.

Units which did not engage in unit amphibious training at the FAITC sent selected cadres to schools in water-proofing of vehicles for driving in water, transport loading, and unloading of ships and craft. These cadres were then returned to their units to instruct the remaining personnel.

Special courses in driving and maintenance Dukws (2½ ton Amphibious trucks) were conducted by the 1st Engineer Special Brigade at Port Aux Poules in order to train drivers for the large numbers of Dukws received just prior to the operation.

It was impossible to conduct rehearsals with all units participating, but rehearsals followed the same scheme of maneuver as planned for the actual operation and were on a scale as near full strength as possible. It gave all sub-task forces the benefit of a dry-run.

Following the rehearsals, sub-task forces were assembled in staging areas for final loading of units to ship in the assault movement. Location of staging areas was determined by location of sub-task forces at the end of rehearsals, available bivouac areas, dock space for loading ships, protection of ships and craft from enemy sea and air, the necessity for maintaining the maximum secrecy, and the type of ships or craft in which units were to be lifted.

In late April, Headquarters I Armored Corps moved from Rabat, Morocco, to the same stretch of Algerian coast where many of its major units were training and rehearsing for the HUSKY operation. The forward echelon was officially established in the College Communal in Mostaganem on the 26th. Three days later, the classified HUSKY planning group, which still comprised only a small portion of the staff, arrived in Mostaganem by a special, fast, heavily-guarded convoy. Its maps and overlays, and its files of planning instructions and intelligence material, were deposited in the secret joint map room which had been prepared in advance.

Soon, however, the volume of planning work had grown to such an extent that it overflowed the confines of the joint map room. More and more personnel of the staff sections were classified, more and more offices in the school building were roped off, placed under special guard and given over exclusively to planning work.

While the HUSKY plan was being worked out in Mostaganem, the headquarters rear echelon was operating at Oran. Routine administrative and personnel matters were handled there, as well as details of the HUSKY supply plan that required coordination with SOS NATOUSA.

Communication and liaison between staffs working on the HUSKY plan were in themselves major operations. The 343 staff was split into two widely separated echelons. Some troops under control of Force 343 were on the east coast of the United States, others were scattered from Casablanca to Bizerte, a distance of over 1,000 miles. Headquarters at Oran, Mostaganem, Algiers, La Marsa, Malta, and even Cairo had to be tied together into fast-working channels. A constant stream of intelligence material, directives, requisitions, inquiries and miscellaneous correspondence flowed back and forth across half a continent - and on to London and Washington.

Preparing, sending and receiving and safeguarding an immense volume of highly classified matter taxed to the utmost the facilities and personnel of the Adjutant General and Signal Sections. Hundreds of papers were registered daily. Special courier routes were established, direct teletype lines installed between major headquarters, radio nets and their accompanying code rooms placed in constant operation, and telephone circuits opened and kept open.

But there is no adequate substitute for direct contact and throughout the planning period general and special staff officers attended conferences and visited back and forth to discuss the manifold problems presented by the plan.

On April 23, there was a meeting at Headquarters Force 343, Rabat, presided over by the Commanding General and attended by senior commanders, and senior staff officers of I Armored Corps, and representative of Force 141. At this meeting General Patton gave an introduction and the general plan for the HUSKY Operation.

The next day Force 141 decided, in response to a request from Force 343, to substitute the 1st Infantry Division for the proposed 36th Infantry Division if the Tunisian Campaign ended in time to make the change possible. Just a month later, after the Tunisian Campaign closed, the II Corps was substituted for the VI Corps.

CHANGE IN PLAN

On May 3, the plan of attack of Force 343 was changed from the western end of the island to the beaches between Pozzalo and Licata in the southeast. The outline plan of the new JOSS-DIME-CENT assault was published on the 18th of May. The general mission was to assault the southeastern portion of Sicily in conjunction with the 12th British Army and capture it as a base for further operations. (See Plate 2).

The specific mission of the new assault plan called for landing and operating west of the line VIZZINI - RAGUSA - POZALLO, all exclusive; to seize and hold the airfields just north of Comiso and at Ponte Olivo and the air landing fields at Biscari and northwest of Licata; to seize and operate the small port at Licata; and to prepare for further operations under the directions of the Deputy Commander-in-Chief, Allied Force.

The scheme of maneuver was to make a simultaneous assault in the Licata - Gela - Sampieri area in order to capture the airfields and the port of Licata by dark on D plus 2; to extend the beachhead to the general line (YELLOW), PALMA DI MONTECHIARO - CAMPOBELLO - MAZZARINO - CALTEGIRONE - GRAMMICHELE, and to the east to contact the British in the vicinity of RAGUSA; to include (BLUE) the high ground in the vicinity of PIAZZA AMERINA - AIDONE to prevent hostile interference from the Northwest.

The CENT - DIME Assault was to be under the immediate command of Lieutenant General O. N. BRADLEY, II Corps. The participating troops were to be the 1st Division (-1 RCT), 45th Division, 2 Ranger Battalions, 91st Reconnaissance Squadron, Paratroops (82nd Airborne Division), and supporting troops.

This Assault Group had three immediate missions: (1) Under cover of darkness to D Day to land in the Gela - Sampieri area and to capture and secure the airfield at Ponte Olivo by daylight on D plus one; the airfield north of Comiso by daylight of D plus two, and the air landing field north of Biscari by dark of D plus two. (2) To extend the beachhead to YELLOW and gain contact with the British in the vicinity of Ragusa to make contact with the 3rd Infantry Division on the left.

The JOSS assault, commanded by Major General L. K. TRUSCOTT, was to comprise the 3rd Infantry Division, Combat Command A of the Second Armored Division, one

Ranger Battalion and supporting troops, and was to land in the Licata area. It was to capture and secure the port and airfield by dark of D Day, extend the beachhead to YELLOW, protect the left flank of the operation against interference from the northwest, and on its right flank, to make contact with II Corps.

The Force 343 Reserve was to consist of three principal elements: The KOOL force, under Major General HUGH GAFFEY, made up of elements of the Second Armored Division (less Combat Command A), one RCT of the 1st Infantry Division, and supporting troops, was to sail with the assault and be prepared to land in support of any of the assaults; the 82nd Airborne Division less paratroop elements was to be prepared to support the assault on call after H-Hour on D-Day; 1 RCT and Division artillery of the 9th Infantry Division was to be alerted to move from Bizerte on call of the Commanding General, Force 343, after D-Day.

The WOLF Force composed of one Parachute RCT reinforced, from 82nd Airborne Division was to assist DIME Force in landing and capture of airfield in vicinity of Ponte Olivo night of D minus 1, D-Day (prior to seaborne assault) and be attached to II Corps upon contact on land.

In the case of some staff sections, the change in plan had little effect and they continued working along the same lines as before. In the case of others, however, many weeks of work had to be done over from the beginning.

Again much of the initial burden fell on G-2, whose intelligence material had to be amended and supplemented to cover the new area. A new intelligence plan and new G-2 estimates were written during subsequent days. New overlays, similar to those covering the western half of the island, were prepared first for the southeast, and then for the northeast portions of the island. Frequent conferences were held with the Engineer Section to rearrange priorities on map publication.

Arrangements were also made to transfer to Force 343 the beach models for the Gela and Licata sectors. These relief models, produced by Army Engineers showed beaches, towns and terrain features in exact detail; a model of its own landing area was delivered to each sub-task force involved. In addition, a 1:100,000 terrain model of the entire island was made during the planning phase, and carried with the G-2 combat intelligence section throughout the operation.

As additional intelligence information became available, a steady stream of battle order, terrain and miscellaneous information emanated from G-2 to the other staff sections and the sub task forces. On May 10 the first of a series of general information bulletins was published, the series continuing until the end of the operation.

Photographic intelligence became the principal source of detailed information during the planning period. Starting with only one officer in March, the photo interpretation section expanded steadily until by D-Day it comprised 35 Officers and 70 Enlisted Men. Prior to D-Day, sorties flown by the North African Photo Reconnaissance Wing, yielded 195,000 prints and 1,400 assembled mosaics.

Information gleaned by interpreters was disseminated in special over-printed collation maps and a series of written interpretation reports.

To take full advantage of this important activity and its immediate effect on operations during a critical period, there were arranged plans for both visual air observation (Plate 3) and photographic reconnaissance from D to D+5 (plate 4). These were to be used in case of emergency in the event of unsatisfactory communications, bearing in mind that radio silence was to be effective until ordered lifted on the morning of D Day.

During the operation proper, there was considerable satisfaction in knowing that these two important activities were being provided for, even though it was impossible to gain contact through direct channels. Arrangement was made with the tactical reconnaissance unit, which was performing the visual observation, that lacking suitable communications, steps would be taken through air command channels for the honoring of requests against targets so disclosed, and arrangements were also made in advance for the reporting of any results of photographic reconnaissance for immediate action from Africa, where both of these units had to be located initially. Bombardment missions were executed without further orders from this headquarters as a result of the combined activities, and the Navy interpreters who had joined the Interpreters Group transmitted over radio broadcast channels, such information as it was deemed essential either for the landing or against targets found subsequently based on both of these services.

SUPPLY

The section principally affected by the change in plan was G-4, which had to revamp its plan of supply. As originally outlined, the Force 343 operation would have included early capture of the port of Palermo, and smaller ports in the west of the island. But the new area did not boast a single important port and plans therefore had to provide for supply over the beaches for a period of thirty days, if necessary, before a port could be captured.

The force was to be initially equipped, and supplied until D plus 14, from North African sources. On D plus 14, the first convoy loaded in the United States was to put in at Sicilian ports.

The basic supply plan was to provide the soldier with the essentials for combat and not overload him or the beaches with unnecessary supplies.

The general plan for execution of the supply mission was that sub-task force commanders were to be responsible for their own supply from ships and other landing craft over the beaches or through any sub-ports, to include the operation of all beachheads until that duty was taken over by Force 343.

When the supply activities were to be taken over by Force 343, the Commander, 1st Engineer Special Brigade, would assume command of the beach groups and of all non-divisional and non-corps units attached thereto and such necessary service units as might be attached by the Commanding General, and also be responsible for the execution of all supply plans within the theater of operations emanating from Force 343, including the operation of any seized ports.

Force 343 was to be responsible for the coordination with Headquarters SOS NATOUSA in the assembling of supplies at various ports of embarkation and their transportation to the theater of operations, and that supplies would be obtained from SOS NATOUSA and forwarded on an automatic basis or on special request by Task Force and Sub-Task Force Commanders.

The administrative channel for supply was to be from the Sub-Task Force Commanders and Army troops direct to Force 343. The II Corps was to have no administrative functions other than those pertaining to its Corps troops, except in emergency.

Initial maintenance was to be over the beaches until such time as a major port could be captured. Plans were accordingly made for continued beach maintenance for a period of at least thirty days. In the event that beach maintenance should prove inadequate, arrangements were made for a partial use of the Port of Syracuse after D plus 14. A force of 2,500 service troops loaded on one troop-

THIS PAGE IS UNCLASSIFIED

ship, two MT Store ships and two LST's were scheduled to arrive at Syracuse on D plus 10. Known as the American Liaison Group, these troops were intended to establish depots in the vicinity of Syracuse and to ship supplies forward to the Seventh Army.

Special staff sections with supply functions developed their plans to fit into this broad G-4 scheme. Service troops needed to execute the supply mission were obtained, requisitions were submitted to bring all units up to TBA and items unobtainable in North Africa were ordered from the United States.

Quartermaster submitted to SOS NATOUSA overall requisitions for Class I, II, III and IV supplies for an average strength of 130,000 troops for the period to D plus 30. Shortages of life belts, water cans and gasoline cans were anticipated and made up. Quartermaster innovations in this operation were such items as assault packs, an especially packed hospital supplement of the ration, a high proportion of pre-broken-down rations (5-in-1) and a large number of individual cook stoves.

Ordnance Supplies

Requisitioning of Ordnance supplies for the operation had begun in April, and by the end of the combat phase on August 17 had yielded 140,551 tons of Ordnance materiel. Phased requisitions for ammunition were so planned as to build up from the two and one half units of fire combat loaded for assault troops to a reserve of seven units of fire by D plus 40. In practice there were 80,000 tons of ammunition in Sicily by D plus 45.

The Ordnance planning section also arranged for preparation of "Assault and Follow Up Kits" of maintenance parts, including essential unit assemblies, standard hardware, special tools and cleaning and preserving materials. The assault kits were so packed that the heaviest of them could be carried easily by two men, no kits exceeding 100 pounds.

Artillery, Medical, Signal, Chemical Warfare and Engineer Sections also compiled detailed supply plans for the troops under their control, arranging for requisitioning, waterproofing, and packing of supplies and delivery to beach dumps.

Coordination and execution of these supply plans involved creation of two special agencies. One was the First Engineer Special Brigade, charged with unloading of craft and over-the-beach maintenance of the force; the other the G-4 Transportation Section, whose highway, water, rail and petroleum subsections grew to a total of 11 officers and 19 enlisted men to channel the movement of supplies.

Months of careful planning to assure that combat troops would never be wanting for any essential items bore their fruit in the success of the operation itself - and in records showing that 104,134 deadweight tons of supplies were moved over the beaches of Southern Sicily between the tenth and thirty-first of July.

As the planning phase entered into its critical final weeks, in mid-May, many major questions regarding the operation remained to be settled. Coordination with Air and Navy began to develop on the 19th and 20th of May, respectively, when an Air Corps liaison officer from Force 141 and a Naval liaison officer from Headquarters COMNAVNAW reported to 343.

At this time many of the units to be involved in the operation were not up to full strength - of a total of 9,250 replacements received after May 1, over one thousand reported during the last week before D-Day. Not until June 16 were personnel of HUSKY troops units frozen, preventing transfer to units not scheduled for the operation.

A definite channel of command was first established on June 10, when I Armored Corps, Reinforced, was relieved from assignment to the Fifth Army and assigned to Force 141. Until this time the headquarters had operated through dual channels, dealing directly with Force 141 on HUSKY matters, and through Fifth Army on routine administrative matters.

Air and Navy Targets

The vitally important decision on targets to be bombed by the Allied Air Forces before and during the operation and the selection of Naval gunfire targets was made after Force 343 submitted its third list of suggested targets on June 20th.

These were considered in great detail (see Plate 5). The targets were numbered in lettered category and by number in order of priority. Series "B" (one to nine in red in Plate 5), were considered as pre-D Day aerial bombardment targets, consisting of:

"1. A heavily fortified area consisting of 2 - 4 gun medium coastal batteries, numerous pillboxes and machine gun positions to important beaches where landings were contemplated.

2. A heavily fortified area between the highway and the sea consisting of 2 - 4 gun dual purpose batteries, many pillboxes and machine gun positions, all of which command the approaches to 3 beaches which were to be used. Troops approaching these beaches would be in full fire of this strongly fortified area.

3. A heavily fortified area consisting of 2 batteries. One battery was a 4 gun medium coastal battery commanding 4 beaches. The other battery was a 4 gun dual purpose commanding the approaches to 3 beaches.

4. A strongly defended area one mile North of the coast consisting of a 4 gun medium howitzer battery and machine gun positions. This point commanded the approaches to 2 important beaches.

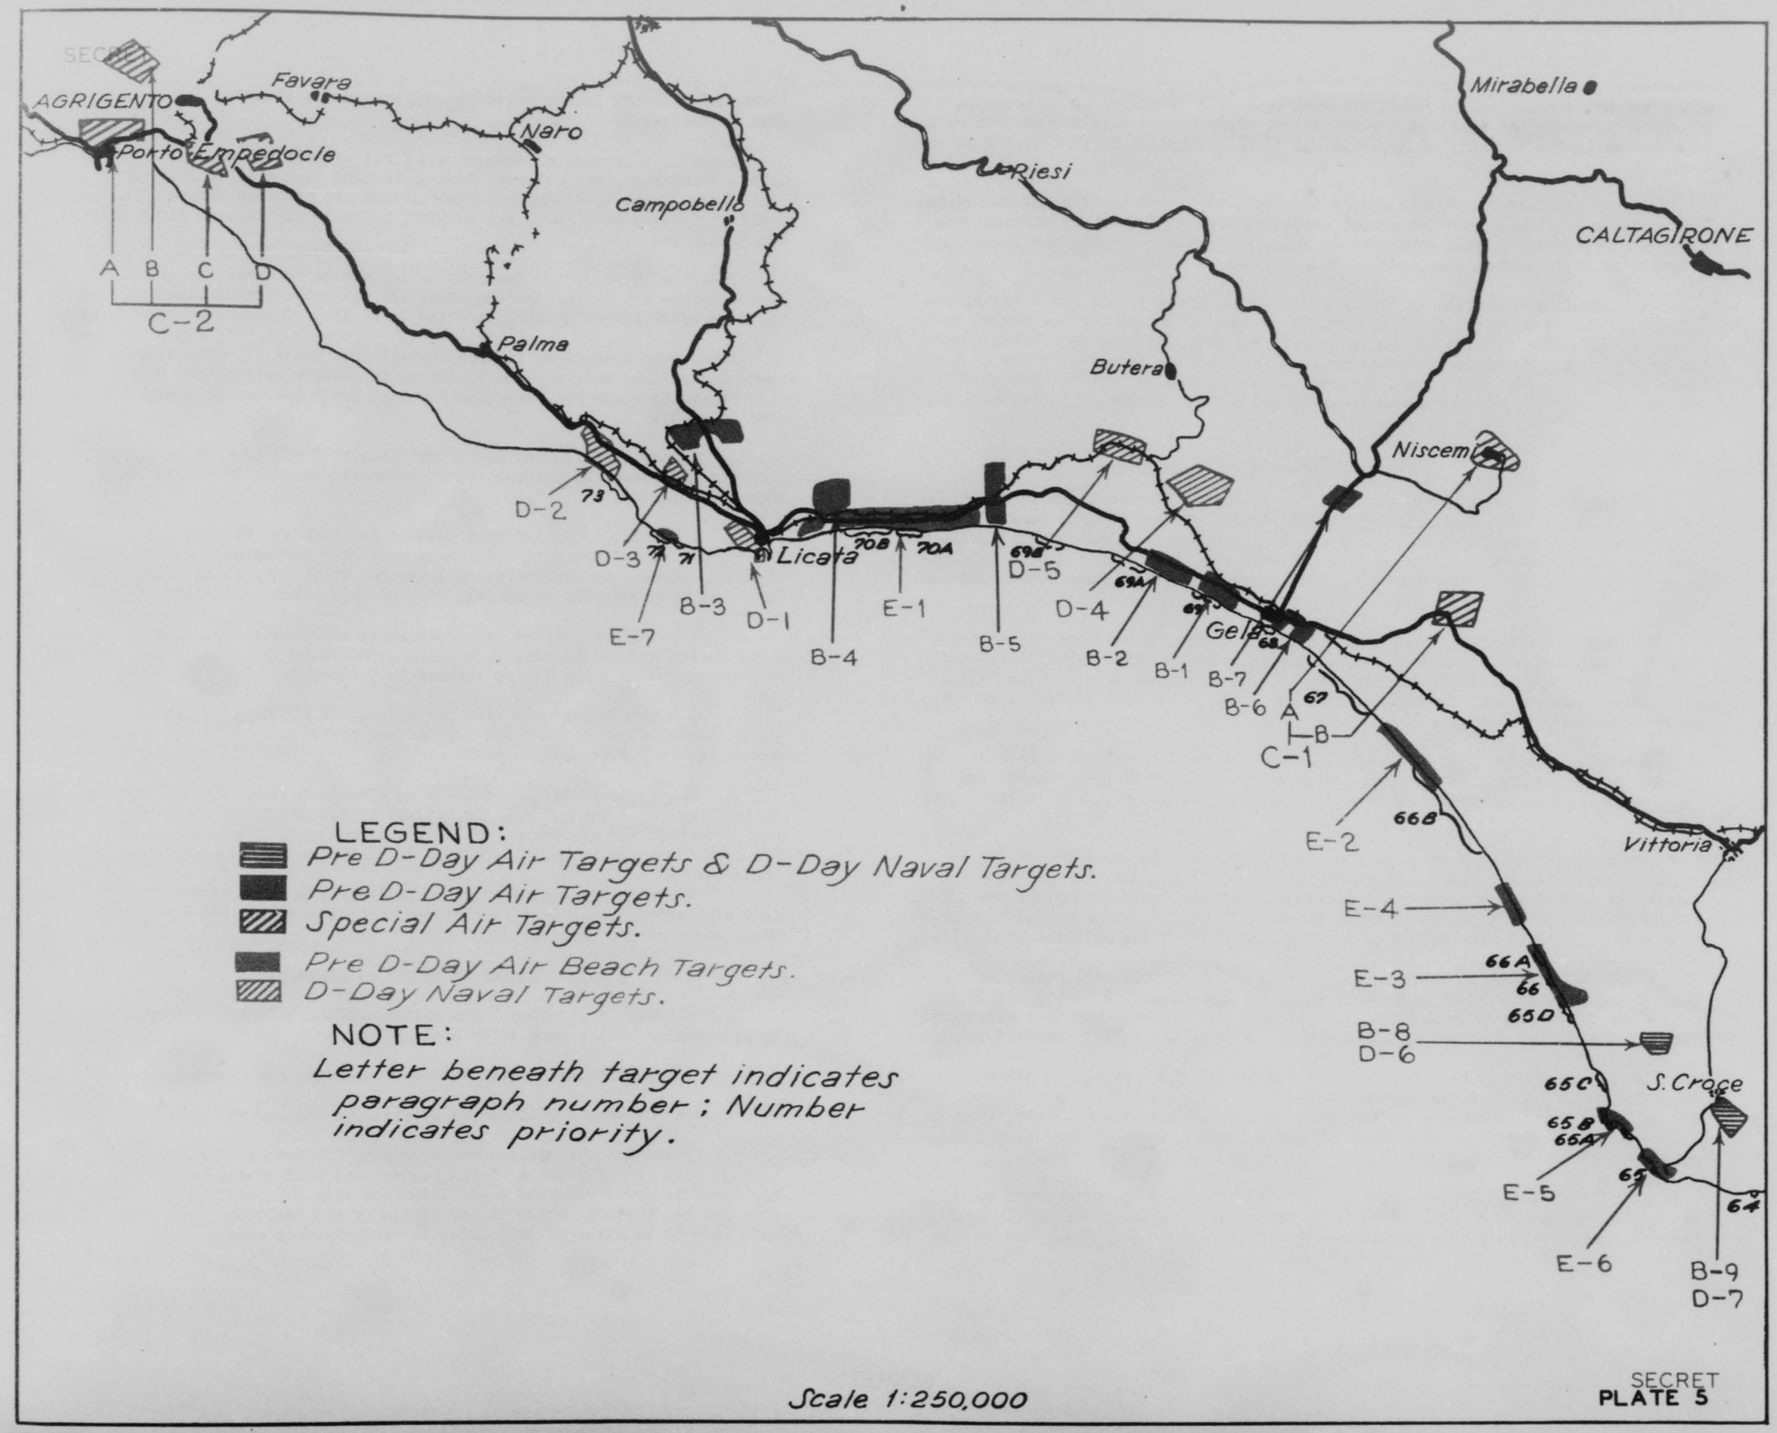
5. A heavily fortified position on a knoll between the sea and the road and railroad one mile North. A 4 gun battery in the middle of the area. This position commanded the approaches to beaches directly in front, to the West, and to the East of the position. There were 10 pillboxes and 15 machine gun positions in the area.

6. A strong point consisting of pillboxes, machine guns and AA guns concentrated on the beach East of the town on both sides of the river. This strong point overlooked 2 beaches.

7. A strong point astride an important highway.

8. A newly constructed 4 gun medium coastal battery commanding the approaches to five beaches which were to be used.

9. A 4 gun medium coastal battery commanding the approaches to four beaches."



Series "C" were considered as special air targets and were listed as:

"1. A special air mission was suggested for both of these targets simultaneously. The town (B) was a focal highway and road center besides being the living quarters for troops who could interfere with the paratroop landing. The other area (a) was a strong point in the middle of the paratroop drop area. These targets were to be attacked just prior to the paratroop attack.

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. A special air mission consisting of four concentrated areas in the PORTO EMPEDOCLE area. These targets to be attacked on D-Day with bombs and smoke.-

a. An area consisting of the town. There were 11 batteries of guns as well as many machine gun positions.

b. A heavily defended point consisting of 3 light or medium coastal batteries and many machine gun positions.

c. An area consisting of 3 light or medium coastal batteries.

d. A heavy strong point consisting of a light or medium coastal battery and many machine guns and pillboxes."

Series "D" (Plate 5) were considered D Day Naval targets. All targets were to be bombed prior to the movement of the troops to the target area. In addition, the Navy would take under fire all gun positions listed in Series "B", which were not silenced by pre-D Day air attacks. No priority numbers were assigned those targets.

"1. A heavily fortified area in the dock area of LICATA, consisting of 2 batteries and numerous machine gun positions. A railway battery of 4 coastal guns and a battery of 2 light AA guns are in the Eastern mole. A 3 gun dual purpose battery was behind the quay in the Western part of the town. Numerous machine guns and pillboxes were in the area. These positions command the approaches to 4 beaches in the area.

2. A strong point built around 2 R.D.F. stations. Numerous pillboxes, machine gun positions and AA guns commanded the approaches to a beach.

3. An important strong point commanding the road running parallel to the coast. It was composed of pillboxes, mortars, and machine gun positions.

4. A strong point of mortars and pillboxes capable of preventing the extension of the beachhead.

5. A heavily fortified strong point consisting of many machine guns and pillboxes.

6. A newly constructed 4 gun medium coastal battery commanding the approaches to five beaches which were to be used.

7. A 4 gun medium coastal battery commanding the approaches to four beaches.

Series "E" (Plate 5) were considered pre-D Day air beach targets. The defenses within those areas were composed of machine gun positions and pillboxes and were designated to be bombed, insofar as possible, as near dusk of D-1. All targets in that category were to be considered in lower priority than targets described in "B" and "C". The priorities established were those as indicated.

Thus the softening of the areas in which landings were scheduled was assured.

As these and other crucial final touches were being put to the plan, troops were being moved into staging areas and loaded aboard their ships and craft. The Third Infantry Division and Combat Command A of the Second Armored Division mounted at Bizerte; the First Infantry Division at Algiers; the Ninth Infantry Division, in reserve, and the Forty-Fifth Infantry Division, remounting in the ships in which it had come from the United States, at Oran; and the Eighty Second Airborne Division at Kairouan, 2nd Armored Division (-CC "A") from the Oran area.

The first echelon of Headquarters Force 343 to mount for the operation was the reserve staff which, together with Headquarters Company personnel and part of the First Armored Signal Battalion, went aboard LST 325 at Mostaganem on June 24. The ship arrived at La Goulette (Tunis) on June 28, and left on July 8, accompanying the KOOL force to Sicily.

The tactical headquarters of Force 343 went aboard the headquarters ship Monrovia in Algiers harbor on June 29. A transport, rather than a warship, was used because of experience gained in the TORCH operation when the Western Task Force command post on the cruiser Augusta lost touch with the forces ashore each time the Augusta went into action. A combined operations room, shared by Army, Navy and Air staffs, was established in limited space available aboard the ship. The Monrovia left Algiers on July 6th with the DIME force.

At sea, at one minute past midnight on the tenth of July, I Armored Corps and Force 343 ceased to exist and in their stead the United States Seventh Army came into being.

The formal directives from which the plans for the use of Force 343 were made came from Force 141, dated 12 February 1943 and 19 May 1943. Copies of these are shown as exhibit "I". The outline plan prepared by Force 343, 18 May 1943, is exhibit "II".

The plan of the Air Force in support of Task Force 343, dated 7 June 1943, is shown as exhibit "III". The plan of the Western Naval Task Force dated 25 May 1943 is listed as exhibit "IV".

The foregoing exhibits will be found on pages d-1 to d-50 of part I.

SUMMARY OF OPERATIONS

6. the Operation

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

The operation justly began with the following announcement by the Commanding General:

HEADQUARTERS SEVENTH UNITED STATES ARMY
A. P. O. NO. 758, U. S. Army

At sea

Soldiers of the 7th American Army:

We are indeed honored in having been selected by General Eisenhower as the American component of this new and greater attack against the Axis. We are teamed with the justly famous British 8th Army, which attacks on our right, and we have for the Army Group Commander that veteran and distinguished soldier, Sir Harold Alexander.

In addition to the two armies, our attack will be supported by the annihilating might of the Allied Navies and Air Forces.

Owing to the necessity for secrecy, I am unable to put in writing the location of our impending battle. However, I hereby direct the officers who will read you this after you are at sea to tell you where you are going and why.

When we land we will meet German and Italian soldiers whom it is our honor and privilege to attack and destroy.

Many of you have in your veins German and Italian blood, but remember that these ancestors of yours so loved freedom that they gave up home and country to cross the ocean in search of liberty. The ancestors of the people we shall kill lacked the courage to make such a sacrifice and remained as slaves.

During the last year we Americans have met and defeated the best troops Germany, Italy and Japan possess. Many of us have shared in these glorious victories. Those of you who have not been so fortunate, now have your opportunity to gain equal fame.

In landing operations, retreat is impossible. To surrender is as ignoble as it is foolish. Due to our Air Force and our Navy the enemy is unable to evacuate prisoners. Therefore, our soldiers who are taken prisoner, will remain to starve and run the added risk of being bombed or shelled by their own comrades who will be unable to tell prisoners from the enemy.

Above all else remember that we as the attackers have the initiative. We know exactly what we are going to do, while the enemy is ignorant of our intentions and can only parry our blows. We must retain this tremendous advantage by always attacking; rapidly, ruthlessly, viciously, and without rest. However tired and hungry you may be, the enemy will be more tired and more hungry — Keep punching! No man is beaten until he thinks he is. Our enemy knows that his cause is hopeless.

The fact that we are operating in enemy country does not permit us to forget our American tradition of respect for private property, non-combatants, and women. Civilians who have the stupidity to fight us we will kill, those who remain passive will not be harmed but will be required to rigidly conform to such rules as we shall publish for their control and guidance.

The glory of American arms, the honor of our country, the future of the whole world rests in your individual hands. See to it that you are worthy of this great trust.

God is with us. We shall win.

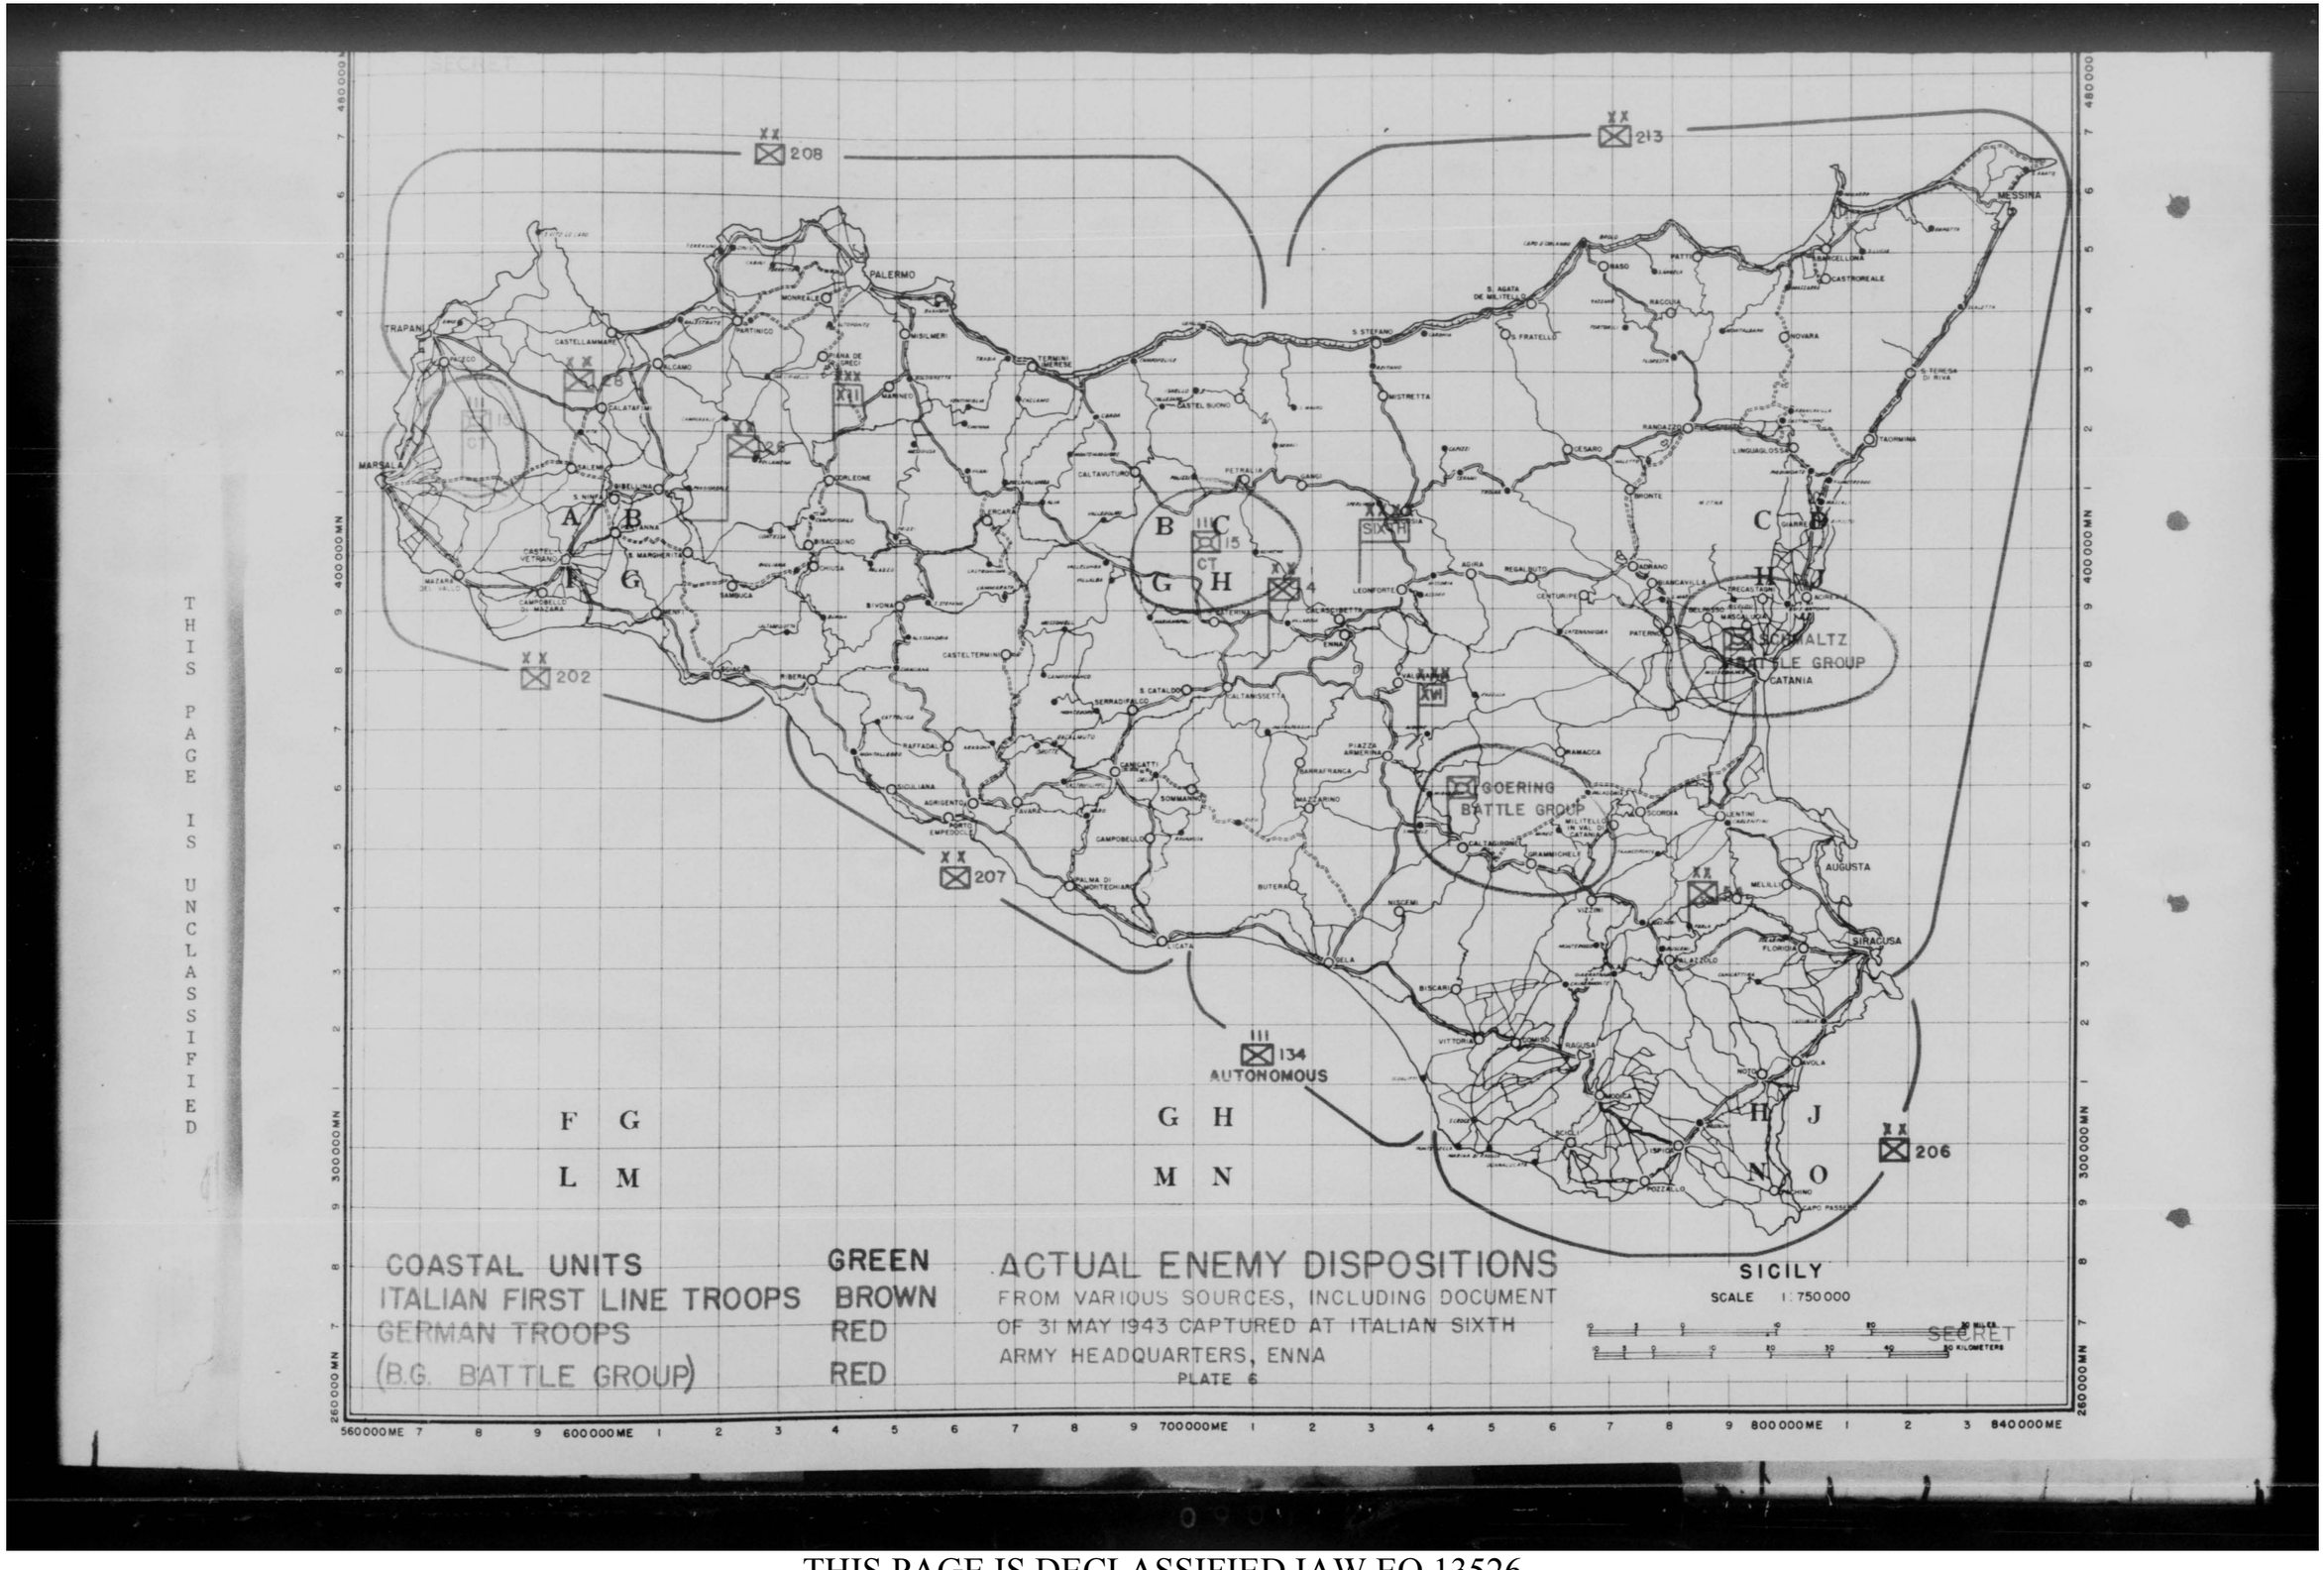
/s/ G. S. Patton, Jr.
G. S. PATTON, JR.
Lieut. General, U.S. Army,
Commanding.

A rare summer windstorm kicked the Mediterranean into a white-capped frenzy the morning of July 9, 1943. Now wallowing in the troughs of the twenty to thirty foot sea, now turning and plunging their noses into green water and shaking spray off their superstructures, the ships of history's greatest armada converged toward Malta, Battleships and monitors, cruisers, destroyers and escort vessels shepherded their flock of transports and invasion ships across the heaving sea. Occasionally a flight of bombers swept overhead against the storm, intent on their mission of softening enemy defenses before the invasion.

More than seasickness was caused by that storm. In the command posts above decks there was consternation. The whole delicately timed plan, culminating in the in the moment for which the whole world was waiting, hung subject to the caprices of nature. What if the sea was too high for the small boats to land? What if the high wind scattered the troop carriers of the airborne assault? Plans were made to delay the invasion one day.

But by late afternoon, as Malta appeared abeam and then dropped astern, with the Sicilian coast only 90 miles away, the wind seemed to slacken and the sea to level off. The decision was made to carry on as planned. The gray ships that covered hundreds of square miles of ocean maintained their northward course. And far behind them, at Kairouan in Tunisia, the fleet of C-47 transports received orders to warm up and take aboard their cargo of parachutists (elements of the 82nd Airborne Division - the 505th Parachute Regt and 3 bn of the 504th). A few hours later, the air fleet roared over Malta to strike the first blow of the long-planned assault.

But that first blow was destined to be the one that missed its target. A 40-knot headwind was still blowing as the Parachute Task Force searched southern Sicily for its drop zone - the high ground north and east of Ponte Olivo airport, 6 miles northeast of Gela. Buffeted from their courses, the planes failed to reach the drop zone at the proper times (2356B, 9 July, for the 505th; 2330B for the 3rd Battalion of the 504th), and the parachutists were strewn over a large part of southern Sicily, from Ponte Olivo to Niscemi, Vizzini, Ragusa and as far east as Noto in the British Eighth Army sector.



Meanwhile, the assault convoys were nearing their transport areas. At 2330, deck watchers could see fires along the Gela seafront, presumably started by the pre-D-Day bombings. Just before midnight bursts of tracers were seen reaching up into the blackness - enemy anti-aircraft gunners were searching out the paratroops' planes. Searchlights flashed briefly, but failed to pick up the ships offshore.

NOTE: Field Order No. 1 is exhibit V in section "d" of Part I. All other orders were issued in the form of directives or letters of instruction which are recorded in the G-3 Section of this report.

"H-Hour" was set for 0245 on the 10th. Shortly after midnight, assault troops of the sub-task forces began moving toward the beaches in their landing craft.

Enemy searchlights continued sporadic activity and as early as 0158 aircraft were hanging parachute flares over the landing areas. But large scale enemy resistance at the water's edge never materialized during the initial landings - an eloquent indication that elaborate security precautions had succeeded in insuring complete tactical surprise.

The Shark Force (II Corps) had been assigned a sector covering approximately 57 miles of beach. The sub-task force Cent (45th Division) went ashore on its right, covering beaches from Scoglitti to Fiume Agata, 10 miles southeast of Gela; the Dime Force (1st Division minus the 18th RCT) landed between Fiume Agata and Gela, with the Ranger force on its left assaulting Gela frontally. The Joss Force, composed principally of the 3rd Infantry Division, Reinforced by CCA of the 2nd Armored Division, attacked from six miles east to six miles west of Licata.

As H-Hour arrived the heavy sea of the preceding day had not yet fully subsided and was a principal factor in the failure of some assault waves to hit the beaches exactly on schedule. The actual times of landings were:

45th Division

Beaches	Unit	Time
66B	179 RCT	0350B
66B	180 RCT	0434B
65C	157 RCT	0420B
65B	157 RCT	0515B

1st Division

Beaches	Unit	Time
67	16 RCT	0245B
67	26 RCT	0245B
68	Ranger Force	0245B

3rd Division

Beaches	Unit	Time
70A	30 RCT	0415B
70A	15 RCT (-2d Bn)	0430B
73	7 RCT	0430B
71 & 72	3d Ranger Bn w/2d Bn 15th Inf atchd	0515B

All landings had been successfully accomplished by 0600 of the 10th. By then enemy air forces had begun to throw against the beaches and transport areas the series of bombing and strafing attacks which later turned out to have been the major enemy air effort of the campaign. The Gela transport area was first bombed at 0530B, again at 1840B and intermittently by small formations until 2200B. Principal targets were the LST's and landing craft discharging reinforcements and material on the beaches.

The KOOL force, the floating reserve (consisting of the 18th RCT, detached from the 1st Div, and the 2nd A D less Combat Command A) was held off Gela throughout the early part of D-Day, prepared to land in support of any of the initial assaults. At 1520B it was ordered to land on the Dime beaches just east of Gela, to assemble and remain in Army reserve. As units debarked beginning at 1800B, they closed in assembly areas north of the coastal highway (No. 115) and east of Gela.

Presaging the heavy fighting that was to come in this sector, enemy tanks had been reported moving toward the First Division as early as 0830B. At 0925B, 24 of them were near a point about 6 miles east of Gela. Allied air forces attacked enemy tanks and trucks on the Vizzini-Comiso and Caltagirone-Biscari roads, and at 1320B reported good results. Small columns were reported moving south from Barrafranca and a large column moving southeast from Riesi.

Meanwhile, the parachutists who had been scattered across southern Sicily were reforming to the best of their ability and preparing to assist assault units in consolidating ashore. Two battalions, dropped south of Vittoria and Comiso, succeeded in assembling by noon of D-Day, and in heavy fighting protected the left flank of the 45th Division. One battalion, dropped in the vicinity of Syracuse, fought side by side with the British until July 15. Some elements of the 505th Parachute Combat Team, dropped near Ponte Olivo airfield, were contacted by the 1st Division during the day.

By the end of D-Day all beachheads were secure. II Corps held its assigned sector from Gela, on the left of the 1st Division, to Scoglitti, on the right of the 45th Division. The 3rd Division, which had met some enemy resistance just east of Licata, had captured the town and pushed strong combat patrols inland toward Palma di Montechiaro and Campobello. The two distinct Seventh Army beachheads extended two to four miles inland.

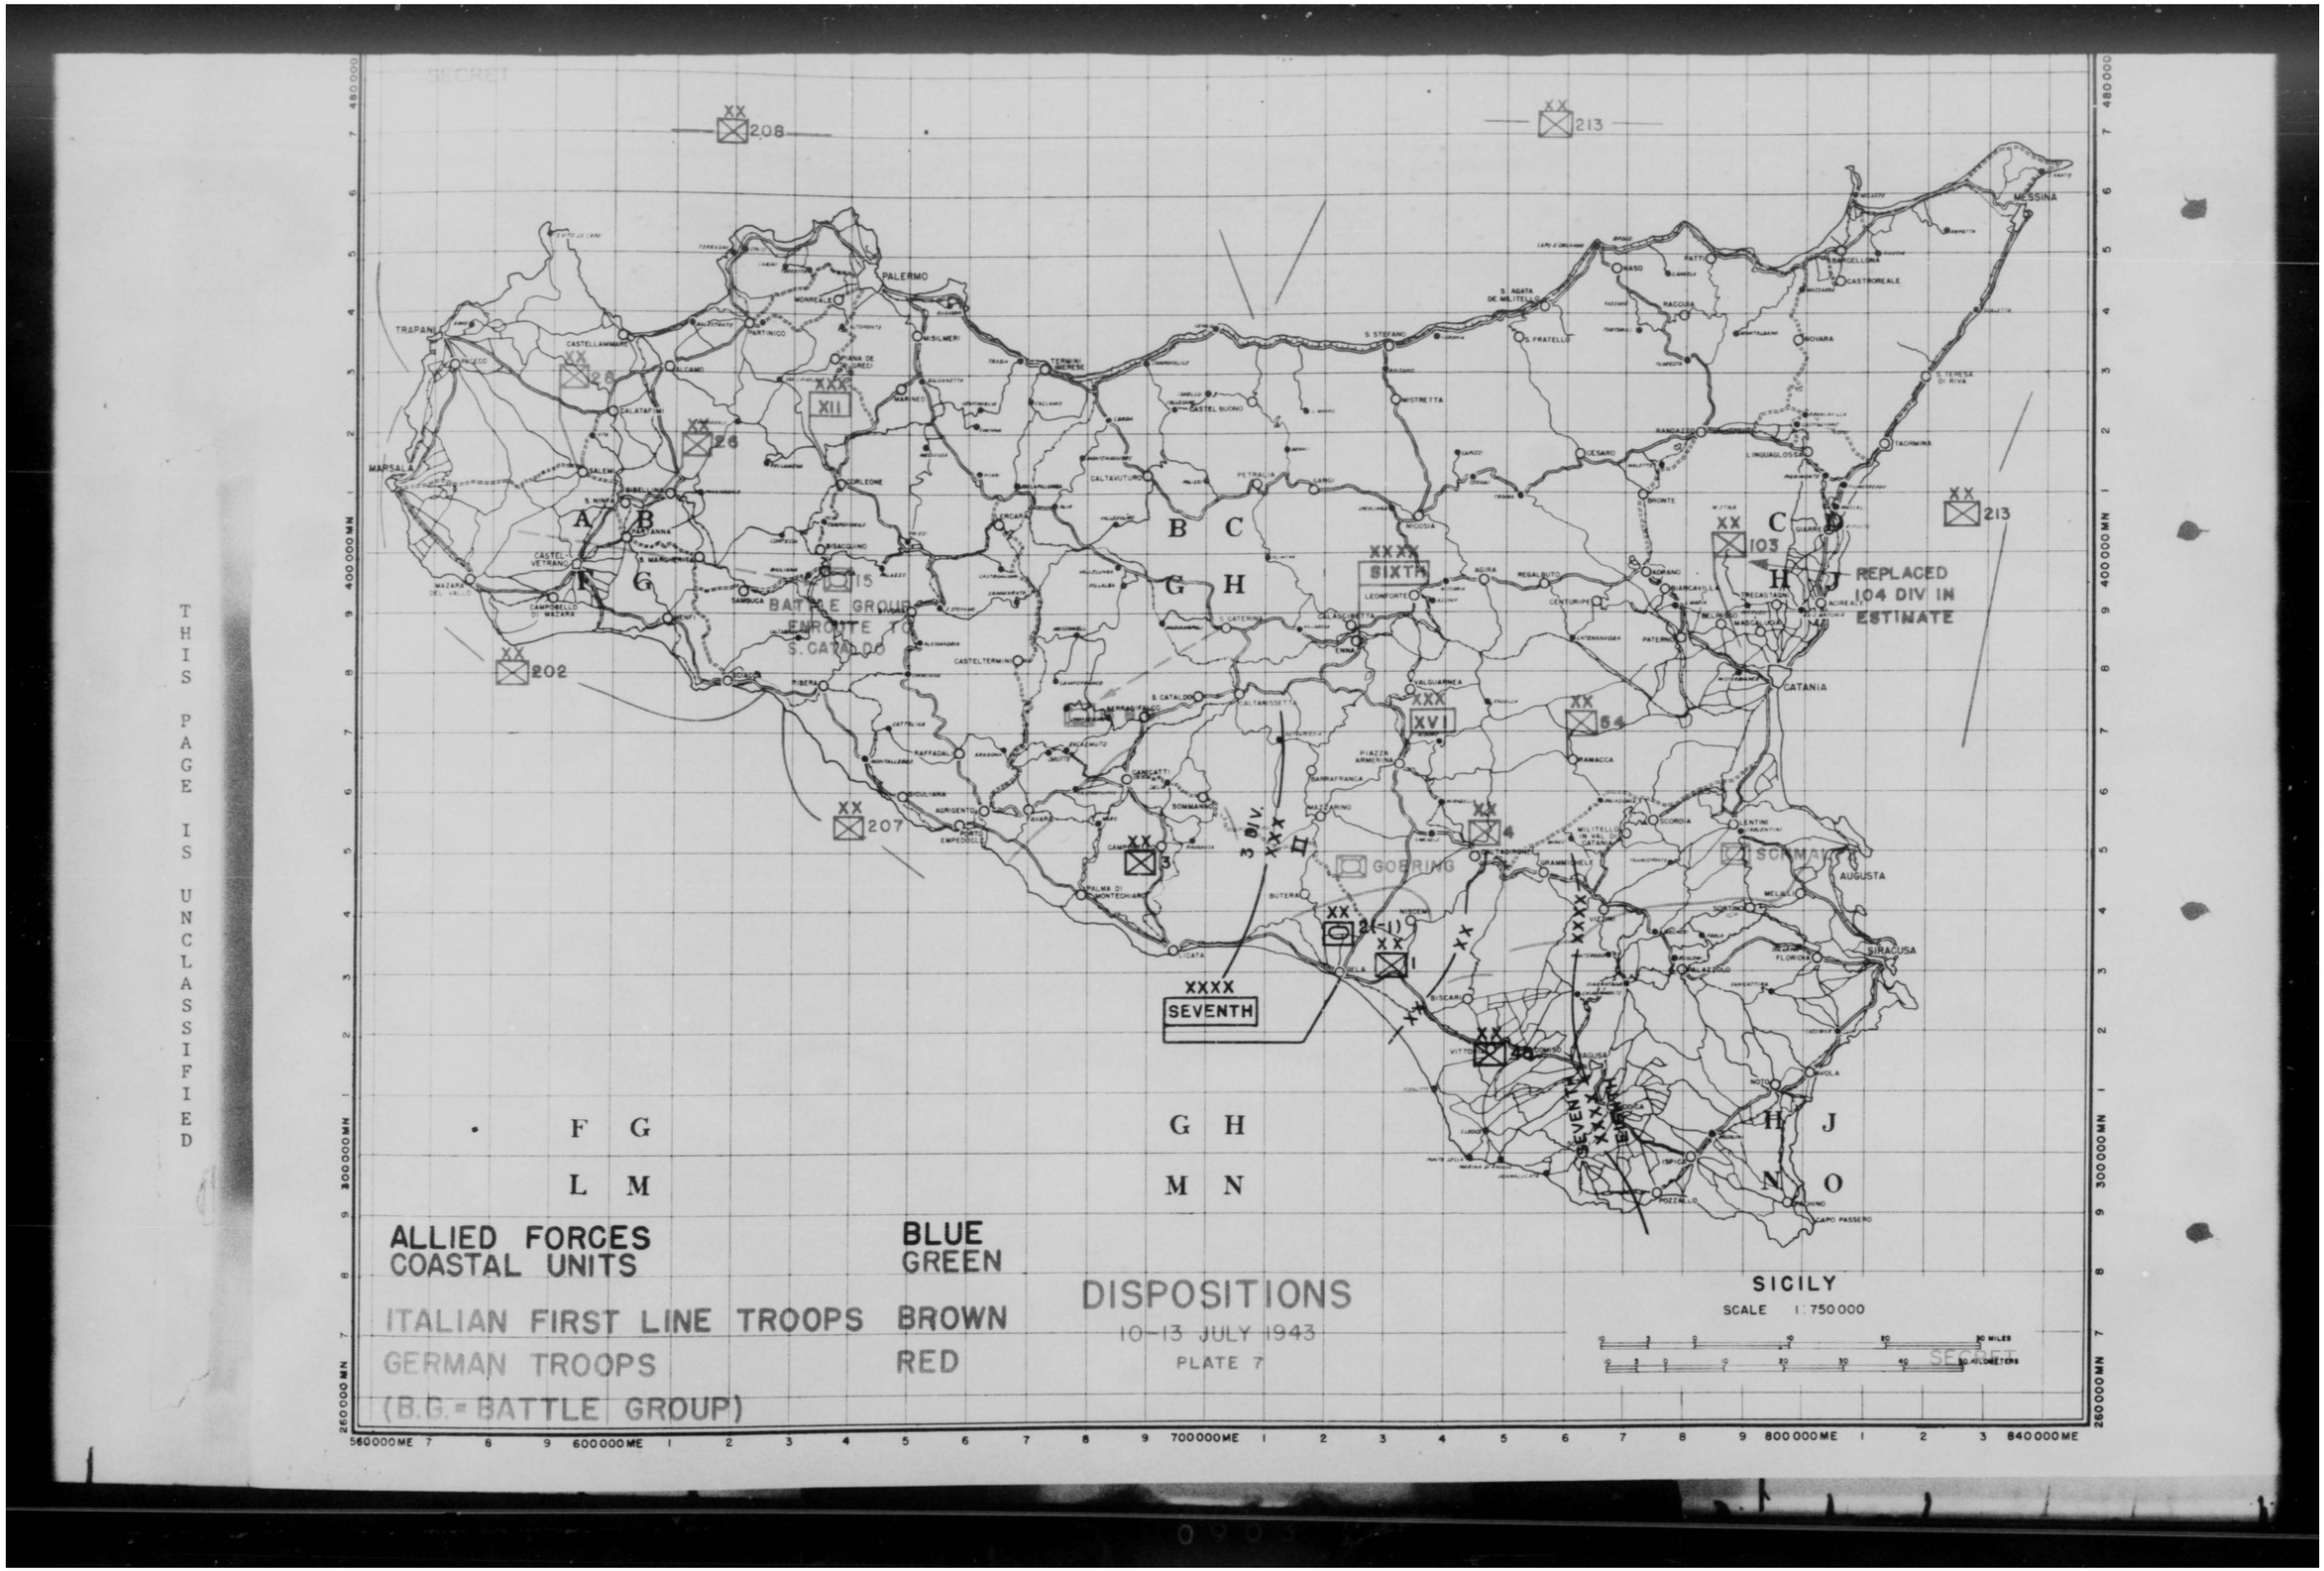
That first day had yielded 4,265 Prisoners of War. American casualties, caused both by enemy fire and by land mines along the beaches, totalled 58 killed 700 missing in action and 199 sick and wounded. 105 of the latter were evacuated by water, the bulk of them being taken aboard the U.S.S. Dickman, some aboard the flagship U.S.S. Monrovia. A civilian hospital was requisitioned in Gela.

D plus 1, 11 July

After taking a full day to evaluate the situation and group forces for a counter attack, the enemy, on the morning of July 11, launched his major effort to throw the invaders back into the sea.

At 0800B, both German and Italian units counterattacked the II Corps, their greatest weight coming to bear on the 1st Division near Gela. Twenty Mark IV tanks attacked south on the Ponte Olivo-Gela road, breaking through the 26th Infantry and approaching to within two thousand yards of Gela, before being stopped by artillery fire. Enemy infantry following the tanks was driven off by small arms fire. Attacking across the front of the 16th Infantry, a force of about 40 Mark IV tanks were stopped only by the combined fire of rocket guns, antitank grenades, tanks and artillery. A lighter attack carried out by Italian infantry and ten Italian tanks, was repulsed by the Ranger force.

At approximately 1630 in the afternoon the last counter-attack of the day by the enemy was launched down the Butera road against Gela. This attack was successfully broken up by the combined action of Naval gunfire, a Ranger Force as supported by one battalion (less a company) of the 41st Infantry and the Engineer Shore Group which was called forward from their beach duties.



The left flank of these enemy attacks against II Corps extended across the Acate River and was directed against the 180th Infantry (45th Division) and the 505th Parachute Combat Team. In this sector also, the enemy attack was repulsed. On the extreme right of the II Corps front, Comiso and Ragusa were taken.

In the Licata Sector, 3rd Division extended its beachhead beyond the town pushing the 7th and 15th Regimental Combat Teams to the line Palma di Montechiaro - Naro - Campobello - Riesi. It had thus accomplished its initial mission by reaching the line "Yellow."

By the end of D + 1 the Seventh Army had extended its beachheads inland on both its right and left flanks, and had withstood determined counterattacks at its center.

The enemy air attacks that had begun on D day were maintained, with repeated raids on beaches and transport areas, by both high altitude and dive bombers. Early in the morning, the command ship U.S.S. Monrovia suffered a near miss at 50 feet. The air attacks continued throughout the day until 2400B.

Our losses for the day stood at 117 killed, 1894 missing and 466 wounded. A total of 4390 prisoners were taken. By 1400B about 400 prisoners had been gathered on the Gela beach awaiting evacuation by sea to Africa.

Among documents found in an enemy headquarters captured in Gela was an Italian map giving the location of minefields along the south coast and the coastal roads. After translation, copies were sent to the Divisions.

D plus 2, 12 July

The second lift of the 82nd Airborne Division was due to land in Sicily from North Africa the night of the 11th-12th. But for the second time an unfortunate incident of war interfered with the execution of the airborne mission. The transport planes arrived over the beachhead area simultaneously with a fleet of enemy bombers. In the two hours that followed many paratroopers missed their mark.

On the ground, the enemy again launched counterattacks against the II Corps, throwing both infantry and tanks into battle south of Niscemi. The attack was repulsed by the First Division supported on its right by elements of the 2nd A. D. and by 1400B the enemy had been forced to abandon his last attempt to prevent our establishment of a secure beachhead. During the morning the Ponte Oliva airfield had been captured.

D + 2, 12 July

On the extreme right of the Seventh Army sector, elements of the 45th Division in Ragusa, contacted elements of the British Eighth Army under General Montgomery.

However, the Seventh Army beachhead was still divided into two distinct sectors. The 3d Division advanced rapidly against scattered enemy infantry and tank units, pushing its line to Canicatti and improving positions at Palma di Montechiaro and Riesi; but on its right, patrols contacted enemy elements south of Riesi between the 3d and 1st Divisions. Except for this gap, the Seventh Army foothold on Sicily extended from eight miles deep at Gela to 15 miles on each flank by the end of D + 2.

The Engineers had removed obstructions from the runways of the landing field west of Gela, and, acting quickly to cut mine fuses, had saved the runways of Ponte Olivo from destruction. Straggler control and traffic direction were organized in Gela and the security of enemy ammunition dumps and abandoned enemy headquarters was assured. The advance Army command post moved ashore from the Monrovia in mid-afternoon, established one echelon in a school building in Gela and another in a grove north of the town. In short, the critical phase of the assault had been passed, and the Seventh Army was ashore to stay.

Enemy air action had been reduced considerably during the day, but some bombing and strafing continued. One LST was bombed, burned and sunk.

Against the loss of 29 killed, 106 missing, 13 reported captured, and 183 wounded, we had taken 4,206 prisoners during the day. The unsuccessful enemy counter attacks against the 1st Division during the 11th and 12th had cost him 4 Mark VI, 29 Mark III and IV, and 10 Italian tanks.

D + 3, 13 July

Field Order No. 1 had ordered each sub-task force to extend its beachhead to the line "Yellow" immediately after securing its initial beachheads. When the enemy had been driven back to this line, his long range artillery would be unable to reach the airfields at Ponte Olivo, Comiso, and Biscari, and these fields, together with the port and airfield at Licata, would be usable by the Seventh Army.

On the 13th, a Seventh Army directive made some revisions in the order. The 3d Division, which had already reached "Yellow" was directed to continue reconnaissance to Agrigento, and hold Canicatti and the road junction two miles east of Riesi. 2d Armored Division (less Combat Command A), together with the 1st and 4th Ranger Battalions, were detached from II Corps and assigned to Army reserve. II Corps was then to continue on its original mission of securing the "Yellow" line. 82d Airborne Division, in Army reserve, was to continue reorganization. The 18th RCT was released to the 1st Division.

The major enemy effort at this time seemed to be east and west of a general line Caltagirone - Gela. Elements of the Hermann Goering Division, estimated as an armored regiment, were in action in this area. All Seventh Army forces advanced and further deepened the beachhead.

II Corps advanced to high ground 5 miles north of Chiaramonte Gulfi, 5 miles northwest of Comiso airport and 4 miles north of Biscari on its right (45th Division) flank; and to the high ground 3 miles north of Niscemi and Ponte Olivo in the 1st Division sector. 3d Division continued its aggressive reconnaissance toward Agrigento and the north. 2d Armored Division, with the 1st and 4th Ranger Battalions, advanced to Mt. Nicola, 8 miles northwest of Gela, and continued toward Butera.

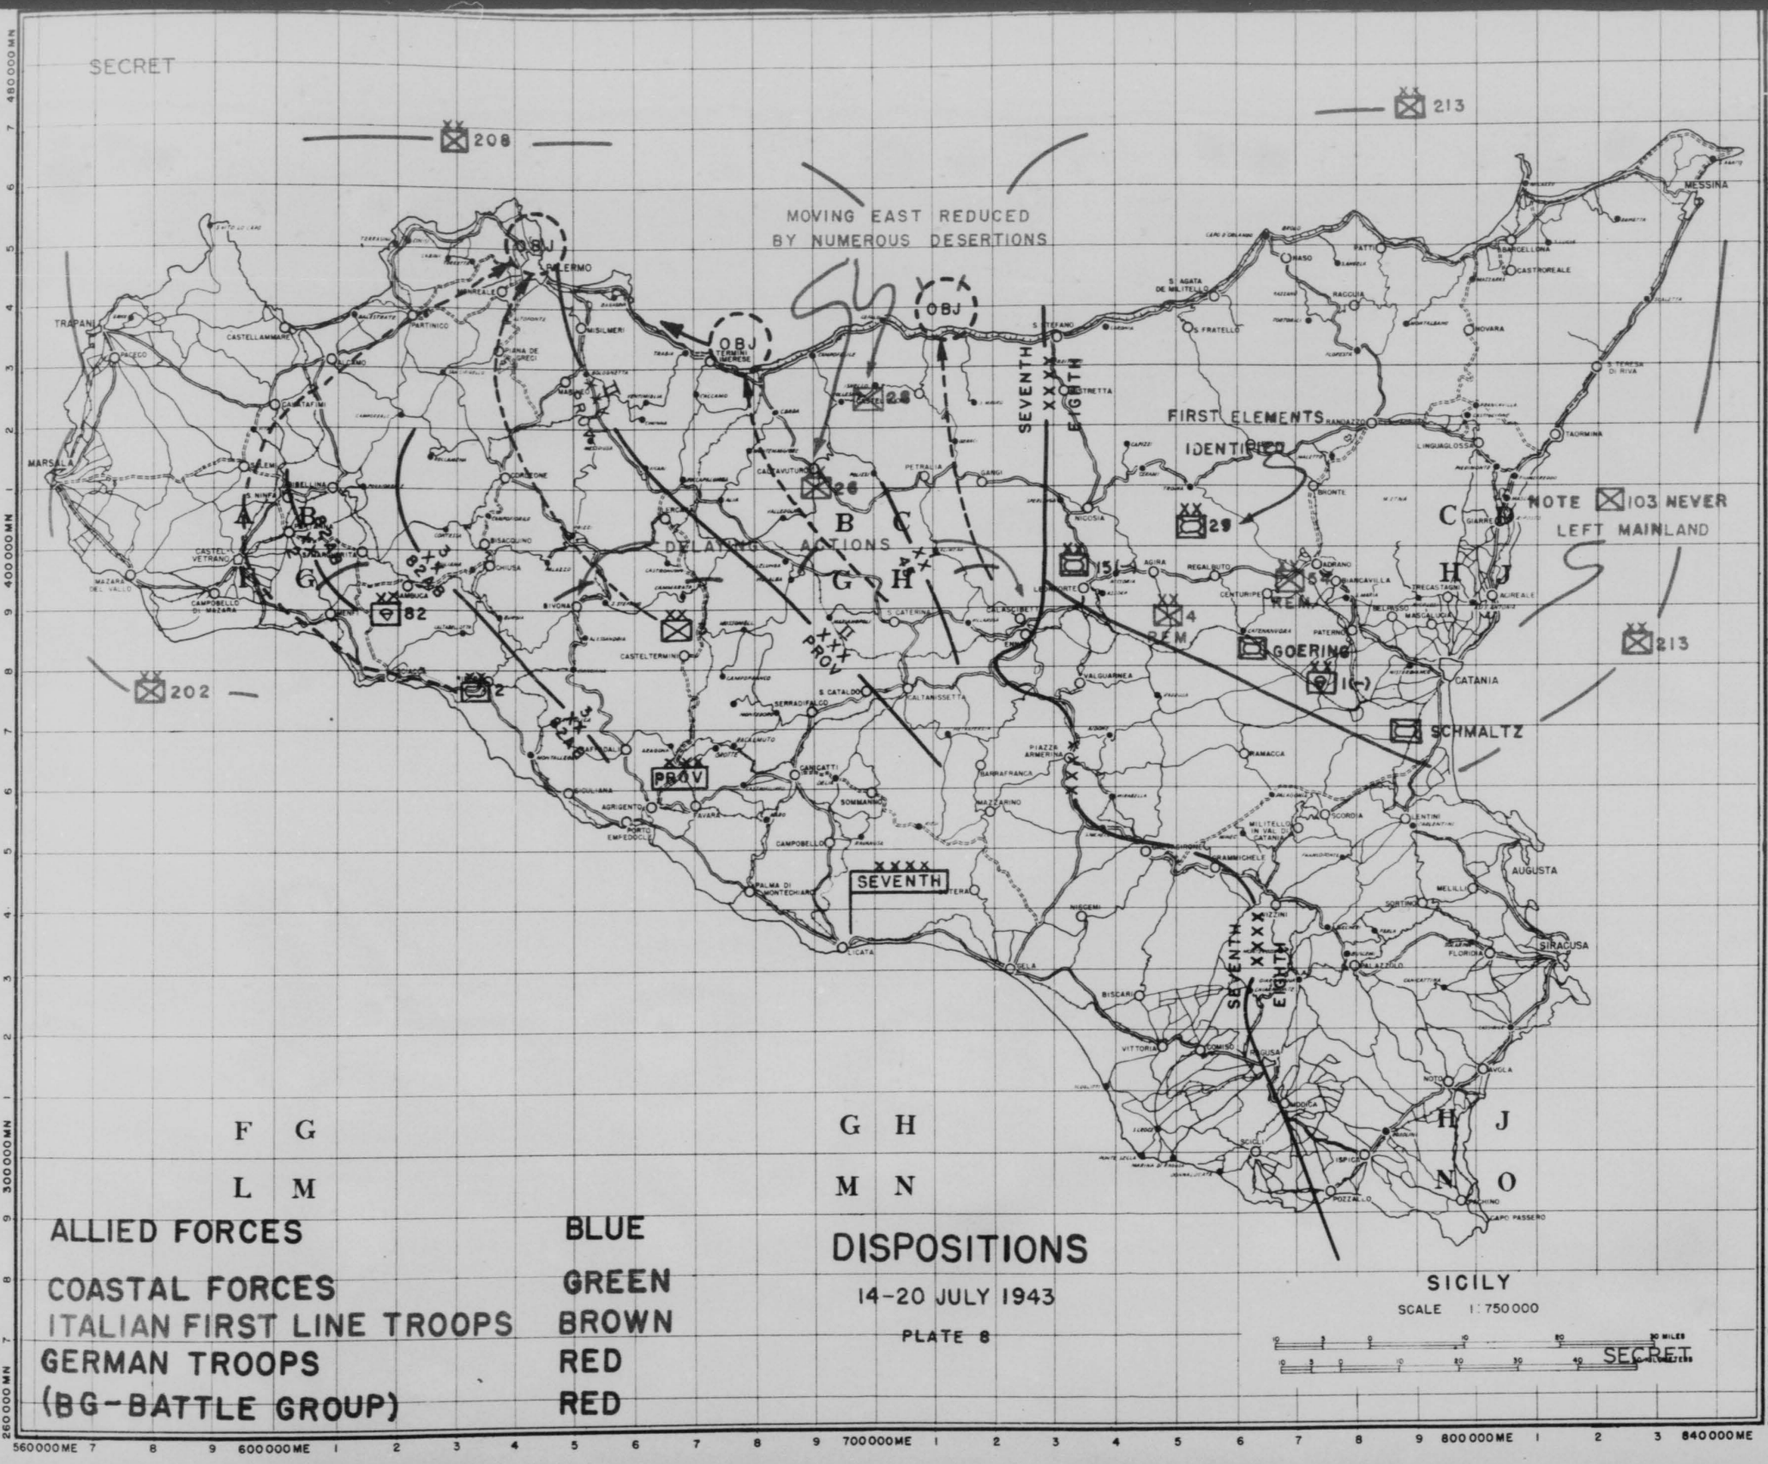
Now firmly established on the island, Seventh Army was preparing to put captured airfields and communications in early operation. The airfield at Ponte Olivo, a glider strip northwest of Gela, and a landing strip 2 miles east of the town, were ready to receive planes. A newly constructed landing strip was also ready at Licata, and 3 P-38's came in to the field on the 13th.

On 13 July, 2033 prisoners were taken, and by this time the mounting total of captured and deserting enemy troops, principally Italian, had presented a difficult problem. Divisions were burdened with hundreds of prisoners, and Corps and Army lacked sufficient transportation to provide substantial relief. Additional prisoner of war guards were requested to take over the processing of captured enemy personnel.

The civilian medical problem had also become acute, due to an apparent lack of adequate local facilities. Prevented from shouldering the full civilian medical burden by the limitation of its own supplies, the Army had to limit civilian hospitalization to rendering first aid to cases in danger of death.

American casualties for the day totalled 58 killed, 36 missing, 4 reported captured, and 157 wounded.

Tactical air reconnaissance kept close watch on enemy movements, and frequently its reports led directly to bombardment missions. Bombers also served as a source of valuable information, reporting their observations through the XII Air Support Command on returning from missions.



Late in the evening of the 13th, a battle group of the Hermann Goering Division was reported near H-4540, about 5 miles east of Niscemi. An American officer who had been captured by the Germans and then escaped confirmed previous

estimates that there were two German divisions on the island, the Hermann Goering and the 15th Panzer Divisions. In addition, four companies of Mark VI tanks were reported to be in Sicily.

D + 4, 14 July

By the 14th it was apparent that the frustration of enemy counterattacks on the Gela sector on the 11th and 12th had led to a decision to withdraw, fighting only delaying actions and making local counterattacks. Air reconnaissance revealed a general enemy movement toward the Catania plain, and there were also signs of enemy withdrawal northward along highway 124 beyond Caltagirone.

Orders from higher headquarters (the 15th Army Group) now swung the effort of the Seventh Army toward the northwest. A new boundary between the Seventh and Eighth Armies extended from Vizzini along the road to Caltagirone, Piazza Amerina and the road junction ten miles southwest of Enna.

II Corps continued its rapid push northward on its extreme right and reached the line Yellow near Vizzini. In the center the left of the 45th Division sector, stiffer opposition was met, but units advanced to the high ground five miles southeast of Caltagirone and also captured Biscari landing field.

On the II Corps left, the 1st Division took Niscemi and Mazzarino and held positions controlling the road junction three miles southeast of Caltagirone. A small pocket of resistance between the 1st and 45ht Division was still being mopped up, but contact had been established here - as well as between the 1st and 3rd Divisions on the left of II Corps and between the 45th Division and the British on its right - thus assuring a continuous Allied beachhead across southeastern Sicily with both flanks anchored on the sea. 3rd Division maintained its positions, with active reconnaissance north and west; Combat Command B of the 2nd Armored Division and the 1st and 4th Ranger Battalions operated on the II Corps front, the former helping to clean out the enemy pockets near Niscemi, and latter capturing Butera, with the aid of effective Naval bombardment.

The capture of Biscari airfield reported repairable within five to eight hours, had marked completion of the initial missions assigned to Seventh Army.

The 4th Tabor of Goums, from the "Goums Marocains" of the French North African Army, landed at Licata on the 11th and were attached to the 3rd Division. Corresponding in strength to an infantry battalion, the 4th Tabor fought with the 3rd Division during its advance on Sciacca, and later was attached to II Corps for operations in the rugged country of northeastern Sicily. It gave a good account of itself throughout the campaign.

G-2 estimated that by D + 4, 13,000 prisoners of war had been captured, the enemy had suffered 1,400 casualties, dead and wounded, had lost 85 aircraft captured, and 67 guns larger than 75mm captured and destroyed, sixteen Mark III and IV tansk and 7 Mark VI tanks were taken as well as nine other tanks whose classification was not reported.

All prisoners except Italian medical officers and chaplains, and Italian soldiers of Sicilian birth were being evacuated to North Africa as rapidly as facilities permitted. A Red Cross hospital was later opened for Prisoner of War patients, who were, so far as possible, cared for by Italian personnel.

Many of the Italian prisoners expressed great bitterness toward the Germans, whom they accused of sacrificing Italians to cover their own withdrawals. On one occasion the Germans had withdrawn ahead of the Italians and had mined the roads as they went, trapping the Italians between Americans on their front and minefields in their rear.

D + 5, 15 July

15 July marked the first major change in the composition and direction of advance of the Seventh Army. Line 'Yellow' was occupied, the new Seventh-Eighth Army boundary would bring the EighthArmy across the present front of the 45th Division and on the left, the time was ripe for a major drive westward and northwestward through the island.

First of the changes to be affected was the creation of a Provisional Corps, comprised of the 3rd Division, reinforced by the 3rd Ranger Battalion, Fifth Armored Field Artillery Group and other supporting troops, and the 82nd Airborne Division. This latter division had completed reorganization and was reinforced by the 39th RCT of the 9th Division, 34th Field Artillery Battalion of the 9th Division, the 83rd Chemical Weapons Battalion and other troops.

Accordingly during the next two days II Corps pivoted on the Provisional Corps to swing the entire Seventh Army front to the north and northwest in preparation for the drive to the north coast.

The 45th Division, on the right flank, assisted the 1st Canadian Division of the British XXX Corps in the capture of Vizzini, occupied the remainder of the high ground south of the Vizzini - Caltagirone road, and thus completed the initial mission of II Corps in this sector. The 1st Division continued its advance, moving north of Mazzarino toward Barafranca, and the 3rd Division, now part of Provisional Corps, sent strong patrols into Favara and Ragalmuto and reconnaissance patrols four to five miles north of Canicatti and Riesi. 82nd Airborne Division continued reassembling in preparation for its Provisional Corps role, and the 2nd Armored Division, which regained Combat Command A from the 3rd Division, assembled in the Campobello area under Army control.

The initial objective of the combined Seventh American and Eighth British armies (Fifteenth Army Group) as stated in the directive was the line Catania - Palma Di Montechiaro.

An Army directive issued on the 15th extended the left boundary of II Corps to Palermo and the right boundary to the north coast.

II Corps mission was to capture Caltanissetta and secure the highway north from Caltanissetta, and to be prepared for further action by dark July 19.

Provisional Corps' 3rd Division was to secure the highway from Canicatti - San Cataldo and be prepared for further action by July 19. The 82nd Airborne Division was to assemble Palma Di Montechiaro and relieve elements of the 3rd Division at that location by dark July 17 in preparation for a westward advance.

As final preparations shaped up for the next phase of the campaign, the box score thus far stood as follows:

A total of 15,500 prisoners had been taken, with no breakdown available as to the proportion of Germans to Italians. The enemy had lost an estimated 1900 dead and wounded, 112 aircraft had been captured or destroyed on the ground, and 80 guns, larger than 75 mm, 24 Mark III and Mark IV tanks, and 7 Mark VI tanks had been captured.

Total strength of the Seventh Army then stood at 203,204.

In preparation for continuing operations, a map depot was established at Gela, remapping of units began and the initial waterpoint was opened at Gela with an estimated capacity of 25,000 gallons per day.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

D + 6, 16 July

In general enemy resistance during the day was light. Withdrawal to the north continued, covered by counterattacks in which tanks were used - the strongest was by a force of 16 tanks operating south of Barrafranca. The 1st Division repelled the attack and by dark had entered Barrafranca with the 70th Tank Battalion moving north of the town.

The pivoting of the II Corps began. The 45th Division was ordered to move south and west to Gela, then north to the vicinity of Mazzarino prepared to continue the operation on the left of the 1st Division.

The 3d Division continued aggressive reconnaissance west and northwest from Palma di Montechiaro and Canicatti and set the stage for the capture of Agrigento and the subsequent breakthrough to the west. Porto Empedocle was taken by the 3d Ranger Battalion, and the capture of highground north of Agrigento yielded 4,000 Italian prisoners.

D + 7, 17 July

Aided by excellent naval gunfire support, 3d Division continued its assault on Agrigento during the night and by morning had captured the city. The balance of Provisional Corps was preparing to undertake its assigned missions - 2nd Armored Division continued its move into the Campobello area, and the 82nd Airborne Division, its reassembly completed, began shuttling by motor into an area five miles south of Agrigento.

II Corps also continued the regrouping of its forces. 45th Division captured Pietrapersia (H16) and Salso River crossings south of Caltanissetta and took up postions on the left of the 1st Division. Enemy tanks were again used in support of local counterattacks delaying our advance to the north. Against this stiff opposition, 1st Division pushed northward to Salso River crossings six miles east of Caltanissetta. XII Air Support Command aided the advance by assigning bomb targets in the Caltanissetta - Caterina area. In all, 6506 prisoners of war were captured during the day, most of them taken when resistance collapsed at Agrigento.

Seventh Army was now consolidated on its new front, extending from Porto Empedocle to Racalmuto to Serradifalco and the high ground seven miles southeast of Caltanissetta. Facing it, from west to east, were the 207th Coastal Division (Italian), the 4th Livorno Division (Italian), the Hermann Goering Division (German) and the 54th Napoli Division (Italian). The latter had been reported virtually destroyed by the British.

Ponte Olivo airfield had become the principal focal point for the efforts of enemy air forces operating over the army rear areas, and the recurrent attacks had led to the decision of the XII Air Support Command to base fighter planes on the new fields east and west of Gela until the raids on Ponte Olivo stopped.

D + 8, 18 July

During the night of the 17th - 18th, the enemy withdrew from general contact along the entire front, and only slight resistance was offered. Seventh Army units advanced in all sectors, encountering many mines and booby traps along the routes of advance.

In the II Corps sector, the 1st Division pushed forward toward Villarosa (H-18) and Enna (H-28) and reached the vicinity of Mt. Capodarso, between Enna and Caltanissetta. The latter town was occupied by the 45th Division, which then continued northward and had reached a point two miles northwest of S. Caterina by dark.

Provisional Corps, with the 3d Division still in front, occupied the line Raffadali (G-56) - Aragona (G-66) - S. Cataldo (G-97). On the left of the 3d Division, elements of the 82d Airborne Division, to which were attached elements of the 39th RCT of the 9th Division, took over their assigned coastal sector, extending along the south coast road.

The 39th RCT passed through units of the 3d Division at daybreak and advanced along the main coastal road to positions about two miles east of Realmonte, 6 miles west of Agrigento. The 504th Parachute Regiment passed through the 39th and siezed crossings of the Fiume Della Canne, about eight miles west of Porto Empedocle. 2d Armored Division completed reassembly near Campobello.

A gauge of the lightness of resistance during the day was the G-1 report that 720 prisoners were taken, and that American troops had lost three killed, four missing, and 275 sick and wounded. Up to date, a total of 4114 admissions had been made to medical installations. 1427 casualties had been evacuated by water, and 210 by air.

The Licata prisoner of war cage, with an operating capacity of 8,000 prisoners, was taken over from 3d Division by Seventh Army.

D + 9, 19 July

A new directive, issued on the 18th, had outlined the missions now assigned to the Allied armies attacking Sicily. The British Eighth Army was to drive the enemy north and east into the Messina Peninsula. The general Seventh Army mission was to drive north and northwest to capture Palermo. Accordingly, II Corps was directed to secure a strong base in the rear of the Eighth Army, advance to the north and northwest, cutting the coast road, the Nicosia-Cerda road, and the Enna-Alia road, and be prepared to attack Palermo from the east.

Provisional Corps was to advance to the northwest, prepared to attack Palermo from the south and southwest. It was to be followed closely by the 2d Armored Division, which was to be prepared to exploit a breakthrough or extend envelopment to the west.

Envelopment of the Palermo area, as called for by this directive, gathered headway on the 19th against only light enemy opposition. In the west, the enemy attempted to hinder the advance with bridge and road demolitions and minefields. The 3d Panzer Grenadier Regiment of the 15th Panzer Division (German) was identified in the Enna area, with a German battalion combat team supported by a regiment of artillery astride the Army boundary near H-2580.

1st Division, now on the right of II Corps sector, contacted the enemy at Villarosa and advanced on Enna. On its right flank, the 1st Canadian Division bypassed Enna to the east, thus leaving a pocket of strong enemy resistance south of the town. The pocket was reduced by the 1st U. S. Division. In II Corps' left sector, the 45th Division contacted the enemy four miles south of S. Caterina and, advancing to the north and west, sent strong patrols as far as Marianopoli.

Provisional Corps also advanced westward, the 3d Division crossing the Platani River and taking Casteltermini (G-68) and Mussomeli (G-78). 82d Airborne reached the stream crossings six miles west of Ribera on the coastal highway, and 2d Armored Division began its move to the vicinity of Agrigento.

American casualties were again light, with 3 killed and 47 missing. 2,852 Italian prisoners were taken, and a prisoner of war cage was opened at Porto Empedocle, with a capacity of 20,000.

SECRET

D + 10, 20 July

An Italian battalion, reinforced by two R-35 tanks at Vallelunga, offered the strongest enemy resistance encountered by the Seventh Army during the day, although minefields and demolitions were increasing as the enemy speeded his withdrawal.

II Corps captured Enna, near which the 1st U.S. Division contacted the 1st Canadian Division, and went on to take Villapriola, 8 miles northwest of Enna, and advanced on Alimena. Repulsing the Italian battalion and its two tanks, the 45th Division reached the point where the railroad cuts Highway 121, south of the town.

On the Provisional Corps front, 3d Division, with strong reconnaissance forces ahead, captured the high ground three miles north of Mussomelli (G-78) and reconnoitered as far west as Villafranca. The 30th Infantry took San Stefano (G-59). 82d Airborne Division captured Sciacca (G-17) and Menfi (G-08). 2d Armored Division arrived at march assembly areas near Ribera and was attached to the Provisional Corps. Casualties were light.

D + 11, 21 July (See plates Nos. 9, 14, 15)

As the advance CP of the Seventh Army moved from Gela to Agrigento, the Army drove farther north and west, encountering organized opposition only on the II Corps front. Reports of enemy movements, including that of 15 tanks going north out of Alimena (H-19), and heavy traffic on the Petralia (C-01) - Nicosia (C-30) road, indicated that shuttling of enemy troops was probably in progress.

1st Division extended the II Corps front through Alimena toward the coast road north of Castelbuono (C-03), encountering demolitions and minefields, as well as artillery and mortar fire. Considerable sniping and street fighting marked the capture of Alimena. 45th Division moved north and northwest with the Torto River as its objective.

The possibility of a breakthrough to the north and west, anticipated when the 2d Armored Division was assigned to Provisional Corps, now became more fully apparent as the Provisional Corps went forward along its entire front. 3d Division occupied Corleone. Patrols reached Highway 121, north of Lercara Friddi (B-60) and established roadblocks, and also contacted the 45th Division on the right. One RCT pushing toward the Belice River reached a point six miles northwest of Bisacquino (B-30). The 82d Airborne Division, from which the 39th RCT had now been detached, occupied St. Margherita (C-19). The 39th RCT, 1st and 4th Ranger Battalions, and 1st Battalion, 77th Field Artillery (155 How) were formed into Task Force "X", which secured Castelvetrano and covered the assembly of the 2d Armored Division, northeast of the town.

The stage was set for a rapid drive on Palermo, and the "touchdown play" was called.

D + 12, 22 July

2d Armored Division moved to the line of departure, its left and rear covered by Task Force X, which secured the line Marsala (A-61) - Salemi (A-91). The division moved rapidly northeastward from Castelvetrano, through Camporeale (H-12), San Giuseppe, and Monreale to the high ground five miles below Palermo. Meanwhile, the 3d Division was deploying along high ground southeast of the city, and to the right, in the II Corps Sector, the 157th Infantry reached the main north coast road six miles east of Termini Imerese (B-73). Moving forward from San Caterina, the 180th RCT also reached the outskirts of Palermo, where it contacted the 3d Division.

A coordinated attack on the city was planned, but no resistance materialized, and at 2000B that evening, the 2d Armored Division entered Palermo, where the Commanding General of the Provisional Corps received the surrender of the city.

Thus, the second phase of the Seventh Army's mission in Sicily was virtually completed. The initial beachhead had been fully secured with the occupation of line Yellow on D plus 4. Now the island was cut in two and only isolated units in the west remained to be mopped up before the Seventh Army could devote its full attention to the final phase - driving the enemy back through the Messina Peninsula.

The final battles for the northeast portion of the island were already beginning to shape up. In the II Corps sector, the 1st Division continued to move northward, occupying Bompietro against continued artillery and mortar fire, tanks, mines, and demolitions. Enemy artillery fire increased between Roccapalumba (B-61) and Leonforte (H-39). The Italian 28th Aosta Division was in defensive positions along the line Caltavuturo (B-81) - Petralia (H-11) and southeast to Leonforte. German troops were reported concentrated between Regalbuto (H-59) and Catenanuova (H-68).

D + 13, 23 July

The final clean up of Western Sicily was now underway, and among the 9,562 prisoners taken was the Commanding General of all Italian coastal divisions in the west. 82d Airborne Division, with Task Force X now returned to its control, moved north and northwest, captured Trapani (A-63) and thus reduced the Marsala - Trapani area.

Against stiff resistance on the right of the II Corps sector, the 1st Division captured Petralia (C-01) and cut Highway 120. Patrols cleared the road from Petralia to Gangi (C-11). The 45th Division sent one battalion of the 157th Infantry west on Highway 113 to Termini, while the remainder of the regiment advanced east through Campofelice and on toward Cefalu (C-03). The 179th Infantry took Collesano (B-92) and continued east toward Castelbuono, encountering German reconnaissance units. The enemy had undertaken extensive bridge demolitions ahead of the II Corps and anti-tank ditches and roadblocks were found on the Caltavuturo-Termini and Alimena - Petralia roads.

Consolidation in the large part of Sicily now under Seventh Army control required immediate repairing of roads, railroads and public utilities throughout the area. A major task was the clearing of the Palermo harbor, where sunken ships, demolished quays, and mines made use of the port by large ships impossible. Clearing and repairing were undertaken by the Navy.

Many other major construction and salvage tasks to make safe the movement of supplies had been undertaken since the operation began.

During the first three days of the operation, 8,215 tons of supplies had been unloaded over the beaches, and a total of 120 small vessels unloaded hourly. Meanwhile, the port of Licata provided facilities for handling five LST's simultaneously, and was put into use on the morning of July 12.

To speed the movement of supplies ashore, it was decided to bridge the gap which the enemy had blown in Gela pier at the beginning of the invasion. Work was begun on the installation of two pontoon causeway sections.

As early as July 13, D+3, a railway was serving the advance of Seventh Army units. From Licata, the railway was in operation as far as Campobello. Thirty cars were being spotted daily at Yellow Beach (three miles east of Licata) to move supplies inland.

Palermo

A week later, July 20, sixteen steam locomotives and 100 cars were located at the Caltanissetta railroad yards.

On July 28, six days after the fall of Palermo, the first coasters (cargo ships) arrived for unloading in the harbor. At this time, work was underway on the removal of sunken hulks in the harbor.

After the fall of Palermo, it was found that the standard gauge railway between Palermo and Messina was reported in good condition from Palermo to Termini, with a considerable amount of available rolling stock. On July 29, the first train along the northern Sicilian coast railway was operated between Palermo and Cefalu. By this time, unloading of supplies on the southern coast was tapering off as the main axis of supply for the Seventh Army shifted to Palermo.

Four days later, July 17, construction was started on a bulk fuel storage tank at Gela.

The next day, a cache of 16,000 gallons of oil and 13,000 gallons of gasoline was found at Comiso airfield. By July 20, the bulk fuel storage tank, with a capacity of 5,000 barrels and a pipeline with a 1,000 barrel capacity tank, were ready for operation at Ponte Olivo airfield.

Two waterpoints were operating at Licata, one at Campobello, and work was underway on the drilling of a well at the Ponte Olivo airfield.

The first valuable underground bulk fuel storage tanks were found at Ponte Olivo on July 13. These tanks had a capacity of 42,000 gallons. Reconnaissance was then made for additional storage tank sites, and for a pipeline to be constructed at the Gela pier.

D / 14, 24 July

Beginning the Seventh Army's change of front for the drive to Messina, the II Corps turned eastward, with the 18th RCT of the 1st Division reaching Gangi (C11) and continuing five miles east toward Nicosia (C30). Contact was maintained with the enemy elements withdrawing toward the east. The 45th Division took Cefalu (C03) and reached the stream crossing three miles east of the town. Progress was slowed by demolitions on Highway 113. Inland, the town of Castelbuono (C02) was taken.

Seventh Army took its greatest bag of prisoners on the 24th - 11,540 of them, mostly Italians rounded up in the west where Provisional Corps was cleaning up pockets of resistance around Palermo and Castellammare Del Golfo and disarming the many disorganized Italian units.

An indication that future operations in Sicily might be conducted principally against German units was the identification of all three battalions of the 3rd Panzer Grenadier Regiment in the area north of Alimena-Leonforte.

D / 15, 25 July

To provide II Corps with adequate artillery support for its eastward drive, Army shifted the bulk of available artillery to the Corps. The 77th Field Artillery Regiment, 1st Battalion of the 36th, the 34th Field Artillery Battalion and the 5th Armored Artillery Group were relieved from attachment to Provisional Corps and attached to II Corps. The transfer was affected on the 25th and 26th and the units began moving eastward to join II Corps near Alia (B70). Additional fire support was provided the infantry by extensive use of 4.2" chemical mortars, which proved extremely effective in mountainous terrain.

On the front, II Corps improved its positions along both Highways 120 and 113, The 1st Division repelled an enemy counterattack and held position five miles east of Gangi, and the 45th Division advanced along highway 113 to a point north of Pollina (north of Castelbuono).

To assure adequate supplies for forth coming operations, 45 LST's were allotted to Seventh Army until 8 August. It was anticipated that Palermo harbor, capable of handling regular cargo ships, would be in operation by then.

In continuing the clean up of western Sicily, 7,237 prisoners were taken. The total of prisoners captured to date thus increased to an estimated 52,000, plus 7,000 enemy dead and wounded. Booty included 227 aircraft, 220 guns of 75mm or larger caliber, 159 tanks of all types, including 43 Mark III and IV and 22 Mark VI's. Advance CP of the Seventh Army opened at Palermo.

D / 16, 26 July.

As II Corps advanced eastward against increasing resistance, it was apparent that the enemy intended to impose maximum delay on our further progress, and that the rapid withdrawal of the previous ten days had come to an end. Air reconnaissance reported an increase in the flow of reinforcements across the Straits of Messina, and the enemy was reported digging in west of Sperlinga (C30) and along the general line Hill 794 (C3109) - Hill 776 (C3204) - Hill 749 (C3106). The 1st Division moved forward north and south of Highway 120 (Petralia-Randazzo), the 91st Reconnaissance Squadron reached the road junction about five miles southwest of Nicosia, and the 45th Division got as far as the road junction north of San Mauro (C12).

The Seventh Army was displacing supply, service and rear combat elements forward. The 39th RCT and the 3d Chemical Weapons Battalion were relieved of attachment to Provisional Corps and attached to II Corps.

First reports of the downfall of Mussolini and the succession of Badoglio began to circulate and gave the Allies in Sicily the satisfaction of knowing that their assault on the island had already brought about the first crack in the Axis political structure. That Mussolini and the Fascists had little support had been eloquently demonstrated many times during the campaign. Almost without exception, high ranking Italian Army and Navy officers (five captured generals and one admiral were being evacuated to North Africa) had showed little hesitation in voicing disgust for Mussolini and his government; and the civilian populations of captured towns had everywhere greeted the Americans as liberators.

D ∕ 17, 27 July.

Enemy resistance was increasing on the northern flank where, it was estimated, the German 29th Motorized Division would oppose our advance on the north coast road. The 15th Panzer Division faced the Seventh Army right flank. It was estimated that of Italian units, the 202, 206 and 207 coastal divisions had been completely destroyed, the 208th Coastal Division 75 percent destroyed and the 28th Aosta Division 60 percent.

Considerable enemy movement had been noted north and northeast out of Nicosia, and there were additional indications of movement into, but not out of, the area bounded on the east by San Fratello (C35), Troina (C51) and Regalbuto (H59). From these signs it was concluded that an organization of defensive positions had been taking place in that area.

Preparing for a major II Corps attack eastward, the 1st Division cleaned out several enemy strong points along highway 120 and advanced to within six miles of Nicosia. The 4th Tabor of Goums, covering the left flank of the 1st Division, moved cross-country toward the Nicosia-San Stefano (C33) road. 45th Division reached Castel di Tusa, five miles west of San Stefano, on highway 113, and San Mauro (C12), in the interior. The 91st Reconnaissance Squadron was covering the right flank of the 1st Division and maintained contact with the 1st Canadian Division.

Prisoners taken in the west continued to be a serious administrative problem. 3,411 new ones were reported on the 27th. Approximately 37,000 were in the stockade at Prizzi (B40).

Palermo harbor began operation when the first craft (LCT's) arrived.

D ∕ 18, 28 July.

With the enemy withdrawing to the Troina (C51) - San Fratello Line, the Seventh Army was in position west of San Stefano (C33) to Nicosia, prepared to attack eastward.

The most bitterly fought battle of the campaign was to follow in a matter of hours. The Battle of Troina lasted from August 1 to August 6, when the enemy withdrew from their positions after launching twenty-four counter-attacks during the five days. Nearly as bitterly contested was the Battle of San Fratello, which began August 4 and ended August 8. The demoralizing result of these two battles started the enemy on his hurried way to Messina and evacuation to the Italian mainland.

In the II Corps sector, on July 28, the 1st Division captured Nicosia and the road net east and north of the town--then continued to attack eastward. The 45th Division advanced eastward against determined enemy resistance east of Castel di Tusa, five miles west of San Stefano. By 2200B advanced elements had reached a point four miles west of San Stefano. Meanwhile, patrols of the 1st and 45th Divisions made contact near Mistretta (C32).

The Air Force reported for July 28 that there was heavy traffic from Troina to Randazzo (C82) with a concentration of up to 200 motor transports in and around Cesaro (C61) early in the day. During the day enemy air activity increased, and that the enemy was concerned by the threat of the Seventh Army against the north flank was shown by the types of defense and the advent of the German 29th Motorized Division into the North coastal area.

D ∕ 19, 29 July

Increased resistance to the drive on Troina and San Fratello was encountered west of San Stefano and as far south as Mistretta in the Northern Zone. Patrols encountered no resistance north and northeast of Nicosia. An indication of the enemy concern on the threat to their defenses was that Germans evacuated Spirlinga (C-30) rapidly, leaving considerable dead and much equipment. During the night of July 28-29, three battalions of German infantry were reported as having moved through Nicosia.

The Seventh Army drive under the direction of II Corps Headquarters saw the 1st Division advancing north and east fron Nicosia, reaching the outskirts of Mistretta on the north and a point four miles from Cerami (C-41) on Highway 120.

The 45th Division advanced east of Tusa River along the coast, sending one of its infantry units to flank the enemy in the vicinity of San Stefano from the south. Another infantry unit moved cross country and entered Mistretta.

Pocket of resistance were silenced by the end of the day, while operations were underway to flank the enemy south of San Stefano on the northern axis.

Only 1,555 prisoners were reported taken this date, indicating that the round-up of Italian prisoners in Western Sicily was nearly complete. Authority was granted to parole Sicilian enlisted prisoners of war.

D ∕ 20, 30 July

Resistance was continuing west of San Stefano, but the enemy was forced to withdraw northeast from Mistretta. Intense rear guard action was felt east and northeast of Nicosia. The defense of San Stefano was conducted by the 71st Panzer Grenadier Regiment of the German 29th Motorized Division.

News arrived that the islands of Favignana, Marettimo, and Levango, off Trapani, surrendered unconditionally to the 82nd Airborne Division.

The 1st Infantry Division had pushed the enemy back toward Troina. With the 39th RCT and 4th Tabor of Goums attached, the division advanced along the Nicosia - Cerami road, reaching the road junction two miles west of Cerami and high ground south of Capizzi. Meanwhile, its patrols reached Cerami with only slight resistance. The 91st Rcn. Sqdn. maintained contact with the 1st Canadian Division on the right flank.

The 45th Division pushed toward San Stefano against stiff resistance to their pincer movement on that city. One infantry unit moved eastward from Pittineo (six miles southwest of San Stefano) to Reitano (C-33) and prepared to attack San Stefano from the south.

The number of prisoners taken on July 30 dropped to 372, the lowest day's catch to date in the campaign. The aggregate for the campaign to date was estimated at 80,000.

Our losses to date were: Killed - 713, Wounded - 2,616, Missing - 713.

D ∕ 21, 31 July

A directive was issued on July 31 stating that the Seventh Army would attack east along the north coast road, the road from Nicosia to Randazzo, and thence northeast on Messina, driving the enemy out of the peninsula.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

II Corps (1st Division, 9th Division, 3rd Division, replacing the 45th Division, 70th Tank Battalion, 753rd Tank Battalion, 4th Tabor Goums, 91st Reconnaissance Squadron, 19th and 39th Engineer Regiments, 13th Field Artillery Brigade, 77th Field Artillery Regiment, 5th Armored Field Artillery Group, 2nd and 3rd Chemical Battalions, and the 106th Coast Artillery Battalion), was to advance east on two axes along the north coast road and the road from Nicosia to Randazzo. It was to maintain a relentless drive until the enemy was decisively defeated.

Provisional Corps (45th Division, 2nd Armored Division, and the 82nd Airborne Division) were to organize and secure the west portion of Sicily, protect Palermo and the rear of II Corps, prepared to support the advance of II Corps by moving reinforcing troops to the east in II Corps zone.

The enemy was driven from San Stefano during the night of July 30-31. The town of Rietana was evacuated during the night, and Capizzi and Cerami, which had been held by one company to each town, were taken during the day. Stubborn resistance was offered by the German rear guard in Gagliano, but that town was also taken.

Along the entire Seventh Army front the enemy was evacuating north and east. Photo reconnaissance failed to reveal organization of defensive positions although time had been ample for such work. Appearance of German units in the north continued to indicate the importance attached to the threat of Seventh Army.

San Stefano fell to II Corps' 45th Division, with the USS Destroyer "Rowan" furnishing naval fire support for the advance of the infantry units on the coast road. The 3rd Division had been designated to relieve the 45th Division in this area, and took over at 1530B.

In darkness, the 1st Division moved to within five miles of Troina after capturing Cerami (C-41) on the way. On the division's left flank, the 4th Tabor of Goums captured Capizzi (C-41). The 1st Division was now in a position from which II Corps could start an attack on the enemy stronghold of Troina.

The rapidly moving situation put a severe strain on map supply agencies. It was necessary to deliver maps from Seventh Army rear Headquarters by plane, and surplus maps held by II Corps were turned over to the 3rd Division on its re-entry into action. Seventh Army strength on July 31 was 201,928.

D ∕ 22, 1 August

Seventh Army was continuing its steady advance eastward on two axes against stubborn enemy delaying action. Reinforcements of artillery concentrations in the Troina (C-51) area slowed the advance. (See G-2 Estimate of the Enemy Situation #6 for long range capabilities.)

II Corps units were still pushing forward. Forward elements of the 1st Division were keeping the enemy busy on the outskirts of Troina, while the 26th RCT moved north of the 39th RCT to flank the enemy positions at Troina. The 91st Rcn Squadron entered Gagliano, seven miles southwest of Troina.

Headquarters II Corps moved to a point four miles northeast of Nicosia from which spot Troina and the surrounding hills could be observed.

The 3d Division completed taking over the sector of the 45th Division in the San Stefano area and continued the attack along Highway 113. On its relief, 45th Division was attached to the Provisional Corps and began assembly in the area between Termini and Cefalu. Continuing the attack along Highway 113, the 30th RCT advanced east along the road to about four miles east of San Stefano.

The 9th Division (less the 39th RCT)which was already in action, arrived in Palermo Harbor on August 1, and began assembling near the city.

Palermo Harbor and airfield were bombed by nine or more enemy planes at 0410B, some damage being done at the docks.

Paroling of enlisted men of the Italian Army whose residence was on the island of Sicily began. Both prisoners and hospital patients were now being evacuated from Cefalu to Palermo by train. The train was in daily service, attended by U.S. Army Medical Corps and Italian medical personnel.

D ∕ 23, 2 August

The stage for the Battle of Troina was set. Preparations were completed by II Corps for strong attacks on both axis. A preliminary fight had opened up at dusk, August 1, during which the enemy, with an estimated 200 men, attacked at hill C-5018 near Troina but were repulsed.

Our advance was constantly delayed by blown bridges, badly damaged roads at places which required engineer rebuilding, and heavily laid minefields. The 1st Infantry Division completed its plans for a coordinated attack. The 3d Division consolidated its positions in the San Stefano - Coronia (six miles east of San Stefano) area preparatory to resuming the eastward advance.

The 9th Division began assembling in the Nicosia - Cerami area, and the 45th Division completed assembling in bivouac in the area between Termini and Cefalu.

Straggler collecting points were established at Termini Imerese, Caltavatura, (B-81), and San Caterina (H-08). The large number of prisoners sent to North Africa had reached the capacity of existing facilities there and the Commanding General, Eastern Base Section, notified Seventh Army that no more could be handled until a later date. Admissions to medical installations this date were 848, and total admissions to date were 11,877.

D ∕ 24, 3 August

The Battle of Troina was underway. Coordination of ground and air forces brought effective results against formidable enemy counterattacks, and the Seventh Army continued its drive to capture the town.

Extremely bitter fighting which began August 2 went over into August 3d with increased vigor, indicating that the enemy intended to make his first determined stand against our advance.

An attack was planned by II Corps for 1st Division units. The attack jumped off as scheduled at 0330 hours. The 16th Infantry replaced the 1st Battalion, 39th Infantry, for the attack, and was to move north of the 39th to cut the road east of Troina while the 2nd Battalion, 18th Infantry (Mtzd), moved via Agira and Gagliano to envelope the enemy position south of Troina.

Stubborn resistance throughout the day found enemy elements southwest of Troina slowly withdrawing under the pressure. The 1st Division captured high ground west and north of the town. During the attack by the 16th and 18th Infantry units, the enemy was showered with heavy artillery.

The 3d Division, aided by naval gunfire, advanced slowly along the coast road, encountering numerous demolitions, mines, and sporadic artillery fire, to within two miles of Fiume Furiano (running north, two miles west of San Fratello).

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

The 60th RCT, 9th Division, completed movement from Palermo to Nicosia, while the 47th RCT completed debarkation at Palermo and began movement to the Nicosia area.

D + 25, 4 August

Stiff, determined opposition retarded the advance of Seventh Army on both fronts. Late in the afternoon a full scale attack was launched against the Troina position, by the 1st Division.

Enemy artillery had been noted in increasing numbers along the coast road, and it was indicated that stubborn fighting and defense astride Highway 120 was anticipated to keep the line of communication around the base of Mt. Etna open until enemy evacuation had been completed from that area.

During the morning, routes across the river were reconnoitered and that afternoon, the 15th Infantry launched an unsuccessful attack supported by one cruiser and two destroyers. The 15th Infantry then moved up the valley three or four thousand yards the next day, attempting to find better routes across the river.

The 1st Division opened the attack on Troina with a fifty minute artillery and air preparation at 1645B hours. Eight and a half artillery battalions were firing on enemy positions, and 72 A-36 Fighter-bombers in two waves of 36 planes carrying a 500-pound bomb each dropped its load on Troina's defenders. The terrific casualty and demoralizing effect of this bombardment was attested to later by many German prisoners of war.

At 1735B hours the infantry jumped off. All the regiments made successful advances, but the battered German defenses still held doggedly and no general break-through occured.

The 60th Infantry with two battalions of artillery and some attached engineers were sent to threaten enemy observation and artillery positions north and northwest of Cesaro, supporting the enemy position at Troina. This movement undoubtedly had considerable influence on the results of the Battle of Troina.

Despite the pounding given the enemy, the progress of forward elements north, west, and south of Troina, was impeded by heavy enemy fire and minefields.

At the same time Navy Task Force 88 assisted the 3d Division by naval gunfire on Cape Orlando (C-65), and San Agata (C-54), and bridges and defiles on Highway 113. The 7th RCT with attached corps artillery was shuttled by sea in landing craft to the area behind the 15th RCT (about one mile west of Furiano River and two miles west of San Fratello) in preparation for an attack on San Fratello Ridge (C-53).

Palermo Harbor and airfield were bombed again at 0405B by more than 25 enemy planes using low level and dive bombing tactics. Meanwhile, 9th Division completed its assembly at Nicosia and was attached to II Corps.

G-1 reported that for August 4 there were 823 prisoners taken. The total now stood at 91,600 taken by Seventh Army. Our losses to date included: Killed - 851, Wounded - 3,379, Missing - 860.

D + 26, 5 August

The enemy was now fighting for time in which to carry out an evacuation. This became evident through reports of large vessels in the Messina Strait.

Catania had fallen. Troina still offered extremely stubborn resistance. Demolitions impeded progress on the north coast road. From San Fratello (C-54), south to Mount Pellato, the enemy withdrew only under pressure. The line of Mount Pellato (C-42), south to Mount Acuto (C-51), was well organized and strongly supported by heavy mortar and artillery fire.

A horseshoe type of defense was noted from Mount Dellacroce (C-51), then west of the town to Mount Gregegio (C-50). On the south, this area was well defended, organized in depth, and occupied by a determined enemy.

In the British Eighth Army sector, the Canadians forced the enemy east of the Troina River. The British XIII Corps captured Catania and Misterbianco (H-87) and pushed patrols as far north as Paterno (H-78).

The 1st Infantry Division, with the 39th RCT attached, continued its relentless attack on enemy positions at Troina. High ground south of the city was captured by the 18th Infantry. The 1st Division drive was directly supported by XII Air Support Command which conducted three dive bomber missions against enemy defense positions in the vicinity of Troina.

Meanwhile the 3d Infantry Division continued its attack toward San Agata with the 30th Infantry (all under II Corps Command) attacking San Fratello Ridge from the southwest.

At the close of the day, the II Corps units had captured the high ground dominating Troina, and had opened its attack from the south on San Fratello Ridge.

D + 27, 6 August

Aided by dive bombers, the 16th RCT of the 1st Infantry Division took Troina and pushed one mile east of town where vigorous enemy resistance was again encountered.

The Advance Command Post of the Seventh Army moved from Palermo to San Stefano at 1200B, and that afternoon several bombs landed near the CP during an attack on naval craft loading at San Stefano beach.

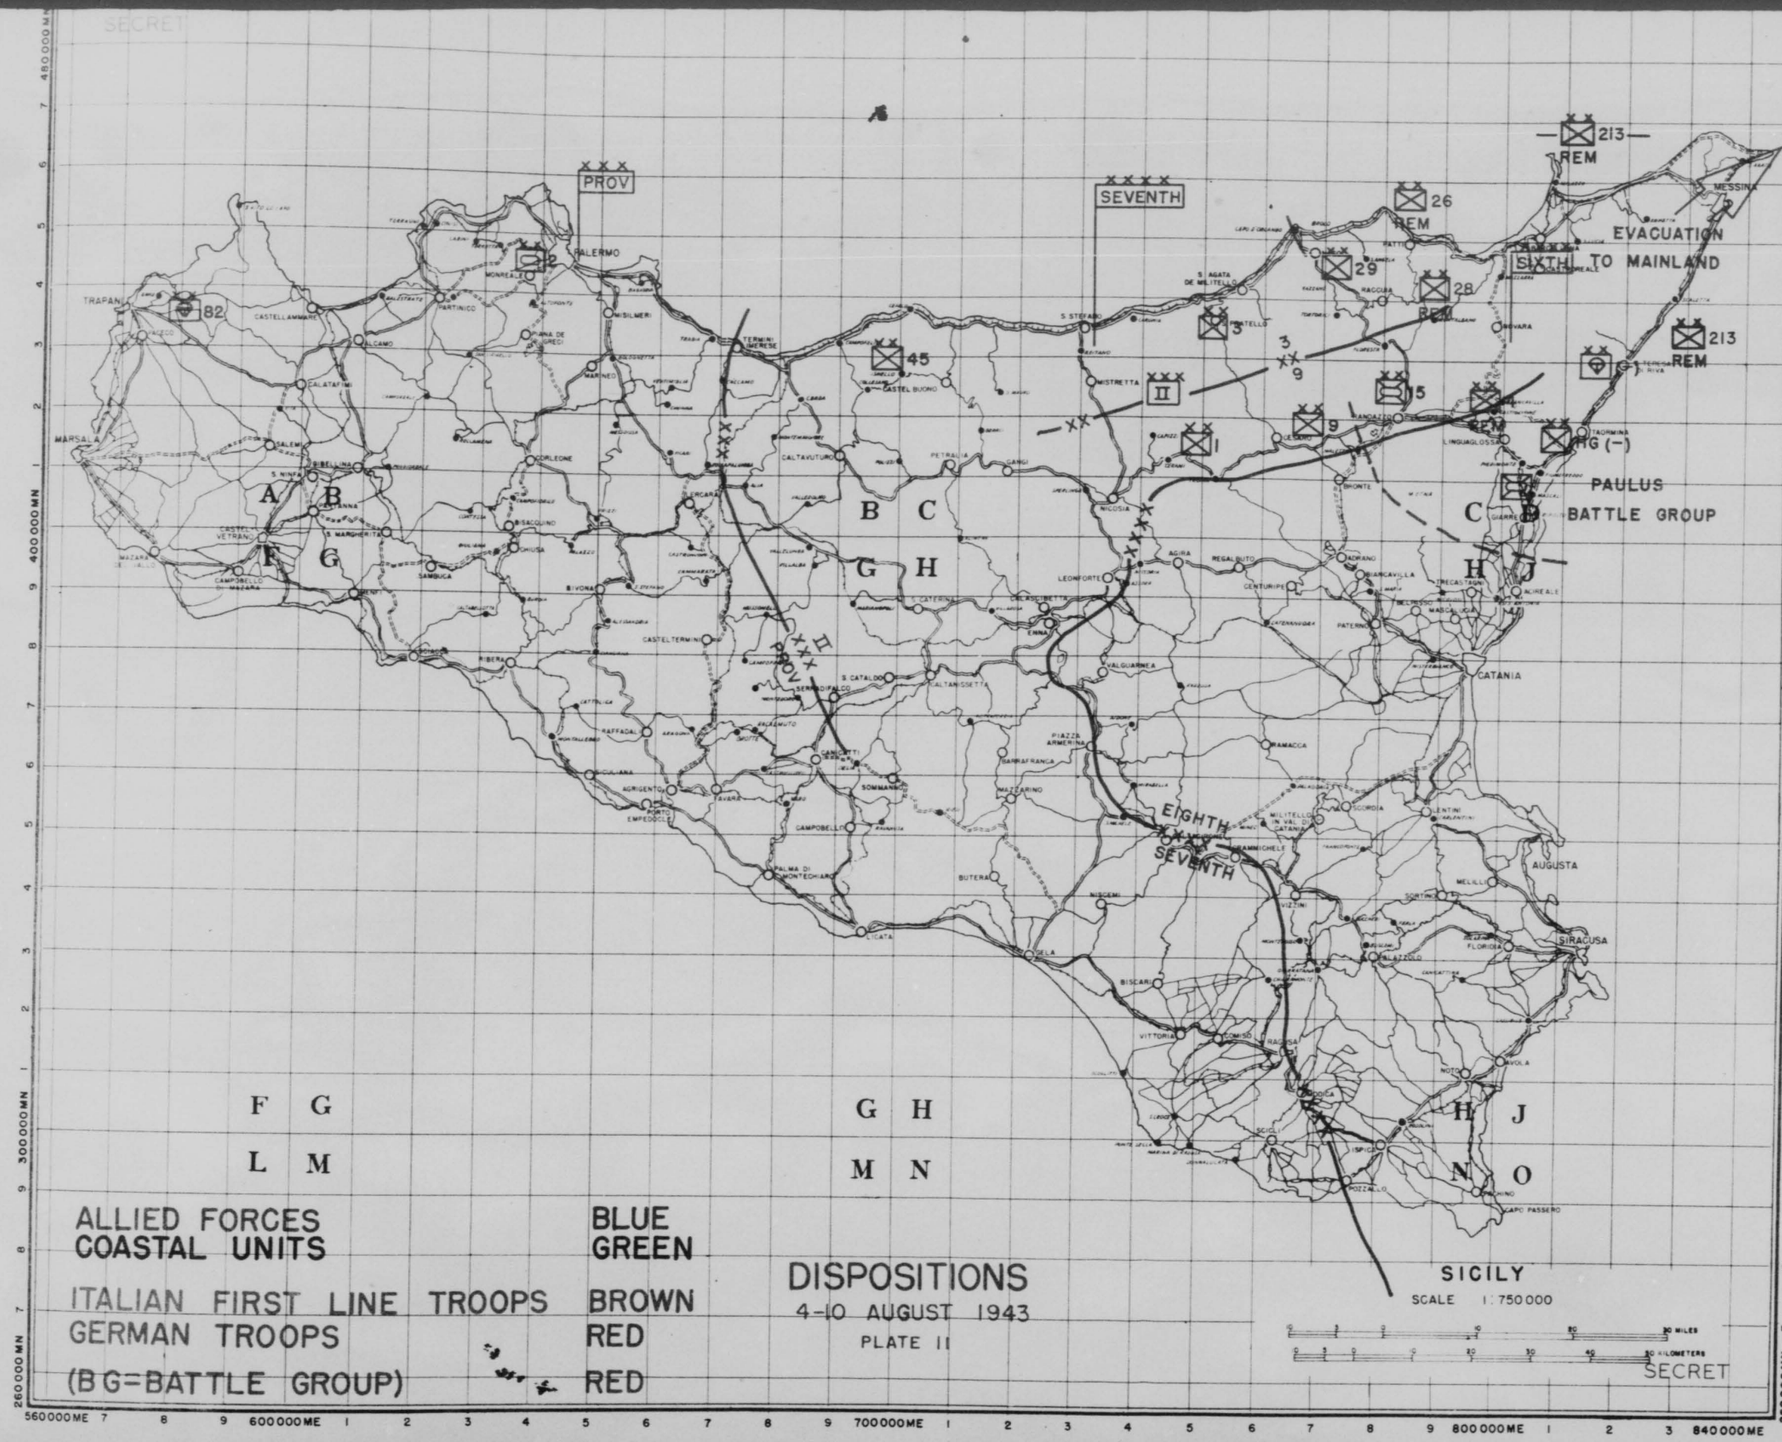
Enemy planes raided Palermo Harbor area at 0425B. Flares were dropped over the area but all bombs landed outside the harbor.

The enemy continued to hold San Agata and San Fratello in the north. Mines, demolitions, and booby traps were widespread and hampered the movement of the Seventh Army for the remainder of the campaign.

While the 16th RCT was entering Troina, the 60th RCT of the 9th Infantry Division, captured the high ground seven miles to the north of Troina. The 91st Reconnaissance Squadron and the 4th Tabor of Goums were attached to the 9th Division, protecting its left flank.

Units of the 3d Division were, on August 6, attacking enemy positions on the west bank of the Furiano River and succeeded in gaining a foothold. But during the afternoon a counter-attack by the enemy forced withdrawal of 3d Division units to the west bank.

D + 28, 7 August



Strong opposition across the entire front held up the advance along the coast, but progress was made east of Troina. The coastal resistance by the enemy was supported by heavy concentrations of artillery, mortar, and machine gun fire. A local counter-attack by the enemy north of San Fratello prevented any further advance during the day.

In the Troina sector, the enemy had withdrawn the bulk of his forces and engaged in stubborn rear guard action, retiring only under pressure toward Cesaro (C-61). Six enemy tanks were destroyed in the fighting.

The Battle of Troina having been concluded, II Corps relieved the 1st Division and replaced it with the 9th Division. On August 7, units of the 9th Division attacked east from Mt. Pelatto, eight miles north of Troina. They advanced slowly, encountering strong enemy resistance five miles east of Mt. Pelatto. Another unit advanced eastward from Troina and reached the Troina River.

The 3d Division was gaining a foothold on the east bank of the Furiano River during the day, and by dark held high ground north of San Fratello. Strong enemy positions on Mt. Fratello were bombed by A-36's from the XII Air Support Command to support the 3d Division attack.

A smoke screen 900 meters in length was maintained for 13½ hours to screen the movements of the 7th Infantry in preparation for the attack on Fratello Ridge. The screen was put up by 4.2" chemical mortars which maintained great accuracy despite continuous fire.

Enemy shells landed at half hour intervals in the vicinity of the Advance Command Post of the Seventh Army, beginning at 0100B, and lasting until daylight. At 1130B, enemy aircraft bombed shipping near the San Stefano beach. One small ship was hit and beached.

D ∕ 29, 8 August

The Seventh Army advanced eastward on both axes during the day, driving the enemy from the San Agata and Cesaro positions, and capturing San Fratello.

Plans had been initiated by Seventh Army Headquarters for an amphibious operation by II Corps units against the enemy's rear. It was carried out successfully, with landings two miles east of San Agata, at 0400 hours. The enemy was completely surprised. The landing force was composed of the 2nd Battalion, 30th Infantry, a tank platoon of the 753rd Tank Battalion, and two batteries of the 58th Armored Field Artillery Battalion, loaded at San Stefano. It landed at a point two miles east of Torrenova (six miles southwest of Cape Orlando) at 0400B without opposition and captured high ground south of the highway. This operation broke enemy resistance on Mt. Fratello, while the 15th and 30th Infantry units captured the town of San Fratello. The 7th Infantry, advancing under a smoke screen, captured San Agata, mopped up pockets of resistance, and gained contact with the special landing force at 1600B.

Enemy resistance in the San Fratello sector ceased during the night of August 7-8, and approximately 1500 prisoners of war were captured. The heights of Mt. Fratello were reached early on the morning of August 8.

The German and Italian defense of the San Fratello position had been bitter and determined, and as in the Battle of Troina, the enemy was forced to withdraw only after the full weight of superior fire power and maneuvering had been brought to bear.

Enemy forces were retreating east of Cesaro at 0800B, heavily mining the road from Cesaro to Randazzo. The 47th Infantry of the 9th Division entered Cesaro, where many bridges were found blown. Meanwhile, the 2d Battalion, 60th Infantry, captured Mt. Camolato, six miles northwest of Cesaro.

Ustica Island surrendered unconditionally on August 5, to a combined naval and military force. The Germans had departed on July 11. Five enemy E-boats made an unsuccessful attack on Palermo Harbor, being driven off by destroyers.

Total admissions to medical installations reached 16,853, which included about 1500 enemy sick and wounded. The total evacuated to date by water was 3,750, and by air, 3,447.

D ∕ 30, 9 August

The enemy was conducting a continuous rear guard action along the entire front. At this time, however, the 9th and 3d Divisions were consolidating elements in preparation for a coordinated attack against known enemy positions.

Enemy forces in the north coast sector withdrew east of the Zappula River, and the road from San Fratello south to Cesaro was also evacuated. On the road to Randazzo, the enemy retired to the Simeto River, 10 miles west of Randazzo. But all along the front, the enemy continued delaying action with mines, mortar fire, and heavy artillery concentrations.

Air reconnaissance reported that the enemy had Milazzo Harbor in use for some time, and further reported increased landing craft activity in the Messina Straits on August 7, when approximately 40 craft were seen.

Reconnaissance elements of the 3d Division worked east of Torrenova, six miles southwest of Cape Orlando, to envelope enemy positions. The 30th Infantry passed through the 7th Infantry and continued to attack eastward along highway 113, reaching a point three miles east of Torrenova. The 47th Infantry of the 9th Division continued its attack east of Cesaro, on Highway 120.

D ∕ 31, 10 August

Slowly, because of the heavy concentration of mines, demolition, and other obstacles, but steadily, the Seventh Army advanced. By 1600B, the enemy had withdrawn west of the Zappula River and had accupied the high ground west of Naso. No organized defensive positions were noted in the coastal sector.

On the road to Randazzo, the enemy withdrew east of the Simeto River. During the withdrawal, extensive minefields and numerous demolitions of bridges were completed along Highway 120 from Cesaro. And a few isolated pockets of resistance still existed in the coastal area between San Marco and the Zappula River.

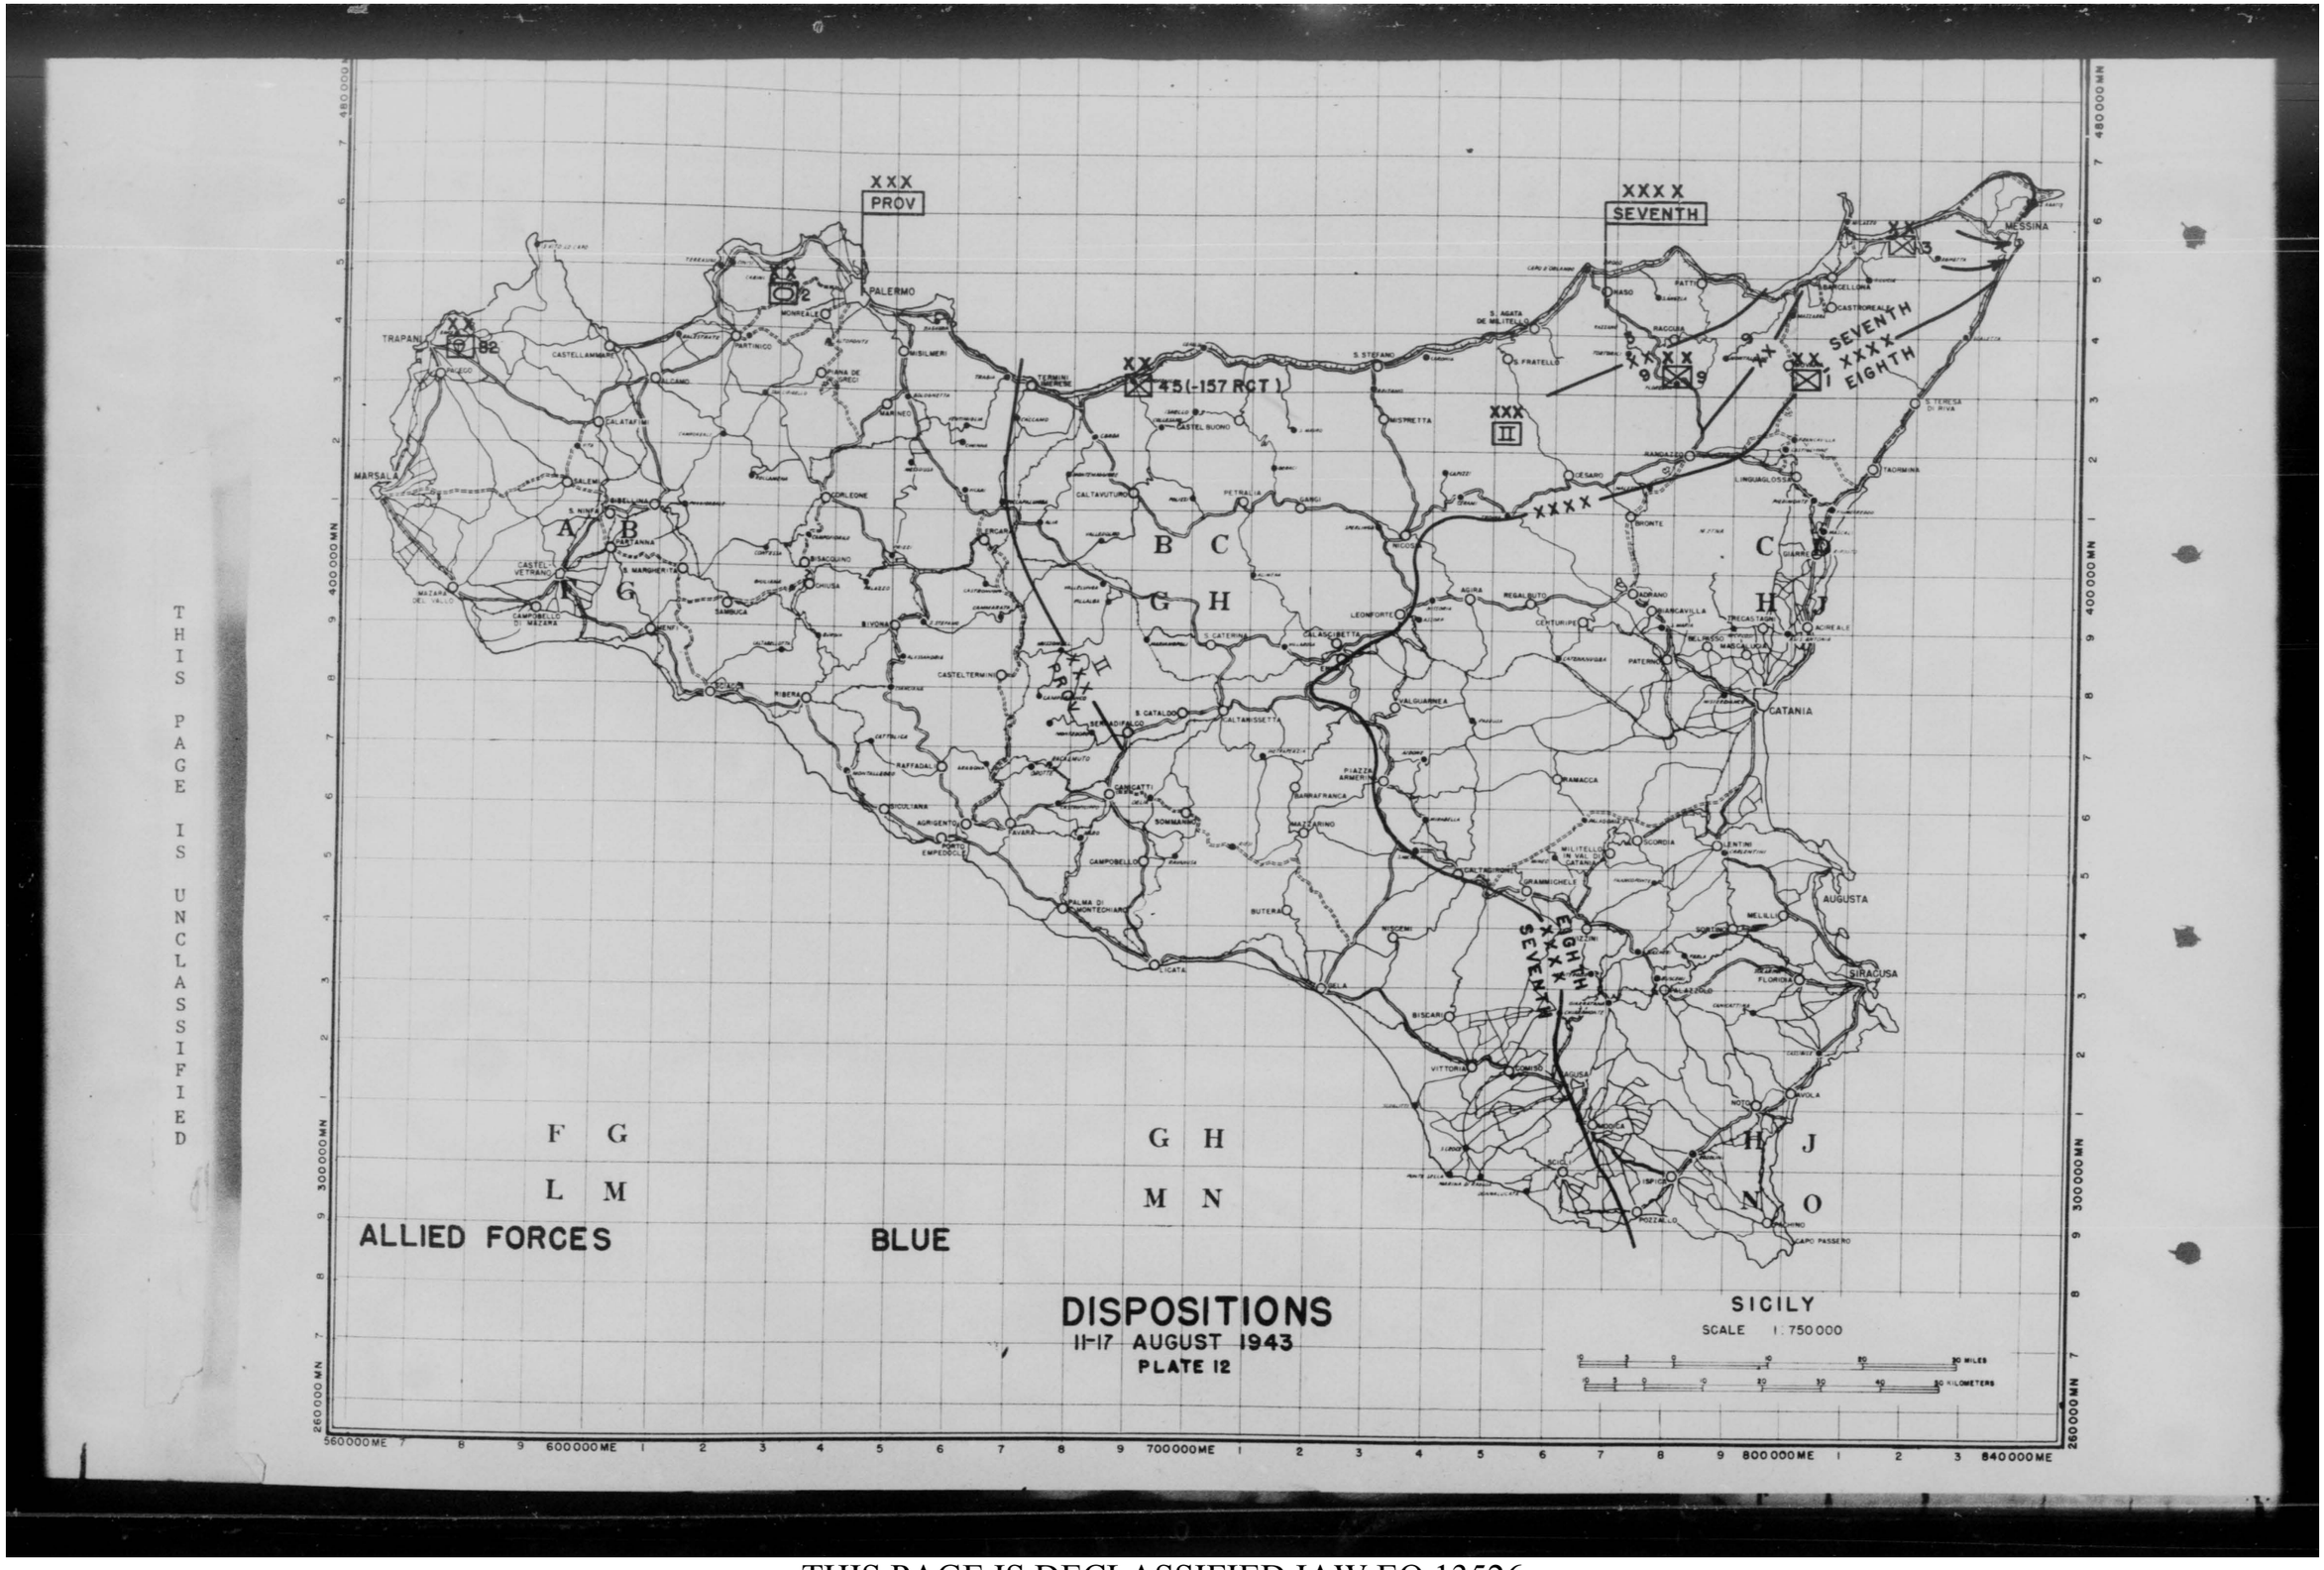
The convergence of the 15th Panzer Division, elements of the Herman Goering Division, and portions of the 3rd Parachute Division in the center, indicated strong resistance to be offered in that area.

During the day the 9th Infantry Division's 60th Infantry advanced along the line of hills in the section of II Corps zone to Mt. Saro, eight miles north of Cesaro. At the same time the 47th Infantry advanced along Highway 120 to the road junction seven miles north of Bronte.

The 3rd Division beat off a strong counter-attack during the afternoon southwest of Cape Orlando and then crossed the Zappula River. Inland, via Militello (four miles southwest of San Agata), the 15th Infantry advanced across the Rosmarino against stiff opposition.

A hospital train was performing invaluable service transporting casualties from Cefalu to Palermo, carrying as many as 300 a trip. As of this date, the strength of Seventh Army was 197,836. Our total losses to date were: Killed - 1,113, Wounded - 4,308, Missing - 939.

D ∕ 32, 11 August



Efforts of the enemy to reform and reorganize for a defense on the Cape Orlando - Naso line were broken by a strong 3rd Division attack. This involved a second en-

Army Strength!

velopment by sea, with a landing at Brolo. Protected by air cover and supported by naval gunfire from Naval Task Force 88, the 2nd Battalion, 30th Infantry, reinforced with armored artillery and tanks landed successfully two miles east of Cape Orlando and captured a position astride the highway and railroad two miles west of Brolo.

This force was counter-attacked during the day but held its position. The 7th RCT pushed along the coast road, crossing the Zappula River while the 15th RCT advanced northward and captured Naso.

No enemy attempt to evacuate south along the Naso - Randazzo road had been made. He continued rear guard action along Highway 120 to Randazzo, using mines and demolition. Although indicated earlier, no strong defensive position northwest of Randazzo had been located by our troops moving in from the northwest. Other than isolated pockets of resistance in the vicinity of Naso, which were nearly surrounded, and the enemy continued rear guard action along the entire front of the Seventh Army.

The 60th Infantry of the 9th Division was continuing its march eastward across extremely rough terrain toward Floresta. In most places the regiment had to build its own roads. The 39th RCT passed through the 47th RCT and established contact with the 78th Division of the Eighth Army which was moving on Maletto. The 39th continued to attack eastward toward Randazzo against strong enemy resistance.

By the end of the day, the II Corps units were closing in on Randazzo.

D ≠ 33, 12 August

Enemy evacuation across the Messina Straits was underway on a large scale. Eastbound enemy traffic was fully loaded and westbound vessels were empty. Air photographs which covered the Messina Straits on August 11 showed 33 water craft, including 10 Seibel ferries.

Enemy forces were withdrawing east of Patti (C-84), breaking contact during the night of August 11-12. The defense of Randazzo consisted mainly of mined roads defended by artillery, mortar, and long range small arms fire. Generally, the enemy continued delaying action in the north in the Seventh Army zone. In the center, the enemy evacuated Floresta (C-83) and was withdrawing east of the Naso - Randazzo road.

Before the British Eighth Army, the enemy's retrograde movement reached Riposto (D-01) without indications of an organized defense. In the 9th Division zone the 60th RCT captured Floresta, ten miles north of Randazzo, cutting the Cape Orlando - Randazzo road.

The 3rd Division's 7th RCT advanced along the coast road and captured Cape Orlando. Both the 7th RCT and the 15th RCT made contact with the special landing force West of Brolo (C-75). The 30th RCT passed through the 7th Infantry, and aided by naval gunfire moved rapidly along the coast road to capture Brolo. Elements of this regiment also entered Ficarra (five miles south of Brolo).

Meanwhile the British XIII Corps 78th Division pushed north of Maletto to high ground south of Randazzo to effect a pincer movement on the city with the 9th Division attacking from the north and west.

At the close of day, the 9th Division was in an advantageous position north and west of Randazzo to wage an all-out attack on the city. The 3rd Division was advancing along Highway 113.

D ≠ 34, 13 August

Once more enemy withdrawals were characterized by heavy demolitions and minefields to impede the advance of the Seventh Army. In the northern sector there was a general enemy withdrawal and apparent disorganization. Little contact was made west of Patti (C35).

In the vicinity of Randazzo, the enemy withdrew under cover of darkness, supported by occasional artillery and mortar fire. A large concentration of motor transport was observed in the vicinity of Messina (D35), and three small freighters and 30 small boats were seen at Porto D'Olivieri, (C94).

By nightfall the 9th Division had captured Randazzo, the last strong enemy position on the southern axis. The 39th RCT captured the city against stubborn resistance, while the 60th RCT continued the attack eastward from Floresta (C83). The 47th RCT passed through the 39th RCT on the eastern outskirts of Randazzo.

In the 3rd Division zone, the 30th RCT continued its advance to the east within two miles of Patti, while the 15th RCT and 3rd Ranger Battalion cleared pockets of resistance southwest of Patti. The advance past Cape Calava, four miles northwest of Patti, was impeded by a large crater blown in the road at the eastern end of the Calava tunnel where the road had been carved from solid rock mountainside. LCT's were used to ferry infantry and artillery past this block, which required 24 hours to repair.

A specimen of incendiary-filled 32 CM. (German rocket shell) was taken from a captured German ammunition dump.

The number of prisoners taken this date rose to 2,532 following the breaking up of remaining Italian units in northeast Sicily.

D ≠ 35, 14 August

The enemy was by this time concentrating almost exclusively on trying to evacuate the island of Sicily successfully. Enemy air operations during this phase were confined to scattered night bombing raids and an occasional daytime strafing and bombing mission along the coast road.

The enemy evacuated east of Falcone (C94) during the night of the 13-14 August. Mild contact was gained at noon, northwest of Funari (seven miles southwest of Barcellona (83)), but the enemy was primarily concerned with withdrawal.

Montalbano (C83) was also evacuated during the night of August 13-14. That evacuation was continuing along the coast was evidenced by air reconnaissance which reported two troop transports in the Milazzo Harbor early in the morning. A prisoner of war stated that evacuation to Italy had been ordered on August 8th.

The 18th RCT of the 1st Infantry Division passed through the 39th and 47th RCT's of the 9th Division and advanced eight miles east of Randazzo along Highway 120. The advance was hampered by blown bridges and minefields.

Meanwhile, the 9th Division continued its advance northwest and gained contact with the 3rd Division in the vicinity of Montalbano. The 3rd Division advanced rapidly to the east, capturing Oliveri (six miles east of Patti), and Falcone. Then they advanced three miles east of Barcellona on the coast road.

D ≠ 36, 15 August

The enemy evacuated east of Spadafora (D25), however, some attempt of organized resistance was encountered in the capture of Barcellona. Further activity was observed in the Messina Straits and the enemy was reported to have lost four craft in the Messina Straits because of Allied air action. In the British Eight Army

18th RCT still in line

sector, Castglione (C92) and Taormina (D11) were captured. It was further reported that the headquarters of the Hermann Goering Division was located at S. Lucia (D45) on the Calabrian Peninsula. During this evacuation period twelve long range guns were firing from the mainland of Italy covering the Messina Straits.

The 18th Infantry of the 1st Division moved north of Francavilla and concentrated in the vicinity of Novara (C93). A reinforced company was sent north to contact the 3rd Division on the coast road. Further advance of other elements of the 1st Division was stopped, by Army order.

The 9th Division advanced no further; elements were north and west of Randazzo. The 3rd Division's 7th RCT advanced rapidly along the coast road capturing Spadafora 12 miles east of Barcellona.

Meantime, the advance Command Post of the Seventh Army moved from San Stefano to the vicinity of Naso (C64), six miles south of Cape Orlando, at 1200B.

An enemy chemical warfare dump at Caltanissetta was found to contain mustard and other lethal gases.

That night a third amphibious landing was made on the north coast. The 157th Infantry of the 45th Division (under Army control) was selected for the operation. The force was to land in the vicinity of Falcone, but the troops advancing overland were moving ahead so rapidly that the landing point for the 157th was changed to the beaches northwest of Barcellona, a point in the rear of 3rd Division advance elements. The landing was made at 0230B of the 16th, without incident.

D ≠ 37, 16 August

The first shots fired onto the Italian mainland from Sicily were 100 rounds of 155 MM (HE) fired by guns of the 36th Field Artillery at located enemy batteries in the vicinity of Villa San Giovanni

Enemy batteries on the mainland counter-batteried our artillery and attempted to slow the advance of the infantry. The 7th Infantry continued its advance across country from the vicinity of Spadafora toward its objective on the ridge four miles west of Messina. Contact was maintained with light enemy rear guard forces during the day. By dark, the 7th Infantry had reached the road junction at Divieto where Highway 113 turns southeast to Messina.

During the night of August 16-17, the 7th RCT advanced east of Spadafora and pushed strong patrols into Messina, the first patrols arriving at 162000B.

Enemy rear guard elements withdrew east of D-2761, covering the withdrawal with artillery. In evacuating Cape Milazzo approximately 150 motor transport were left undemolished and no serious effort had been made by the enemy to destroy fixed guns.

In the British Eighth Army sector, the enemy retreated north of Savoca (D-13).

The last German forces embarked from the island during the night of August 16-17, abandoning a large amount of undestroyed materiel, supplies, and Italian troops in their haste.

Organized resistance was at an end. Only small, scattered groups of the enemy were found in the Messina area.

The Surgeon reported a total of 21,883 patients had been admitted to medical installations during the campaign -- 19,923 of them from the United States Army. A total of 5487 were evacuated by air to North Africa and 5391 by water. One thousand and eighty prisoners were taken on this date.

The G-1 report showed Seventh Army strength as 195,617. Our losses to date were: Killed - 1233, Wounded - 4695, Missing - 968.

D ≠ 38, 17 August

A light conclusion to the delaying action by the enemy on the Island of Sicily was offered by the withdrawal of final remaining forces on the night of 16-17th of August.

Along the British Eighth Army sector, Scaletta (D-24) was successfully occupied by landing forces on the night of August 15-16, and the coastal area north of Scaletta for a short distance was the only remaining territory not under complete control of the Allied forces.

The continued absence of the Italian Navy from Sicilian waters and the lack of activity of Axis aircraft was further evidence that the enemy considered the Sicilian campaign a closed issue. Only isolated groups of Germans in civilian clothes and Sicilians still loyal to the Fascist regime remained as the last sentence in the final chapter of the Sicilian operation.

The 3d Division encountered only isolated pockets of resistance and occasional artillery fire from the mainland of Italy. A small group of British tanks joined the 3d Division at Messina at 1000B, the 7th Infantry having entered the city at 0610B. The 30th Infantry advanced along the north coast road to Capo Di Faro, clearing the Capo Di Faro Peninsula of all remaining resistance.

At 1015B the Commanding General of the United States Seventh Army entered Messina.

The fall of Messina was the fall of Sicily itself. Thirty-eight days after the landing, the campaign had ended. The first United States field army to fight as a unit in this war had accomplished its mission with complete success. Long, hard months of training and of battle experience, the vast productive power of America and the courage and vision of its leaders had combined to demonstrate to the world that the unprepared nation of two years before had arrived on the scene of battle as a full-fledged fighting power.

In their efforts to prevent, or at least delay, our conquest of Sicily, the enemy had lost 100,000 prisoners of war, an estimated 12,000 killed and wounded. 267 aircraft were accounted for by capture or on the ground. 293 guns, of 75mm caliber and larger, 43 Mark III and IV tanks, 22 Mark VI's, and 123 tanks unclassified, had been taken. The only small measure of success gained by the enemy was his evacuation of a large part of the German forces to the Italian mainland.

But Italy, far from being a safe refuge, was now on the verge of becoming a battlefield itself. The collapse of Sicily ended forever the enemy's dreams of domination of the Mediterranean. His last strong outposts were gone. The continent itself, goal of months of Allied planning and preparation, was within reach. And the "handwriting on the wall" had been seen by the Italian people, as it would soon be seen by other nations of occupied Europe.

Many hard battles remained to be fought before the enemy could be decisively beaten. But the Seventh Army had helped pave the way toward final victory, and, justly proud, was ready for its next mission.

HEADQUARTERS SEVENTH ARMY
APO # 758
U.S. Army

22 August 1943

GENERAL ORDER)
:
NUMBER 18)

Soldiers of the Seventh Army:

Born at sea, baptized in blood, and crowned with victory in the course of 38 days of incessant battle and unceasing labor, you have added a glorious chapter to the history of war.

Pitted against the best the Germans and Italians could offer, you have been unfailingly successful. The rapidity of your dash, which culminated in the capture of Palermo, was equalled by the dogged tenacity with which you stormed Troina and captured Messina.

Every man in the Army deserves equal credit. The enduring valor of the Infantry, and the impetuous ferocity of the tanks were matched by the tireless clamor of our destroying guns.

The Engineers performed prodigies in the construction and maintenance of impossible roads over impassable country. The services of Maintenance and Supply performed a miracle. The Signal Corps laid over 10,000 miles of wire, and the Medical Department evacuated and cared for our sick and wounded.

On all occasions the Navy has given generous and gallant support. Throughout the operation our Air has kept the sky clear and tirelessly supported the operation of the ground troops.

As a result of this combined effort, you have killed or captured 113,350 enemy troops. You have destroyed 265 of his tanks, 2,324 vehicles, and 1,162 large guns, and in addition, have collected a mass of military booty running into hundreds of tons.

But your victory has a significance above and beyond its physical aspect - you have destroyed the prestige of the enemy.

The President of the United States, the Secretary of War, the Chief of Staff, General Eisenhower, General Alexander, General Montgomery have all congratulated you.

Your fame shall never die.

G. S. PATTON, JR.,
Lieut. General, U. S. Army,
Commanding

CONGRATULATORY MESSAGES

From the President of the United States:

"ALL OF US ARE THRILLED OVER THE SICILIAN CAMPAIGN NOW SUCCESSFULLY CONCLUDED IN ACCORDANCE WITH THE TIMING AND PLANNING OF THE ALLIES. THIS IS ESPECIALLY TRUE WHEN WE REALIZE THAT THE ENEMY FORCES IN SICILY AMOUNTED TO FOUR HUNDRED FIVE THOUSAND MEN. THE EVENTS OF THE PAST THIRTY EIGHT DAYS SHOW WHAT CAN BE DONE BY TEAM WORK BASED ON PREPARATION TRAINING TIMING AND ABOVE ALL ON GALLANTRY ON LAND ON SEA AND IN THE AIR. FROM THE ANCIENT CITADEL OF QUEBEC I SEND YOU MY WARM CONGRATULATIONS AND TO THE OFFICERS AND MEN UNDER YOUR COMMAND BRITISH CANADIAN FRENCH AND AMERICAN MY THANKS AND ENTHUSIASTIC APPROBATION. TELL THEM WELL DONE".

From His Majesty King George VI:

"ON THE FINAL ACCOMPLISHMENT OF THE OCCUPATION OF SICILY I WISH TO SEND TO YOU AND TO ALL MEMBERS OF THE FORCES THAT YOU COMMAND WITH SUCH DISTINCTION MY HEARTFELT CONGRATULATIONS ON A GREAT ACHIEVEMENT. THROUGHOUT THE BRITISH EMPIRE WE HAVE WATCHED WITH ADMIRATION THE ORDERED PROGRESS OF THE CAMPAIGN BY SEA AND BY LAND AND BY AIR AND WE REJOICE AT ITS SUCCESSFUL CONCLUSION. I SHOULD BE GRATEFUL IF YOU WOULD CONVEY TO MY BRITISH AND CANADIAN TROOPS A SPECIAL ASSURANCE OF MY PRIDE IN THEIR SHARE IN THIS VICTORY".

From General Marshall:

"YOU HAVE DONE A GRAND JOB OF LEADERSHIP AND YOUR CORPS AND DIVISION COMMANDERS AND THEIR PEOPLE HAVE MADE AMERICANS VERY PROUD OF THEIR ARMY AND CONFIDENT OF THE FUTURE. GIVE THEM MY PERSONAL THANKS AND CONGRATULATIONS".

From General Eisenhower:

"I HOPE YOU WILL EXTEND TO GENERAL MONTGOMERY AND PATTON AND TO THE MAGNIFICENT TROOPS SERVING UNDER THEM MY COMMENDATIONS AND CONGRATULATIONS FOR THEIR ENERGY DETERMINATION AND AGGRESSIVENESS IN DRIVING THE ENEMY OUT OF SICILY".

From General Alexander:

"I SEND YOU, YOUR STAFF, AND EVERY AMERICAN SOLDIER IN YOUR SEVENTH ARMY, MY HEARTIEST CONGRATULATIONS AND THE EXPRESSIONS OF MY SINCEREST ADMIRATION FOR NOT ONLY YOUR RECENT GREAT FEAT OF ARMS IN TAKING MESSINA, BUT FOR THE SPEED DASH AND SKILL YOU HAVE SHOWN IN THE SICILIAN OPERATIONS. YOUR COUNTRY WILL BE VERY RPOUD OF YOU AND SO AM I TO HAVE THE HONOR OF HAVING UNDER MY COMMAND SUCH MAGNIFICENT TROOPS".

SUMMARY OF OPERATIONS

c. Lessons Learned

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

I. ORGANIZATION

1. Composition of an Army:- While an Army is a nebulous organization, it is felt that as a datum plane a minimum Army should consist of two infantry corps of three divisions each. Each corps should be reinforced by a corps artillery brigade. The necessity for three divisions is that by using them it is possible to maintain the pressure. Very rarely do situations arise where a two division corps can rest one of its divisions.

2. Troop Lists:- a. In making up the troop list for the assault convoy, it must always be remembered that while men and equipment to operate harbors, beaches, graves registration, hospitals, or to restore and maintain airfields are necessary, they are utterly valueless until the fighting infantry, supported by artillery and tanks, has captured a beachhead.

b. From our experience units not engaged in the initial fight at the beaches are always super-optimistic as to how long it takes to secure a beachhead. Non-killers must be held to an irreducable minimum in early echelons.

3. Staff Sections:- Each staff section should be at full strength when the initial directive is received and planning initiated. The volume of work is usually greater during this phase than it is during the operational stage. Augmenting the staff immediately prior to the campaign is unsatisfactory. Officers thrust into the middle of the planning with a necessarily inadequate background are placed at a disadvantage which materially lessens their value.

4. Additional Staff Section:- No T/O allows sufficient personnel for the G-4 Section in a landing operation. A transportation section in G-4 as an additional special staff section on the Army level is an essential adjunct to the successful operation of the supply functions of a modern corps, field army, or amphibious task force. It should contain from ten to twelve officers and about twenty enlisted men. This is probably the most important section in G-4.

5. G-2 Activities:- All persons connected with intelligence activities should be placed under one head, namely, the task force commander, who would exercise this authority through his Assistant Chief of Staff, G-2. It is worthy of note that in the HUSKY operation there were many uncorrelated G-2 activities which resulted in no little confusion.

6. Intelligence:- A service to provide for the interception of radio messages between subordinate units of the command and particularly between other friendly major units engaged in the operation, similar to the British "J" Service, should be established as a permanent unit.

7. Air:- A staff officer for air should be assigned to the G-3 Section of all divisions and higher units. He should be from the air force, preferably of field grade and thoroughly trained in air-ground support.

8. Army Liaison System:- The Army liaison system must be further developed. A separate liaison section should be established in Army headquarters. Personnel should be carefully selected equipped and trained. It is important that they be available and function at the inception of planning. Adequate provision for lateral liaison must be worked out.

9.. Troop Movements:- It is recommended that the G-3 Section be responsible only for establishing the priority of movement of units, and that a G-4 Transportation Section, or a separate Movements Section, be responsible for issuing detailed orders, providing the necessary additional means, and coordinating and controlling the movement.

10. Near Shore Control:- An Army near shore control organization should be perfected at the inception of planning. This group should be completely staffed with informed representatives of all section necessary to the operational phase. In "HUSKY" due to initial staff shortages and for other reasons it was not feasible to erect such an organization until shortly before D Day.

11. Corps Artillery:- The corps artillery brigade should consist of one regiment of 155 guns, one regiment of 8 inch howitzers, and one regiment of 4.5 inch guns, also one observation battalion. All corps artillery should be provided with M-4 tractors now used by the CA AA.

12. Engineer Units:- In fighting in bad country against an enemy who trusts to demolitions for delay, it is conceivable that the ratio of Engineer regiments to Infantry regiments should be fifty-fifty. Certainly every Infantry division actively engaged requires the services of one Engineer regiment in addition to its divisional Engineers. The Corps Artillery certainly requires an Engineer regiment, and others must be utilized to see that the supplies brought up by the Army reaches the Corps and Divisions.

II. ADMINISTRATION

1. Changes by Higher Headquarters:- There is never enough preparation time. Changes in plans and the specifying of minute details should therefore be avoided insofar as possible by higher headquarters. Valuable time during the training period can thus be saved and lower units be given its benefit for assembly, equipping, and training.

2. Channels of Command:- Definite channels of command should be set up immediately after the conception of the operation. The channel of command, from the task force commander to the highest authority, should be definite and direct. No subsidiary or adjacent headquarters should be included in this command channel.

3. Assignment of Troops:- All troops selected for the operation should be placed directly under the command of the task force commander. This command should be all-embracing. Troops should not be under one command for training, and under another command for administrative purposes.

4. T/O Strength:- All combat units should be brought up to T/O Strength, plus 15% for enlisted men and officers of junior grade, and all personnel frozen. This is of vital importance if the small combat units such as boat teams, platoon, etc., are to go into action full strength. It should be a recognized fact that due to sickness and other reasons, approximately 10 to 15% of any command will not be available to the commander on D-day. Therefore, in order to have completely trained teams made up of men accustomed to working together, an over-strength must be provided at the earliest possible moment.

5. Record of Units Joining Sub-Task Forces:- A check system must be established which will provide for an accurate record of the dates on which units and parts of units join sub-task forces. This is especially necessary for the operational phase.

6. Headquarters Accomodations:- Headquarters, whether on land or sea, must be adequate in size to accomodate all personnel concerned, and the communication set-up must be ample to handle the heavy traffic that normally accompanies amphibious operations, both during the planning and the operations phase.

7. Designation of Ports and Units to Participate:- In planning for an amphibious operation it is essential that the designation of ports, embarkation points and final staging areas be included in the initial directive. Designation of units to comprise the force and provision for the release of these units to the task force concerned must also be accomplished with the start of planning so that priorities

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

for equipping, movement and the prescribing of training to utilize the maximum amount of time available may be promptly established.

8. Control of Loading:- Control of the loading of personnel, supplies and equipment should not be too greatly decentralized. It is true that division of the parent force into numerous commands places initial responsibility upon sub-task force commanders, which should permit to a certain degree his absolute decisions as to loading of personnel and supplies. The possibility of asumption of control at an early date by the higher headquarters, however, demands adequate control to insure proper arrival of troops and supplies based on the overall picture. The advisability of the task force retaining a small part of the shipping space provided each sub-task force until all last minute requirements are known should be considered to provide for unexpected late demands on the task force as a whole.

9. Loading:- a. Loading of items of a complicated or highly technical nature must be supervised by personnel capable of identifying parts and who realize the necessity for orderly placement on shipboard. A Bailey bridge lacking an essential part might better remain on the dock in a base area than take up valuable space on a transport.

b. Medical personnel, their equipment, and vehicles should be loaded, insofar as possible, on the same ship. Under no circumstances should the personnel and equipment be shipped on separate convoys.

10. Communications:- Means must be made available early in the planning stage for the establishment of direct communication channels between Army headquarters and units on the troop list.

11. Message Centers:- a. The message center of the force commander is the nerve center of the entire operation. It should be in charge of at least two officers of field rank, and officers of mature and seasoned judgement.

b. There must be a redefinition of the Adjutant General's mail and distribution sections, and the Signal Corps Message Center duties. Messages incoming and outgoing are unnecessarily delayed by having to pass through two offices at one headquarters before delivery to the addressee.

12. Public Relations:- Efficient operation of Public Relations personnel requires that transportation be available for all correspondents to perform their legitimate missions. Rapid means of clearing dispatches, either by a separate radio channel or by air courier service, is necessary. It is particularly desirable that a special channel be provided aboard the principle command ship, and later ashore, to handle press dispatches. The use of command channels for the transmission of press material is impractical, since such use cause interruptions in tactical traffic. It may however be necessary to modify Naval policy to permit of individual transmission of press reports.

13. Official Observers - Visitors:- a. The exact number of official observers and/or visitors from higher headquarters should be known to the commander well in advance of D-day; this, in order that proper accommodations and space may be allotted to them on the different ships, and in order to prevent last minute interruptions and changes.

b. No official observers or visitors should be allowed to come to the combat area without receiving prior authority from the force commander. Reports made by such observers should be submitted through the headquarters of the force commander.

14. Civilian Agencies:- a. It should be made clear to civilian agencies with the task force that they must work through the appropriate task force section as long as operations require.

b. It is incumbent upon the Provost Marshal, Civil Affairs Officers, and Counter Intelligence agencies to coordinate their plans, beginning during the initial planning stages and continuing through the completion of the operation.

They must, at all times, keep one another jointly informed as to the matters pertaining to the function of their own activity to prevent inefficiency, misunderstanding, and over-lap.

15. Reports and Records:- Forms for the reports and records required by higher headquarters should be issued to subordinate units at the inception of planning together with full instructions as to when and how they are to be submitted. This will enable participating organizations to promptly accumulate and provide in a uniform manner, essential data as to requirements in respect to personnel, vehicles, and equipment necessary for troop movement, staging area needs, allocation of shipping and other necessary information.

16. Casualty Reports:- a. Battle casualty reports, as submitted by G-1 and the Adjutant General, will rarely agree during the operational phase. The G-1 report conveys to the commander the effective strength of his troops, which includes all ailments which render a man incapacitated for duty. It is not an accurate personnel accounting. The battle casualty report, on the other hand, reports those men actually casualties through the action of the enemy, and is an accurate personnel account.

b. Misinformation:- A source of much misinformation is unauthorized data on casualties, which reaches the United States mail in spite of censorship regulations. This is borne out by the constant stream of inquiries directed to the Theater Commander by the War Department based on letters received from relative of soldiers. Unit and other censors, and specially hospital censors, must be ever on the alert to delete this information, which not only embarrasses the War Department but may directly affect civilian morale.

17. Identification of Personnel:- The identification of our personnel killed in action was greatly facilitated by the requirements in some units of identifying every officer and enlisted man by having his identification marked on the inside of each legging.

18. Replacements:- a. In order to provide proper means for handling of replacements and for the handling of men released from hospitals, Replacements Battalions should be assigned to the force and should be brought into the combat zone as soon as practical. The number of replacements needed should be anticipated well in advance of the operation. Replacements should be available to task force commanders well in advance of D-day and throughout the entire operation so that units can be kept up to efficient operational strength.

b. When active operations are in progress, divisions do not and cannot provide even educated guesses as to the number of replacements necessary, therefore, during active operations, calls for replacements should be based on experience tables. When a lull occurs, accurate check-ups can be made and inequalities then corrected. However, we will always be short. In providing replacements it is the experience of Morocco, Tunisia, and Sicily that at least 75 percent of casualties occur in the riflemen of the rifle companies, therefore, in training replacements, this consideration should be borne in mind.

19. Hospital Ships:- A great saving in non-fighting men and heavy hospital equipment can be effected by providing hospital ships. The presence of these ships removes the initial necessity for hospitalization and provides much better care for the wounded men. However, steps must be taken to see that the Navy provides a list of wounded taken on board and turns this over to the Army prior to sailing, otherwise, men will be reported missing who are actually on the hospital ship or transports.

THIS PAGE IS UNCLASSIFIED

III - TRAINING

1. Debarkation:- Too much time is devoted to teaching soldiers to debark from large craft into small craft. This is a very simple operation and can be very readily accomplished. A great deal of time should be put on teaching soldiers to get out of small craft on the run and keep running across the beach.

2. Reconnaissance:- a. Air. Modern aircraft precludes detection of details by visual air reconnaissance; such as gun installations, except where guns are firing. Dispersed front line troops, and pinpoint targets cannot be located easily, as the pilot must observe, fly his ship, and read his map in one operation. The lack of understanding of ground officers as to the capabilities and limitations of tactical reconnaissance and strategical photo reconnaissance aircraft leads to a waste of effort.

b. Ground. From the highest units down there is a notable lack of understanding of the value of reconnaissance and how to execute it. Unquestionably, the reconnaissance troop in the infantry division is not adequate in size. It should certainly be doubled. Further, all infantry rifle soldiers must be taught how to scrutinize the country for concealed or camouflaged gun implacements and pillboxes.

3. Night Combat:- Night combat has such an important place in war and is so disliked by the Germans that we should specialize in it. Great improvement in night operations, particularly with regards to eyesight is produced by practice.

4. Innovations:- Experimentation must be completed prior to the commencement of the training period, or failing that, be conducted by troops other than those involved in the operation. By this is meant primarily, innovations in landing methods, passage of obstacles, and related subjects. Continual changes in the standard operating procedures can lead only to confusion and a failure to complete proper training.

5. Camouflage:- Care in the placing of obstacles, particularly barbed wire, in front of well camouflaged fortifications is important. Many exceptional examples of camouflage of fortifications were encountered, but in many cases the value of the camouflage was lost because the locations were given away by the barbed wire around them and by lack of track discipline.

6. Air Support Parties:- a. Air support parties should train under the supervision of the G-3 for air. Frequent and regular exercises with the ground units with which they are to work during combat should be held. Pilots who are to fly missions in the anticipated operation would benefit immeasurably by participating in this ground training.

b. The radio communication of air support parties may be improved by better and more intensive training of operators.

7. Battle Order:- The subject of enemy battle order presents a most difficult training problem. The importance of this subject must be appreciated, as it requires long and comprehensive study by competent personnel. In operations it becomes instantly vital to success.

8. Simulated Battle Conditions:- Some of the battle practice to which our troops have been subjected is more sensational than battle and as a consequence gives a false idea of the violence of war, with the result that some troops are unduly perturbed. It is certainly necessary that troops be fired over at very close heights by their own supporting weapons. They should also be habituated to following closely on artillery preparations, both percussion and air bursts. In doing so, they should have targets at which they fire so as to habituate them to fire while moving and to using their own arms in addition to the fire protection provided by the supporting arms. On the other hand, firing towards our troops close over their heads and bursting unduly large number of small mines amongst them as they move forward under circumstances which almost invariably inhibit their firing, have a bad effect. Troops must always fight back, not just take it.

9. Hardening of Troops:- Too much emphasis cannot be placed on the physical condition of officers and men. Only by being extremely inured to terrific hardships can they produce successful results under the conditions of actual war.

10. Mutual Air - Ground Recognition:- The ground troops and the Navy, particularly in the case of Navy small boats and non-AA ground troops, must be trained never to fire at airplanes unless they are attacked or the planes are so close that there is no possible doubt as to their nationality. If this is not done, we simply deprive ourselves of air support by shooting our own planes, or demand of our own aviators very high courage, which, to their credit, they have often been seen to display in flying through our own AA fire. Our Air Force must be equally well trained not to attack friendly troops or craft.

11. Detection of Mines:- The detection of mines by all types of troops must be stressed and each infantry rifle company should be provided with ten mine detectors. Owing to the fact that mine explosions are usually fatal, and we do not classify the cause of death, it is impossible to say what percent of our losses were due to mines. It is estimated that not over ten percent of our losses were thus caused. Mines are mental hazards and must not be over-emphasized in training.

12. Evaluation of Terrain:- Sub-Task Force Commanders should be given a free hand in planning the details of their operation, but they should make their plans conform to the terrain. By the same token the training of their troops must conform to the type of terrain over which they will fight.

IV. EQUIPMENT

1. Individual Equipment:- a. The equipment of troops engaged in landing operations must be reduced to the minimum. For the infantry rifleman, who has the hardest job, a hundred rounds of ammunition, one canteen, one or two grenades, and probably the light type of gas mask are sufficient. Supporting troops should, in addition to the grenades, or as an alternative to them, depending on the circumstances, carry one light trench mortar projectile a piece.

b. For landing operations the use of A or B bags for the initial assault is expensive and valueless. All they need in the way of extra equipment is a toilet set, including shaving equipment, towel, and soap.

c. As soon as the beaches are taken over by the Army, additional clothing and equipment in appropriate sizes must be immediately made available for issue. In the Sicilian Campaign we carried in the assault convoy, but in a late priority to land, waterproof bags containing full field equipment, including pistol and pistol belts for 5 percent of the assault infantry. The contents of these bags are for the purpose of immediately replacing equipment lost or destroyed during the landing. Experience indicates that the ratio could be reduced to 2½ percent of the assault infantry.

2. Gas Stoves:- The issue of individual gas stoves on a basis of one per squad in infantry divisions contributed substantially to the health and morale of troops denied organization cooking.

3. Weapons and Vehicles:- Major weapon and vehicle casualties are generally complete casualties. There is, in the main, little chance for economical repair, and spare parts should be limited to organic loads in line organizations and ordnance maintenance organizations for the first 30 days, supplemented generally by replacement of vehicles and complete weapons. All replacements must be complete and ready for combat.

4. DUKWS:- In the unloading of supplies the Dukw has proved an exceptionally fine piece of equipment and has accentuated the importance of bulldozers on the beaches early in order to properly construct the necessary roads, and it has also made the sleds previously used by the shore units obsolete.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

5. Mine Detectors:- In Sicily we met only one new type of non-metallic mine. The charge in this mine was a plastic explosive wrapped in heavy paper or burlap and tied with string. The firing mechanism consists of a bakelite igniter containing a metal striker and detonator with flash cap attached. However, it is certain that this type will become more and more prevalent. It is felt confidently that the inventive genius of America can devise some device for locating such mines. Certainly an intensive study for the creating of such a device should have a very high priority.

6. 4.2 Mortars:- The 4.2 mortar firing a white phosphorus or high explosive shell is a terrifically destructive weapon, but as its present mount is almost wholly immobile it can only be used in the first phase of an attack. If it could be provided with a tractor-drawn mount from which it could fire, it would be tremendously valuable. The range should be increased to 4,000 to 4,500 yards.

7. Illuminated Sights: - a. None of the mortars provided American troops have any means of illuminating the sight for night firing. This is a grave defect. The Germans have a small flashlight strapped around the forehead under the helmet which throws a pencil of light on the elevating and traversing mechanism of the mortar. Some such device for all our mortars should be developed.

b. The tank 75, the 57, and 37, as well as all larger calibers, should all be provided with illuminated sights for night firing. The tank is particularly valuable in firing at point targets at night, provided these targets have been picked out in the daytime. The direct fire from the tanks in turret defilade can be kept up, especially while firing uphill, until the infantry attack is within 50 yards of the target.

8. Artillery Ammunition:- a. Modern warfare emphasizes artillery weapons. The proportions of artillery ammunition must be determined after a careful analysis of the probable tactical employment of artillery for a particular operation.

b. In Sicily we had nothing but armor-piercing ammunition for the 57. Ten percent of the rounds for a 57 should be armor-piercing, and the rest should be 20 percent white phosphorus and 70 percent high explosive.

c. If a projectile can be developed for the 37 with more penetrating effect, it is superior to the 57 as an offensive antitank weapon for two reasons: First, it can be pulled by the low-relief ¼-ton truck. The 57 cannot and must be pulled either by a half-track or a high-relief 3/4-ton truck. Second, with the limited crews available, the 57 cannot be manhandled any distance over bad country while the 37 can. Even with present ammunition the 37 is deadly against tanks up to 400 yards.

9. Hand Grenades:- The majority of opinion favors the percussion grenade over the fragmentation grenads. This is based on the fact that at the close ranges, at which grenade fights take place, the shocking effect of the percussion grenade is sufficient to let troops in with bayonets, whereas if they use fragmentation grenades, they have to take cover and lose time getting close. The troops in Sicily were not provided with any means of carrying grenades. This is an error and should be corrected. Thermite and white phosphorus grenades in the ratio of 5 percent each should be available in a theater.

10. Bazooka:- On four specific occasions the Bazooka accounted for Mark-4 tanks. It is believed that if the Bazooka were provided with a personnel shell with an "all-way" fuse in addition to its armor-piercing shell, its effectiveness would be materially improved. Most of the officers prefer the rifle grenade to the Bazooka as a close range antitank weapon.

11. Amphibious Radios:- It is essential that high powered radio channels be established ashore at the earliest possible moment. This was effectively accomplished by installing water-proofed sets, SCR-299, in 2½-ton amphibious trucks. Two such units should be provided for each Army, Corps, and Division Headquarters and loaded in such a manner as to permit of unloading over the ramps of landing vessels while still some distance off shore.

12. Gadgets:- In planning landing operations, there is an invariable tendency to put too many gadgets in the small boats and consequently to overcrowd them. The only accessories necessary are the following: One grapnel projectile for 81-mm mortars in the ratio of one per assault company. In the same ratio there should be a four section bangalore torpedo raised on skids to a height of four feet. These are used for opening lines through minefields. Every assault platoon should have two pairs of bolt cutters. One wire mat per small landing boat is useful for crossing entanglements and does not take up too much room. The above applies to assault waves only.

13. Animals:- The pack animal is a definite asset in modern mountain warfare and should be provided.

V. SUPPLY

1. Decentralization:- The initial supply for all classes must be decentralized to the Sub-Task Forces. The amount and character of supply will depend on circumstances, which are governed by the character of the terrain, the type of beach or port, and the distance from home. In any event the Force Commander should not attempt to intervene in the supply problem until the initial objectives of the landing have been attained. Then the G-4 of the Army and his assistants, with the aid of special beach engineer battalions, should take over the beaches. As the operation progresses, the G-4 of the Army should be relieved by units from the SOS who take over the harbor and other successive supply installations as the Army moves forward. To make this transition smooth, it is desirable that representatives of each section of the SOS accompany the G-4 of the Army.

2. Detailed Requisitions:- Detailed requisitions should not be necessary to include all items of all classes of supply for an entire task force and for an entire operation projecting such requirements as far as five months beyond D Day. Tables of experiences should permit the flow of such requirements beyond the initial operational stages.

3. Critical Items:- Some critical items of supply require at least 90 days between requisition and delivery. The mission must be defined in ample time to complete the plans for and delivery of those items requiring that time lag.

4. Build-Up:- In the TORCH Operation, due to time and space, the earliest probable build-up was 60 days after landing, which meant that the initial landing lived or died on what it took with it. In the Sicilian Campaign, and in other possible operations, the second and third convoys can arrive sooner, and in fact, ships making the assault landing will return and bring up the successive increments. There is a tendency to arrange the sequence in which these increments will arrive. This is wrong. The best a Commander can do is to estimate what he would probably want, but the action of the enemy will determine the order in which he will want them. An officer of force and experience must remain behind to command these build-up increments and send whichever type is called for promptly and completely.

5. Rations:- a. Troops in combat require one and one-third rations per day.

b. The "B" 5-in-1 ration plays an important part with the emergency rations "C" and "K" for use by combat troops in that it permits issue of a balanced "B" ration during a fast-moving campaign wherein the time element prohibits the breakdown and shipment of the normal "B" ration.

c. The "Hospital Supplement" ration was extremely successful and filled a definite need for use in sustenance of sick and wounded prior to the issue of the straight "B" ration.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

6. Engineers:- The faster an Army intends to go and the more violent the blows it intends to strike, the larger must be the tail. Without tremendous supplies of gasoline, ammunition, and other stores, an Army cannot develop its elasticity or striking power. It cannot attain these supplies except through the use of a tremendous number of troops behind the front line. At one time in the Sicilian Operation, the Seventh Army had thirteen Infantry regiments and nine Engineer regiments, besides Ordnance, maintenance, and other non-fighting but vitally essential units.

VI. AIR - NAVY - GROUND

1. Joint Planning:- a. In operations of an amphibious nature, it is absolutely essential that all services represented, i.e., Ground, Air, and Navy, should be housed together or adjacent to each other during the entire planning stage. Failure to do so results in confusion, inefficiencies, and unwarranted delay.

b. The naval and air arms participating must plan in conjunction with the ground force. In "HUSKY" as in "TORCH" the Army and Navy staffs were widely separated during the critical period of planning. In both operations this resulted in needless misunderstandings and the loss of valuable time. The plan for a combined operation must be developed in close cooperation by all participating arms. This requires that ground, naval, and air force staffs be immediately and continuously available to each other so that all the details of training, rehearsals, movement to staging areas, loading of convoys and embarkation may be effectively coordinated. It is essential that the air service command be represented on the air planning staff. Representatives of air tactical units are not sufficiently familiar with air service units to indicate with the required exactness service command requirements for shipping space.

2. Liaison:- Constant liaison must be maintained with all supply agencies of higher and subordinate headquarters, air, ground, and navy, during the planning and operational stages of an amphibious operation.

3. Selection of Objectives:- The general area to be attacked is selected by the High Command. It then becomes the duty of the Force Commander, in conjunction with the Navy and with the Air Force, to determine the precise localities where the various landings will be attempted. The interest of the Navy in this is a determination of the beaches which, from a naval standpoint, are available. The interest of the Air is largely where and to what extent fighter cover can be provided. Time and argument will be saved if the Navy, Army, and Air planning staff, with their respective commanders, make this decision immediately after the amount and type of lift is determined. The reason that the lift must be determined first is that on the lift depends the amount of troops available, and on the amount of troops available depends the number of landings which may be attempted.

4. Extra Personnel:- The Navy and Air Force through their senior officers must state their requirements for men and equipment. Since these requirements will invariably be excessive, the Ground Force Commander, the Navy, and the Air must thrash the matter out under the presidency of the senior officer from the office of the Commander-in-Chief who can make the final decision. Not only must this final decision state the number of men and amount of equipment but it must also specify in which convoy they will be carried. After these decisions have been reached, nothing except enemy action should in any way reduce the list of vessels or change the order of loading.

5. Mutual Recognition by the Air and Ground:- It is very important that more instruction be given both ground troops and air troops in recognizing each other. It is believed that the number of friendly planes shot down by ground troops in any operation is considerably less than the number of friendly vehicles destroyed by our air. This fact is not an argument against close air-ground support which is of sufficient value to warrant the casualties above mentioned, but it is regrettable that such casualties occur, and more thorough training would certainly reduce their number.

6. Surprise Element:- If surprise can be insured until H minus 1 hour, the chances of landing successfully are greatly enhanced. Owing to the noise of the ships in the transport area, it is highly improbable that surprise later than H minus 1 hour will ever be secured. This being so, it is very desirable that the air assault the selected beaches between H minus 30 minutes and H minus 15 minutes. It must be definitely arranged that if for reasons of weather or other causes the air is unable to attack before H minus 15, the air attack must be dispensed with.

VII. NAVY

1. General:- From the standpoint of the ground troops, it is vital that before planning starts a definite agreement be secured from the Navy as to the number and type of ships available, and the depth of loading permissible in the smaller craft.

2. Joint Operations:- Joint operations subsequent to the initial phase require a well qualified naval liaison officer working in full cooperation with the G-3 Section of Army. Direct communications with naval headquarters for this officer are vital. Naval support during phases of the action subsequent to the initial landing must be carefully coordinated. The premature withdrawal of naval liaison personnel makes such coordination difficult.

3. Command Ships:- a. A combined Army, Navy, and Air Force command ship is necessary not only for the Task Force Commander but for the Sub-Task Force Commanders and even as far down as the Regimental Combat Team Commanders. The complexity of the installations diminishes with the size of the unit involved.

b. Command ships should be specially constructed and not improvised at the last moment. They should in no case be naval fighting ships since involvement in a fire fight results in immediate disruption of all radio communication channels.

c. A suitable office must be provided for each of the following: The Commanding General, Chief of Staff, G-3, G-2, and Air Support.

d. Each command ship should have three separate code rooms: One for the Army, one for the Navy, and one for the Air Force code sections. Each of these code rooms must be large enough to permit of efficient operation of British and American Code Teams. The message center room should be convenient to the code rooms, and of sufficient size to accomodate the three message center installations, namely, Army, Navy, and Air Corps. All three services, however, may use a common radio operation room. Also a British Code Room must be provided wherever a joint operation is planned. We had such a code room on the "Monrovia".

e. The Task Force Commander's headquarters ship should be accompanied by an alternate command ship carrying sufficient radio equipment to take over the channels if the principal headquarters ship is lost. Where possible all command ships should have alternates particularly when the unit in question equals or exceeds the size of a division.

4. Training of Navy Personnel:- More emphasis must be placed by the Navy on training coxswains to handle boats and to find the proper beaches. Also more training is necessary in the arrival at and the manipulation of vessels in the transport area.

5. Beach Parties:- a. Combined Army and Navy beach parties are of great potential value but very seldom produce the results they should. This is due to the lack of force of character in the men of the Army and Navy commanding them.

b. They also have a tendency to develop unnecessarily complex forms of procedure. A solution is to have a senior Naval and Army officer on each beach who are known to possess sufficient force and drive to see that things work.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

6. Speedboats:- There should be--and this need is vital--at least two speedboats solely for Army use which should lie close to the command ship. There are innumerable occasions when the possession of such speedboats to take messages would facilitate matters because, up to a distance of fifteen to twenty miles, a staff officer in a speedboat can deliver and receive messages far faster than they can be coded, sent, and decoded. When the headquarters goes ashore speedboats should still be available till communication is assured.

7. Controlled Shipping Off Shore:- Better means should be provided to insure control of shipping off shore. Supplies carried on the ships are needed by the units ashore, and the points to which they are delivered should be determined by those for whom the supplies are intended. Otherwise, as in past operations, supplies will often be landed distant from the point where they are required.

8. 'Closing-in' of Transports:- As soon as the enemy shore batteries are put out of action, the transports should close on the beach. There are two reasons for this from the Army standpoint. First, it greatly facilitates the speed of unloading by shortening the turn-around. Second, the air cover, which is protecting the beach, is also available to protect the ships. This is not true if the ships are lying nearer the horizon.

9. Combat Loaders:- When combat loaders are used and loading for the assault is to be done at night, it is most desirable that they have sufficient landing craft carried in davits to lift a complete assault unit without having to call on other ships to supply small craft.

10. Naval Gunfire Support:- Whether or not Navy gunfire support is to be used prior to H hour, must be definitely determined for the entire force. It is the opinion of this Headquarters that Navy gunfire support should not be used sooner than H minus 1 hour and then only against enemy units which are firing, or against searchlights. In the daytime, Navy gunfire support is of immeasurable value, and the means now developed by the Navy for putting it on are extremely efficient.

11. Medical:- The hospital carrier equipped with water ambulances are far superior to any other manner of water evacuation from the beaches.

12. Feeding Prisoners:- Arrangements must be made with the Navy for a definite responsibility for the feeding and guarding of prisoners of war. If this guarding cannot be done by the Navy, additional MP Battalions must be provided. However, to put such men in the assault convoy reduces the assault personnel. Food for prisoners of war while on board ships should be provided by the Navy.

VIII. AIR

1. Air Support: - a. Air support divides itself into three phases. The first one is the removal or control of hostile air activities in the air. This is solely a function of the air. The next one is bombing ahead of the ground forces. This has been in the past satisfactorily accomplished by the ground stating those targets on which an attack would apparently facilitate the movements of the ground troops or hamper those of the enemy, and by the establishment of a bomb line. The bomb line should err on the side of being too far in front of our own troops, and it should be picked out after consultation with air officers so that it will be delineated by terrain features easily discernible from the air. To draw a line between map coordinates is quite dangerous because people passing over the ground several hundred miles an hour have difficulty in picking out hypothetical land marks.

b. Finally, we come to what is known as close air support; that is, utilizing airplanes to attack in conjunction with and close to an attack put on from the ground. However, until definite air units can be provided to train with ground troops and to have as a primary mission the duty of attacking targets which are adversely affecting the progress of the ground troops at the time called for by the ground, it is illusory to count on a very great effect. On the other hand, the ground troops have a tendency to expect more prompt assistance from the above form of attack than is always possible. They must be taught that it requires quite a while to mount an attack with the appropriate bombs, etc.

c. The tendency to credit air attacks on roads and railways with the capacity of destroying such arteries is also illusory. In the first place the chances of getting a direct hit with a bomb on a vulnerable place are very small, certainly no better than the chances of getting a point hit with long range artillery, but this is not the primary defect. We all know that a demolition to be effective must be defended or else it will be readily removed. This fact is equally true whether the demolition is caused by a mine planted in the ground or by a bomb dropped from the air.

2. Recognition Signals:- a. A point which should be settled at the commencement of the planning is whether or not air support will be supplied during the landing and subsequent to the landing, and the nature of support in each case. If close air support is to be supplied, an effort must be made to utilize directional smoke. This directional smoke, produced either by shells or hand grenades, come in three colors and is analogous to recognition lights.

b. For instance: On D Day, from zero to 2400 hours, yellow smoke means friendly troops; red smoke means enemy. Where the front line is uncertain, or if friendly air attacks our own troops through error, yellow smoke is put out by the use of hand grenades. When the front line is marked by yellow smoke, anything beyond it in the direction of the enemy may be attacked by close support airplanes. If, on the other hand, some particularly obnoxious enemy installation is beyond the power of the ground troops, e.g., a reverse slope position, and is in artillery range, it will be outlined in red smoke. From zero to 2400 D plus 1, red smoke will indicate friendly troops; blue smoke enemy, etc.

c. It is felt that could our airplanes utilize some method of showing a recognition signal of the same color as that which has been designated for friendly troops on that day, it would reduce accidental firing at them.

3. Communications:- All Signal Corps agencies of the various sections of the Air Corps must be coordinated under a single head. All Air Corps sections have important operating requirements, both for wire and radio. These requirements must be coordinated by an Air Corps officer. In this operation, all sections of the Air Corps seemed to be working independently. Requirements were never made known until the last possible moment. This lack of adequate supervision often delayed installations of Air Corps communication channels. This was especially true when wire circuits had to be constructed for the Air Corps by Army Ground Force Signal Troops.

IX. TACTICAL

1. General:- The plans for a landing operation must be simple, not only for the Force as a whole but also for the Sub-Task Forces. In order to insure coordinated effort, the Commanders of the Sub-Task Forces should be assembled and the general plan and objectives of the landing should be explained to them so that in the inevitable fog of war, in which they will find themselves, they can use their best efforts for the accomplishment of the general end.

2. Function of Force Commander:- a. The Force Commander should interfere as little as possible until the artillery line has been reached by the Sub-Task Forces. This having been done, he can issue orders for the grouping of the units for the further operations which present themselves. However, the physical presence of the Force Commander on shore during the early and generally critical phases of the operation is very important.

b. Every effort should be made never to issue orders below the next echelon of command. The higher an officer is, the greater temptation he seems to undergo to by-pass his juniors by telling them the size and type of unit with which they are to execute instructions.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

3. Initial Assault Equipment:- All boats which are capable of being beached, from the LSF on down should approach the beach with mortars or tank guns and machine guns emplaced to fire. The support battalions in the initial assault must be equipped with the antitank guns and tanks, also with self-propelled dual-purpose antitank, antiaircraft guns on half-tracks.

4. Speed Over the Beach:- The primary function of a landing operation is to secure a beachhead which means we must get ashore and proceed far enough inland to insure that we will not be evicted. The greatest importance must be placed on the rapid leaving of the landing craft and of the rapid and relentless advance across the beach. Troops must not stop on the beach.

5. Mine Detecting:- Engineer personnel with mine detectors or personnel trained in prodding must precede vehicles coming ashore. Mines were encountered on practically all beaches, and valuable equipment was lost because of a failure on the part of beach groups to properly provide for their removal prior to the arrival of motor equipment.

6. Field Artillery:- Probably the outstanding lesson for Field Artillery was the feasibility of landing light, medium, and heavy artillery materiel early in an assault, from modern landing craft. The 105-mm Howitzer M7 (SP) proved to be one of the best non-amphibian landing vehicles of any arm. This vehicle was debarked in as much as six feet of water, but came ashore under its own power without difficulty. It was found that on a soft sloping beach, operation must be perpendicular to the water-line since travel parallel to water-line causes a thrown track due to sand banking up inside the track. Other types of Field Artillery materiel landed successfully on D Day included the 105-mm Howitzer M2 (towed), 155-mm Howitzer M1918 A3, 155-mm Howitzer M1 and 155-mm Gun M1.

7. Ordnance Company:- In amphibious operations, Ordnance Ammunition Companies should accompany the assault. Proper ratio 1 company per Infantry Division.

8. Balloons:- Balloon barrages do not justify the amount of space and trouble they take in the assault wave. If it is necessary to put balloons on the beach, they should not be emplaced until the arrival of the reserve wave when space is not so important.

9. Initial Objective:- The first objective for a sub-task force is to secure before dawn a well-marked terrestrial objective, far enough inland and so situated that its capture prevents the enemy from putting small arms and mortar fire on the beach. It is permissible to reorganize on this line. However, if the enemy is retiring, do not stop to reorganize but push on to what is called the artillery line; that is, a terrestrial objective which will prevent the enemy, either through distance or by depriving him of observation, from bringing effective artillery fire, except by very large pieces, on the beach or shipping.

10. Mental Attitude:- a. The greatest importance must be placed on enthusiastic elan and self-confidence on the part of the troops making the initial assault. Battle is a violent and elemental occupation. Men to conquer in battle, particularly in a night landing, must be imbued with this elemental viciousness. A landing operation which does not continue its attack is bound to fail.

b. Nothing is more subversive of morale than retrograde movements during combat, even when these movements are for the purpose of reforming troops. When the movements take place at night, they are doubly disadvantageous. Generals and staff officers must consider this danger whenever issuing orders for movement.

c. It is necessary that officers and non-commissioned officers prevent the men from remaining prone and passive after they have been induced to lie down by enemy fire. Men in such positions offer ideal targets and the enemy fire will increase. Therefore, they must be required to move forward or, if that is impossible, to at least open fire. During the forward movement the troops should fire not rapidly but continuously. The act of firing produces self-confidence on the part of the firers and reduces the self-confidence on the part of the recipients of the fire.

d. It is believed that the construction of numerous powerful defensive works has a very bad effect on the morale of the troops constructing them, because, not trusting to their own weapons and courage, they begin to place confidence in wire and concrete. Wire and concrete are valueless against any enemy who will not be fooled into frontal attacks, or who, in the case of a landing operation, passes through the obstacles prior to dawn.

11. "Dig or Die":- The expression, "dig or die" is not only untrue but harmful. Troops must not be permitted to dig until they have reached the final objective.

12. Confusion:- In any landing operation confusion is bound to occur. This is due to the fact that in spite of the best intention, landing craft do not land where they are supposed to and stores get ashore regardless of categories. The main thing is to get the man and the stores ashore. If they are there they can be used. If we waste time trying to get them ashore in some preconceived order, they will not be available.

13. Night Attacks:- a. There is considerable feeling in favor of night attacks. When these are used, and to be successful one must attack both day and night continuously, they should be executed by taking advantage of the moon, or they should be put on about 2½ hours before dawn if there is no moon, in either case on a limited objective. The heavy weapons and artillery should be put into position and registered the night before. They can then cover the attack until the flashes of the loading infantry show they are coming close to the objective.

b. A night attack, whether executed by moonlight or just prior to dawn, must be confined to limited objectives and these objectives must be carefully reconnoitered the previous day, and the men who made the reconnaissance must lead the units to the objectives. In making this reconnaissance it is sometimes necessary for patrols to expose themselves in order to draw fire.

c. Night attacks against unreconnoitered positions, particularly in hilly country, are very apt to fail because viewed against the stars or moonlight, one hill looks like another and troops misjudge their locality by as much as a thousand yards.

14. Counterattack:- a. The German will invariably counterattack immediately after dawn and is very adept in supporting this with artillery and mortar fire. After he believes the position has been softened by supporting fire, he advances on it from the front with a small number of infantry and seeks to envelop one or both flanks with the majority of his infantry. This infantry starts to attack between 800-1000 yards and comes forward at a continuous fast walk using marching fire or firing from the halt, or from the kneel.

b. In no case where our infantry utilized the full power of their rifle did a German counterattack get home. In fact, our troops looked forward to the German counterattack as the surest and most effective way of killing Germans. Nevertheless, the certainty of receiving such an attack makes it very evident that the position gained at night must be ready for an attack by daylight.

c. If the observers from the batteries are in contact, it frequently is possible to stop the counterattack by a combination of percussion and air bursts. Only one case is known where the German, stopped by artillery fire, resumed his attack. Normally, he moves forward until human nature can stand no more then quits. While going forward he shoots a great deal and makes all the noise he can. However, his small arms fire is of little value.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

15. Aircraft vs Counterattack:- In any landing operation, the most critical period is from about noon on D Day to the night of D plus 1, because during that time we are probably inferior to the enemy in guns and possibly in infantry, and he has had time to make his reconnaissance and bring up reserves. It is therefore essential that if the mastery of the air permits, we have suitable aircraft aloft to be used against hostile counterattacks. A solution is to have these aircraft wait on over-head for ten minutes in every hour. They can have a secondary bombing mission to which they can proceed and drop their bombs at the close of their ten minute wait. They should be replaced in fifty minutes by another similar group with a similar secondary target. These airplanes must be in radio communication with the air support unit on the ground. By such a method any counterattack can be met from the air.

16. The Infantry Regiment in Close Country:- In deep penetrations against an active enemy, particularly if he is provided with tanks, it has been found expedient to leap-frog battalions. The leading battalion advances and occupies or captures a limited objective on a commanding site. The second battalion passes through the first battalion which immediately begins to organize a defensive position. When the new leading battalion has reached a suitable limited objective further to the front, it will halt and the third or rear battalion will pass through it. The second battalion then begins to organize. In this way the danger of a counterattack is materially reduced, since, if the deployed leading battalion is over-run, the enemy comes up against a partially prepared position, and if this is broken through he finally strikes a fully prepared position.

17. Infantry Regiment in Open Country:- Except in particularly difficult country, it is usually possible through the use of engineers to maintain two battalions abreast. These engineers, working at night behind an infantry screen, make extemporized roads up which the necessary vehicles can move in support of their battalions. As the fight moves on the engineers must extend the roads.

18. Maps:- a. All personnel should have a greater appreciation of the value of maps. Unreasonable requests for maps during the operation probably resulted because initial issues were generous, giving the impression that maps were available to be expended as desired.

b. There is a definite need for a mobile map depot company or similar organization. One of the most vital functions of the engineer during the operation has been the supply of maps. The volume, because of the unexpectedly large number of troops concentrated in a small area, has been tremendous. In many instances additional personnel was required to assist the small map depot detachments in the sorting, packaging and issue of maps. In addition, with a rapidly moving force, the map supply must be mobile so that maps are steadily available when and where called for. A recommended T/O is attached as Inclosure #4.

19. Air Photos:- a. Based particularly upon the ingenuity of the enemy, photographs of usable future areas must be taken for purpose of comparison over a long period of time. In that way can new defenses which are immediately camouflaged and blended well into surroundings be tetected.

b. A set of aerial photos covering the Division reoutes of advance should be furnished each Division and Corps Engineer well ahead of the front lines. All sorties flown should be inspected by an Engineer photo interpreter for minefields, obstacles and bypass sites. The reports must be gotten into the hands of the Division and Corps Engineers by cub plane courier, daily in time to be of value.

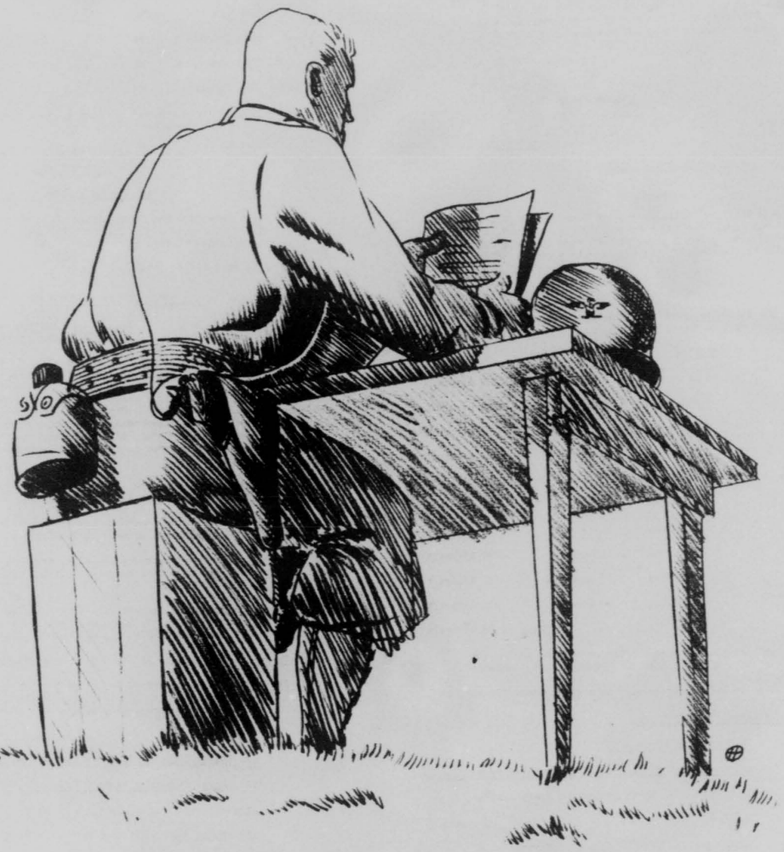
20. Security - Recognition:- Countersigns and paroles are of great value but must be kept under Army control and must be published by Army headquarters at least seven days in advance. These should then be disseminated by lower echelons with decreasing time intervals so that the company receives them approximately 24 hours in advance. Great care must be taken that Army and Corps troops receive them through proper channels.

21. Amphibious Attacks:- When a parallel flank commanded by the Navy exists, it is very important to use amphibious attacks in rear of the enemy's position. These amphibious attacks should be in a strength at least equivalent to a reinforced combat team, because such a force can land further in rear of the enemy and can be self-sustaining for a period of days. Navy gunfire support is vital.

I. MISCELLANEOUS

1. Geneva Conventions:- Field Manual 27-110, "Rules of Land Warfare" is not sufficiently clear in that it lacks interpretation and explanatory data of the general terms of the Hague and Geneva Conventions, particularly with reference to the distinction between private and public public property and its use by an invading force. There is also an insufficiency of material dealing with prisoners of war and ways that they may be legally utilized.

For the Commanding General:



G. KEYES,
Major General, USA,
Deputy Commander

SUMMARY OF OPERATIONS

d. Orders

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

EXHIBIT I

HEADQUARTERS FORCE 141

PLANNING INSTRUCTION NO. 1

COPY NO. 2

12 February 1943.

1. The Combined Chiefs of Staff have directed that an attack will be launched in 1943 against SICILY with the target date the period of the favorable July moon. The C-in-C, Allied Forces, has been designated as Supreme Commander for the operation, with General Alexander as Deputy Commander-in-Chief, Admiral of the Fleet Cunningham as Naval Commander and Air Chief Marshal Tedder the Air Commander.

2. The central planning and operational Headquarters for Operation HUSKY, known as Headquarters Force 141, is being organized at ALGIERS under the supervision of the Deputy Commander-in-Chief. Documents and correspondence transmitted to this Headquarters by courier, or mail, should be addressed:

Headquarters Force 141,
A.P.O. 512.

The telegraphic address is "FORTUNE ALGIERS" and all cables and messages transmitted to this Headquarters should be so addressed.

3. The plan calls for

a. Main U.S. assault from NORTH AFRICA - Western Task Force

b. Main British assault from MIDDLE EAST - Eastern Task Force

4. Recommendation has been submitted to the Combined Chiefs of Staff for the appointment of General Montgomery and General Patton as Eastern and Western Task Force Commanders, respectively.

5. The general function and locations of the respective commanders and staffs concerned in preparing the operation are:

	Function	Responsible	Remarks
a.	Outline Planning Coordination of detailed planning	Force 141	Focus of planning will be at ALGIERS where HQ will be located.
b.	Detailed planning	Western Task Force Commander & Staff	Focus of planning will be in NORTH AFRICA Initially at CASABLANCA probably moving to ORAN.
		Eastern Task Force Commander & Staff	Focus of planning will be in NILE DELTA probably at CAIRO.
c.	Initiation of Executive action to mount Operation.	AFHQ	

	Function	Responsible	Remarks
d.	Agencies responsible for mounting the operation	AFHQ for forces from NORTH AFRICA. U.S. Chiefs of Staff for forces from U.S.A. C-in-Cs Middle East for Forces from Middle East British Chiefs of Staff for division from U.K.	

These proposals are illustrated in Diagram I attached.

6. It has been decided that Headquarters Force 141 will use the British Staff system. Its relation to AFHQ is illustrated at Diagram II.

7. Pending the issue of directives to the Commanders Eastern and Western Task Forces, and the completion of an outline plan for the operation aproved by the Commanders referred to in para 1, the following documents are forwarded to the Commanders Eastern and Western Task Forces:

JP(43)7 (Final) dated 10 January 1943.
COS 161/1 dated 21 January 1943.

These are to be regarded as preliminary documents for information and are subject to modification: they are supplied in order that delay may be avoided in consideration by the Eastern and Western Task Forces of the problems involved and in the organization of their planning and operational staffs. The study so far made by HQ. Force 141 indicates, however, that the approved outline plan will follow, in general, the tactical plan prepared by the Joint Planning Staff.

8. The Naval, Ground and Air forces to be allotted, so far as at present known, are shown in Appendix A. Alterations to these lists will be notified as they occur.

9. Application has been made for a Central Cover Plan for this operation, which will be forwarded to all concerned in due course. A central list of code names and security instructions are being issued separately.

(S) ARTHUR S. NEWINS,
ARTHUR S. NEWINS,
Brigadier General,
(BGS) Plans, Hq. Force 141.

Distribution: (Eliminated)

APPENDIX A

FORCES AVAILABLE

A. NAVAL.

It may be assumed that the Admiralty and the Commander-in-Chief of the US Fleets will make available the necessary forces outlined in COS 161/1 dated 21st January 1943 Annex A in sufficient time to carry out the final rehearsals and to comply with the operation orders of the Naval Commander.

B. AIR FORCES

Air forces of the following order are expected to be available in the theater in sufficient time for this operation:

	BRITISH	U.S.	Total
S.E.F.	24 Squadrons	6 Groups	912 Aircraft
TEF (Day)	3 Squadrons	3 Groups	294 Aircraft
TEF (Night)	3 Squadrons	- - -	54 Aircraft
Light Bombers	6 Squadrons	1 Group	165 Aircraft
Medium Bombers	6 Squadrons	5 Groups	375 Aircraft
Heavy Bombers	2 Squadrons	7 Groups	281 Aircraft
GR	3 Squadrons	- - -	48 Aircraft
TB	4 Squadrons	1 Group	137 Aircraft
PRU	3 Squadrons	1 Squadron	48 Aircraft
Transport	3 Squadrons	3 Groups	210 Aircraft
		Total	1586 Aircraft

If airborne operations are to be undertaken on a large scale, the allotment of transport aircraft will have to be considerably increased.

If a division is to be lifted, there will be a requirement for approximately 320 aircraft of the C-47 type.

C. MILITARY FORCES LIKELY TO BE AVAILABLE.

WESTERN TASK FORCE - US

	Unit	At present in	To be trained in	Mounted from	Remarks

Copy No. 2

141 FORCE OPERATION INSTRUCTION NO. 1

19 May, 43.

OPERATION HUSKY

1. It has been decided that an operation is to be prepared to seize and hold the island of SICILY as a base for future operations.

2. The operation as a whole will be under the command of the Allied Commander-in-Chief. The Naval forces will be under the command of the Commander-in-Chief, Mediterranean; the Ground forces under the command of the Deputy Commander-in-Chief, Allied Forces; and the Air Force under the command of the Air Commander-in-Chief, Mediterranean. The system of joint command will apply.

3. The intention of the Allied Commander-in-Chief is to seize and hold the island by operations in five phases.

Phase 1. Preparatory measures by Naval and Air forces to neutralise enemy naval efforts, and to gain air supremacy.

Phase 2. Pre-dawn seaborne assaults, assisted by airborne landings with the object of seizing airfields and the ports of SIRACUSA and LICATA.

Phase 3. The establishment of a firm base from which to conduct operations for the capture of the ports of AUGUSTA and CATANIA, and the GERBINI group of airfields.

Phase 4. The capture of the ports and airfields outlined in Phase 3.

Phase 5. The reduction of the island.

4. Commanders of forces have been appointed as follows:-

(a) Naval.

(i) Naval Commander Eastern Task Force. Admi Ramsay.

(ii) Naval Commander Western Task Force. Vice Admi Hewitt (U.S.N.)

(b) Army.

(i) Force 343. Lieut-General PATTON.

(ii) Force 545. General MONTGOMERY.

(c) Air.

(i) North West African Tactical Air Force. (N.A.T.A.F.) Air Marshal Conyngham.

(ii) Force 343. Col. Hickey. (U.S.A.A.F.)

(iii) Force 545. Air Vice Marshal Broadhurst.

THIS PAGE IS UNCLASSIFIED

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

5. Tasks will be carried out as follows: -

(a) Force 545.

(i) The assault between SIRACUSA and POZZALLO, supported by such parachute troops as can be lifted in one third of the available transport aircraft.

(ii) Capture of the port of SIRACUSA and the airfield at PACHINO.

(iii) Establish itself on the general line SIRACUSA - PALAZZOLO - RAGUSA, which place will be inclusive to Force 545 and where touch will be gained with Force 343.

(iv) The rapid capture of the ports of AUGUSTA and CATANIA and the GERBINI group of airfields.

(b) Force 343.

(i) Assault between CAP SCARAWIA and LICATA, supported by such parachute troops as can be lifted in two-thirds of the available transport aircraft.

(ii) Capture of the port of LICATA and the airfields of PONTE OLIVO, BISCARI and COMISO.

(iii) Establish itself so as to gain touch with Force 545 at RAGUSA, and protect the airfields and port in sub-paras (b) (ii) above.

(iv) Subsequently to prevent enemy reserves moving eastwards against the left flank of Force 545.

6. The dividing line between Force 545 and Force 343 all inclusive to Force 545 will be VIZZINI - CHIARAMONTE GULFI - RAGUSA - POZZALLO.

7. Further operations will be designed to establish Force 141 across the S.E. corner of the Islands from CATANIA to LICATA, with a view to final operations for the reduction of the Island.

8. Owing to the lack of ports for the maintenance of Force 343, it will be necessary for Force 545 to assist Force 343 in its maintenance, and the Commanders concerned will jointly decide the allocation of port capacity.

9. The Naval Task Force Commanders are charged with the escort and landing of Force 545 and Force 343, and for their subsequent support. The Naval Commanders are also responsible for seaborne diversions.

10. The primary role of the Allied Air Forces in all phases will be to neutralise the enemy air forces and to provide maximum security for shipping and beaches against air attack. Whilst enemy air forces can still operate from Sicilian bases, the provision of this security is of such overriding importance that the scale of air effort available for the direct support of land forces will be strictly limited.

The Air Officer Commanding (A.O.C.), N.A.T.A.F. will command all the air forces, including those at MALTA, giving direct support to the operations undertaken by Forces 343 and 545.

To each Task Force Commander an Air Officer will be allotted who will command the air units assigned to him as shown in the Allied Air Force Order of Battle for HUSKY. In the opening stages of the campaign, the limited area of land operations will permit the operation of one air control only. This will be exercised by A.O.C. Force 545 as soon as units are able to operate from SICILY. During this stage A.O.C. Force 343 will operate under the direction of A.O.C. Force 545.

The second control to cover the Force 343 zone will be operated as soon as land forces have enlarged the front sufficiently to allow the effective operation of two controls. When this stage is reached, A.O.C. Force 343 will operate independently subject to co-ordination by A.O.C., N.A.T.A.F.

The Air Outline Plan gives the detail of system governing command for the whole Allied Air Forces which are participating in HUSKY.

11. Task Force Commanders are responsible for planning the assaults in conjunction with the Naval Task Force Commander and the North African Tactical Air Force Commander, and for planning and carrying out any subsequent operations by the forces under their command which may be required to enable them to complete their mission.

12. Under the general direction of the Deputy Commander-in-Chief, Allied Forces, Task Force Commanders are responsible for supervising the training of their forces and, in addition, in conjunction with the Naval Commanders concerned, for prescribing the lines on which amphibious training should be carried out.

Task Force Commanders are responsible for the general direction of training of the airborne division allotted to them, through the Divisional Commander concerned. Copies of all airborne training instructions will be sent to the Commanding General, Fifth Army.

13. Task Force Commanders will be in executive control of their forces from the time the troops composing it are placed under their command, except that the Naval Commander will be in executive control during the period at sea, and until the forces are firmly established ashore.

14. The forces allotted are shown in the Order of Battle, which will be issued to Task Force Commanders separately.

15. Your Outline Plan, if not already forwarded, should be forwarded with the least possible delay.

(S) A. A. RICHARDSON,
A. A. RICHARDSON,
Brigadier,
C.G.S.

Distribution: (Eliminated)

EXHIBIT II

HEADQUARTERS FORCE 343

18 May 1943
S-E-C-R-E-T

OUTLINE PLAN	:Auth CG IAC : :Initials :
JOSS - DIME - CENT Assault	:18 May, 1943 :

I. MISSION

1. General:
a. To assault the southeastern portion of HORRIFIED in conjunction with the 12th British Army and capture it as a base for further operations.

2. Specific: Landing and operating west of the line VIZZINI - RAGUSA - POZALLO, all exclusive.
a. Seize and hold the airfields just north of QUEENBEE and at HOMESPUN and the air landing fields at PARKHEAD and northwest of FIBULA.
b. Seize and operate the small port at FIBULA.
c. Prepare for further operations under the direction of the Deputy Commander-in-Chief, Allied Force.

3. Scheme of Manoeuver:
a. Make a simultaneous assault in the FIBULA - FEDERAL - SAMPIERI area in order to capture the airfields and the port of FIBULA by dark D/2.
b. Extend the beachhead to the general line (YELLOW).
(1) PALMA DI MONTECHIARO - CAMPOBELLO - MAZZARINO - CALTERGIRONE - GRAMMICHELE and to the East to contact the British in the vicinity of RAGUSA.
(2) To include (BLUE) high ground in vicinity of PIAZZA AMERINA - AIDONE to prevent hostile interference from the Northwest.

II. PLAN

1. CENT - DIME Assault:
a. Commander: Major General O. N. BRADLEY, II Corps.
b. Troops: 1st Division (-1 RCT)
45th Division
2 Ranger Battalions
91st Reconnaissance Squadron
Paratroops (82d Airborne)
Supporting Troops (See Troop List to be issued separately)
c. Missions:
(1) Under cover of darkness of D Day to land in the FEDERAL - SAMPIERI area (beaches 59 to 69 inclusive available) capture and secure:
(a) The airfield at HOMESPUN by daylight on D/1.
(b) The airfield north of QUEENBEE by daylight of D/2.
(c) The air landing field north of PARKHEAD by dark of D/2.
(2) Extend the beachhead to YELLOW and gain contact with the British in the vicinity of QUEENBEE.
(3) Contact with 3rd Division.
d. Maintenance: Over the beaches and through small ports.
e. Transport: Ship to shore and shore to shore (See Troop List).
f. Support:
(1) Navy: By naval gunfire on call of the Sub Task Force Commanders.
(2) Air:
(a) Protection from hostile air interference.
(b) Direct support of the ground troops, including reconnaissance and photo missions.
(c) Protection, transport and supply of airborne units.

2. JOSS Assault:
a. Commander: Major General L. K. TRUSCOTT.
b. Troops: 3rd Division
Combat Command A, 2nd Armored Division
1 Ranger Battalion
Supporting Troops (See Troop List to be issued separately)
c. Mission:
(1) Under cover of darkness on the morning of D Day to land in the FIBULA area (beaches 70 to 74 inclusive available) capture and secure the port and the airfield at FIBULA by dark on D Day.
(2) Extend the beachhead to YELLOW, protecting the left flank of the operation against interference from the Northwest.
(3) Contact with II Corps.
d. Maintenance: Over the beaches and through small port.
e. Transport: Shore to shore. (See Troop List)
f. Support:
(1) Navy: By naval gunfire on call of Sub Task Force Commanders.
(2) Air:
(a) Protection from hostile air interference.
(b) Direct support of ground troops, including reconnaissance and photo missions.

III. FORCE 343 RESERVE.

1. KOOL:
a. Commander: Maj. Gen. HUGH GAFFEY, 2d Armored Division.
b. Troops: 2d Armored Division (less CC A)
1 RCT 1st Division
Supporting Troops (See Troop List to be issued separately)
c. Mission:
(1) Sail with assault convoy and be prepared to land in support of any of the planned assaults.

2. 82d Airborne Division (less paratroop elements):
a. To be prepared to support the assault on call after H-Hour on D Day.

3. 9TH DIVISION: To be alerted to move on call of the Commanding General 343 after D Day.

IV. GENERAL

1. Navy:
a. Provide escort for assault and follow-up convoys throughout their passage to and from HORRIFIED.
b. To clear under-water mine fields in the vicinity of the assaults.
c. To be prepared to assist the planned assaults with gunfire on call of the Sub-Task Force Commanders.
d. To assist the planned assaults by making feint landings elsewhere.
e. Protection of transport area.

2. Air:
a. To provide protection for the assault and follow-up convoys in their movement across the MEDITERRANEAN.
b. To occupy, repair, protect and operate captured airfields as quickly as possible.
c. To be prepared to support further action of the ground troops on call from the captured airfields.
d. To carry out further bombardment, reconnaissance and photo missions as directed by the Task Force Commander.
e. To attack enemy troops moving on roads.
f. To be prepared to bomb enemy artillery beyond the range of the artillery of the ground troops.
g. To insure for the initial airborne operations a minimum of two-thirds of the transport aircraft available, and sufficient gliders to move or to carry the glider RCT of the 82d Airborne Division.
h. To transport, protect and supply the airborne troops.
i. To provide AWS service.
j. Protection of shipping off beaches or in ports.

3. Maintenance:
a. Initially over the beaches and through small ports, and
b. Through the port of LADBROKE by the British, commencing on D Day.

V. COMMAND SET-UP.

EXHIBIT III

PLAN FOR ORGANIZATION CONCENTRATION
AND MOVEMENT OF XII AIR SUPPORT
COMMAND UNITS IN OPERATION
HUSKY

7 June, 1943

I - GENERAL

1. An estimate of the situation will be published at a later date for the information of all subordinate units. Current intelligence summaries will be issued at periodic intervals prior to, and during the operation. Pertinent extracts of the detailed operational plans of other forces involved in the operation will be furnished units concerned.

2. Allied Air Forces are now engaged in operations designed to reduce Axis Air strength in Sicily, Sardinia and Southern Italy as a preliminary to a joint operation in which Southeastern Sicily is to be assaulted on D day by Ground forces and paratroops supported by Naval and Air Forces. During the period prior to D day Pantellaria will be converted to our use as an air base. Other preparatory operations include those conducted with the Navy to gain the upper hand over Axis submarines in the Mediterranean, to destroy any Axis Naval Forces which may threaten the movement to Sicily and to protect shipping and major ports in North Africa.

II - OUTLINE OF ASSAULT PLANS

3. Seaborne Forces

Force 141 will assault Southeastern Sicily through eight groups of beaches at H hour "D" day to seize airdromes and ports in the area and to establish itself along the general line Catania, Licata, prepared for further operations. The assaults are as follows:

ACID NORTH & ACID SOUTH	At Avola by Force 545, (British) to capture Syracuse and AGUSTA.
BARK NORTH, BARK MIDDLE & BARK WEST	By Force 545, on either side of Cape Passero, to capture the airfield at Pachino and to support the forces landed at AVOLA.

CENT, near Cape Scorina by Force 343 (U.S.) to capture Comiso airfield and to advance to the high ground Pallazzolo BUCCHERI-VIZZINI.
DIME, At GELA, by Force 343, to capture airfields at Ponte Olivo and Biscari.
JOSS, At LICATA, by force 343, to capture the port and nearby landing ground.

4. Airborne Forces.

a. A paratroop attack, the details of which are not available, will be dropped in the zone of Force 545, in conjunction with the Acid & Dark assaults.

b. In Force 343 sector, paratroops will be dropped south of Niscimi during the period 2330 D-1 to 0300 D, to assist CENT Force in establishing itself on shore.

5. Naval Forces.

The Eastern Naval Task Force and Western Naval Task Force, are charged with the escort to and landing of Force 545 and 343 respectively and with the subsequent support of these forces until they are firmly established on shore.

6. Air Forces.

The primary role of the Allied Air Forces will be to neutralize the enemy air forces and to provide maximum security for shipping and beaches against air attack. Until this aim is attained or until conditions permit the relaxation of such security measures, the scale of air effort available for direct support will be strictly limited.

7. Operational policy, Tactical Air Force in the preliminary phase, Tactical Bomber Force will undertake escorted light bomber attacks by day and by night when moon assists against selected objectives on Western Area of Sicily and medium bomber attacks against objective on Eastern Area. Escort will be provided from Mainland for light bombers and from Malta, for Medium Bombers. Fighter units in Malta will be employed in Air Fighting using every artifice to secure combat with the enemy air forces. On D-1 day, heavy convoy commitment will be imposed on fighters in Malta. During the initial assault, the main requirements from Malta and Pantellaria are protection of congested beaches and shipping lying off by day and night. Night fighter operations will include intruder activity against main enemy airdromes on Sicily. During this phase, fighters are fully committed and support bombing possible only in exceptional circumstances.

On movement of Air Forces from Malta to Sicily, heavy protective committment for beaches reduced and fighter bombers will become available for support bombing. At this stage, escorted light and medium bomber effort by day for prearranged attacks will be practicable and by night, light and medium bomber effort against selected objectives. The above system will continue in effect until such a time as it is practicable to establish a second fighter control in Sicily.

8. Fighter Control Principles.

a. Assault Phase: All fighters are to be under control of AOC Malta, including operating from Pantellaria. U.S.S. Monrovia will provide forward direction with VHF/RT in the Dime and Joss areas, and the U.S.S. Ancon in the Cent area. Subordinate to U.S.S. Monrovia and providing visual direction over Dime and Joss beaches are U.S.S. Chase and Biscayne respectively. Night Fighters will operate under GCI Control Malta and also under GCI Control of LST's.

b. AOC Malta will continue to control all fighters until Hq's 211 Group is established ashore. Forward control in 343 area will be provided by Ponte Olivo information Center and by Cent Sector operating directly under AOC Malta. Joss Sector will operate under Ponte Olivo until adequate communications are established.

c. On approximately D/3 day nucleus ARQ Desert Air Force and Hq. 211 Group will commence to operate in the PACHINO area and will control RAF squadrons on PACHINO, COMISO and BISCARI airfields. At this stage ARQ DAF will be integral with Hq. 211 Group and will use its communications, until the air warning, GCI and communications systems can be centralized in 211 Group, subordinate to 211 Group will continue to operate in Comiso and Syracuse areas. A forward control will operate in advance of 211 Group. Forward and subordinate sector controls will be linked to 211 Group by HF R/T and W/T until land lines are established. On D/3 information center of Hq. 12th Air Support Command will be ashore and operating. This formation will provide fighter control both forward in support of land operations and for the defense of airfields and beaches. AOC Desert Air Force will control the 31st Group in the Ponto Olivo area through this agency.

d. After the capture of the Catania area, three U.S. Fighter Groups will be operating in Sicily from LICATA, PONTE OLIVO, BISCARI and COMISO airfields under control as specified in sub par. c above until such time as it is practicable to establish a second fighter control in Sicily when XII ASC will form separate entity with direction of effort and coordination undertaken by TAF.

III - MISSION

9. a.--To provide general support for the operation against Southeastern Sicily in conjunction with other Air Forces, by gaining and maintaining air mastery over the battle area and in particular over beaches, naval escorts, and during the initial assault.

b. To furnish Tactical Air Reconnaissance for Force 343, and to watch particularly for the movement of enemy reserves into the battle area from the North and West.

c. To be prepared to operate in close support of either Forces 343 or 545 when the situation permits the diversion of the Air effort from its main objective of denying the air to the enemy, or in the event a major emergency arises during the early stages of the operation.

IV - ORGANIZATION

10. Control of Units.

a. XII ASC units, located on the mainland, will be under the operational control of AOCTAF, who will exercise control through rear Hq. XII ASC.

b. XII ASC units located on Pantellaria, will be under operational control, AOC Malta, under direction AOCTAF.

c. XII ASC units located in Sicily will be under operational control AOC DAF through advance Hq. XII ASC.

d. The 111th Observation Sq. is excepted from the above. This unit will be available for direct call C.O. XII ASC for reconnaissance in support of Force 343, ground.

e. XII ASC will form separate entity with direction of effort and coordination by AOC, TAF when the formation of two separate commands in the Sicilian area is practicable.

f. Movements by D, D/4, and D/8 convoys will be coordinated with division commanders concerned. Succeeding movements will be coordinated with Force 343.

g. The movement of combat echelons into Sicily will be coordinated with AOC, DAF.

11. Channels for Requests for Air Assistance.

When the demands for air assistance exceed the capacity of units under the operational control of the C.O. XII ASC, requests will be initiated and forwarded to Headquartere as follows:

a. Requests for protective air cover during the assault phase are to be made to Air Officer Commanding, Malta.

b. When air forces are established in Sicily and during the assault phase, requests for air support are to be made to the Air Officer Commanding, Desert Air Force.

c. After the assault stage, requests for heavy bomber attack by day (by Strategic Air Force) and for night reconnaissance or bombing by Strategic Air Force or Tactical Bomber Force respectively are to be made direct to Tactical Air Force Hq. repeated to Air Officer Commanding, Desert Air Force, and Air Officer Commanding Malta. Coordination of this effort will be undertaken by Tactical Air Force Hq's.

d. Requests for PRU reconnaissance will be forwarded direct to Tactical Air Force Hq., repeated to Air Officer Commanding Desert Air Force and Air Officer Commanding, Malta.

12. Headquarters Organization.

Hq. & Hq. Sq. reinforced by elements of the 3d Wing will be organized into an advance, and a rear echelon.

a. The advance echelon will consist of 28 Officers and 40 Enlisted Men. The functions of this headquarters will be:
(1) To control Operations of the 111th Observation Sq.
(2) To be prepared to take over other units specifically released to operational control of the CO XII ASC.
(3) To maintain liaison with Force 343 and to initiate or filter requests for air assistance in accordance with developments of the situation.
(4) To supervise operations of the forward fighter control unit in Force 343 area.
(5) To control and supervise the installation of XII ASC units on shore.
(6) Collect and evaluate operational and intelligent data and forward pertinent information to lateral and higher Air Headquarters.
(7) Arrange for movement of Air Echelons from Tunisia in coordination with AOC, Force 545.
(8) Establish a standby Headquarters to take over the above function in event Force 343 Command ship is destroyed or delayed enroute to the area.

b. The Rear Echelon will:
(1) Control operations of XII ASC units operating in Tunisia under direct orders AOCTAF.
(2) Administer these units and coordinate their movement to ports of embarkation.
(3) Dispatch air echelons to Sicily as directed by C.O. XII ASC.

13. Provisional Fighter Control Group.

a. This unit will include the following organizations:

Det. 3rd Air Defense Wing.
82nd Fighter Control Squadron.
Provisional Aircraft Warning Bn.

b. Functions will include the establishment and operation of:
(1) RDF facilities and ground observation station.
(2) Air - ground communication facilities.
(3) Advance Fighter Control.
(4) Operational control of A.A., artillery covering airdrome, and rear areas to include ports.
(5) Dispatch and control of aircraft in accordance with operational plans C.O., XII ASC or as directed by higher headquarters.

d-3

SECRET

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

14. Battle Order - (Combat Units).

31st Fighter Group
27th Fighter-Bomber Group
86th Fighter-Bomber Group
33rd Fighter Group
324th Fighter Group
7th Wing South African (Fighters)
79th Fighter Squadron
111th Observation Squadron

15. General Plan.

a. Disposition of Units (XII ASC).
(1) By D-10:

1 Group Spitfires - GOZO
1 Group P-40's - PANTELLARIA
Remaining Units - CAPE BON PENINSULA

(2) Units will be moved to advance airdromes in Sicily as rapidly as conditions permit in such a manner as to preserve continuity of operations in the following order of priority:

31st Fighter Group
111th Observation Squadron
33rd Fighter Group
27th Fighter-Bomber Group
86th Fighter-Bomber Group

b. Tactical Employment (XII ASC).

The following missions will be undertaken by XII ASC units in conjunction with other formations of the Tactical Air Force.
(1) During the period D-7 to D-1 Day:
(a) Units based in the Malta and Gozo will be employed to neutralize enemy air forces based in Western Sicily, and to protect shipping. Escort will be provided for day operations by the Tactical and Strategical Bomber Force.
(b) Air Force (XII ASC) elements based in Pantellaria and Tunisia will be employed to escort medium bombers of the Strategic Air Force and Tactical Air Force in attacks against objectives in Western Sicily, and to protect shipping.
(2) Period of the Assault:
The air effort will be concentrated to provide protection to shipping and beaches. Direct support for ground operations will be provided only in exceptional circumstances. Air Reconnaissance will be furnished for Force 343.
(3) Establishment of a Bridgehead from LICATA TO CATANIA.
(a) Continued air operations to neutralize enemy air forces and to protect shipping and beaches.
(b) Air Reconnaissance for Force 343.
(c) When air forces can be located in Sicily, direct support to assist the advance of land forces.
(4) Flexibility in Employment:
(a) Units equipped with A-36 and P-40 type aircraft will be prepared to operate as fighters or fighter bombers.
(b) Observation units will be retained specifically for an observation role but will be trained in fighter tactics.

c. Maintainance (1st and 2nd echelon) and operational facilities will be established in Force 343 area and combat echelons will be advanced to the area as rapidly as conditions permit. This movement will be so arranged as to maintain continuity of operation.

d. Forward control and AW facilities will be provided for aircraft operating within the zone of action of Force 343, covering ground operations, airdromes, beaches, and naval escorts. The system will be tied in with that established by D.A.F.

e. Liaison will be established with Force 343 and maintained throughout the operation. Requests for air assistance will be filtered and acted on within the capabilities of units under operational control C.G., XII ASC. Requests which cannot be met will be passed to higher formations.

VI - DETAILED MOVEMENT PLAN

16. One-half Hq & Hq Sq., and 309th Fighter Squadron (less combat echelon), will move to Algiers by D-28 for concentration, training and rehearsal with the 1st Infantry Division. These units will accompany the assault Echelon, "Dime" Force and will establish themselves on Fonte Olivo airdrome prepared to service aircraft and coordinate operations immediately on arrival of combat echelons of the Group. Detailed arrangements for movement will be coordinated with Hq., 1st Infantry Division.

a. The combat echelons of 307th, 308th, and 309th Squadrons and 1/2 Hq & Hq Squadron will be moved to GOZO by air prepared to undertake intensive operations under AOC Malta prior to D-7. On D-2, on call, these units will be moved to Sicily by Air where they will operate under control AOCWD, through Advance Hq., XII ASC.

b. The service elements of the Air Echelons of the 307th Squadron, the 308th Squadron will be moved by air transport to Fonte Olivo on call Advance Hq., XII ASC. Transports to be furnished by the Service Command.

c. The 308th and 309th Fighter Squadrons, (less air Echelons), will be held in the Cape Bon area, in readiness for movement to Tunis after D-8 on orders C.G., XII ASC.

17. 33rd Fighter Group Disposition.

a. The 58th Squadron, less combat echelon, will be concentrated in the vicinity of Tunis by D-4 day, prepared for embarkation with elements of the "Dime" Force on D-4 day. Upon arrival in Sicily, this unit will establish itself on Biscari airdrome prepared to service combat echelons of the Group by D-3. Movement to be coordinated with C.G., 1st Infantry Division.

b. The Air Echelons, 59th and 60th Squadrons, the combat echelon, 58th Squadron, and Group Hq & Hq Sq., will be moved to Biscari by combat aircraft and transports to be furnished by NAASC. Movement to be made on D-8 on call Advance Hq., XII ASC, escorted by combat echelon of the Group. Units are to be prepared for operations immediately after landing at Biscari.

c. The Ground echelons of the 59th and 60th Squadrons will be prepared to move from Pantellaria to Biscari by D-10. Details concerning movement will be coordinated with Force 343 by Hq., XII ASC.

18. 27th Fighter Bomber Group.

a. The Group will be concentrated in the Cape Bon Area prepared to undertake operations as fighter or fighter bombers over Sicily by D-7.

b. One-half Group Hq & Hq Squadron and 17th Fighter-Bomber Squadron (less combat echelon) will be moved to point of embarkation "Dime" Assault Force, Tunis by D-4 day, prepared for shore to shore movement to Sicily. These units will leave on the D-4 convoy and will establish themselves by D-8 on Comiso Airdrome, prepared to service aircraft and to coordinate operations immediately on arrival of the combat echelons of the Group. Detailed arrangements will be coordinated with C.G., 1st Infantry Division.

c. The combat echelon, 17th Fighter-Bomber Squadron, the Air Echelons of the 16th and 91st Fighter-Bomber Squadrons, and 1/2 Group Hq & Hq Sq., will move by air to Comiso on or about D-8 on orders C.G. XII ASC, Adv. Hq. Air Transports will be furnished by NAASC. Units will be prepared for immediate operations on landing at Comiso. Escort for transports to be provided by combat echelons.

d. The ground echelons of the 16th and 91st Fighter-Bomber Squadrons will be moved to Tunis on D-12 prepared for embarkation with elements of the "Dime" Assault Force. Details relating to the movement from Tunis to Sicily to be coordinated with Hq., Force 343, Hq., XII ASC.

19. 86th Fighter-Bomber Group.

a. The Group will be concentrated in the Cape Bon area prepared to undertake operations as fighter or as fighter-bombers by D-7.

b. One-half Gp., Hq & Hq Sq., and the 309th Fighter-Bomber Squadron (less combat echelon) will be moved to point of embarkation "Dime" Assault Force Tunis by D-4, prepared for shore to shore movement to Sicily. These units will leave on the D-4 convoy and will establish themselves by D-8 on Comiso Airdrome prepared to service aircraft and to coordinate operations immediately on arrival of the combat echelons of the Group. Detailed arrangements will be coordinated with C.G., 1st Infantry Division.

c. The combat echelon 309th Fighter-Bomber Squadron and the air echelons of the 310th and 311th Fighter-Bomber Squadrons will be moved to Sicily on D-8 on orders C.G., Advance Echelon XII ASC. Air transports will be furnished by NAASC. Units will be prepared for operations immediately on landing. Escorts for transports will be provided by combat echelons.

d. The ground echelons of the 310th and 311th Fighter-Bomber Squadrons will be moved to Tunis on D-12 prepared for embarkation with elements of the "Dime" Assault Force. Details of the movement from Tunis to Sicily to be coordinated with Hq, Force 343, by C.G., XII ASC.

20. 111th Observation Squadron.

a. The Squadron will be concentrated in the Cape Bon area by D day prepared for operations in Force 343 area.

b. One-half ground echelon will move to assembly area in the vicinity of Tunis on D-8. The unit will move to Sicily on D-4 with elements of the 1st Infantry Division (Dime Force). Details of the movement to be coordinated with Hq, 1st Infantry Division. Upon arrival in Sicily, the unit will establish itself on Fonte Olivo airdrome prepared to service aircraft and to coordinate operations of the combat echelon by D-5.

c. The air echelon will move to Fonte Olivo airdrome on D-2 on orders C.C., Advance Hq., XII ASC. Transports to be furnished by NAASC. Unit to be prepared for operations immediately after landing. Escort for transports to be provided by combat echelon.

d. The remainder of the squadron will be assembled in the vicinity of Tunis on orders C.G., XII ASC prepared for embarkation with elements of the "Dime" Force. Details to be coordinated with Hq, Force 343.

e. Special fighter escort will not be available in the early stages of the assault due to the air situation, but advantages will be taken of the incidental protection offered by scheduled fighter and bomber missions. Initially reconnaissance will be concentrated to provide early information relative to the movement, disposition, and strength of reserves. Operations will be controlled through forward fighter control facilities in the GELA area.

21. Hq & Hq Sq., XII A.S.C.

a. The advance echelon will accompany Hq, Force 343, and subordinate Headquarters in Command Ships for command and liaison purposes.

COMMAND SHIP	OFFICERS AND MEN	ASSEMBLE	DATE
Force 343 (Monrovia)	10 Officers 20 Enlisted Men	Algiers	D-10
II Corps and 45th Inf Div (Anson)	8 Officers 10 Enlisted Men	Oran	D-20
1st Inf Div (Chase)	4 Officers 5 Enlisted Men	Algiers	D-20
3rd Inf Div (Biscayne)	4 Officers 5 Enlisted Men	Bizerte	D-15
1st Armored Div (Ormsaba)	2 Officers	Oran	D-20

b. Command ship parties (less 2 liaison officers for each headquarters), will assemble at GELA at headquarters, XII ASC on arrival in Sicily.

c. The Rear Echelon will move to GELA on orders C.O., XII ASC after combat units have cleared Tunisia.

22. Fighter Control Group (Provisional).

a. Assault Echelons.

(1) Provision will be made for the operation of fighter control facilities on board command ships as follows:

COMMAND SHIP	PERSONNEL	TYPE OF CONTROL	ASSEMBLE	DATE
(Monrovia)	6 Officers 25 Enl. Men	Main Ftr. Control and Visual Direction	Algiers	D-25
(Anson)	6 Officers 25 Enl. Men	Standby Ftr. Control and Visual Direction	Oran	D-25
(Chase)	3 Officers 8 Enl. Men	Visual Direction	Oran	D-25
(Biscayne)	3 Officers 8 Enl. Men	Visual Direction	Bizerte	D-25

(2) An advance party of 20 Officers and 221 Enlisted Men (includes, British GCI team of 3 Officers and 31 Enlisted Men and 6 ground Observer teams totaling one Officer and 42 Enlisted Men) will be organized to establish forward fighter control facilities on shore in the GELA area. This party will be assembled at Algiers with the 1st Division by D-20 for training and rehearsal. It will accompany the assault convoy 1st Division, and establish RDF, VHF, and operations room facilities on shore to take over main control in the area from the Monrovia. The system will be integrated with JOC69 facilities and will be tied in laterally with 211 Group as rapidly as possible.
(3) Personnel on Force 343, 1st Division, and 45th Division Command Ships will assemble at GELA as soon as fighter control facilities are established on shore, to augment the organization outlined in 21 a(2) above.
(4) An advance party of 5 Officers and 61 Enlisted Men (includes 1 COL (British) attached, with 1 Officer and 31 Enlisted Men) will be organized to establish RDF facilities and local fighter direction in the LICATA area. This party will assemble in the Bizerte area by D-25 for rehearsal and training with the 3rd Division. It will accompany Assault Convoy 3rd Division.
(5) Personnel on the Command Ship, 3rd Division, will assemble at LICATA to augment the organization outlined in 21 a (4) above.

b. All follow up echelons will be moved to Sicily through the Dime area with elements of the 1st Division. Units will be assembled in Tunis at least 8 days prior to scheduled date of departure.

(1) A first follow up echelon of 20 Officers and 233 Enlisted Men (includes attached 1 GCI team (British) 1 Officer and 31 Enlisted Men, 1 COL (British) 1 Officer and 31 Enlisted Men, 6 ground Observer teams (British) 1 Officer and 42 Enlisted Men will be organized to augment fighter control facilities in the area. This unit will be assembled at Tunis by D-4 prepared for movement with elements of the 1st Division on D-4.
(2) A second follow up echelon of 9 Officers and 116 Enlisted Men (includes 8 Officers and 72 Enlisted Men) will be assembled at Tunis by D day prepared for movement with elements of the 1st Division on D-0.
(3) Remaining elements to be in readiness after D-16 prepared for movement on 48 hours notice to Tunis.

SECRET

3rd Communications Squadron.

a. (1) ASP's will be provided as follows:

CENT Assault:	1.	For II Corps Hq.
	2.	For 45th Div. Hq.
DIME Assault:	2.	For Hq. 343
	2.	For 1st Div.
JOSS Assault:	2.	For 3rd Div.
KOOL Force by Air	2.	For 1st Armored Div.
	1.	For 82nd Airborne Div.
	Reserve 1 with 9th Division	

(2) Each ASP will include 1 Officer, and 5 Men. They will be concentrated initially in the Algiers area for training and re-equiping and will be moved to join designated headquarters at the earliest practicable date. These units will accompany division Corps and TF Hq., on command ships. The ASP set-up for the 82nd Airborne Division will be dropped by parachute with appropriate headquarters.

(3) For details, see Signal Plan.

b. Advanced Landing Ground Parties.

(1) 4 Parties, 1 Officer and 13 men each, will be organized. They will be concentrated inthe Algiers area for re-equiping and training and moved to Divisional areas by D-25.

(2) Parties will accompany convoys and establish HF and VHF communications on airfields as indicated:

UNIT	ASSAULT FORCE	DATE CONVOY	COMMUNICATIONS ESTABLISHED AT
1 Party	3rd Division	D	Licata
1 Party	1st Division	D	Ponte Olivo
1 Party	1st Division	D+4	Biscari
1 Party	1st Division	D+4	Comiso

c. Remaining elements of the squadron will be in readiness after D+8 prepared for movement to Sicily from Tunis on 48 hours notice.

24. 927th Signal Bn. ASC.

a. Cryptographic and message center personnel will be provided on Command Ships as follows:

SHIP	O	MEN	ASSEMBLES	DATE
Monrovia	2	7	Algiers	D-25
Ancon	2	7	Oran	D-25
Biscayne	0	2	Bizerte	D-25
Chase	0	2	Oran	D-25
Orizaba	0	2	Oran	D-25

Personnel will be assembled at GELA when C.P., XII ASC opens on shore.

b. An advance detachment of 8 Officers and 136 Enlisted Men will be organized to provide communications for Hq, XII ASC, to include the construction of lines for Intelligence and Operational purposes. This detachment will be concentrated with the 1st Division on D-25 for training and rehearsal. It will move to Sicily with the Assault Echelon, 1st Div., on D day and will report to Hq. XII ASC GELA upon arrival on shore.

c. A follow up detachment of 3 officers and 96 Enlisted Men from Light Construction Company will be moved to Point of Embarkation 1st Division, Tunis, on D+1. Detachment moves with D+4 convoy 1st Division and reports to Hq. XII ASC at GELA on arrival on shore.

d. Remaining elements will continue to operate Signal facilities for Rear Hq. XII ASC, moving with the latter unit to Sicily on orders C.O., XII ASC.

25. The 3rd Air Defense Wing will provide necessary detachments for organizing the Provisional Fighter Control Group and Advance Hq. XII ASC. Remaining elements will be held in Tunisia, for reorganization as a Fighter Wing, to be moved to Sicily on call C.O., XII ASC.

VII - MISCELLANEOUS

26. Anti-Aircraft Artillery.

Operational control will be undertaken by C.O., XII ASC when satisfactory communications are established.

27. Barrage Balloons.

The number and type to be available in the Cent convoy from the U.S. are not known. Provision has been made for British equipment and personnel but these will be replaced if possible with U.S. units. Local A.A. defense commanders will control barrage balloons.

28. Restrictions, A.A. Fire. (To be issued later in separate instructions).

29. Air-Sea Rescue.

Air-Sea Rescue arrangements are being made by Mediterranean Air Command for the Theater of Operations and comprehensive instructions will be issued by this formation. This information will be passed to aircraft crews when it becomes available to this headquarters.

30. Defense of Airfields.

Before aircraft are called into Sicily, assurance will be had that airfields are adequately protected by A.A. Artillery. Minimum requirements for each airdrome are estimated at:

8 - 90 mm
16 - 40 mm
16 - 50 Cal.

31. Airfield Construction.

Reconnaissance for additional airfields will be initiated early inthe operations. Every effort will be made to construct additional fields to expedite the entry of units into Sicily and to effect greater dispersion of units.

32. Licata Airfield.

A minimum of one squadron of fighters will be moved to Licata prior to the time the port is opened for use by Force 343.

VIII - ESSENTIAL ELEMENTS OF ENEMY INFORMATION

33. Preparatory Period.

a. Are there any indications that preparations are being made to concentrate Axis air forces to meet our attack?

b. What additional beach defenses are being established in Sicily?

c. What effect is our bombing having on his fighter strength and dispositions? Are bombers being withdrawn as a consequence of this bombing? If so to what locations?

d. What are his current air defense potentialities?

e. Are there any weaknesses in the enemy's logistical and communications systems which can be effected by air action?

34. Period of the Assault.

a. What is the current strength disposition and location of Axis Air Forces in position to intervine in the battle area?

b. Where is the enemy's A.A. Artillery located?

c. How is the enemy employing his Air Forces? In mass attacks or piecemeal? Against which objectives are their Air Forces being concentrated?

d. How is the enemy disposing his local and general reserves of ground forces?

e. What effect is our attack having on his Air defense organization?

f. What organized defenses including Artillery are holding up our ground forces?

g. What is the enemy's reaction to our paratroop attack?

h. Are there any indications of weak points in the enemy's logistical and communications systems?

35. Establishment of a Bridgehead from Licata to Catania.

a. What are the current reactions and future capabilities of Axis Air Forces?

b. Against which objectives is the enemy concentrating his Air Forces?

c. What is the current disposition and capabilities of the Axis Air Forces?

d. How are his reserves being employed?

e. What weakness has been developed in his AW defense system?

f. Where is his A.A. Artillery located?

g. Are there any signs of a withdrawal or full retreat?

h. Are there any indications of weak points in the enemy's logistical and communications systems?

SECRET

AMENDMENT NO. 1 BIGOT SECRET
to
PLAN FOR ORGANIZATION CONCENTRATION
AND MOVEMENT OF XII AIR SUPPORT
COMMAND UNITS IN OPERATION
HUSKY

18 June, 1943.

Add Paragraph 25½:

25½. a. The following units based in the Cape Bone Area operating under control of the Rear Echelon Hq. XII ASC until that formation moves to Sicily when they will pass to direct control of Hq N.A.T.A.F. These units will be prepared to operate over the area of Force 343, refuelling if necessary, at Pantelleria.

324th Fighter Group
7th Wing, South African Air Force (Fighter)

b. The 99th Fighter Squadron, attached to the 33rd Fighter Group initially, will not under present plans move to Sicily, but will continue operations from Pantelleria under control of Commanding Officer, Pantelleria.

For the Commanding General:

/s/ A. R. Lederer,

A. R. LEDERER,
Captain, Air Corps,
Acting Adjutant.

MOUNT BAKER,
TARAZED,
WINOOSKI, NATTAPONI, CHICOPEE, SALAMONIE, CHEMUNG, NIOBRARA,
CHAMBERLAIN.

1. Information. (1) Current information on hostile forces and on characteristics of the Theater of Operations is listed in Information Annex, Annex A. Additional information, as available, will be separately distributed.
(2) The Western Task Force is part of a combined Allied force which has as its mission the capture of SICILY as a base for future operations.
(3) The Western Task Force is being employed in the waters to the westward of the southeastern part of the island. Operations by British forces on the same echelon are taking place simultaneously in waters to the eastward of the southeastern portion of the island.
(4) The area of the Western Task Force is bounded:
(a) On the North, by the parallel of thirty-eight degrees North.
(b) On the West, by the meridian of twelve degrees East.
(c) On the Southwest, by a line drawn one one zero degrees from POINT SPADILLO (PANTELLARIA).
(d) On the Southeast, by a line drawn two two five degrees from RELIGIONE POINT (SICILY).
(5) Enemy ports which will come under the control of UNITED STATES forces are PORTO EMPEDOCLE, MARSALA, TRAPANI, and PALERMO. Other ports on the southern coast may be occupied during the early phases of the operation in order to maintain our military forces. Maintenance of our military forces will be undertaken also through the port of SYRACUSE as soon as that port is captured and made available to our shipping. Upon the opening of ports to the shipping of the Eastern Task Force, additional British landing craft may be allocated to the Western Task Force to assist in the maintenance over the beaches of UNITED STATES military forces.
(6) British submarines will act as navigation beacons in each area selected for American attacks (see Submarine Plan, Annex H).
(7) Fighter coverage of the Western Task Force will be provided: by North African Coastal Command during movements along the north coast of Africa and during passage through the TUNISIAN war channel; by the MALTA command during the northern approach on D minus one day. Until the capture of SICILIAN air fields: cover over the CENT Attack Force and DIME Attack Force will be provided by MALTA; cover over the JOSS Attack Force by PANTELLARIA. When SICILIAN air fields are captured and placed in operation, (probably D plus three), day and night fighter cover will be provided over landing beaches, ships lying off-shore, and convoy movements. (See Air Plan, Annex F).
(8) Friendly aircraft participating in the operation will be marked with existing National markings, except that the UNITED STATES white star will be enclosed in a yellow circle. Thus all Allied aircraft will have the general similarity of a circle, i.e., the British and French roundel and the UNITED STATES circle enclosing the star. (See Air Plan, Annex F).
(9) Force "H", a strong British force, will cover the Allied assaults from enemy surface vessel approach from the IONIAN SEA. If the Italian Fleet sorties from western ports of ITALY, Force "Z", a strong British force, will operate southward of SARDINIA in positions favorable covering the Allied assaults from enemy surface vessel approach from the TYRRHENIAN SEA.
(10) On D minus two, a Covering Group, consisting of UNITED STATES cruisers and destroyers, will cover the eastward movement of Allied convoys, operating in accordance with Covering Group Directive, Annex O.
(11) From D minus two onwards a British screening force comprising two MTB flotillas and one MGB flotilla will operate to screen the western flank of the Western Task Force. The operating area of this screen will be west of the meridian thirteen degrees East, and north of a line connecting Latitude thirty-seven degrees North, Longitude thirteen degrees East, with Latitude thirty-eight degrees North, Longitude eleven degrees East. At zero eight hundred on D day this screen will come under the command of Naval Commander, Western Task Force.
(12) Controlled mine fields are reported to exist off all southern beaches, except possibly beach number eighty-eight. Beach data given in Information Annex, Annex A.
(13) During moonlight on D minus one, own paratroops will be dropped from transport planes into zones behind the enemy lines in order to capture enemy airfields and divert enemy forces from the beach defenses prior to the assault from seaward.
(14) When military operations are undertaken for the reduction of the island, a Support Force, comprising light cruisers and destroyers, will be assigned to support the reduction operations by naval bombardment.
Assumptions. (1) That the initial landing will take place during darkness.
(2) That strong submarine, E-boat, and air attacks are to be expected.
(3) That mines may be encountered.
(4) That no harbors will be available and that initial landings must be over beaches.
(5) That weather conditions will permit landing through the surf on designated beaches.
(6) That false beaches will not preclude the landing ships and craft from landing on the true beaches.
(7) That own paratroops will divert enemy forces from the beach defenses prior to the landings made from seaward.
(8) That the maintenance and build-up of the military forces can be continued over beaches until adequate ports become available and are rendered usable to meet logistic requirements.

2. This force will firmly establish Western Task Force in positions ashore on the island of SICILY suitable to its capture of the south-eastern portion of the island in order to assist in seizing and holding that island as a base for future operations.

3. (a) CONTROL Force, Force Flagship operate as directed by Naval Commander Western Task Force.
Escort Group escort convoys in accordance with Convoy Plan, Annex I. Protect convoys against submarine, surface, and air attack. Upon arrival in attack area, render gunfire support as directed.
Screening Group screen JOSS Attack Force against hostile surface forces approaching from bases in WEST SICILY. Frustrate enemy E-boat raids. Operate in accordance with Screening Group Directive, Annex K.
Demonstration Group conduct deceptive operations in accordance with Demonstration Group Directive, Annex L.
Minelaying Group lay mines in accordance with Minelaying Group Directive, Annex M.
Reserve Group LCT's sail with TJS-1 enroute to DIME area, LST's sail with TJU-1 enroute to DIME area, and LCI(L)'s sail with TJF-1 enroute to DIME area; ORIZABA and CHATEAU THIERRY sail with CENT Attack Force joining DIME Attack Force in accordance with Departure and Rendezvous Plan, Annex G; subsequent movements as directed by Naval Commander Western Task Force.
(b) DIME Attack Force establish assigned Army Forces ashore near GELA by simultaneous attacks on selected beaches at H hour on D day in accordance with plan of attack developed by Commanding General concerned. Capture and secure the airfield at PONTE OLIVO, extend the beachhead to the East and Northeast to include the line RAGUSA-CHIARAMONTE-CALTAGIRONE and gain contact with the British forces on the East. Support military operations by naval gunfire in accordance with Fire Support Plan, Annex B. Silence batteries and destory searchlights which threaten transports, beaches, and landing craft. Take advantage of opportunity to move transports inshore during darkness, and in daylight when shore-batteries have been silenced. Upon joining in accordance with Departure and Rendezvous Plan, Annex G, sail ORIZABA and CHATEAU THIERRY of Reserve Group to DIME area. Expedite unloading transports; utilise fully twelve LCT's ex-JOSS Attack Force.
(c) CENT Attack Force establish assigned Army Forces ashore near SCOGLITTI by simultaneous attacks on selected beaches at H hour on D day in accordance with plan of attack developed by Commanding General concerned. Capture and secure the airfields at COMISO and BISCARI, extend the beachhead to the East and Northeast to include the line RAGUSA-CHIARAMONTE-CALTAGIRONE, and gain contact with the British forces on the East. Support military operations by naval gunfire in accordance with Fire Support Plan, Annex B. Provide own air spot. Silence batteries and destory searchlights which threaten transports, beaches, and landing craft. Take advantage of opportunity to move transports inshore during darkness, and in daylight when shore batteries have been silenced. Sail ORIZABA and CHATEAU THIERRY of Reserve Group, releasing in accordance with Departure and Rendezvous Plan, Annex G. Expedite unloading transports; utilize fully fourteen LCT's ex-JOSS Attack Force.
(d) JOSS Attack Force establish assigned Army Forces ashore near LICATA by simultaneous attacks on selected beaches at H hour on D day in accordance with plan of attack developed by Commanding General concerned. Capture and secure the port and airfield at LICATA; protect the left flank of the operation against interference from the northwest. Support military operations by naval gunfire in accordance with Fire Support Plan, Annex B. Silence batteries and destroy searchlights which threaten landing craft and beaches. Sail craft of Reserve Group as follows; LCT's in TJS-1, LST's in TJW-1, and LCI(L)'s in TJF-1. Prior to execution of JOSS Approach Plan, release Reserve Group. Exploit port facilities to maximum to ensure troop maintenance. Be prepared to unload four coastal freighters upon arrival D plus four day. When unloaded from assault flight release twelve LCT-5 to DIME Attack Force and fourteen LCT-5 to CENT Attack Force.
(e) Train render logistic services to all Task Forces as required. Base on ORAN, ALGIERS, BIZERTA, or as directed.
(x) (1) This Operation Plan will be placed in effect by dispatch or sealed orders.
(2) D day and H hour will be signalled.
(3) The assault is to be pressed home with relentless vigor regardless of loss or difficulty.
(4) Take every available measure to ensure,
(a) earliest warning of submarine attack, and
(b) destruction of hostile submarines.
(5) Destroy enemy forces encountered.
(6) Take all practicable precautions against mines.
(7) Take appropriate steps to ensure safety of submarines stationed as beacons. Escort submarines in accordance with Submarine Plan, Annex H.
(8) Employ smoke to fullest extent for defense against enemy action and to screen own operations.
(9) Take special precautions to ensure early recognition of friendly aircraft.
(10) Take special precautions to avoid compromise of infra-red receivers.
(11) Extend timing of boat waves to avoid congestion on beaches.
(12) Site pontoon bridges expeditiously.
(13) Ensure effective boat salvage operations.
(14) Clear landing ships and craft promptly in order to ensure prompt follow up. Provide adequate escorts. Route shipping in accordance with Convoy Plan, Annex I.
(15) Maintain radio silence and visual silence except as modified by Communication Plan, Annex C.
(16) The following documents, in the possession of Commanders of Attack Forces, are in effect:
(a) MEDITERRANEAN (W) Combined Navy/Air Orders.
(b) MEDITERRANEAN (W) Naval Air Defence Orders.
(c) MEDITERRANEAN (W) Secret General Orders.
(17) Landing ships and craft base on BIZERTA-TUNIS; other ships base on ORAN - ALGIERS.

4. Evacuation of wounded in accordance with Medical Plan, Annex D.
Logistic support in accordance with Logistic Plan, Annex E.

EXHIBIT V

FIELD ORDER NO. 1 FORCE 343

Field Order)
Number....1)

Hq Force 343,
APO #758, US Army,
20 June 1943

MAPS: Road Map, SICILY, 1:500,000 (Sketch)

1. a. See Annex No. II Intelligence.

b. (1) FORCE 343, consisting of FORCE 343 (Left) and BRITISH 12th ARMY (Right), supported by combined US and British Air and Naval Forces, assaults the southeastern portion of SICILY to capture it as a base for further operation.

(2) BRITISH 12th ARMY (1st Canadian Div on the left (West)O, assault's within its zone of action at H Hour on D Day. (See Operations Map)

2. FORCE 343 assaults west of the line POZZALO - RAGUSA - CHIARAMONTE GULFI - VIZZINI, all exclusive, at H Hour D Day to seize and hold the airfields just north of COMISO, at PONTE OLIVO, the air landing fields at BISCARI and northwest of LICATA; to seize and operate the small port at LICATA; and to be prepared for further operations.

D Day: To be announced.
H Hour: To be announced.
Troops: See Annex No. III, Troop List

3. See Annex No. I. (Operations Map)

a. SHARK FORCE (CENT and DIME FORCES)

Commanders: SHARK: Lt Gen O. N. BRADLEY
CENT : Maj Gen T. C. MIDDLETON
DIME : Maj Gen TERRY DE LA M. ALLEN

Mission:

(1) Land H Hour D Day in the SAMPIERI - GELA area, capture and secure:

(a) The airfield at PONTE OLIVO.
(b) The airfield north of COMISO.
(c) The air landing field north of Biscari.

(2) Contact with JOSS FORCE.

(3) Extend beachhead to YELLOW and gain contact with the BRITISH 12th ARMY, initially vicinity RAGUSA.

b. JOSS FORCE

Commander: Maj Gen L. K. Truscott

Mission:

(1) Land H Hour D Day in the LICATA area, capture and secure the port and the airfield at LICATA.
(2) Extend the beachhead to YELLOW, protecting the left flank of the operation against interference from the Northwest.
(3) Contact with SHARK FORCE.

c. PARACHUTE TASK FORCE:

Commander: Col J. M. GAVIN

Troops: 505th Parachute R.C.T.
3rd Bn, 504th Parachute Infantry Regt.

Mission:

(1) Land maximum parachute elements that can be lifted in available troop carrier aircraft night of D-1, D Day in drop zones on high ground east of PONTE OLIVO.
(2) Assist DIME FORCE in landing, and the capture of airfield vicinity PONTE OLIVO.
(3) Attached to SHARK FORCE upon establishing contact with DIME FORCE after H Hour.

d. RESERVES:

(1) KOOL FORCE (Floating Reserve).

Commander: Maj Gen H. J. GAFFEY

Mission:

(a) Sail with Assault Convoy, prepared to land in support of any of the Assault Forces.

(2) 82ND AIRBORNE DIV (-Dets) W/2nd Bn 509 Para Regt atchd.

Commander: Maj M. B. RIDGEWAY

Mission:

(a) 82nd Airborne Div (-Dets) concentrate rapidly by successive air lifts in SICILY, by D ∮ 7, in either or both the DIME or JOSS areas, as directed.
(b) 2nd Bn, 509th Para Inf, remain in NORTH AFRICA, in FORCE 343 reserve, available for drop missions as directed.

(3) 9TH INF DIV.

Commander: Maj Gen M. S. EDDY

Mission:

(a) One RCT (w/84th Cml Wpns Bn atchd) and the entire Div Arty will be assembled prepared to move to SICILY on call anytime after D Day.
(b) Remainder of Div (less 1 RCT and Div Arty) will be prepared to move on call to SICILY at any time after D ∮ 8.

e. FORCE TROOPS (See Annex No. III, Troop List).

(1) Units other than those allotted to Sub-Task Forces will be prepared to move from NORTH AFRICA to SICILY in subsequent convoys as shipping becomes available, according to priorities announced by this Headquarters.

f. WESTERN NAVAL TASK FORCE.

(1) Naval gun fire support. (See Annex No. IV).

g. AIR (See Annex No. V).

(1) XII Air Support Command.

(a) Furnish organized Air Support Control and Air Support Parties and coordinate requests for air support.
(b) Provide air reconnaissance on request.

h. (1) All commanders will insure that troops have sufficient information of the operation prior to H Hour D Day to enable them to execute their tasks intelligently and effectively.

(2) The provisions of this paragraph will be made known to all ranks:

(a) Leading waves will reach beaches at H Hour.

(b) Leading waves will push in rapidly and aggressively, cleaning beaches promptly.

(c) Avoid direct attack. Pin the enemy by frontal fire and attack from rear.

(d) Attack both by day and night to the limit of human endurance and then continue to attack. Rapid, violent and continual attack will win.

(e) Military or civilian units or individuals offering resistance will be destroyed.

(f) Military and civilian authorities displaying conciliatory attitude will be treated accordingly.

(g) Local Civilian Authorities in captured localities will be urged to continue their administrative and judicial functions.

(h) Houses of worship, cemeteries, and private homes will not be disturbed or entered unless they are used as defensive works.

(i) Women will be treated with the utmost respect. Soldiers guilty of assault on women or looting will be shot.

(j) Men will go ashore in the initial beach assault carrying minimum equipment needed for the immediate task at hand.

(3) All commanders, down to and including companies, will make known prior to H Hour, D Day the names of the second and third in command of their unit or organization.

4. See ADMINISTRATIVE ORDER No. 1 w/Annexes.

5. a. See Annex No. X. Signal Annex.

b. Command Posts: Force 343, (1) Initially aboard MONROVIA.
(2) Ashore, vicinity GELA, at a time to be announced.

JOSS, aboard BISCAYNE
SHARK, aboard ANCON
DIME, aboard CHASE
CENT, aboard ANCON
KOOL, aboard ORIZABA
82nd Airborne Div, (1) Adv CP - aboard MONROVIA.
(2) CP - KAIROUAN, TUNISIA.

INTELLIGENCE ANNEX

Maps: OPS Map (Annex I) to FO #1.

Headquarters Force 343
A.P.O. 758, U. S. Army
20 June 1943

1. SUMMARY OF THE ENEMY SITUATION

a. See G-2 Estimate of the Enemy Situation #4 (to be issued by Y-day) as supplemented by Air Intelligence Estimate, Hq XII ASC, 14 June 1943 issued as G-2 General Information Bulletin No. 18, 18 June 1943, Hq. 343.

b. See Battle Order of Sicily (to be issued by Y-day), this Headquarters.

c. See collation map of defenses correct to 19 June 1943, this Headquarters.

2. ESSENTIAL ELEMENTS OF INFORMATION

a. NAVY.

(1) Status of alertness of enemy navy? Submarine, PT boats, Seibel ferries activities?

(2) Details of location, calibers, etc., enemy land and shore batteries? Firing efficiency?

(3) Underwater defenses, mines, wiring, etc. How are mines controlled?

b. GROUND FORCES.

(1) Identifications, troops weapons, calibers? Nationality and units? General status of equipment? Status of local maintenance reserves?

(2) Sabotage, demolition, mines, booby-traps, wire? Location of mine fields and road blocks? Condition of utilities - (railway, electrical, telephone and telegraph, water)? Water pollution? Condition of wells, springs and streams?

(3) Location of troop reserves? Location of reinforcements? (Prisoners of war and civilian reports).

(4) Military attitude (type and quality of resistance)? Civilian attitude? Gas masks being worn by civilians or military?

(5) Location and type of armored trains? Tanks encountered, type, German or Italian?

(6) Air activity? (Type, time, number, direction of flight, and results achieved)?

(7) Status airfields and airfield supplies and equipment? Results of our bombings prior to and during operation?

(8) Terrain and road information for map correction?

c. METEOROLOGICAL

(1) Forecasts as to visibility, humidity, high and low pressure areas, wind directions and velocity. Temperatures.

(2) Effects of forecasts on streams, employment of chemical smoke and actual smoke due to burning, and visual observation?

c. AIR AND AIRBORNE.

(1) Nature and type of enemy air activity?

(2) See 2b. (1); 2b.(6); 2 b. (7).

(3) Location of unmapped terrain features (lakes, rivers, defiles).

(4) Troop movements on roads, direction, type and volume? Emphasis on movements to East and South. (Road congestion, military and civilian, by location). Location of armored trains and tank units?

(5) Intensity and type of antiaircraft fire?

(6) Enemy water movements (time, number and direction emphasis on activity in Straits of Messina).

3. RECONNAISSANCE AND PHOTOGRAPHIC MISSIONS.

a. Visual air observation and spot photo sorties by XII Air Support Command through Air Support Party channels. One mission (two sorties) reserved for JOSS, two missions (four sorties) reserved for SHARK daily until noon, unless this Headquarters otherwise advised, as if and when available.

b. Air Reconnaissance photographic sorties by PRU detachment, NAPRW, under direct control of AC of S, G-2 Force 343. Requests direct to AC of S, G-2 Force 343 through channels, (not through Air Support Parties). See G-2 General Information Bulletin #22, 20 June 1943, Hq 343.

4. MEASURES FOR HANDLING PRISONERS AND CAPTURED DOCUMENTS.

During initial phase of operations prisoners and captured documents will be examined and disposed of by Sub-Task Force Headquarters. (See Annex #1 to Intelligence Plan, 22 April 1943, Hq Task Force 343). Important information will be transmitted at once. See letter, this Headquarters, same subject.

5. MAPS, PHOTOGRAPHS AND MOSAICS.

Maps will be issued as provided in Annex No. 4 to G-2 Intelligence Plan, this Headquarters, 27 May 1943. See also amendment 21 June 1943, Hq 343, to Annex #4 of G-2 Intelligence Plan.

6. MISCELLANEOUS.

a. C.I.C. See G-2 General Information Bulletin #21, 19 June 43, Hq 343.

b. Photo Reconnaissance and Interpretation Plan. See G-2 General Information bulletin #14, 14 June 43, Hq 343.

c. "J" Service. See letter 1 June 43, Hq 343, same subject.

d. P.W.I. See Intelligence Plan referred to in 4 above.

e. Interpreters. None will be provided from Hq 343. See paragraph IV, G-2 General Information Bulletin #11, 12 June 43, Hq 343.

7. REPORTS AND DISTRIBUTION.

a. A summary G-2 report will be submitted by Sub-Task Forces daily covering the preceeding 24 hour period to 2400B and will reach this Headquarters by 0800B the day following day reported upon, or as soon thereafter as practicable.

b. Important information pertaining to enemy action against our forces will be transmitted by the most expeditious means to this Headquarters in brief form as spot returns.

c. Yellow Smoke Grenades will be used by attacking units to designate "Friendly troops are here."

PATTON, Commanding.

GAY
Chief of Staff.

ANNEX NO. IV
TO F.O. 1.

NAVAL GUN FIRE SUPPORT PLAN

1. MISSION:

a. To provide prearranged fire support as scheduled by sub-task force commanders.

d-12

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

b. To provide call fires, to be fired upon call by assault battalion or regimental commanders through shore fire control parties, or Army Sub-Task Commanders through Naval Sub-Task Force Commanders.

c. To provide fire on targets of opportunity as requested by Assault Battalion Commanders or Regimental Commanders through shore fire control parties or as requested by Army Sub-Task Force Commanders as a result of information furnished by air reconnaissance.

d. To provide deep supporting fires as requested by Army Sub-task force Commanders.

e. To provide counter-battery fire as follows:

(1) Prior to landing, as necessary to protect own forces (See par 4 a).

(2) After landing, as coordinated between Army and Navy Sub-task Force Commanders to protect our own forces.

4. ORGANIZATION FOR SUPPORT:

In accordance with requests of sub-task Force Commanders submitted to Naval Sub-Task Force Commanders.

5. DURATION OF FIRE SUPPORT:

a. Fire support ships will be withdrawn as necessary when required by the Fleet Commander for action against enemy forces. If any units are withdrawn, shore fire control parties and Army Sub-task Force Commanders will be notified.

b. Except as noted in a, Naval gun fire support will continue until the Commanding General, Force 343 informs the Fleet Commander that Naval gun fire support is no longer required.

c. Sub-task Force Commanders will inform the Commanding General, Force 343 immediately when Naval supporting fires are no longer required by their forces.

6. LIMITATIONS UPON NAVAL SUPPORT FIRES:

a. There will be no Naval gunfire employed against shore targets until enemy action indicates to Sub-task Force Commanders that the presence of the invading force has been discovered. At times designated by Sub-task Force Commanders, deceptive fires and special demonstrations may be undertaken. Schedules and objectives for deceptive fires will be submitted without delay to the Commanding General, Force 343 for approval. Deceptive fires will be delivered only against remunerative targets.

b. Scheduled fires in the vicinity of the objective beaches will not be executed prior to the assault except when in the judgment of Sub-task Force Commanders, the assaults on the objective beaches have been discovered by the enemy and no further secrecy can be gained by withholding fire.

c. After troops have landed, Naval gun fire will be employed as specified in paragraph 1.

By Command of Lieutenant General PATTON:

HOBART R. GAY,
Colonel, G.S.C.,
Chief of Staff.

OFFICIAL:

/s/ H. G. Maddox
H. G. MADDOX,

COPY #1 HEADQUARTERS FORCE 343
ANNEX NO. V APO #758
TO F. O. NO. 1 20 June 1943

AIR SUPPORT PLAN

Primary Mission

1. The main tasks of the Allied air forces in order of priority will be as follows:

a. To render the enemy air forces unable to offer serious interference with our shipping, projected landings and subsequent operations.

b. To impede the enemy's power of movement in the area of operations on land and to hamper reinforcements moving by sea, air and land.

c. To give the maximum support possible to Allied land forces both in the assault and during subsequent phases of the operations.

Plan

2. The Air plan provides for the above tasks to be carried out as follows:

a. By destroying the enemy air forces both on the ground and in the air.

b. By attacking focal points of enemy land, sea and air communications.

c. By providing maximum direct support of land forces consistent with the success of a and b.

Policy

3. Accordingly, the following general policy has been decided:

a. There will be no bombing of purely tactical targets before the assault, other than the diversions planned to assist the operations of parachute troops.

b. The task of destroying the enemy air forces (Para. 2 a) has priority over all other tasks.

Coordination

4. Hq XII Air Support Command will be located with Hq Force 343 and will furnish air support parties to all Corps and Divisions.

Method Before 'D' Day

5. Force 343 will submit for consideration of Northwest African Tactical Air Force, through Hq XII Air Support Command:

a. Lists of bombing targets which can be considered with the other strategical targets selected by the Air Forces.

b. Details through the same channels of diversionary bombing targets required to cover airborne operations.

c. Demands for smoke to be laid by aircraft, if required.

Period Subsequent to D Day

6. Direct Air Support after D Day will be requested through Hq XII Air Support Command.

Artificial Landmarks

7. a. All Corps, Division, and Regimental Headquarters Companies will have a trained "Team" prepared to put out landmarks in their areas by day or night when ordered through Air Support Command channels. Such landmarks will be in such a position that they may be easily maintained without enemy opposition. The landmark will be a letter of the alphabet as ordered, by day at least 50 yards long, by night 100 yards long, the width of the strips forming the landmark being at least 3 yards. Day landmarks can be improvised from tin cans (opened out and blackened if necessary), blankets or ground panel strips. Night landmarks will consist of lighted tins of gasoline and sand, burlap or waste soaked in oil, small flares, or electric bulbs spaced 25 yards apart. Arrangements must be made for illuminating a night landmark thorughout the whole period of darkness if necessary.

b. The Air Support Command will be responsible for determining the time of illumination of night landmarks.

c. It is the responsibility of "The Artificial landmark Team" to reconnoiter the site and report accurately the map reference of the landmark. The landmark may be moved from time to time provided all concerned are given sufficient warning.

Impromptu Landmarks

8. a. For close targets, an impromptu landmark will be put out whenever possible, consisting of colored smoke or flares preferably in conjunction with a well defined natural landmark or a "V" strip (Signal Operation Instructions, Item 2h-1). (Yellow smoke or flares will NOT be used for this purpose). Its position will be included in the target request, as close as possible to the target area but in such position that it can be maintained without enemy opposition. The actual color of smoke or flare to be used will be ordered through Air Support Command Channels from time to time. The smoke or flares should be lit two minutes before the estimated time of attack of the aircraft (received over Air Support Command channels).

Form of Target Requests

9. a. Requests for targets will include description of target and map reference, time attack is required (if necessary), Bombline and any special instructions, which would include the map reference of any impromptu landmark put out as an aid to air attack.

b. The target map reference will always be sent in clear; other details will be encoded if considered essential and time permits.

c. The reply to a target demand giving details of air effort and time of attack will always be encoded.

d. Targets within artillery range, by specific prearrangement with units concerned, may be marked by smoke.

Bombline

10. a. The bombline is defined as the predicted line of forward troops during the next two hours.

b. Air Support Command must be kept constantly informed as to location of Bombline.

1. MISSION.

a. To provide maximum fire support for elements of Force 343 in HUSKY operation.

b. To counterbattery enemy artillery opposing Force 343.

2. ORGANIZATION FOR COMBAT:

a. Divisional artillery. To remain initially in organic divisional assignment.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

b. Corps artillery:
(1) Attached JOSS:
5th Armd FA Gp
77th FA
1st Bn 36th FA
Btry B 1st Obsn Bn (less 1 Flash Unit).

(2) Attached SHARK:
13th FA Brig (less 1st Bn 36th FA and Btry B 1st Obsn Bn (-))
Btry G (Prov), 36th FA (155mm Gun).

3. COUNTERBATTERY:

a. Sub-task force commanders will be responsible for all counterbattery in their respective zones.

b. Counterbattery sub-section of artillery section, Hq IAC (R) is available to JOSS for counterbattery use, from D-20.

4. PHOTOGRAPHIC COVERAGE:

a. Force 343 and SHARK will each establish, at Force 343 Photographic Interpretation Center, an Artillery Photo Liaison Section which will locate artillery targets on pertinent prints from all photographic sorties and forward description and location of targets direct to Counterbattery Subsections of JOSS and SHARK.

b. Artillery requests for air photo missions will be submitted to the Artillery Photo Liaison Sections through the respective Counterbattery Subsections of JOSS and SHARK.

5. AIR OBSERVATION:

Requests for artillery observation or surveillance missions to be flown by the 111th Obsn Sq will be submitted to G-2, Force 343, through Artillery Officer, Force 343.

6. COLORED SMOKE SHELL:

a. No yellow smoke shell will be fired by artillery units in this operation.

b. Other colors will be used:

(1) Primarily: For fire control purposes and to assist in the accurate massing of fires.

(2) Secondarily:

(a) By specific prearrangement with supporting air units for each target to mark targets for air attack.

(b) By mutual arrangement with supported unit commanders for simple signalling purposes such as to indicate the completion of an artillery concentration, to mark terrain objectives, and to designate sector boundaries.

(3) In emergency, as normal smoke.

(c) Use of white smoke remains unrestricted.

7. CONSERVATION OF AMMUNITION:

Only remunerative targets will be taken under fire.

c. Conduct of Antiaircraft Fires.

(1) Units not in communication with an Air Force Controller will fire only at aircraft indentified as hostile or committing a hostile act.

(2) Controllers will order fire withheld or limited to 6,000 feet when friendly planes are operating in the area by passing the command "FORTU" followed by the area, as "CENT" or "JOSS". This will be cancelled as soon as friendly aircraft leaves the area by the command "NEGATIVE FORTU _____."

d. Barrage balloons.

Supply elements (transports, ports, beaches and dumps) will have priority in assignment of barrage balloons.

4. Smoke will be used in AA defense in coordination with local Controller, local Chemical Officer, and the Navy.

5. a. Recognition Signals. Aircraft recognition signals will be obtained by AAA Defense Commanders from local Air Defense Controllers or Air Defense Commanders.

b. Air Warning Broadcasts.

(1) AWS information will be broadcast by US Navy, for Force 343 area only, on 2010 KC. Complete AWS information will be broadcast from MALTA on 3755 KC using MAPOG and standard air warning code.

c. Radio and Radar Channels.

(1) All SCR-268 sets assigned to AAA units will operate within a frequency band of 202Mc to 209Mc.

(2) All GCI will operate on a frequency of 209Mc.

(3) Care will be exercised that power allotted on any radio frequency is not exceeded.

6. Secondary AAA roles:

a. AAA Commanders charged with AA defense of ports and beaches will be responsible for:

(1) Coordination of defensive fires with AA defenses of any naval vessels in the commanders area of responsibility.

(2) Siting of some AA weapons in vicinity of beaches and ports for defence against surface craft.

b. Where indicated by the situation AAA commanders will site AA weapons for use in dual role defense against enemy mechanized vehicles.

c. 90mm gun units will prepare plans for possible employment in Field Artillery role.

ANNEX NO. VIII
TO F.O. 1.

COAST DEFENSE PLAN

1. Basis of Planning. a. This Coast Defense Plan is based on the following intelligence estimations contained in Planning Instruction No. 10, Hq Force 141;

(1) That no threat exists of large scale attack on HORRIFIED by the enemy fleet or any major portion thereof.

(2) That small scale attacks by small craft and submarine are the only form of coastal threat expected.

b. It is presumed some CD weapons will be captured intact and operative.

2. General Plan.

a. In view of the limited lift available, and small probability of profitable targets, a minimum of Coast Defense troops and materiel is being made available for one port only.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

b. Some AAA weapons employed in beach and port defense will be sited to provide defense against enemy Naval vessels.

c. Captured enemy Sea Coast materiel will be exploited.

3. Detailed Plan.

a. Means Available.

(1) Seacoast Artillery.

(a) 1 Hq & Hq Btry ___ CA Bn, 155mm Gun (SM).

(b) 2 CA Btries, 155mm Gun (SM).

(c) 1 CA Btry, Harbor Defense, with plotting room equipment, less guns.

(2) AA Artillery. All AAA set up in defense of beaches, ports and other objectives on the coast will site necessary weapons for dual role, Antiaircraft and Coastal Defense.

(3) Enemy Materiel. Enemy Seacoast Defense weapons in critical areas, which can be made serviceable, will be manned by CA personnel and utilized in Coast Defense (See par 4).

b. Plan of Employment.

(1) All Seacoast units will be attached to 2626 AAA Brigade on arrival in North Africa and maintained on an alert status prepared to embark on six hours notice after D day.

(2) Seacoast units on arrival in HORRIFIED will be assigned to defense of LICATA unless, by the time of their arrival, a larger port has fallen into our hands in which case all, or the major portion, will be placed in defense of the main port.

(3) Upon arrival Seacoast Defense Units to be attached to the AAA Headquarters in the area to which assigned.

(4) Seacoast Defense Sector responsibility will be prescribed by Hq Force 343.

c. Coordination with Navy. All Coast Defense Units will immediately establish contact and liaison with any U.S. or British Naval Units arriving in their Seacoast Defense Sector and will closely coordinate defense plans with the senior Naval Unit Commander.

4. Exploitation of Captured Enemy Seacoast Materiel.

a. Immediately major enemy coast defense installations in or near a port are captured by elements of Sub-Task Forces, the Sub-Task Force Commander will cause a survey to be made of materiel captured, reporting direct to Artillery Officer, IAC (R), the following:

(1) Serviceable Cannon (3" and greater):

(a) Number (by type and caliber).

(b) Number (by type and caliber) complete w/sighting equipment.

(c) Number (by type and caliber) still operational by centralized fire control systems.

(2) Ammunition (3" and greater):

(a) Number of projectiles (by type and caliber).

(b) Number of fuses (by type).

(c) Number of propelling charges (by type and caliber).

b. Responsibility.

Artillery Officer, IAC (R), will be responsible for exploitation and employment of captured enemy seacoast materiel.

5. Liaison.

CO ____ CA Bn, 155mm gun (SM) will send one officer, capable of completing reconnaissance and planning for coordination of Seacoast Defense Artillery in the battalion area of defense responsibility, to report to the Artillery Officer, IAC (R), to remain thereafter with Hq IAC (R), until the arrival of the Hq ____ CA Bn, 155mm gun (SM) in HORRIFIED.

6. Added Role for 155mm Guns (SM).

a. The Hq Btry and 2 Gun Btries, 155mm Gun (SM), may be required to function in a Field Artillery role, as Corps or Army Artillery, under Force 343.

b. Plans for such employment will be prepared by CO, _____ CA Bn, 155mm Gun (SM).

c. Additional transportation required for such employment will be provided by authority Hq Force 343 if CD Unit is so employed.

2. Missions: Sub-task forces are responsible for all engineer missions until Force 343 assumes control. At that time engineer functions in rear of the line of dumps established by the 1st Special Brigade, except map and water supply, will become the responsibility of the Commanding Officer of that brigade. The Engineer, Force 343, will retain his normal function forward of the line of dumps established by the 1st Special Brigade.

3. In addition to normal engineer functions common to all sub-task forces, specific missions assigned are as follows:

a. Shark

(1) As soon as captured to repair the runways at Comiso and Ponte Oliva airfields or to initiate construction of substitute runways to be available not later than D plus 8.

(2) As soon as captured to repair the landing strip at Biscari landing field or to construct a substitute runway.

(3) To repair the jetty at Gela.

(4) To initiate the construction of pipeline and tanks for bulk fuel storage.

b. Joss

(1) To initiate repair of the Port of Licata.

(2) As soon as captured, to repair landing strip at Licata.

c. Kool

(1) To initiate reconstruction of Porto Empedocle if committed in that sector.

(2) To assist in special missions of sub-task force in sectors in which committed.

d. 1st Engineer Special Brigade.

(1) When supply activities are taken over by the Commanding General, Force 343, to assume responsibility for the execution of all supply plans within the theatre of operations emanating from Force 343, including the operation of ports.

4. Engineer service and supply functions, including water and map supply - see Administrative Order #1 and Engineer Annex thereto.

5. Engineer OPs (afloat)

a. Shark - USS Ancon

b. Cent - USS Ancon

c. Dime - USS Chase

d. Joss - USS Biscayne

e. Kool - USS Orizaba

f. 1st Special Brigade - USS Monrovia

g. Force 343 - USS Monrovia.

By Command of Lieutenant General PATTON:

HOBART R. GAY,
COLONEL, G. S. C.,
Chief of Staff.

HEADQUARTERS FORCE 343
c/o I Armored Corps, Reinf.
A. P. O. # 758

SECTION I

SITUATION

1. General Situation.

a. This Signal Communication Plan covers the provision of signal communications for Force 343, a force moving by sea to occupy the south-eastern coast of Sicily. The area which this force plans to occupy consists of that territory within the limits of the Salza River on the west, the Irminio River on the east and north along the line of town, Riesi, Mazzarino, Caltagirone, and Vizzini. This operation is coordinated with a British Force, Force 545, which will occupy the eastern coast of Sicily.

b. Three simultaneous pre-dawn landings are to be carried out between the towns of Licata and C. Scaramia for the purpose of establishing a broad beachhead, and allowing subsequent operations over this beachhead. The initial objective is to capture the port of Licata and all the airports in the area.

2. Special Situation.

a. Enemy Signal Countermeasures.

(1) It is expected that the enemy will resort to radio "jamming" tactids from time to time when the opportunity presents itself. Plans will be made as to the proper course of action in the event.

(2) It is expected that the enemy will attempt to inject false messages into their traffic to cause "peaks" in an effort to confuse our radio intelligence.

(3) It is known fact that the enemy is extremely capable as to intercept activity.

(4) It is recognized that the enemy has capable cryptanalysts and will make every effort to obtain solutions to our codes and ciphers.

(5) There are no details known as to the strength and organization of enemy signal intelligence units.

b. Installations in theater which may be available.

(1) Radio (see Appendix "A" attached)

(2) Wire (see Appendix "B" attached)

c. Local Power Supply in Towns.

(See Appendix "C" attached)

d. Existing Commercial Facilities.

(1) Initially, each task force commander will have complete control of all telecommunication facilities in areas occupied by his troops. This control will be exercised through his chief signal officer, who will coordinate the exploitation of these facilities and their allotment to the various services.

(2) As a general rule, naval and air telecommunication installations will be made available for naval and air services if so required, since the equipment will usually be of special design.

(3) All existing telecommunication services will be closed down immediately and the installations are secured. Personnel will be evacuated and a guard mounted. Care will be taken to secure and preserve all records. Services will not be resumed except under orders of the commander.

(4) Installations secured will be operated by signal personnel of the Allied Forces. Friendly alien personnel may be employed provided their integrity can be established, but they will not be employed without adequate supervision.

(5) Broadcast transmitters will be taken over as military stations and will, if required, be used initially for communication purposes. They also may be required in the early stages of the operation for broadcasting of announcements by the military commander. As soon as these stations can be released from purely military use, they will go to control of personnel

APPENDICES

of P.W.B. including technical personnel, which will accompany each task force. The technical personnel will be available to operate broadcast stations in the initial period when the transmitters may be required for purely military communications.

(6) No telegraph services will be operated in Sicily except those wholly controlled by the Allied Forces. No civilian will have access to any telegraph facilities, except through AMGOT (Allied Military Government of Occupied Territories, late Civil Affairs).

(7) All civil telephone services will be discontinued as such. Local telephone services will be re-opened for military purposes requirements, certain public services or individual civilians may be allowed access to local telephone services. Among these will be included such civilian agencies or persons, for example hospitals and doctors, as may be nominated by AMGOT. Such agencies or persons will have no direct access to long distance telephone services, but may be permitted by AMGOT to make calls when necessary from military offices.

e. Information on Procedures.

(1) Combined Radio Telegraph (W/T) Procedure, short title, CCRPI, will be used by all army ground forces, U. S. and British, taking part in the operation HUSKY for:-

(a) Combined use; that is, when working to other services of the other nation.

(b) Joint use; that is, when working to other services of the same nation.

(2) "Combined Operating Signals", short title, CCRP2, will be used whenever CCRPI is used.

(3) It will be the object of all signal planning to insure that personnel of the same service and the same nation operate both ends of a channel whenever possible, thus reducing the use of CCRPI and CCRP2 to combined or joint usage in cases where no previous arrangements have been possible.

(4) Consequent on the adoption of this procedure within the forces employed in HUSKY the following procedures will no longer be used by army ground forces.

(a) Basic (British-U.S.) Signal procedure.

(b) British Inter-Service Procedure.

(c) U. S. Joint Army-Navy Procedure, for use as a joint procedure.

f. Naval Plan for Communication between Ships.

An outline Naval Communications Plan will be published and will be listed as Appendix "K" to this Annex.

g. Joint Codes and Ciphers

(1) To provide essential flexibility in handling cryptographed traffic, U. S., as well as British cipher teams, will be provided at all task force (Army) and Corps Headquarters throughout. These teams will be adequately equipped to handle messages in the appropriate U. S. and British systems prescribed for the operation. In addition, U. S. units down to and including divisions will hold the British Interservice Cipher for communication with the British Army, Navy, or the Royal Air Force. Royal Air Force Group Headquarters will hold U. S. Army SIGABA and Strip systems.

(2) All units within Force 343 down to and including divisions will hold the Joint Army-Navy SIGABA (Navy ECM) and Strip systems. Converter, M-209, keys for use in the Joint Army-Navy traffic will be held in Army units down to battalions and in the Navy down to minor war vessels. All the above cipher keys will be furnished by Force 141 and distributed by Force 343.

(3) For detailed methods of usage see Signal Instruction Number 9, and SOI Item 2e-1.

h. Information on the Aircraft Warning System.

(See Air Plan, Appendix "I" attached.)

i. Air Plan.

(1) The signal plan for the XII Air Support Command has been drawn up to cover the communication and radar coverage during the assault and initial establishment of forces in Sicily. The XIII A.S.C. aircraft operating from airfields at Licata and Ponte Olivo and subsequently as Biscara and Comiso will be controlled through the facilities of the information center.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(2) Light warning and G. C. I. units are to be landed with the assault to provide early warning of the approach of enemy aircraft and control of night fighters. Long range warning equipment will be brought into operation as soon as possible. D/F and homing facilities will be provided at all airfields.

(3) Plans as drawn up do not cover the entire reduction of Sicily; however, as positions are secured, the communication and Radar system will be expanded to the fullest extent. This work will be done by the communication, air warning and construction units of the XII A. S. C.

(4) Proper coordination as to codes, panel codes, visual signals, photographical maps and such will be made with the ground force and incorporated in the SOI of all arms.

(5) Coordination with the R. A. F. as to frequencies and Call signs have been made through N.A.A.F. and N.A.T.A.F.

(6) Air Support Parties from the 3d A.S. Comm. Sqdn. are being assigned to the respective Infantry Divisions, Task Force and Corps Headquarters taking part in the operation.

(7) Advance landing Ground Parties will go ashore at Gela and Licata to establish radio communications with XII A. S. C. Headquarters and act as advance aircraft control agencies as soon as airfields are captured.

(8) Coordination with Naval units as necessary for such items as are required in the SOI will be made and included prior to issue.

(9) All personnel will be given verbal instructions as required prior to the landing operations.

SECTION II

MISSION AND GENERAL PLAN

5. The Mission

The Signal Mission is to provide communications.

a. As prescribed by Force 141.
b. To major units composing Force 343
c. To the Navy ashore.
d. To the various headquarters of the 12th GASC
e. To subordinate units directly attached to Force 343

6. General Plan

To provide a Signal Service with the following capabilities:

a. Operating headquarters communications, afloat and ashore; to handle all administrative, personnel, communication, training, photographic, pigeon, supply and signal intelligence activities.

b. Operating message centers to serve Force 343 headquarters and the major units of this Force, and subordinate units attached directly to Force 343.

c. Operating a messenger service between Force 343, major units of the Force, Air Headquarters, subordinate units attached directly to the Force, base radio station, main beach command posts and harbor authorities.

d. Installing, operating, and maintaining radio communications to provide:

(1) Communication between Forde 343 afloat and ashore, and the major units within the force.
(2) Communication between Force 343 and Force 141.
(3) Communication between II Corps and 30th Corps (Br)
(4) Communication between forward assault elements ashore, and navy afloat.
(5) Communication between forward elements ashore and air.
(6) Communication for air support by shore and aircraft.
(7) Channels for ship fire control by control parties ashore.
(8) Communication between air and anti-aircraft systems.
(9) Such radio nets within units and subordinate units as required to facilitate their control.

e. Installing, operating and maintaining wire communications.

(1) Initially

From Force Headquarters to the headquarters of the JOSS Force, II Corps, and such other units of Force 343 as may be located in the vicinity.

(2) Later

(a) Establish later communication between Force 343 and 12th Army (Br) in accordance with instructions from Force 141.

(b) Start the repair and operation of the commercial wire facilities within the area occupied by Force 343. These facilities are to be used for military purposes only, until released for civilian use by the Commanding General, Force 343.

(3) Finally

(a) Coordinate the use of all facilities in the area under control of Force 343 to provide the necessary wire communication for the Army, Air Corps, and the Navy.

(b) Construct and operate the Force 343 portion of the wire plan as established in "Outline Plan - Line Communications - Operation HUSKY, dated 17 April 1943, Headquarters 141.

f. Operating a Signal Intelligence Service to provide for:

(1) The interception of enemy radio communications.
(2) Radio goniometric location of enemy radio transmitting stations.
(3) Forwarding to G-2 all intelligence derived from above sources.

g. Establishing, operating, and maintaining a signal depot.

A signal corps depot will be established, operated, and maintained in the vicinity of Licata for the receipt, storage, and issue of signal corps equipment, material and supplies. A sub depot will be similarly established at Siracusa to handle U. S. signal supplies entering that port.

h. Operating a signal corps repair service for radio, wire and other communication equipment for the entire command, with the following exceptions:

(1) In general, all units will be responsible for the first and second echelon repairs to all communication equipment issued to them.

(2) Responsibility for the repair of communication equipment issued to them rests with the Air Corps.

i. Photographic coverage of force activities.

(1) Special photographic units have been organized to cover all phases of action in Force 343. The personnel of these photographic units will carry special identification. Commanding officers will allow photographers complete freedom of movement, and render them all possible assistance in the performance of their assigned tasks. Photographic censorship will be exercised by the War Department and not by unit censorship; however, the shipment of photographic films and prints from a zone of operation will be cleared through Headquarters Force 343.

(2) For details see Appendix "D" attached.

j. Establishing and maintaining pigeon communication is set out in Appendix "E" attached.

SECTION III

OPERATIONS

7. Sub-Forces under Force 343.

8. The SOP For the Signal Services.

a. The Signal Services within the DIME, JOSS. and KOOL forces are to install, operate and maintain communications in accordance with the Signal Annex Plan of Communication to the FAITC Invasion Doctrine, and such communications afloat and ashore within each force as are hereinafter specified or prescribed in SOP.

b. The Signal Services within the CENT force are to install, operate, and maintain communications in accordance with the Joint U.S. Air-Amphibious Communications Instructions and such communications afloat and ashore within the force as are hereinafter specified or prescribed in SOP.

9. Air Communications

An outline of the Air Communication plan for all forces is set out in Appendix I, attached.

10. Detailed Signal Plan.

a. Message Centers to be operated on a continuous basis:

(1) In each headquarters ship from the day of embarkation until all elements of each force is landed. The message center to be jointly operated. For detail of military personnel, see Appendix "F" attached.

(2) At Force 343 Headquarters, Command Posts of major units, and Regimental Combat Team Headquarters of assault regiments from the time of establishment on shore.

(3) At principal Shore Party Command Posts from the time of establishment on shore, until ordered to close by Force 343.

b. Scheduled Messengers.

As soon as the roads have been cleared, scheduled messenger service will be established between all major units, and the messengers will leave these major units three times daily.

c. Special Messenger.

A special messenger will be held in readiness at all times from the time of establishment of the Headquarters of Force 343 ashore. It will be used sparingly so as to enable the maximum number of troops to be engaged on tactical missions. Every effort should be made to use the scheduled messenger service. Only in case of emergency or a strictly urgent message will the special messenger be used.

d. Radio Communication.

(1) Radio silence.

(a) No radio set will be allowed to switch on during the voyage. Communications officers will be personally responsible that this order is carried out, and will take steps to bring to the notice of all radio operators that infringement of this order may jeopardize the safety of the entire convoy.

(b) Radio silence may be broken when leading troops are ashore, or when the element of surprise is lost, or in an extreme emergency during the ship to shore movement on the authority of the Commanding General, Force 343.

(2) Batteries.

(a) Every radio set operated from dry batteries will land with new batteries installed and three new sets of batteries as spare. These spare sets of batteries will be carried in a watertight container. No time expired batteries will be used.

(b) Storage batteries will be fully charged prior to embarkation.

(3) Waterproofing.

(a) Radio sets will be stored aboard ship in the driest and coolest possible place. Communications officers will give this matter their personal attention.

(b) Every portable radio set, combat loaded, will be enclosed in a watertight container. Special canvas bags are issued for this purpose. These bags will not be removed until radio sets are landed, except in the case of those radios which may be required to operate during the ship-to-shore approach movement, and for the purpose of inserting new batteries prior to embarkation into landing craft. These waterproof bags will be collected and turned in to division signal companies at the conclusion or the assault phase, and held pending orders this headquarters.

(4) Call Signs

(a) Individual call signs will be assigned to Force 343 troops. They will be changed daily as directed.

(b) Blocks of call signs will be assigned in accordance with the Army Code Sign System (See item to S.O.I. for the assignment of Call Signs.)

(5) Frequency Allocation

See S.O.I. item 3b-2.

(6) Detailed Description of Radio Channels

See Appendix "G" attached.

(7) Radio Procedure

(a) "Combined Radio Telegraph (W/T) Procedure", short title, C.C.B.P.I. will be used by all army ground forces, U.S. and British, taking part in the operation "Husky" for

1. Combined use; that is when working to other service of the other nation.
2. Joint use; that is when working to other services of the same nation.

(b) Combined Operating Signals, short title C.C.B.P.2 ("Q" Signals) will be used in all units

(c) Link Sign will not be used in cases (a) 1. and (a) 2. as mentioned above.

(d) Link sign procedure combined with C.C.B.P.1 (AFHQ Signal Instruction #48) will be used by all units within the allied ground forces. It will not be used on fixed wireless stations.

(e) For Force 343 higher net procedure see "Radio Schedules for "HUSKY" in appendix "G" to the Signal Annex.

e. Wire Communication

For detailed wire plan see Appendix "J" attached.

f. Visual Communication

(1) (a) During the voyage intercommunication between ships will be by visual methods and will be the responsibility of the Navy. Naval Signal Officers will provide such visual operators as are required to ensure sufficient visual facilities between ships.

(b) During the assault phases visual communications, including pyrotechnics, used between the beaches and seaward will be by prearranged signals the coordination of which will be the responsibility of Division Commanders. Coordination will include all adjacent units in order that there can be no misunderstanding of signals.

(2) Panels

(a) The only panel displays authorized are illustrated in Signal Operation Instructions, item 2h-1. Normally these displays will be by prearrangement or will be requested by radio.

(b) If it should become necessary for a low flying friendly airplane to ask for "Ground Panel Display", in order to know where to drop a message or supplies, the plane will signal by throttling the motor twice or by releasing a green verey light. Any panel display made will be removed and concealed immediately after the plane has acknowledged by "rocking" or has passed on beyond the area concerned.

(3) Pyrotechnics

(a) Pyrotechnics signal within a division will be prescribed and coordinated by the division commander:

(b) Signals are of little value except for a specific operation when the approximate time and location from which the signal is to be released are known. Usually such signals can be used but once as both the signal and the resulting action of our troops will be observed by the enemy who may send up the same or a conflicting signal in order to confuse our troops and nullify the meaning of the original signal.

(c) In all cases the intended use of pyrotechnic signal will be made known to all friendly troops to whom the signal may be visable.

(4) Krypton

(a) The use of Krypton Lights, where available, will be coordinated by the Division Commanders.

(b) If used between air and ground Krypton signals will be coordinated with and made known to all friendly air and ground units operating in the area of visibility.

(5) Smoke

(a) The air-to-ground request for friendly troops to show yellow smoke will be a White Verey light from aircraft. (not to be confused with the Krypton light.)

(b) Ground-to-air recognition will be yellow smoke grenades or flares. Yellow flares or smoke will not be used for any other purpose.

g. Authenticator System

Authentication will follow the procedure set down in S.O.I. item 2d using the keys therein. Corps and Divisions will make up their own keys following the general system used by Headquarters Force 343.

h. Codes and Ciphers

Designation and distribution of codes and ciphers use between services and between higher headquarters will be found in S.O.I. item 2c.

i. Radio Intelligence

(1) Radio intercept and direction finding missions will be carried out by detachments of the 128th Radio Intelligence Company with Force Shark, Force Joss, and Force 343. These detachments will work under the direction of the Signal Intelligence Service who will maintain close liason with the G-2's of their respective organizations.

(3) Information gathered by radio intercept and position finding will be submitted to G-2.

j. Counter Signal Intelligence Measures.

(1) Wire

(a) Field and open wire lines and cables will be patrolled completely and frequently to guard against tapping. Captured commercial wire lines will be completely isolated from outside connections before being put into use. It is quite possible to send false messages over wire lines.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

(2) Radio

Enemy intercept and direction finder operations can be counteracted by:

(a) Limiting transmitting power to the minimum required.
(b) Reducing transmission time to minimum and breaking necessary long transmissions into short irregular intervals.
(c) Locating transmitters away from command posts and other important installations.
(d) Using prescribed radio procedure exactly and without variations.
(e) Adherence to rules of cryptographic security.
(f) Constant monitoring of nets and strict enforcement of radio discipline.

(3) Radio Ruses

Fake messages and fake stations must be guarded against by authentication procedure on all messages and marking of those not authenticated.

(4) Jamming

(a) Enemy interference on our radio channels is avoided by:
1. Rapid shift to alternate frequencies while continuing to transmit, if possible, on original frequency.
2. Use of tone modulation where possible, or of C.W. instead of voice.
2. Training of operators to copy through interference

(5) Intelligence information to other services will be transmitted through established radio channels.

k. British Officers on Liaison Duty with Force 343 "J" Service.

The following British Officers will be on duty with Force 343 assisting in the supervision of the "J" service:

Capt. F.W.A.Allen	R.A.C.
Lt. G.F.Cox	Royal Artillery
Lt. T.B.Wilcox	Royal Artillery
Lt. J. Burness	R.A.C.

1. Naval Fire Control Parties

a. Fire control parties will be attached to each assault battalion. Each party will consist of one naval officer, radio operators and two SCR 284 Radio sets.

2. Fire support ship-shore has been assigned as follows:

DIME FORCE		CENT FORCE		JOSS FORCE	
CL	USS SAVANNAH	CL	USS PHILADELPHIA	CL	USS BROOKLYN
CL	USS BOISE	19	DESTROYERS	CL	USS BIRMINGHAM
9	DESTROYERS	HMS	ABERCROMBIE	9	DESTROYERS
				9	L.C.G.
				8	L.C.F.

1. For Naval Fire Support frequencies see SOI.
General fire support frequency is 5640 Kcs.

m. Air Support Parties

Air support parties will be furnished by the 12th Ground Air Support Command as follows:

Force 343	- 2	45th Inf Div	- 2
II Corps	- 1	2nd Armd Div	- 2
1st Inf Div	- 2	82nd Airborne Div	- 1
3rd Inf Div	- 1		

n. Military Personnel for Hq. Ships.

See Appendix "F" attached.

o. Communication Isolation Plan

(1) Radio broadcast and communication stations will be located on operation maps in the hands of all units down to include battalion Commanders.

(2) Radio communication will be interrupted as soon as possible and with least possible damage to the equipment. Attack will be directed to power and antenna installations rather than transmitter equipment.

(3) Wire communications will be disrupted as outlined in appendix "F" attached.

SECTION IV

ADMINISTRATION

11. General-See the G-4 Administrative Order, that accompanies the Field Order, for general directives and service plans indicated therein for details

12. Motor Vehicles

a. All Signal Corps units are being equipped according to T/BA or appropriate T/E.

b. In addition, each Headquarters, Force 343, Shark, Dime, Cent, Kool, and Joss is being equipped with two DUKWS with SCR 299 installations. These will revert to the control of Force 343 when organic SCR-299 sets are received.

13. Supplies

a. Class III. Gasoline and lubricants.

The Quartermaster is providing gasoline and lubricants aboard each assault and follow-up convoy to maintain the participating units. This material will be provided all Sub-Task forces. Signal detachments and units will obtain these materials from the units with which they are operating. No white gasoline will be provided. An equivalent may be obtained by filtering leaded gasoline through 18 inches of steel wool or several thicknesses of cloth.

b. Class IV

(1) Cryptographic

All regular cryptographic systems and/or devices for communications between higher headquarters (Division and higher headquarters) will be supplied by A.F.H.Q., Distribution will be made by Force 343.

(2) Photographic

See Appendix "D" for list of special photographic equipment additional to that provided in T/BA for the detachments of the 163rd Signal Photo Company.

(3) Wire

A plan for fixed wire installations and systems for this operation is in the course of preparation. Equipment for fixed wire installations will be laid down in North Africa and be ready for shipment to destination on call after D-Day as the situation develops.

14. Shipment of Supplies

Initial and 7-day maintenance equipment will be carried along with the troops. Each 1st and 2nd Follow-up convoy will carry seven days maintenance for the troops already at the destination. 15-day reserve maintenance will be ready on call in the event port facilities will not permit the direct discharge of materials in Sicily from UGS-11 Convoy.

Further maintenance supplies will be shipped from the New York Port of Embarkation direct to Sicily. A thirty day reserve and a ten day working level will be maintained in the depots.

15. Signal Depot

a. Location: To be determined later.
b. Troops: 206th Signal Depot Company.
c. Signal Property Officer: Captain John M. Tallman, Commanding Officer, 206th Signal Depot Company.
d. Mission: To establish, maintain, and operate a Signal Depot at the destination for the receipt, storage and issue of Signal Corps equipment, materials, and supplies.
e. Stockages:

(1) Initial - 7 days maintenance carried by units plus 7 days maintenance on first follow-up plus 7 days on second follow-up to be maintained in beach dumps by Storage and Issue Section of the Signal Depot Company.

(2) Levels - 30 days reserve plus ten days working margin to be maintained by necessary requisitions.

16. Marking of Supplies.

a. Unit equipment and supplies will be marked with their overseas shipment number.

b. Maintenance supplies for over-beach discharge will be marked with:

(1) Port to be shipped from
(2) Signal
(3) Class of Supply (i.e. Class II or Class IV)
(4) KKK
(5) Number of phased requisitions.
(6) Initial of Sub-Task Force Code name.

Example: CAVI-SIG-II-KKK-1-J
(1) (2)(3) (4)(5)(6)

c. Subsequent supplies coming from United States will be marked with:

(1) Port to be shipped to.
(2) Has no significance to the force.
(3) Branch of service requisitioning
(4) Class of Supply
(5) Signifies BIGOT-HUSKY
(6) Has no significance.

d. (1) Signal supply will be marked with the usual orange band around the sides and ends of the boxes.
(2) Packing slips or stenciled markings on outside of boxes will designate contents. These will not be removed by other than Signal Depot Personnel.

SECTION V

COMMAND

17. SIGNAL OPERATION INSTRUCTIONS

a. Initial sets of SOI's will be prepared by Commanding Generals of Forces, Shark, Joss, Kool, Dime, and Cent by 1st June, 1943.

b. Two copies of all SOI's will be furnished to the Signal Officer, Force 343.

c. Except for the following the form of all items of SOI is left to the discretion of the Commanding Generals of the Sub-Task Forces.

(1) Codes and ciphers including keys will be in accordance with the materials furnished (See current Index to SOI)

(2) Radio call signs and frequencies

(a) Tactical Radio Net Operations, see Appendix "C" attached, and SOI.

(b) The cable address of Force 343 will be announced later.

18. a. The II Corps Signal Officer will be designated as the Signal Officer Shark Force.
b. The Divisional Signal Officer of the 1st Infantry Division will be designated as Signal Officer of the Dime Force.
c. The Divisional Signal Officer of the 45th Infantry Division will be designated as Signal Officer of the Cent Force.
d. The Divisional Signal Officer of the 3rd Infantry Division will be designated as the Signal Officer of the Joss Force.
e. The Divisional Signal Officer of the 2nd Armored Division will be designated as the Signal Officer of the Kool Force.

By Command of Lieutenant General PATTON:

APPENDIX "B"

"Enemy Wire Communications"

1. General

a. Telephone long distance lines and all telegraph lines are owned and operated by the government.

b. The local telephone systems are owned and operated by the Societa Esercizi Telefonica (S.E.T.), and independent company with a high degree of government control.

c. There are often two exchanges in one town, one for long distance and one for local calls. In some towns the long distance exchanges are in the main Post Office Building.

d. Special units of the militia have been training in guarding the telephone and telegraph systems. It can be assumed that these guards are also trained in the destruction of the equipment so that extensive damage can be anticipated.

e. The enemy is known to make special efforts to mine and booby-trap communication equipment, so extra precautions must be taken to prevent casualties to personnel from these agencies.

2. Telephone exchanges

a. Automatic

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

The cities listed below have automatic exchanges, using equipment of the rotory type. The equipment was probably provided by Ericsson Company of Stockholm:

City	Location of Exchange	No. of Lines
Agrigento	P.T.T. Piazza Vittorio Emanuele	500
Caltanissetta	P.T.T. Via Francesco Grispi	1000
Catania	Palazzo P.T.T. Via Etnea (S.E. corner of Giardino Bellini)	7000
Marsala	Probably in Via Garibaldi	500
Messina	Palazzo P.T.T. Piazzo Cavour	4000
Palermo	Palazzo P.T.T. Via Roma	9000
Siracusa	Palazzo P.T.T. (North Corner of Ortica)	1000
Trapani	Palazzo P.T.T. Piazza Cavor	1000

b. The cities listed below have common battery exchanges:

City	No. of Lines.
Modica	200
Enna	100
Giarre	100
Piazza Armerina	100
Ragusa	100
Sciacca	100

c. Other cities and towns have common battery magneto type exchanges, but not data is avilable as to size or type of equipment. In many of the smaller localities, Ericsson (Swedish) type multiple relay exchanges have been installed. It is believed that up to 1940, 180 installations of this type were supplied to the S.E.T. and that those supplied for use in villages were of 10 lines capacity, and were installed in the homes of the local Priest.

d. Trunk Exchanges

The location of the following trunk exchanges are known:

City	Location
Palermo	Via Polacchi 127
Messina	Via Delle Rovere
Catania	Palazzo P.T.T. Via Roma

3. Submarine Cables - Submarine cables exist between the points listed below:

a. Punta Mazzone

(1) Cable Hut or Landing Point

Map Ref. Sheet 254 IV N.E. 435649, at or close to lighthouse known as Torre Bianca. It is possible that a cellor of the tower is used as a Cable Hut.

(2) Cables

Four (4) cables to Bagnara (Calabria). These cables carry the main telegraph circuits to the mainland. It is known that in 1940 an S.T. & C. channel carrier system was used between Messina and Naples, and it is possible that it was carried over the Streights of Messina by these cables.

One (1) cable to Fiumicino (Roma). This cable probably carried the Italcable Co. high speed telegraph circuit Messina - Roma.

b. Punta Mazzone

Cable Hut or Landing Point

Map Ref. Sheet 254 IV N.E. 438649, approximately 350 yards east of Torre Bianca.

One (1) Telegraph Cable to C. Chieme (Calabria)

One (1) Telephone Cable to C. Chieme (Calabria)

There is a possibility that a carrier system is used on the above cables.

NOTE: In 1940 the circuits carried on the above cables were extended to Messina by O.H. lines. There is a possibility that these lines are now replaced by U.G. cable.

c. Milli Marina

Landing Point

Map Ref. Sheet 254 III, C7474

Three (3) telephone cables to Rggio Calabria

One (1) Cable, 3 quads for 2 wire circuits
One (1) Cable, 3 quads for 2 wire circuits
One (1) Cable, 3 quads plus one screened pair for two wire circuits and radio.

The above cables are unloaded (7 x 0.5 mm conductors) and carry the through circuits from Sicily to the mainland on 2 wire basis. A carrier system (type not known) is used on these cables. The cables are lead straight into the basement of the repeater station and terminated on a pane. in the repeater apparatus room.

d. Siracusa - Punta Asparano

Cable Hut

Map Ref. Sheet 277-I-NW 126230

One (1) Cable to Benghazi
One (1) Cable to Tripoli

NOTE: It is reported that the Tripoli cable is cut approximately 1830 ohms (say 230 miles) from Tripoli and the sea earth is broken.

e. Siracusa - Cappucini Bay

Cable Hut or Landing Point

Map Ref. Sheet 274 II SW 154320 (approx)

One (1) Cable (Coastal) to Augusta, Catania, Messina

f. Pozzalo

Cable Hut

Map Ref. Sheet 276 II SE 765929

Two (2) Cables to Malta

The Cable Hut is at the east end of a sand beach which extends 750 yards east of the town to a low cliff. It lies 50 yards back from the sea in a low sandy bank. The cable lands just west of rocks lying at the base of the low cliff.

g. Porto Empedocle

Cable Hut

Map Ref. Sheet 271-IV-NW 577545 (approx)

One (1) Cable telephone to Pantelleria - Limosa - Lampedusa - Tripoli

It is not certain if this cable is in operation or not. It is reported that the first section was manufactured, but not laid, in 1940. It is probable that it has been laid as far as Lampedusa. The repeater station associated with this cable was to have been 750 yards from the cable hut.

h. Mazara

Cable Hut or Landing Point

Map Ref. Sheet 275-IV-NE. Probable locations - 752958, 764953, 767948.

One (1) Cable to Pantelleria.

This cable is reported cut by the French in 1940. It is most probable that the cable is working.

i. Marsala

Cable Hut or Landing Point.

Map Ref. Sheet 256 II 613127 (approx). Probably at base of Cape Lilibeo

One (1) Cable to Isola Marettimo

j. Tramontana Point

Cable Hut or Landing Point

Map Ref. Sheet 257 IV 645244 (approx)

One (1) Cable to Favignana Island (Circuits extended to Levanzo Island)

k. Mondello Bay (N. of Palermo)

Cable Hut or Landing Point.

Map Ref. Sheet 249 - 412566 (approx)

The landing point is most probably close NE of Mondello Moles, where, facing E there is a parallel aided cut in the rocks 60 feet long and 10 feet wide.

One (1) Cable to Punta Anzio (Roma)
One (1) Cable to Cagliara (probably operated by Italcable Company)
Two (2) Cables to Napoli
One (1) Cable to Ustica (Isole)

l. Milazzo

Cable Hut or Landing Point

Map Ref. Sheet 254 - 083587 (approx)

Two (2) Cables to Isola Lipari

4. Underground Cable

a. One underground, government owned cable is known to exist. The cable is buried at a depth of 60 - 70 cm (2 - 2½ feet). Loading coils are placed in manholes at distances of 1800 - 1900 meters. These manholes have round covers, the only round covers reported in use in Sicily. The cable carries a number of telephone circuits, telegraph circuits, one radio circuit, and several special army and navy circuits. Known infomation is tabulated below:

Messina (*) - Mili Marina (R)	8 km	24 quads
Mili Marina (R) - Catania (R)	89 km	49 quads
Catania (R) - Catania (E)	2.3 km	69 quads
Catania (E) - Raddusa (R)	59.7 km	39 quads
Raddusa (R) - Caltanissetta (R)	68 km	39 quads
Caltanissetta (R) - Caltavutro (R)	80 km	39 quads
Caltavutro (R) - Palermo (R)	65 km	39 quads

(R) Indicates Repeater Station
(E) Indicates exchange
(*) Cable terminal equipment only - not a repeater station.

b. Full technical details of the cables and repeater equipment is available. See Appendix "A", MI8/2573/7 and 8.

5. Aerial Cable

There are no known aerial cables.

6. Overhead Wire

a. Overhead wire is the standard method of construction. Wooden poles with metal crossarms are used throughout. Exact routes of overhead wire lines are not known, but probably follow main roads.

b. In general, telephone and telegraph lines are built on separate pole lines.

c. Distribution within cities is by means of open wire with supporting structures attached to buildings.

7. Railroad Lines

a. Railroad dispatch and control lines are of standard pole line construction along railroad right of way. Some dispatch circuits are telephone, but most of them are telegraph.

b. Railway dispatch lines are used for military control of armored trains and railway guns when these weapons are used.

8. Carrier Equipment

No information is available regarding carrier equipment.

9. Power Supply

a. Power is supplied to domestic consumers at 150 volts, 50 cycles. Factories and large consumers receive power at 260 volts, 50 cycles.

b. There is no infomation regarding carrier voice channels over power transmission lines.

APPENDIX "C"

"Summary of Local Power Supply in Towns"

1. Hydro-Electric Resources.

a. The hydro-electric resources of Sicily, like those of other Italian Islands, have not hitherto been developed to anything like the extent of those on the mainland of Italy, although there exists plans to provide for considerable increases in capacity during the next few years.

b. Analysis of the output of hydro-electric plants in the Italian Islands as a whole show that they are subject to wide seasonal variations. Seasonal percentages of the annual output have been as follows:

December - February	50%
March - May	40%
June - August	3%
September - November	7%

In Sicily there is an additional obstacle to a highly developed hydro-electric system, in that many of the island's rivers are neither powerful nor accessible enough for building work to be other than a long and costly undertaking. Both in 1937 and 1938 the six important hydro-electric plants produced 70 - 75 million KWH, or about 35 percent of the island's total power production.

2. In order to regulate the supply of electric power throughout the year, a considerable output from the mal-stations is required from June until November, (inclusive). Of the six principle thermal generating stations in Sicily, several are relatively small capacity, but they are important for peak-load operations and for the local power supplies. The output from thermal stations was between 115 and 140 million KWH in 1937 - 1938; this gives a plant factor of about 3000 hours per year. Before Italy's entrance into the war in 1940, the coal for Sicily's thermal plants was imported from Great Britain, Germany, or Poland. Now it presumably comes exclusively from Sardinia.

3. Power Stations:

a. Hydro-Electric

Alto Belice	11,000 KW
S. Carlo	7,000 KW
Francavilla (Alcantara)	5,600 KW
Cassibile	5,360 KW
Kaggi (Alcantara II)	4,800 KW
Poggio Diana	4,000 KW

b. Thermal Stations

Catania	25,450 KW
Palermo	13,800 KW
Porto Empedocle	10,000 KW
Trapani	1,180 KW
Messina	750 KW
Siracusa	300 KW

4. Characteristics of Power Supply

a. For industrial use power is supplied as follows:

260 volts
50 cycles
3 phase

b. For domestic use power is supplied as follows:

150 volts
50 cycles
3 phase

5. Sub-Stations:

Mazzarra S. Andria
Archiand Bauso
Messina
Roccalumera
Viagrande
Capo Molini
Catania
Carlentini
Sartino
Siracusa
Vizzini
Bucchere
Ragusa
Salemi
Porto Empedocle
Caltanissetta

APPENDIX "D"

"Photographic Plan"

1. a. Four photographic units will accompany Force 343.

b. Each unit consists of one officer cameraman, and six enlisted cameramen. Each expert with still and motion picture cameras. The units will be so organized for the assault, that the men will be equipped with the following:

Two men will carry 35mm motion picture cameras, with black and white films.

One man will carry a 16mm motion picture, magazine loading, camera with color films.

Three men will carry 4 x 5 Speed Graphic cameras with 4 x 5 film packs, and a 35mm camera of the Leica type.

c. In the initial assault, each unit will be broken up into three two man teams consisting of one still cameraman and one motion picture cameraman. Wherever possible, these teams will be deployed so that they will accompany a Divisional Combat Team. Each of these teams should be loaded on separate ships wherever possible.

d. Two ¼ ton 4 x 4 vehicles will be used by two of these landing teams in the initial assault.

e. One enlisted cameraman will remain with a vehicle which will have on it the extra film and initial laboratory equipment. This vehicle will arrive as soon after "D" Day as arrangements can be made for it.

By command of Lieutenant General PATTON:

HOBART R. GAY,
Colonel, GSC,
Chief of Staff.

APPENDIX "E"

"Pigeon Communication"

1. a. A detachment (two officers and twenty enlisted men) from the Pigeon Platoon, Company "E", 829th Signal Service Battalion, will arrive by D plus 8, and will be attached to Force 343 Headquarters. This detachment will be employed as required as soon as the birds are settled.

b. The Pigeon Platoon, Company "E", 829th Signal Service Battalion less above detachment, will arrive by D plus 20, and will be attached to Force 343 Headquarters. The Pigeon Platoon will be employed in accordance with the situation.

c. Pigeon communication will be used as the tactical situation dictates. All message will be encoded. Except in emergency, pigeons will not be confined away from their home lofts more than three (3) days. When rapid communications is essential, pigeons will not be used if other means are available.

By command of Lieutenant General PATTON:

HOBART R. GAY,
Colonel, GSC,
Chief of Staff.

HEADQUARTERS FORCE 343
c/o I Armored Corps, Rein.
A. P. O. # 758

APPENDIX "G" (Signal Annex for HUSKI) 10 June 1943.

Radio Plan for the Assault

1. Radio communication for the 45th Division assault landing (ship - shore) will be in accordance with Joint U. S. Air Amphibious Communication Instructions, dated 10 March 1943.

2. Radio communication for the JOSS and DIME Forces will be in accordance with doctrines developed by the Invasion Training Center, Fifth Army. (See attached diagrams, 1, 2, & 3).

a. Prior to 'H' Hour radio silence is in effect.

b. At 'H' plus 10, each Company Commander lands with an SCR-536 (or SCR-511) radio station in the Infantry Battalion Command Net.

c. At 'H' plus 10, the Advance Navy Beach Signals Team lands and establishes an SCR-609 radio station in the Traffic Control Net.

d. At 'H' plus 15, a communications team lands in the third wave and establishes an SCR-284 radio station in the Navaly Gunfire Control Net.

e. At 'H' plus 15, the Shore Company Communication Team lands in the 3d wave and establishes an SCR-609 radio station with one channel operating in the RCT Command Net and the other channel operating in the Shore Battalion Command Net.

f. At 'H' plus 15, the Infantry Battalion Headquarters Communication Team lands in the 3d wave, and establishes the following radio stations:

(1) An SCR-610 with one channel operating in the RCT Command Net; the other channel operating with attached units. These channels are in operation while afloat also.
(2) An SCR-284 operating in the RCT Command Net.
(3) An SCR-536 (or SCR-511) operating as control in the Infantry Battalion Command Net.

g. At 'H' plus 90, the RCT communications lands in the 8th wave and establishes the following radio stations:

(1) An SCR-608 in 1/4 ton amphibious truck with one channel operating as control in the RCT Command Net; one operating with Division Headquarters afloat; one channel operating each Infantry Battalion Channel, one channel operating with Shore Battalion Headquarters.
(2) An SCR-284 radio operating as control in the RCT Command Net.
(3) An SCR-284 operating in the Division Comsand Net.

h. At 'H' plus 90, the Shore Battalion Communications Team lands in the 8th wave and establishes the following radio stations:

(1) An SCR-609 radio station with one channel as control in the Shore Battalion Command Net; the other operating with RCT Headquarters.
(2) An SCR-284 operating in the RCT Command Net.
(3) An SCR-284 operating in the Shore Regimental Command Net.

i. At 'H' plus 90, the Navy Beach Signal Team lands in the 8th wave and establishes an SCR-284 radio station in the ship to shore Administrative Net.

j. At 'H' plus 120, the Air Support Party lands in the 12th Wave and establishes an SCR-299 in the Air Support Net.

k. Diagram 3 shows the Division Ashore.

3. Communications of higher echelons afloat are shown in Appendix F to Signal Annex.

a. Diagram 4 shows the initial 343 radio communications ashore (Army).

b. Diagram 5 shows final 343 radio communications ashore (Army).

4. Listening Watch - All ships radio sets operating on Army or Joint Shore Party teams will open a listening watch at D minus 30 minutes.

5. Radio Silence will not be broken before the leading elements of the assault are ashore or extreme emergencies when authorized by the Senior Naval Officer of the command.

APPENDIX "J"

"Detail Wire Plan"

1. General

a. All equipment being carried by the forces will be in the best possible operating condition. All dry cells will be new and additional dry cells will be packed with the equipment.

b. Waterproofing - All switchboards, telephones, telegraph sets, reel units, batteries and tool kits will be waterproofed in accordance with existing instructions.

c. Full use will be made of telegraph to provide additional channels.

2. Communications in North Africa

a. The 51st Signal Battalion, in the initial phase, will provide wire communications in North Africa for both the Force 343 Command Post and the Rear Echelon. If necessary, additional personnel and equipment can be supplied initially by the 229th Signal Operations Company.

b. Long lines communications and communications in the embarkation area will be provided by Allied Force Headquarters.

3. Tactical Communications in HORRIFIED

a. Sub-Task Forces.

(1) Corps and Sub-Task Force Commanders are responsible for all tactical wire communications in their own areas. This includes responsibility for all wire communications required for Shore Landing Parties and Shore Beach Parties. They are also responsible for the proper use and conservation of existing wire facilities in their areas until such responsibility is taken over by Force 343.

(2) One Construction Company, less one Construction Section, of the 51st Signal Battalion will be attached to the JOSS Force prior to embarkation to supplement their organic signal troops.

(3) One Construction Section of the 51st Signal Battalion will be attached to the KOOL Force prior to embarkation to supplement their organic signal troops.

b. Force 343

(1) Force 343 will be responsible for wire communications to and between Sub-Task Forces.

(2) The following signal troops will be available to Force 343:

1st Armd Sig Bn (14 O and 229 EM on D Day)(Balance D/4)
229th Sig Operation Company (D/8 to D/20)
51st Signal Battalion (less 1 Constr Co)(D/30)
2659th Sig Port Serv Co (Provisional) (D/30)

(3) The 1st Armored Signal Battalion will establish communication to Sub-Task Forces as soon as possible after getting ashore. Initial communications will be over field wire which will be replaced with a better type of construction as soon as the material becomes available. Initially, two talking circuits and one telegraph circuit will be provided to Sub-Task Forces.

(4) The 229th Signal Operations Company will take over any fixed communication installations which may have been started by the 1st Armored Signal Battalion to free the 1st Armored Signal Battalion to advance as the tactical situation changes.

(5) Communication to Twelfth Army will be established as soon as the situation permits.

(6) In accordance with instructions from Force 141, at least one circuit will be built from Comiso to Ragusa for use by the RAF.

(7) Full use will be made of existing facilities in the area. Later as these circuits are no longer needed for tactical use, they will be used in the fixed wire system.

4. Fixed Wire Communications in HORRIFIED

a. Fixed wire communications will be established in accordance with wire plan published by Force 141.

b. Initially this plan will be as shown in Diagram "A". Later it is anticipated that additional fixed communications will be installed as shown in Diagram "B". These plans, however, are subject to change.

c. The greatest possible use will be made of existing poles and wire in establishing the fixed communication system in order to conserve line materials.

d. Material for use in establishing fixed wire communications will be under control of the Signal Officer, Force 343, and except in emergency, will not be issued for tactical purposes.

e. Construction and operation of the fixed wire communications system will be done by the 51st Signal Battalion and the 229th Signal Operations Company. Additional construction will be available from time to time from the 1st Armored Signal Battalion.

f. The 2659th Signal Port Service Company (Provisional) will operate the various port installations that are established on a permanent basis.

5. Interruption of the Commercial Wire System

a. Known details of enemy wire installations are shown in Appendix "B", Annex No. 3, Operations Plans.

b. Advance units will be instructed to cut wire lines leading into enemy territory. This includes telephone, telegraph, and railroad dispatch lines. The near end of the enemy portion of such lines will be short-circuited and grounded.

c. Enemy central offices will be secured intact if possible. All troops will be instructed to remove all enemy personnel from the central offices and establish a guard over such installations. Power supply should be interrupted to central offices to insure that the enemy does not use the equipment. The minimum amount of damage should be done to the central office equipment so that it can be readily restored for our use. Particular care should be taken to secure all records since this will greatly facilitate the re-establishment of communication. Signal Officers of the various units will make plans for taking over central offices as soon as possible after they are captured.

d. Every precaution will be taken to prevent losses to Signal Corps personnel from mines and booby traps while working on any type of enemy communication facilities.

6. Control of existing facilities.

a. Initially Sub-Task Force Commanders will exercise control over all existing commercial facilities in their areas. This control will later be exercised by Commander, Force 343, in order to co-ordinate the use of these facilities. Ultimately, Force 141 will take over supervision of all commercial communication facilities.

b. All existing communications will be closed down as soon as the installations are captured. Personnel will be removed from communication installations and guards posted.

c. Operation of all communication facilities captured will be by signal personnel of the Allied Forces.

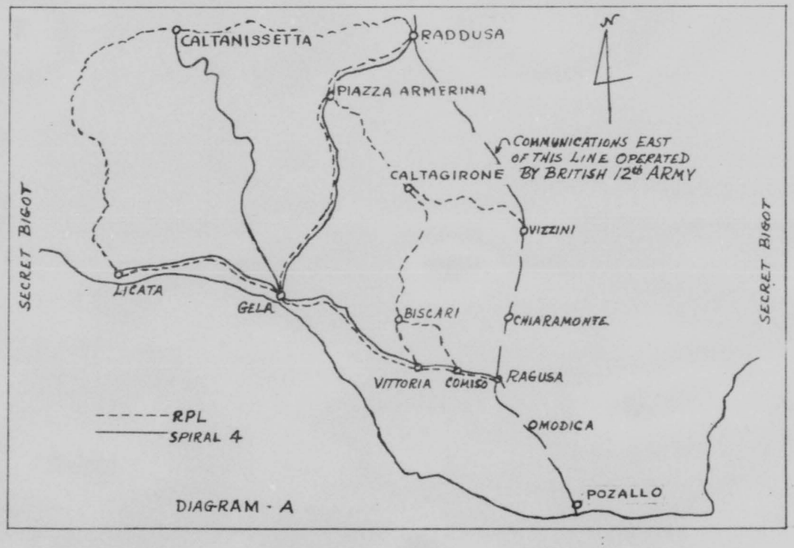
d. Civilian personnel will not be allowed to use telephone or telegraph services. Local services may be re-opened for military use in accordance with instructions from Signal Officer, Force 343.

7. Wire Supply

a. Normal supply channels will be used throughout the operation.

b. Units will be issued wire supplies on the basis of T/BA allotments insofar as these supplies are available.

c. Certain supplies are being received for the special projects involved in the fixed wire communications plan outlined in Par. 4. These supplies will be under control of the Signal Officer, Force 343, and will be issued only for the use intended. This equipment consist of following items:



Permanent line construction materials.
Rapid pole line material.
Spiral four cable.
Carrier telephone equipment.
Repeaters.
Switchboards.

APPENDIX "N"

Air Courier Dispatch Service

1. An air courier dispatch service was inaugurated by the Signal Section, I Armored Corps, Reinforced, on 8 June 1943. The primary object of this service is to furnish rapid dispatch service to all units of this Corps and to higher headquarters located in North Africa.

2. The following personnel is assigned to this service:

a - Officer in Charge, Air Courier Service - Lt. Col., Signal Corps. Part time only.
b - Officer Couriers - From Adjutant General Section on special duty with Signal Section.
c - Officers in Charge of Message Centers located at Telergma Air Field and Biserte.

3. The following is daily schedule of courier service:

a. Mostaganem to Casablanca and return:

Mostaganem	Lv.	0600B	Ar.	2000B
Casablanca	Ar.	1230B	Lv.	1400B

b. Mostaganem to Biserte:

Mostaganem	Lv.	0600B	Ar.	2000B
Maison Blanche	Ar.	1045B	Lv.	1600B
Maison Blanche	Lv.	1130B	Ar.	1130B
Telergma	Ar.	1530B	Lv.	1200B
Telergma	Lv.	1515B	Ar.	0945B
Tunis	Ar.	1800B	Lv.	0700B
Tunis	Lv.	1815B	Ar.	0645B
Biserte	Ar.	2000B	Lv.	0500B

d-29

A. Use is made of the Air Corps, Air Courier planes and the Air Transport Service planes for the air portion of the route.

Use is made of motor messengers from the various sub-message centers to the unit concerned.

5. a. Upon movement of the Corps Command Post to the Biserte area, the courier service will be continued from that point on a slightly revised time schedule.

b. Upon movement of the Corps Command Post from Biserte for the "HUSKY" Operation, an additional daily air courier service will be inaugurated from the Corps Command Post to the Biserte area.

ANNEX NO. XI

CHEMICAL WARFARE

Hq Force 343
19 June 1943

1. Mission. The mission of Chemical troops is to:

a. Support the attack with 4.2" chemical mortar HE and White Phosphorus Fire as directed by Sub-Task Force commanders.
b. Furnish smoke protection for beach and harbor installations.

2. Organization for Combat.

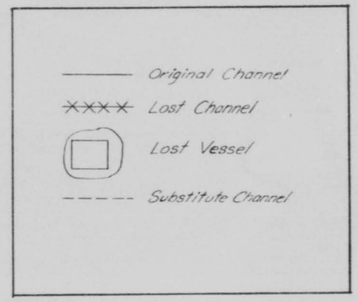
a. Troops attached to Sub-task Forces.
(1) JOSS
(a) 3rd Chemical Mtzd Bn (Sep)
(b) 1st Platoon, 21st Chemical Co (Decon) as Smoke Troops.

(2) II Corps
(a) 83rd Chemical Mtzd Bn (Sep)
(b) 2nd Chemical Mtzd Bn (Sep)
(c) 21st Chemical Co (Decon) less 1st Platoon as Smoke Troops.

b. Force 343 Troops
(1) 84th Chemical Mtzd Bn (Sep)
(2) 69th Chemical Co. (Smoke Generator)
(3) 78th Chemical Co. (Smoke Generator)

3. Tactical Mission for Subordinate Units.

a. The 84th Chemical Mtzd Bn (Sep) is attached to the 9th Infantry Division, and in any assignment missions, will support with HE and WP Fire from 4.2" Cml. mortars.
b. 69th Chemical Co (Smoke Generator) and the 78th Chemical Co (Smoke Generator) will, under the direction of the AADC (Anti-Aircraft Defense Commander) furnish smoke protecion for the harbor of BIZERTE. They will be prepared to move to HORRIFIED and furnish harbor smoke protection on call from Force 343, in the following order:
(1) 69th Smoke Generator Co.
(2) 78th Smoke Generator Co.



4. Use of Chemical Agents.

a. No toxic chemical munitions will be employed by this Force, except on order of the Commanding General.
b. Any use of toxic chemicals agents by the enemy will be immediate reported to Headquarters Force 343 by the quickest possible means.

ADMINISTRATIVE ORDER

Hq. Force 343,
A.P.O. #758, U.S.ARMY,
15 June 1943, 1030B

Ref: Q-630

ADM O 1 To Accompany FO 1.

Maps: Same as FO 1.

1. REFERENCES.
   a. Admin. Plans, Hq. Force 343, 31 May 1943, for CENT, DIME, JOSS and KOOL; Amendment No. 1, 12 June 1943.
   b. No. Q-378, Hq. I Armd Corps Reinf., 3 June 1943, Sub: "Outline Plan for Beach Group Operation".
   c. Adm. O. No. 1, XII Air Support Command (Rear), 5 June 1943.

2. DUTIES AND RESPONSIBILITIES.
   a. Sub-task Force Commanders:
      (1) Sub-task Force Commanders will be responsible for their own supply from ships and other landing craft, over the beaches, or through the ports to include the operation of all beach heads and ports except the port of LADBROKE, until this duty is taken over by Force 343.
      (2) Sub-task Force WOLF will be supplied by air-drop or through DIME beaches.
   b. Commanding Officer, 1st Engineer Special Brigade:
      (1) When supply activities are taken over by the commanding General, Force 343, the Commander 1st Engineer Special Brigade will assume command of the beach groups and of all non-divisional and non-corps service units thereto attached and such other service units as are necessary and may be attached by the Commanding General, Force 343; and will be responsible for the execution of all supply plans within the theater of operations and emanating from Force 343, including the operation of ports, if any.
      (2) Commander, 1st Engineer Special Brigade, will control operations of U.S. service and depot personnel at the prot of LADBROKE until this responsibility is taken over by Force 343.
   c. Force 343.
      Force 343 will be responsible for coordinating with SOS, NATOUSA, in the assembling of supplies to various points of embarkation and their transportation to the theater of operations.

3. PROCUREMENT OF SUPPLIES.
   Supplies will be obtained from SOS, NATOUSA, and forwarded on an automatic basis or on special request by Sub-task Force Commanders and the Task Force Commander.

4. ADMINISTRATIVE CHANNELS FOR SUPPLY.
   a. From Sub-task Force Commanders and Force 343 troops direct to Force 343.
   b. Initially, SHARK will have no administrative functions other than those pertaining to its own Corps troops, except in emergency.

5. MAINTENANCE AND RESERVES.
   a. Maintenance: (Except CWS Class II, which is held in North Africa.)
      (1) To include D + 8:
         (a) JOSS, CENT, and KOOL ---- Twenty-one (21) days.
         (b) DIME ---- ---- ---- Twenty-eight (28) days.

      The above includes 45,000 Type "C" rations for Prisoners of War to be equally distributed among JOSS, DIME and CENT and shipped on the first follow-up, D + 4.

      (2) To include D + 4:
         (a) JOSS and CENT -- Seven (7) days additional.
   b. Reserves:
      (1) The general policy for the build up of reserve supplies, except CWS Class II, in HORRIFIED will be on the basis of at least one (1) to three (3).
      (2) Additional reserves will be built up by SOS, NATOUSA, in North Africa, on the ground at AGOUTI by D day.

6. SUPPLY.
   a. Ground and Air: For details see References, Paragraphs 1a and 1g; also, Quartermaster Supplies, Annex No. 1; Medical, Annex No. 2; Ordnance Plan, Annex No. 3; and Engineer Plan, Annex No. 4.
   b. Water: Supply of one (1) gallon per man per day, D to D + 5, in five-gallons cans over beaches and from LST tanks. Local sources to be utilized thereafter. Strict water discipline must be observed at all times. For details, see Annex No. 4. (Engineer Plan).

7. EVACUATION.
   a. Casualties: See Annex No. 2. (Medcial).
   b. Burial: See Graves Registration Directive - Annex No. 5.
   c. Salvage: Collected by Sub-task Forces and report submitted to Hq. Force 343.
   d. Captured Material: Collected by Sub-task Forces and report submitted to Hq. Force 343, as directed in paragraph 11g(2).
   e. Prisoners of War: By organizations to Sub-task Force collecting point. For details see Military Police Plan, Annex No. 6.

8. TRAFFIC.
   a. Ship traffic control: By the Navy.
   b. Land:
      (1) Circulation restrictions and control: As directed by Sub-task Force Commanders within their respective areas.
      (2) Construction and Maintenance of Routes:
         (a) By Sub-task Force Commanders within their respective areas until Task Force 343 assumes control.
         (b) When Task Force 343 assumes control, by 1st Engineer Special Brigade from shore to line of supply points (beach dumps) and by Engineer, Force 343, from supply points (beach dumps) to sub-task force rear boundaries when latter moves forward of line of supply points (beach dumps).

9. SERVICE SUPPORTING TROOPS.
   As allocated to Sub-task Force Commanders in Troop List No. 4, Hq. Force 343, 10 June 1943.

10. PERSONNEL.
   a. Stragglers: By organization to collecting points.
   b. Surplus Baggage: As directed by Sub-task Force Commanders.
   c. Mail: Normal delivery to all units for the initial operation, except Assault. Details to be announced.
   d. Replacements: See Memorandum # 56, Hq. I Armd Corps Reinf., 6 June 1943, Subject, "Personnel Replacement Requisitions".
   e. G-1 Reports: See Personnel Memorandum # 2, Hq. I Armd Corps Reinf., 6 June, 1943, Subject, "G-1 Reports". Additional instructions will be issued later.

11. MISCELLANEOUS.
   a. Location of G-4 Section, Force 343:
      (1) Afloat: After D day -- MONROVIA.
      (2) Ashore: AGOUTI.
   b. Property Accountability: As prescribed in War Department Circular # 405, dated December 15, 1942.
   c. Procurement Policies and Procedure: See Annex No. 7.

   d. Military Police Plan: See Annex No. 6.
   e. Reports:
      (1) G-4 Periodic Report: To be submitted by Sub-task Forces and separate units to Hq. Force 343 weekly, as of 2400 Friday. First report to be submitted for period ending 16 July 1943. Report Form attached - Annex No. 8.
      (2) Daily Report on Losses and Capture of Material and Supplies: To be submitted, in duplicate, by Sub-task Forces and separate units to Hq. Force 343, daily as of 1800, by the most expeditious means, commencing D day. Report should show quantity and type of major items of equipment and supplies in tons, grouped by supply branches, as follows:
         (a) Actual losses due to enemy action.
         (b) Reported losses due to enemy action.
         (c) Actual losses due to other causes.
         (d) Reported losses due to other causes.
         (e) Actual captured enemy materiel.
         (f) Reported captured enemy materiel.
      (3) The following reports will be submitted to Ordnance Officer, Hq. I Armd Corps Reinf., A.P.O. # 758, U.S.ARMY, by Sub-task Forces and separate units of Force 343.
         (a) Special report as of 5 July 1943 listing weapons and vehicles by type and model for each organization.
         (b) Bi-monthly reports as of the 15th and last day of each month of all major items of Ordnance equipment including vehicles, classified as Authorized, On Hand, Serviceable for Combat, Unserviceable Awaiting Repairs, Unserviceable due to Shortages of Major Items and Unserviceable due to Shortages of Minor Items.
         (c) Commencing on D day, Ammunition Expenditure Reports will be submitted daily as of 1800 to arrive at Hq. Force 343 by 0800 the following day.

(2) Issue to individuals at Port of Embarkation, prior to embarkation: (For consumption during voyage and individual reserve upon landing).

Same as 1, a, (2), (a) and (b) above.

(3) In ships or craft to accompany first follow-up seven (7) days same type as (1) above for troops in assault phase.

(4) In DIME first follow-up ships or craft, seven (7) days same type as (1) above for airborne troops.

(5) Halazone tablets, salt tablets and seven (7) days Hospital ration supplement for (1), (3) and (4) above to accompany shipment.

(6) Tobacco components for assault, first follow-up and airborne (except protions of CENT and DIME mounted in U.S.), seven (7) days, to accompany shipments.

(7) For Prisoners of War: 45,000 Type "C" rations equally divided among JOSS, CENT, and DIME shipments.

3. SECOND FOLLOW-UP PHASE: (To arrive D plus 8).

a. Reserve Rations: Automatic to ships for full capacity of personnel in second follow-up (Not to be consumed during voyage).

(1) Issued to organizations in second follow-up, prior to embarkation and stored in space assigned to organization:

Type "C" -- 2 days
Type "B(5-in-1)" -- 5 days

(2) Issued to individuals at Port of Embarkation, prior to embarkation: (For consumption during voyage and individual reserve upon landing).

Same as 1, a, (2), (a) and (b) above.

(3) In ships or craft to accompany JOSS and CENT second follow-up, seven (7) days same type as (1) above for all troops in assault and first follow-up of JOSS and CENT.

(4) In ships or craft to accompany DIME second follow-up, fourteen (14) days as follows for troops in DIME assault and first follow-up:

Type "C" -- 4 days
Type "B(5-in-1)" -- 10 days

(5) Hospital ration supplement, tobacco component, Halazone and salt tablets on all rations shipped.

4. THIRD FOLLOW-UP PHASE: (To arrive by D plus 14).

a. Reserve Rations: Automatic to ships for capacity of personnel of third follow-up, plus personnel of assault and first two follow-ups:

(1) JOSS and CENT: DIME - None
Type "C" -- 2 days
Type "B(5-in-1)" -- 5 days

b. Type "B" ration to be made available as soon as possible. As early as possible thirty (30) days reserve of Type "B" plus ten (10) days reserve of emergency rations to be built up.

(1) Thirty (30) days supply, Type "C" biscuits and Graham crackers (50-50 ratio) to be substituted for bread. "B" rations, beginning D plus 30 will include bread ingredients and increased allowance (10%) flour, baking powder, shortening and sugar.

c. Items to supplement Type "B" rations for hospital patients to be furnished on an automatic basis by SOS, NATOUSA or PEMBARK, based on 10% (ten percent) of the number of rations furnished to this theater. Special hospital mess to be discontinued D plus 30.

5. Tobacco, candy, toilet articles -- gratuitous issue: Under the provisions of WD Cir. 245, 25 July 1942, each ration, (except Type "B") will include the following items which will be issued to troops, as indicated below, per rations:

Blade, safety razor	ea.	.275	Cigarettes	ea.	20.00
Razor, safety	ea.	.010	Tobacco, cigarette	oz.	.05
Shave cream, brushless	oz.	.140	Tobacco, pipe	oz.	.08
Brush, tooth	ea.	.015	Tobacco, chewing	oz.	.02
Powder, tooth	oz.	.035	Papers, cigarette	bk.	2.50
Soap, toilet	oz.	.140	Matches, safety	bk.	2.00
Candy, hard	oz.	1.000	Gum, chewing	stk.	1.00

6. PACKING AND MARKING: Packages will be prepared for one man loads, not to exceed seventy (70) pounds, at Depot, and marked for Sub-Task force concerned by code name. Shipment to be made to Port of Embarkation on call of Sub-Task Force Commander. Reserve rations to be broken down and issued to organizations will be marked "FOR ISSUE".

7. SPECIAL for LADBROKE: (To be shipped by D plus 10).

Type "C" -- 2 days
Type "B(5-in-1)" -- 5 days

CLASS II and IV

1. GENERAL.

a. Thirty (30) days combat maintenance of certain articles, which include individual clothing and equipment, organizational clothing and equipment, expendable supplies, pest control materials (issued to individuals), assault packs, pack transport equipment and protective covers, individual, will be prepared by SOS, NATOUSA or PEMBARK and will be available upon call of C.G., Force 343.

b. An additional thirty (30) days to sixty (60) days maintenance will be laid down by the Quartermaster, SOS, NATOUSA or PEMBARK to be on call by the C.G., Force 343 when these supplies may be handled. A thirty (30) day level plus a ten (10) day working margin will be maintained at the main port of entry for all units of the force.

c. Packages will be one man loads, not over seventy (70) pounds, water proofed and strapped for rough handling over beaches.

d. Markings: Packages will be marked with contents, quantity, number designating Sub-Task Force (when practicable), and corners will be painted Green.

e. Beach or Unit Reserve: Each unit will carry its own combat maintenance. The assault will be equipped with assault packs and shoe packs for five percent (5%) of its strength. First and second follow-ups will be equipped with assault packs and shoe packs for three percent (3%) of their strength. One (1) 2 oz. bottle of insect repellant and one (1) 2 oz. can insect powder to be issued to each individual JOSS force and to each individual CENT - DIME force mounted in Africa, prior to embarkation. Subsequent follow-ups will carry maintenance for themselves and all preceding groups. Assault packs for 45th Division and accompanying troops mounted in U.S. will be top-loaded in Africa in amount called for by 45th Division, (but not to exceed three percent (3%) of total strength of its assault troops).

NOTE: For 82nd Airborne Division, thirty (30) days special clothing and equipment items to be laid down at AGOUTI prior to D day, along with insect powder, insect repellant, and sunburn ointment.

CLASS III SUPPLIES (P.O.L.)

1. GENERAL: All vehicle fuel tanks will be filled and organic gasoline cans, 5-gallon, will be filled prior to embarkation. Each vehicle will carry oil and greases as specified. Each wheeled vehicle will carry (5) five quarts of oil. Vehicle grease guns will be filled prior to embarkation. Supply of reserve gasoline to be carried on ships will be automatic for ground vehicles only.

2. GASOLINE:

a. Assault: Seven (7) days supply of V-80 for all motor vehicles will be carried as accompanying vehicles or on same convoy. Basis: Six (6) U.S. gallons per wheeled vehicle. Thirty (30) U.S. gallons per half-track and sixty (60) U.S. gallons per track vehicle. (This is based on fifty (50) miles operation per day, plus additional gasoline for Navy ground work. All gasoline will be in five (5) gallon cans.

b. First Follow-Up: Same, plus seven (7) days supply all Class III for assault group.

c. Second Follow-Up (D plus 8): Fourteen (14) days for DIME plus fourteen (14) days for vehicles in assault and first follow-up; JOSS and CENT seven (7) days for vehicles in assault and first follow-up.

d. Third Follow-Up (D plus 14): JOSS and CENT, seven (7) days for vehicles in assault and first and second follow-ups.

e. Gasoline to be available first fifteen (15) days in five (5) gallon cans. Subsequently, and until bulk storage is available, five (5) gallon cans and fifty-five (55) gallon drums. (Bulk storage expected to be available by D plus 16.)

3. DIESEL FUEL OIL:

a. Diesel fuel oil, conforming to Specification 2-102B will be supplied on an automatic basis for use by Engineers. Fuel to be shipped in five (5) gallon cans, initially, later in fifty-five (55) gallon drums. To be shipped in the assault: Fifteen-thousand (15,000) gallons. To be shipped D plus 4: Nineteen thousand two hundred (19,200) gallons. To be shipped D plus 8: Twenty-six thousand eight hundred (26,800) gallons.

4. LUBRICANTS AND GREASES:

a. Allowances: Engine oils, 5.5 gallons per 100 gallons of gasoline consumption. Gear oils, one (1) gallon per 100 gallons gasoline. Chassis greases 1.6 pounds per 100 gallons of gasoline.

b. Oil will be shipped in five (5) gallon cans, greases in twenty-five (25) pound pails. Cans to be plainly marked showing contents.

c. Levels will be brought up to and maintained at a thirty (30) day reserve plus a ten (10) day working margin for all units of the force by D plus 40.

5. SPECIAL FOR LADBROKE (To be shipped by D plus 10): Seven (7) days gasoline, lubricants and greases.

****

Incl. #1

KOOL

For portion of force mounted:

1. Reserve Rations: Automatic to ships for full capacity of personnel. NOT to be consumed on voyage.

a. Issue to organizations at Port of Embarkation and prior to embarkation, and to be stored in space assigned to organization:

Type "K" -- 5 days
Type "C" -- 5 days
Type "B(5-in-1)" -- 9 days

(1) Hospital supplement, consisting of soup, fruit, juices, milk, coffee and sugar based on expectancy of wounded for 21 days.

(2) Gratuitous issue of toilet, tobacco and candy components.

b. Issue to individuals at Port of Embarkation, prior to embarkation:

Type "K" -- 2 days
Type "D" -- 1 day

NOTE: Halazone tablets, salt tablets, toilet paper, sunburn ointment, 2 ounce bottle insect repellant and 2 ounce can insect powder, as specified, issued to each individual prior to embarkation.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

For portion of force not mounted:

1. Reserve Rations: Available at Port of Embarkation on D day for entire personnel, ready to be loaded upon call. NOT to be consumed.

   a. Type "K" -- 7 days
      Type "D" -- 1 day
      Type "C" -- 7 days
      Type "B(5-in-1)" -- 9 days

      (1) Hospital supplement, based on expectancy of wounded for 21 days.

      (2) Gratuitous issue, toilet, tobacco and candy components.

      (3) For individual issue prior to embarkation: Halazone tablets, salt tablets, toilet paper, sunburn ointment, and insect repellants.

CLASS II and IV

Assault packs for five percent of strength mounted and three percent of strength unmounted to be available at Port of Embarkation prior to D day, plus 21 days maintenance of critical items for full KOOL strength, from which supplies will be extracted for personnel mounted.

CLASS III

Twenty-one days balanced stock of gasoline, lubricating oil, grease, and Diesel oil to be available at Port of Embarkation prior to D day for all vehicles, KOOL force, from which will be extracted 21 days supply to be loaded for number of vehicles mounted.

****

ASSAULT PACK

(Quartermaster Class II, plus certain Ordnance, Medical, and Chemical Warfare Items)

Contents Packed Bottom
To Top In Order Named:

1. Haversack, w/pack carrier attached, containing complete mess kit, bath towel, 1 "K" rations, salt tablets, Halazone tablets and insect repellant.

2. Gas Mask, w/protective cover and ointment inside carrier.

3. *Belt, web, pistol, w/following attached: canteen w/cup and cover, dsmtd., pouch, 1st aid, including packet; pocket, mag., web with two (2) loaded clips; holster, w/pistol, incl. loaded clip of 6 rounds.

4. Jacket, field.

5. Helmet, steel, M-1, w/liner, adjustable headband and headnet, sandfly.

6. Suit, working HBT, 1 or 2 piece, and 1 pair sox, in pockets.

7. Undershirt, summer.

8. Drawers, shorts.

9. Blanket, wool O.D.

Above to be packed in special waterproof paper container and enclosed in water repellant barrack bag.

Weight: Not to exceed 50 pounds. Cubage: 2.524 cubic feet.

Clothing items to be sorted large, medium, and small sizes and bags plainly marked with large block letters "L", "M", and "S".

*Approximately half of bags will contain Sub-Machine Gun, pouch, magazine, sub-machine gun, w/two loaded magazines of 30 rounds each, instead of pistol, holster, pouch and 45 caliber ammunition.

NOTE: Assault packs available for top-loading when 45th Division reached North Africa, do not contain Ordnance items.

Incl. #2 to QM ANNEX.

****

SHOES ASSAULT PACKED

Shoes, in full assortment of sizes, will be packed seperately in packages of twelve (12), wrapped in waterproof paper and boxed for handling over the beaches.
WEIGHT: Fifty-five (55) pounds. One (1) shoe pack will be provided for each twelve (12) assault packs shipped on assault and follow-ups.

Incl. #3 to QM ANNEX.

HEADQUARTERS I ARMORED CORPS, REINF.
A. P. O. #758

   c. KOOL Force - CG 2d Armd Div.
      (a) Troops -
         1. 2d Armd Div (- CC "A").
         2. _____RCT 1st Div.
         3. Supporting troops.
         4. Total Lift - 7.975.

      (b) Medical Support allotted.
         1. Beach group - 1 Co, 261st Med Bn.
         2. Assault support group.
            a. 51st Med Bn (- 2 Coll Cos and 2 Clear Plats).
            b. 1 Plat, Co A, 36 Amb Bn.

2. EVACUATION (FM 8-25, "Medical Service in Joint Oversea Operation", will govern).

   a. Navy Responsibility - General Policy

      The Navy is responsible for the medical care of all sick and wounded of all services, including Prisoners of War:-

      (a) While in transit from ports of embarkation to Theatre of Operation.
      (b) While being transported in landing craft of all types to high water mark on land and beaches, except in those LST's to which Army Medical Corps personnel have been assigned.
      (c) While in Evacuation stations of the medical sections of Naval Beach parties.
      (d) While returning patients on any Naval Craft, except in LST's as mentioned above.
      (e) While in transports for further evacuation to hospitals on friendly shores.

   b. Army Responsibility - General Policy

      Combat Zone - Task Force 343.

      (a) Assault Phases-Early

         1. Attached unit medical detachments and elements of Divisional Medical Battalions.
         2. Later - Divisional Medical Battalion.
         3. Field Hospitals with attached Surgical Teams to care for the non-transportables.

         4. Beach Medical Bn. to collect and care for casualties in the beach area and those evacuated to their Clearing Stations by the Divisional Medical Bn. To evacuate casualties to Naval Craft and Ships through Naval Medical Officer on Beach Master's Staff. To initiate and maintain Medical Records. The Senior Medical Officer in each beach group will be designated Surgeon.

      (b) Later Phases

         1. Normal responsibilities of established medical installations after beach head enlarges.
         2. Responsibility for hospitalization of returned casualties in North Africa, NATOUSA, and U.S., SOS.

   c. Evacuation of Casualties - General Policy

      (1) Casualties occurring in landing craft will be retained aboard, if their condition permits, for the return trip to their ship or shore.
      (2) No casualties will be evacuated until after assault troops have landed.
      (3) Non-transportables will be evacuated, only if Hospital Ships, Hospital Carriers, AFA's, and XAFA's, are available.
      (4) Initially HORRIFIED will be regarded as an Evacuation Zone, with the Evacuation Hospital as the largest medical unit. Normal Army method of evacuation will be in effect, except that initially the Divisional Medical Bn. will evacuate their Clearing Stations rearward to the Beach Medical Bn. General/Station Hospitals will be landed as soon as possible after a port has been opened. The build up of hospital beds will not exceed 3% of the Force (taken at its maximum strength), the remainder of the beds required being available in North African bases. With the reduction of the garrison following the subjection of HORRIFIED, this will approximate to the 6% normally required.

   d. Evacuation Arrangements
      (1) Evacuation arrangements have been made as follows:
         (a) Phase 1.
            1. Casualties will be evacuated initially to AFA's and XAFA's while these ships are standing off the beaches. These casualties will be discharged at FASCIST.
            2. Hospital ships and carriers will arrive off the beaches when the AFA's and XAFA's depart, or sooner if it appears that a need exists. Hospital ships and carriers will be operated as a shuttle service, between the assault area and the ports of AGOUTI and LAINDON. If the casualties should become congested in the AGOUTI-LAINDON area, ships and carriers may be diverted to EFFENDI by H.Q. Force 141 upon request by NATOUSA.
            3. If it is found that AFA's and XAFA's, hospital ships or carriers are inadequate for the casualties to be evacuated, LST's will be used to transport slightly wounded to NORTH AFRICA. Medical personnel and supplies to accompany the casualties have been provided.
            4. The Beach Master will designate the landing craft he chooses for carrying casualties on the return trip to ships, and LST's (if needed) on the return trip to NORTH AFRICA.

         (b) Phase 2
            1. From the time hospital ships can use ports until adequate hospital accommodation has been established, evacuation will be in accordance with the following general principle:

               All cases having a hospital expectancy in excess of seven (7) days will be evacuated to AGOUTI, LAINDON, EFFENDI or FASCIST, upon the recommendation of NATOUSA.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

e. Casualty Estimates and Sick Rates

(1) To arrive at a basis on which to plan the medical arrangements, it will be assumed that the total casualty rates, including killed, missing and sick, may be of the following order:- (Estimates based on those given in Force 141 Maintenance Project)
(a) During the first seven days of the operation the total number of casualties may be 15% of the formations/units carrying out the assault and 5% of the remainder landed.
(b) During the second seven days 7½% of the total number of men ashore.
(c) Thereafter, 4% of the total number of men ashore.

(2) The above percentages may be sub-divided as follows:-
(a) Of the total casualties 25% can be assumed to be killed or missing.
(b) Of the remainder, 5% can be assumed to remain in HORRIFIED.
(c) After deducting the above, the remainder is the number to be evacuated from HORRIFIED, and is likely to consist of walking or lying cases in equal proportion.

(3) The above rates include assesment for sickness at the rate of 3 per 1,000 men per day. This assessment has been made on the assumption that the recommendations of the medical services regarding measures directed towards the control of Malaria, Dysentery, and other diseases have been implemented, and that preparatory training and the provision of the necessary special equipment have been carried out.

f. Means Available and Plan for Evacuation and Hospitalization

(1) Land
(a) Means expected to be available by D + 4 in addition to the organic medical units of three infantry divisions, one armored division, and supporting troops will be:

1.	Four (4) evacuation hosps. (400 bed)	11th-15th-93rd-128th
2.	Two (2) field hospitals (380 bed)	10th and 11th
3.	Four (4) medical battalions	51st-54th-56th-261st
4.	3rd Aux Surgical group (26 teams)	
5.	Three (3) Platoons, ambulance company (A/36)	
6.	Two (2) sections, adv sup platoon, med sup depot 4th and 2nd	
7.	Two (2) Veterinary Detachments (Food inspection)	
8.	Malaria control	20th

(b) Special features:
1. Maintenance over the beaches require evacuation to holding hospitals on or near the beaches for transfer to hospital ships and carriers.
2. Early occupation of the captured air fields by fighter aircraft requires hospitalization available nearby to serve these units. Hospitals so located will be used as holding hospitals for air evacuation when this service is established.

(c) Reserve Medical Units
The following medical units will remain in N.A. after D + 4 to be called forward when shipping space is available:

8th Evacuation Hospital (750 bed)
16th " " "
59th " " "
77th " " "
91st " " (400 bed)
2nd Medical Laboratory
Co A, 36th Amb Bn (- 3 Plats)

(2) Water
(a) Area Evacuation Officer (AEO).
Each area (CENT, DIME, and JOSS) will have a Naval medical officer assigned as AEO who will control the distribution of casualties within the ships in his area.
1. CENT AEO - In the Leonard Wood
2. DIME AEO - In the Samuel Chase
3. JOSS AEO - In the Biscayne
(b) Force Evacuation Officer (FEO) (U.S. Navy) in the Monrovia. This officer will control the water evacuation of entire force.
(c) Transfer of casualties from beach to craft and from craft to ships is a responsibility of the Navy.
(d) Initial allotment. The following hospital ships and carriers will be allotted to Force 343 initially and will be employed under the direct control of Naval Commander, Western Task Force.

Ships		Draught	Capacity Litter	Sitting	Total	Speed
ACADIA	(U.S.)	25'	380	426	806	18
SEMINOLE	(U.S.)	25'	284	184	468	14½
AMARAPOORA	(BR.)	25'	270	136	406	11
OXFORDSHIRE	(BR.)	22½'	250	120	370	14
TAIREA	(BR.)	25'	261	222	483	16
Carriers						
ST ANDREW	(BR.)	14'	167	223	390	13½
DINARD	(BR.)	13½'	130	230	360	18
LEINSTER	(BR.)	14½'	130	230	360	?
PERAK	(BR.)	?	?	?	150	?

(e) Employment. These ships and carriers will be called forward to the beaches by Naval Commander, Western Task Force when the situation will permit.
Hospital ships and carriers will not move in convoy with other ships. The FEO in communication with each Navy Beach Medical Section through the respective AEO's will coordinate the distribution of hospital ships and carriers to the various beaches as required.
(f) Loading. This is a responsibility of the Navy. Water ambulances or small craft will be used to transport casualties from the beaches to the hospital ships (and carriers).
(g) North African Ports for reception of casualties.
1. LAUNDON and AGOUTI are designated as the regular ports to receive casualties from hospital ships and carriers.
2. Alternate ports. In the event that the hospitals in the LAUNDON-AGOUTI area become congested, upon the request of NATOUSA through HQ FORCE 141 hospital ships and carriers may be diverted to EFFENDI to utilize the hospital beds in that area.
3. APA's and XAPA's, after departure from the beaches, will move in convoy to FASCIST where the following types of casualties will be discharged:
a. Personnel of Force 343 (Army) and U.S. Naval Forces who have a hospital expectancy of less than 90 days.
b. All personnel whose condition does not justify the long sea voyage, regardless of hospital expectancy.
(h) Patient Capacity of Craft:
1. APA's and XAPA's have an average patient capacity of:
Stretcher 139, Ambulatory 337
2. APA's and XAPA's for CENT will have a patient capacity of:
Stretcher 1,907, Ambulatory 4,381 - TOTAL 6,288
3. APA's and XAPA's for DIME will have a patient capacity of:
Stretcher 695, Ambulatory 1,685 - TOTAL 2,380
4. APA's and XAPA's for JOSS - None
5. Each LST will have a patient capacity of:
Stretcher 300, Ambulatory 165 - TOTAL 465
(i) MBS NATOUSA must be prepared to accept up to 5000 casualties from APA's and XAPA's at about D + 5.

(3) Air. Beginning about D + 14 it is expected that air transport service into the island will begin. Returning aircraft will be utilized to the fullest extent, consistent with the welfare of the patients, to evacuate casualties. Evacuation of casualties has second priority on these planes, (first priority to air crews returning to N.A. to return again with operational aircraft to replace fighter aircraft losses).
(a) Medical arrangements on HORRIFIED are the responsibility of Surgeon Force 343 as follows:
1. Holding Hospitals located near the air field or fields to which supplies are to be transported.
2. Ambulance available to transport casualties to planes promptly.
3. Litter squads available to the Advance Air Evacuation Officer, to load the planes.
4. As each patient is prepared to leave the hospitals on HORRIFIED for air evacuation, a slip of paper will be placed in the jacket of his Field Medical Record. This may be prepared on any paper and will show the patient's name, ASN, rank, organization, diagnosis and classification as listed in sub para (c) 2. below. This is to enable the Adv Air Evac Officer to prepare a nominal list of the patients on each plane rapidly.
(b) Medical arrangements in N.A. are the responsibility of Surgeon, ESS, NATOUSA.
1. Reception stations near the airdromes at Meteur which will be used to land U.S. casualties.
2. Ambulance service on the airdrome at the time planes arrive.
3. Litter squads to unload the planes.
(c) Operation. This evacuation service will be operated by the U.S. Troop Carrier Command utilising the available air evacuation squadron or squadrons.
1. an Adv Air Evac Officer will be stationed on each field in HORRIFIED to coordinate the air service with Force 343.
a. He will contact TAF HQ on HORRIFIED to determine number of planes available and time of arrival.
b. He will notify Surgeon Force 343 or his representative the time, place and number of patients he can evacuate. This information will be transmitted as soon as available, if possible during the preceding day.
c. He will supervise the loading of the planes on the field.
d. He will prepare a list for each plane showing: Number of plane, names of medical crew members, and for each patient the name, ASN, rank, organization, diagnosis, and classification as in sub para 2. below.
2. Classification of casualties for air evacuation.
Priority I-Require expert nursing enroute (mostly litter cases)
Priority II-Require minor nursing enroute (mostly ambulatory)
Priority III-Require no attention enroute (ambulatory)
3. Attendants enroute.
a. Available air evacuation crews from the Air Evacuation Squadron will be utilized to the limits of its personnel to staff planes transporting Priority I cases. Priority II cases may be used to fill available lift.
b. A pool of trained medical technicians (EM) will be maintained by U.S. Troop Carrier Command to operate in the air evacuation squadron but will only be utilized to accompany Priority II cases.
c. Priority III cases require no attendants and may be transported to N.A. in any returning planes.
4. Report. Advance Air Evacuation Officer will report through TAF channels to HQ Force 141 for transmission to Surgeon ESS, NATOUSA the number of patients being evacuated, airdrome on which they will be landed and predicted time of arrival.
(d) Ferrying Personnel to HORRIFIED. It is the responsibility of CG, Troop Carrier Command, NAAF, to reserve sufficient space on transport planes being flown to HORRIFIED to transport the medical air evacuation personnel to the landing fields on the island from which casualties will be evacuated.
(e) Supplies. To prevent the wasteful procedure of equipping all C - 47 airplanes with complete stock of exchange items of medical equipment, the following will be followed:
1. Force 343 will maintain a dump of exchange items on the landing field in HORRIFIED sufficient to make proper exchange with ambulances delivering patients to the evacuation planes.
2. The Medical Officer on the landing field in N.A. will make the property exchange with ambulances which evacuate the planes. As this property accumulates he will transfer it to Surgeon, ESS, NATOUSA.
3. The stock of exchange property in Force 343 will be maintained by shipment to HORRIFIED in returning hospital ships. The responsibility of loading this property on returning hospital ships rests with Surgeon ESS, NATOUSA and for unloading it in HORRIFIED and transporting it to advance landing fields rests with Surgeon, Force 343.

(4) After the military forces are firmly established ashore and ports are available to Force 343, evacuation on island will assume the normal mode of operation.
(a) Casualties with prolonged hospital expectancy will be evacuated to N.A.
1. Hospital ships and carriers will operate under control of Force 141. They will be dispatched to the island upon request of Surgeon Force 343 and will deliver casualties to N.A. ports designated by Surgeon, NATOUSA. This policy will be governed by available hospital ships and carriers, demands of Force 343 and Twelfth Army, and availability of ports.
2. Air evacuation will continue as outlined above.
(b) Evacuation policy will be decided from time to time and will depend upon available vacant beds in Force 343 hospitals and NATOUSA hospitals.
(c) Emphasis will be placed on sitting holding hospitals in the vicinity of air fields and ports to facilitate air and water evacuation.

(d) SOS units available in N.A. on call from Surgeon, Force 343.
1 General Hospital (1000 bed)
8 Station Hospitals (500 bed)
4 Station Hospitals (250 bed)
1 Convalescent Hospital
1 Medical Supply Depot (contingent upon arrival of this unit in the theatre)
1 Malaria Control Unit
1 Veterinary Detachment (Food Inspection)

3. SUPPLY

a. Attached medical troops will land with unit equipment, augmented by Special Supplies, such as Blood Plasma, Morphine Syrettes, extra Dressings, etc.
b. Seven (7) day maintenance of medical supplies, augmented by Blood Plasma, Special Drugs, and Biologicals, essential for this operation, combat loaded, will be unloaded at Beaches "X", "Y", and "Z", on D-day, when the situation permits.
c. Medical Supply Dumps will be established at Beaches "X", "Y", and "Z", for each Combat Group, immediately subsequent to the landing of Assault Troops. These supply points or dumps will be dispersed on beaches in protected places as directed by the Beach Group Surgeon.
d. Property exchange will be accomplished at each point in chain of Evacuation. Initially, the Beach Surgeon will be responsible for the Medical Dumps on the beaches and the issuing of supplies at these Dumps. Moving of supplies forward from the Beach Dumps will be the responsibility of the Divisional Medical Supply.
e. The Reserve Force will carry 21-day maintenance for its own Force.
f. The first Follow-Up will carry a seven (7) day maintenance for the Assault Group in addition to its own seven (7) day maintenance.
g. The second Follow-Up will carry a seven (7) day maintenance for the Assault, a seven (7) day maintenance for the first Follow-Up, in addition to its own seven (7) day maintenance; except DIME Force which will carry fourteen (14) days instead of seven (7) day maintenance.
h. Each subsequent Follow-Up brings in seven (7) days maintenance plus seven (7) days for troops previously landed, in lots capable of being unloaded over beaches, sufficient for five (5) follow-up convoys.
i. Special items for troops enroute, such as Sunburn Cream and Seasick CAPSULES to be drawn and issued prior to embarkation. Benzedrine will be available to Unit Surgeons upon request.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

1. Thirty (30) days combat maintenance of certain articles, expendable supplies and pest control materials, have been prepared by SOS, NATOUSA or PEMBARK and will be available upon call of CG, Force 343.

2. An additional thirty (30) days to sixty (60) days maintenance will be laid down by the Surgeon, SOS, NATOUSA or PEMBARK, to be on call of the CG, Force 343. To be built up in HORRIFIED as follows:-

(1) For troops of sub-task forces served by beach heads ten (10) days by D + 32.
(2) For all troops -- Twenty (20) days in HORRIFIED by D + 90.

3. Requisitions. Surgeon, Force 343 will requisition through Force 141 on ERS, NATOUSA for supplies required.
(1) Shipment. Surgeon, ERS, NATOUSA is responsible for preparing supplies for shipment and delivery to ports.
(2) Priority of shipment to HORRIFIED will be determined by Force 343 within the allotment of water and air transport tonnage allotted by Force 141.
(3) Hospital ships and carriers are authorized to transport medical supplies and personnel. This method will be exploited to the fullest as a means of rapidly replenishing stocks on HORRIFIED and relieving the general shipping situation. This method will habitually be used to return to HORRIFIED exchange items of equipment brought to N.A. by air evacuation service.
(4) Emergency requisitions will be placed in the same manner as other supplies. Force 343 will give these items a priority in their daily request for air transportation to HORRIFIED.
(5) Surgeon, ERS, NATOUSA will maintain a small section in the dump to be established in the vicinity of KAIROUAN. This dump will contain a balanced stock of items which may be required in an emergency for shipment by air to "HORRIFIED".

4. PREPARATION AND SUBMISSION OF MEDICAL DEPARTMENT RECORDS AND REPORTS DURING THE INITIAL PHASE

a. The attention of all concerned is directed to pertinent Army Regulations, Field Manuals, War Department Circulars, APHQ Circulars, and Circular Letters from the Office of the Surgeon General, as they apply to the preparation and forwarding of medical reports and records of units of this Task Force in its prescribed Theatre of Operations.

b. General
All reports will be classified as "SECRET" and will designate only the APO number as the location.

c. Sick and Wounded Records
(1) Unit Dispensaries and Aid Stations
(a) In combat, aid stations and collecting stations of divisional or brigade units engaged with the enemy will partially accomplish the Emergency Medical Tag (WD MD Form 52b) to show only the name, grade, army serial number, date, hour, diagnosis and treatment given. Space will be economized to permit subsequent entries.
(b) Form 52b thus partially prepared, will be signed by the person responsible, indicating his grade.
(c) At clearing stations and other Medical Department establishments in rear of clearing stations, Form 52b will be accomplished completely.
(2) For the Transfer of Patients
To Clearing Station or Hospital. The original of the Emergency Medical Tag will accompany the patient to the Clearing Station or Hospital. Hand imprinting machines should be used whenever possible to transmit the information contained on the patients identification tag to the Emergency Medical Tag (MD Form 52b). The notation, "Clearing Station" or "Hospital" will be shown in the space for disposition. If the patient is returned to duty from the Clearing Station, the Emergency Medical Tag will accompany him back to his unit dispensary when practicable to do so, where the tag will be removed, completed by the necessary notations on the reverse side under "Supplement Record", and will be forwarded with the Sick and Wounded Report for the month in which the patient returned to duty. When this procedure is impracticable, the Emergency Medical Tag may be included in the Sick and Wounded Report of the Unit which had given treatment to the patient.
(3) For Treatment Cases. The Emergency Medical Tag will be used for cases excused from duty and treated in quarters. Cases admitted to dispensary beds are considered as being on a "quarters" status. On cases returned to duty from dispensary or quarters, the Emergency Medical Tag will be completed with the notation "Duty", "Duty Improved" or "Duty Condition Unchanged" under disposition. In cases treated in quarters or dispensary, and later transferred to a clearing station or hospital, the Emergency Medical Tag will accompany the patient with the proper notation "Hospital" or "Clearing Station" together with the date of transfer.
(4) For Deaths. All deaths occurring outside Hospitals will be recorded on the Emergency Medical Tag, and attached to the body. The original EMT will be removed from the body of the dead at internment, and forwarded direct to the Graves Registration Officer, Hq Force 343, who will in turn transmit the original EMT to the Surgeon, HQ Force 343, who will forward to Surgeon General through channels.
(5) Hospitals, mobile. Mobile hospitals will prepare, on each patient admitted, the Field Medical Record (WD MD Form 52c) and (WD MD Form 52d). If Form 52c and 52d are not available, Form 52 may be used. The Field Medical Record will accompany patients transferred to other hospitals. For patients returned to duty, dying, or otherwise disposed of (absent in desertion, turned over to Military Police, etc), the records will be completed. All records on completed cases will be forwarded with the monthly report of Sick an Wounded.
(6) Channels of transmission. All sick and wounded reports will be submitted to the Task Force Surgeon through medical channels. A surgeons will check and correct reports transmitted through their offices.

d. Casualty Reports and Reports of Death.
Battle Casualty reports will be rendered under the provisions of Circular #5, Hq. I Armored Corps, Reinforced, dated 25 May 1943. Detailed instructions for the preparation of casualty and death reports other than battle casualties are also found in this Circular, and therefore further instructions in this directive are not necessary. Strict adherence to the instructions contained in this Circular #5 is imperative. All concerned will check their reports for accuracy.

e. Admission and Disposition Reports.
(1) Purpose: The purpose of the Daily Admission and Disposition Report will be to furnish commanders with information concerning the status of personnel evacuated to medical installations.
(2) When and by whom submitted: A report on IAC Form 1, or a reproduction thereof, will be furnished by each commanding officer of a medical installation down to and including medical battalions It will cover all admissions and dispositions of patients, both casualty and non-battle casualty, and will show the last name, first name, middle initial, grade, army serial number, date of admission or disposition, and short diagnosis. Diagnosis of battle casualties will be preceded by (BC) to indicate and separate those cases hospitalized as a result of enemy action. Reports will be submitted to this headquarters in duplicate through command channels and will cover the period from midnight to midnight of each day. Also under dispositions will be shown whether casualty was transferred, i.e., within the combat zone, or evacuated, i.e., from the combat zone. The evacuating craft will be identified by name or number by the Evacuation Officer.

f. Report of Hospitalization.
In order to facilitate the notification of each unit as to the number of casualties, an individual report of hospitalization will be rendered by each functioning clearing station and hospital. This report will be rendered daily as of midnight. Attached is a suggested form for individual report of hospitalization. This, or a similar form will be used by all units rendering this report.

g. Award of Purple Heart.
(1) Casualties entitled to the Purple Heart will be given this decoration in the forward Medical installations provided that they are not to be evacuated rearwards.
(2) The fact of such an award and the number of the decoration will be entered on the individual's Emergency Medical Tag or (WD MD Form 52, Report Card) to avoid duplication. Four (4) copies of orders announcing the award will be forwarded through this headquarters to The Adjutant General, Washington, D.C.

h. Form 86f (Revised)
(1) The Form 86f (Revised) will be rendered daily as of midnight by all hospitals and during combat by functioning clearing stations. When any unit opens, its first report will be marked "INITIAL" and when closed the last report will be marked "FINAL".
(2) The following instructions relative to the preparation of the Form 86f will be used as a guide in the preparation of this form and will be strictly complied with by all units rendereing this report. Attached hereto is copy of 86f which will be used by all units rendering this report to this headquarters.

I Red Status: Self-explanatory.
II Number of patients:
(a) Under spaces (1) Diseases, (2) Injury, (3) Wounded, (4) Gassed, and (5) Total, will be entered all United States Army, Navy and Air Force personnel hospitalized or treated during the period covered by this report. Each of these spaces have been sub-divided into two sections: Army and Navy. Include all Air Force personnel under either the Army or Navy column as the case may be. Under space (6) will be entered all other Allied personnel hospitalized or treated during the period covered by the report, such as English, French, etc. Space (7) Enemy, self-explanatory. Space (8) Grand Total, self-explanatory.
(b) Line (a) Remaining: All patients that were remaining on preceding report will be entered on this line.
(c) Line (b) Received Direct: Patients received will be considered DIRECT ADMISSIONS if they have not previously had a War Department MD Form 52c or 52d started. If a patient is received from a division or corps clearing station and admitted to an evacuation hospital with only the War Department MD Form 52b, Emergency Medical Tag, attached, he therefore should be carried as a DIRECT ADMISSION: the same applies to division and corps clearing stations.
(d) Line (c) Received by Transfer: On this line will be entered all patients that are received and already have a Form 52c or 52d started on them.
(e) Line (d) Total: On this line will be the total of Lines (a), (b), and (c).
(f) Line (e) Duty: On this line will be entered all patients returned to duty during period covered by report.
(g) Line (f) Transferred: On this line will be entered only those patients evacuated to the communications zone; i.e., if a patient is transferred from a clearing station to an evacuation hospital or from one corps evacuation hospital to another within the combat zone, this will not be considered as evacuated but carried as Transferred and entered on Line (f) Transferred. For a patient to be evacuated he must be evacuated from the combat zone to a medical installation in the Communication Zone.
(i) Line (h) Died: On this line will be entered all patients dying during period covered by report.
(j) Line (i) Other Dispositions: On this line will be entered unusual dispositions, such as AWOL, or when a patient is returned to his organization as a quarters case; or any other unusual disposition not covered specificially on this form.
(k) Line (j) Sub-Total: On this line will be the totals of Lines (e), (f), (g), (h), and (i).
(l) Line (k) Remaining: On this line will be entered the total number of patients remaining in hospital or clearing station at the close of period covered by report.
(m) Line (l): On this line will be entered in the proper subcolumn all seriously ill patients remaining in hospital or clearing station at the close of the period covered by the report.
III Classification of Patients:
(a) Bed Patients: In this space will be entered the total number of bed patients remaining in hospital or clearing station at the close of period covered by report.
(b) Transportable: In this space will be entered all patients whose physical condition permits them to be transported, both ambulatory and litter patients.
(c) Non-transportable: In this space will be entered all patients that cannot be removed, due to the status of their physical or mental condition, from the hospital or clearing station.
(d) Ambulatory: In this space will be entered the total number of ambulatory patients remaining in hospital or clearing station at the close of period covered by report.
(e) Approximate Number of Patients to be Evacuated Following Day: In the space (1) Litter and (2) Walking will be entered the approximate number of patients to be evacuated (not transferred) the following day; i.e., if you are rendereing a report for the period 2 May 1943 - the report is rendered on 3 May 1943 and refers to the approximate number to be evacuated on the following day - 4 May 1943.
IV Communicable Diseases: (To be rendered when medical situation permits)

(a) Communicable disease cases will be entered under the appropriate column as designated by the report; i.e., Respiratory, Venereal, etc. Communicable disease cases entered under the column "Endemic Diseases" will be further explained as to the specific kind under section "VI Remarks".
(b) Line (a) Remaining: All patients that were remaining on preceding report will be entered on this line.
(c) Line (b) Admitted: All patients admitted either direct or by transfer during the period covered by the report.
(d) Line (c) Total: On this line will be entered the total of Lines (a) and (b).
(e) Line (d) Duty: All patients returned to duty during the period covered by the report.
(f) Line (e) Died: All patients who have died during the period covered by the report.
(g) Line (f) Other Dispositions: All patients transferred or evacuated, AWOL, etc., during period covered by the report.
(h) Line (g) Sub-Total: On this line will be entered the total of lines (d), (e), and (f).
(i) Line (h) Remaining: On this line will be entered the total number of communicable disease patients (within these categories) remaining in hospital or clearing stations at the close of period covered by report.
V. Hospitals Included in this report:
This section pertains to hospital units only and should give the correct designation of each hospital whose statistics are included therein.
VI. Remarks:
This section pertains to hospitals and clearing stations. Any information pertinent to the casualty situation should be included under this heading. Any communicable disease, injury or unusual circumstance reported under above headings that may require clarification should be further explained here.

i. Wounded Progress Reports.
(1) When submitted: Wounded Progress Reports will be submitted weekly on NATOUSA Form 7 by commanding officers of all hospitals. The reports will be submitted direct to this headquarters in duplicate covering the period from mid-night of Saturday to mid-night of the following Saturday, the initial report being submitted as of mid-night of the first Saturday following "D" day.

d-37

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(2) Preparation: The Preparation of the Wounded Progress Report, NATOUSA Form 7, is self-explanatory and no further discussion is necessary except that it must again be impressed upon all concerned with the preparation of this report that only personnel who have been hospitalized as Battle Casualties will be reported on this form.

j. Surgeon, Sub-Task Forces, will report daily to Surgeon Force 343 by the most expeditious means available the number of casualties being evacuated by water and air, their classification (Water - stretcher or ambulatory. Air - Priority I, II, or III), and place of landing in N.A.

5. PROFESSIONAL CARE OF CASUALTYS

a. In an effort to standardize professional care of patients by medical officers of the force, the consultants in the Chief Surgeon's Office, NATOUSA have prepared outlines for the professional guidance of all concerned. These are attached as Appendices "A", "B", "C", "D", and "E" and "F".

b. These represent the best opinion available in the light of experience gained in Tunisia and should be widely distributed.

6. SANITATION

See attached inclosure 1. - Sanitary Order.

By Command of Lieutenant General PATTON:

(S) W. G. CALDWELL,
Lt. Col., AGD.
Adjutant General.

DRAFT FOR SANITARY ORDER

GENERAL ORDER:

NO. . . . :

1. GENERAL: The following provisions for the sanitation of this command are published for the information and guidance of all concerned:

a. Responsibility. Commanding Officers of all grades as provided in AR 40-205 and FM 21-10.

b. Medical Department. The Senior Medical Officer is responsible for the general supervision of the Medical Department of the Command in the performance of its duties. All medical officers will act in like manner as technical advisors to their respective commanding officers.

c. Hygiene. The highest standard of personal hygiene must be continuously maintained to prevent the occurrence and spread of serious diseases in this area. Physical inspections will be held twice monthly and at such other times as recommended by unit surgeons and approved by unit commanders. Frequent bathing will be required. All personnel will report to the unit medical officer immediately upon discovery of infestation with lice, ticks or fleas.

d. Water. The supply is scanty. Commanders of all grades will insure strict compliance with regulations for the conservation of water, assuring themselves that economy measures shall apply less drastically to drinking supplies. All water will be considered as non-potable, regardless of source, until pronounced potable by competent authorities. Troop units away from authorized sources will purify their water by boiling for one (1) minute or by the use of Halazone Tablets (2-4 tablets to one canteen of water depending upon turbidity) and allow to stand for thirty (30) minutes. A minimum allowance of one (1) gallon of water per man per day should be provided.

e. Food and Messes. Care will be exercised in the preparation and handling of food, especially avoiding all use of left over cooked foods for subsequent meals. Meats and other foods will receive veterinary inspection and approval before issue to troops. Local root and leafy vegetables will not be used except when thoroughly washed, scaled or peeled. No raw vegetables will be served. No food will be purchased from local sources unless authorized by the Commanding General.

During the initial landing phase, troops are cautioned not to eat out of mess kits, until facilities for washing mess-gear become available. Sand, other than that from clean beach sources, will not be used for scouring.

Police and cleanliness of messes and mess-gear will receive special emphasis to prevent disease outbreaks. In the event facilities for adequately heating of water cannot be provided, dishes having been cleaned by washing and then rinsed in hot water will be immersed for not less than 30 seconds in a chlorine solution containing at least 50 parts per million of free chlorine.

Food handlers will be examined and inspected as prescribed in AR 40-205.

f. Waste Disposal. Intestinal diseases being very common, special care is demanded, particularly during initial phases of landing on beaches.

(1) Human excreta will be disposed of by the following methods:
- (a) Catholes during the initial landing phase.
- (b) Straddle trenches properly maintained.
- (c) Flyproof, deep-pit latrines.
- (d) Urine soakage pits.
- (e) Septic tanks and other water carriage systems where present and proper maintenance is possible.

(2) Kitchen solid and liquid waste will be disposed of by the following methods:
- (a) Burial or incineration.
- (b) Soakage pits or trenches, employing grease traps, which must be covered.
- (c) Hauling away by reputable civilians with the avoidance of spillage or other sanitary nuisances.

g. Quarters. All barracks, tents or billets will be maintained in a clean and sanitary state. All buildings will be thoroughly inspected and disinfested, when necessary, before occupancy. Locations near swamps, ponds or native habitations will be avoided as much as possible when the military situation permits. All troops will sleep under sand fly nets.

h. Control of Insects and Pests:

(1) The Medical Department is responsible for making necessary surveys relating to pests and for making appropriate recommendations relating thereto.

(2) The Corps of Engineers is charged with the carrying on of work in relation to the environmental factors of insects.

(3) The Quartermaster Corps has the responsibility for operating the larger delousing units for the treatment of troops.

(4) The Chemical Warfare Service will furnish the Medical Department technical advice in regard to fumigation of buildings.

(5) The troop units will conduct pest control measures within their own areas and in areas immediately adjacent thereto.

i. Prevalent Diseases.

(1) Intestinal Diseases - The high incidence of Diarrhea, Amebic Dysentery, Bacillary Dysentery, Typhoid Fever, and Undulant Fever necessitates the greatest possible emphasis on the sanitary supervision of all foods, drink, waste disposal and all fly control measures. No unboiled milk from any source, except canned rations, is to be used. Native foods and native food-handlers will be avoided initially. Strict compliance with Cir. No. 106 NATOUSA 9 June 1943 will be enforced. Any relaxation in recommended control measures will be followed by serious epidemics and will not be tolerated by this command. All troops should be fully protected by T.A.B. inoculation.

(2) Insect-borne Diseases - Malaria, Sandfly Fever, Leishmaniasis, Relapsing Fever, Typhus Fever, Fievre Boutonneuse, Dengue and Yellow Fever introduced by air, must be especially guarded against. Whenever possible camp sites should be located on high ground and not near ruins. All troops will sleep under mosquito bars, sandfly mesh, carefully supervised and constantly maintained. Personnel on guard detail will wear gloves and headnets. Repellants and anti-mosquito spraying should be employed. Equipment for applying Paris Green and Oil must be available. Suppressive Atabrine therapy against malaria will be carried out as ordered by the Commanding General. Contact with dogs, especially those with sores, native dwellings, and natives must be forbidden. Bathing will be as frequent as possible. Avoidance and correction of lousiness is paramount to prevent Typhus and Relapsing Fever. All buildings will be thoroughly inspected and fumigated or sprayed before occupation in order to eliminate fleas and other disease bearing insects. Rat control measures will be instituted.

(3) Other Diseases.

(a) Hookworm - Personnel should be cautioned against going barefoot and handling soil in the vicinity of homes and manured fields. If suspicious symptoms arise, trench diggers should be examined after 20 days for eggs.

(b) Rabies - Because of the prevalence of Rabies, the keeping of dogs, cats, and other animal pets in organizational areas is forbidden.

(c) Schistosomiasis - Bathing or swimming in fresh water streams, lakes or marshes will be prohibited

j. Immunization. All immunizations will be accomplished in accordance with Circular No. 21, NATOUSA, dated 28 February 1943.

k. Supplies for Pest Control. The following pest control materials will be available at Engineer and Quartermaster supply warehouses. The fullest possible use of these materials must be made by all organizations to prevent Plague, Typhus, Malaria, and other diseases spread by insects and rodents:

Engineer Supplies

MATERIAL:	BASIS OF ISSUE:
Pyrethrum insecticide for roaches or fleas.	5 gal per Co.
Insecticide for crawling insects	2 oz can per pers. ea. mo.
Borax powder to prevent fly breeding	10 lbs per Co.
Barium carbonate rat poison	1 lb per Co.
Calcium cyanide for fumigation	- to be handled by trained persons, not for general issue.
Rat traps	4 per Co.
Fly swatters	4 per Co.
Fly paper, rolls	10 rolls per Co.
Flying insect repellent "Indalone"	2 oz bottle per pers. ea. month.
Sprayers Knansack, anti-mosquito	2 per Regiment.
Diesel Oil for mosquito control	1 drum with ea. sprayer (55 gal.)
Paris Green	- to be handled by trained persons.

Quartermaster Supplies

MATERIAL:	BASIS OF ISSUE:
Ethocel delousing bags, individual	2 per Co.
Methyl bromide ampules to use with above	50 per Co. (20 cc. each)

Organizations will provide themselves with proper equipment and materials to control lice, fleas, rats, flies, mosquitoes, roaches and other pests about their areas. Engineer responsibility for mosquito control and other pest and insect control is as outlined in AR 100-80.

Medical Inspectors are responsible for inspection of men and premises and for advice as to the best means for controlling any pest that is encountered. Daily inspection for lice will be made when louse-borne diseases occur in an organizations.

The use of Ethocel bags for delousing is as follows: -

The clothing and equipment of the individual soldier are placed in the bag with one 20cc capsule of methyl bromide and the mouth of the bag securely tied. The capsule is then broken from the outside of the bag using the least force necessary. The bag is set in the open air for thirty (30) minutes. It is then opened and aired ten (10) minutes before emptying. No gas mask is needed when working in open air. Men will be bathed, shaved and inspected for lice and nits as in any other method of delousing. Adult lice and eggs are destroyed by methyl bromide.

l. Venereal Prophylaxis. Venereal disease is common and widespread. Before landing troops should be provided with adequate mechanical and chemical prophylactic kits. Venereal prophylaxis will be available at each unit dispensary. Lists of prophylactic stations in nearby communities will be posted on all organization bulletin boards. Personnel on pass will be required to have on their person mechanical and chemical prophylactic kits.

m. Health Education. Troops will receive regular and frequent instruction relative to personal hygiene, dangers of unauthorized food and drink, diseases prevalent in this area, venereal diseases, and the necessity for the various special precautions.

n. Liaison with Local Civilian and Civil Affairs Health Authorities. The Force Surgeon will contact and maintain liaison with local native and Civil Affairs Health Authorities as soon as possible and make available such local health information to the Command.

2. CIVILIANS: All civilians and civilian organizations attached to this Command will comply with this order insofar as it applies to them.

TREATMENT OF SANDFLY FEVER, MALARIA, AND BACILLARY DYSENTERY

1. Sandfly Fever. This disease clinically resembles Influenza. The onset is abrupt with a congested face and injected conjunctivae. Meningismus may be present with an increase of lymphocytes in the spinal fluid. A transient rash may be noted in the first 24 hours and headache, backache and post-orbital pain are prominent symptoms. The pulse is slow in comparison with the temperature.

a. Treatment. Purely symptomatic. Aspirin grains 10, Q. 4 hours relieves the pain. Fluids should be forced.

2. Malaria Therapy. If a subject becomes infected with Malaria and breaks through suppressive therapy, the clinical course of the disease will not be changed by the fact that suppressive treatment has been given, and curative therapy should be carried out as usual.

a. Therapy. Malaria - uncomplicated. (Patients are able to retain oral medication.)

(1) Combined QAP Treatment. (Method of choice)
- (a) Quinine sulphate, 0.64 gram (10 grains) three times daily after meals for 2 or 3 days, or until pyrexia is controlled.
- (b) Atabrine, 0.1 gram (1 1/2 grains) three times daily after meals for five days. Then after 2 days without anti-malarial medication give
- (c) Plasmochin, 0.01 gram (3/20 grain) three times daily after meals for five days, except for the debilitated patient, who should receive only two doses daily. (Discontinue if toxic symptoms occur. Never give Atabrine and Plasmochin concurrently).

(2) Atabrine - Plasmochin treatment. (May be used for simple vivax infections and in other infections when no Quinine is available.)
- (a) Atabrine, as above for 7 days. Then, after 2 days without antimalarial medication, give Plasmochin, 0.01 gram three times daily for 5 days, as above.

(3) Quinine - Plasmochin treatment. (Method when no Atabrine is available.)
- (a) Quinine sulphate, as above, for 7 days during the last 5 of which accompany each dose of quinine with Plasmochin, 0.01 gram three times daily.

NOTE: Quinine sulphate tablets are more quickly effective if dissolved before taken. Ten grains of Quinine sulphate may be dissolved in one ounce of water which has been acidified by the addition of 10 minims of dilute sulphuric or hydrochloric acid, (USP) or 2 trams (30 grains) citric acid.

- (b) Malaria with coma. Quinine dihydrochloride, 0.64 gram (10 grains) in at least 200 cc. sterile normal saline given intravenously very [illegible] every 8 hours until patient can retain oral medication; then treat as uncomplicated case.
- (c) Malaria with vomiting (unable to retain oral medication)
  1. Quinine dihydrochloride, 1.0 gram (15 grains) in 10cc sterile normal saline injected carefully into the gluteal muscles of one buttock; site of injection then massaged thoroughly for 2 minutes. Care must be taken to avoid the sciatic nerve. Dose may be repeated if necessary in 8 hours in another buttock. As soon as patient can retian oral medicant treat as an uncomplicated case. (See 2 a).
  2. Atabrine dihydrochloride, 0.2 gram (3 grains) in 5 cc. sterile normal saline may be substituted for intramuscular injection if no quinine dihydrochloride is available.

SECRET

3. Acute Bacillary Dysentery. Specific therapy should always be used in the treatment of Bacillary Dysentery and Diarrhea in order to prevent many carriers from becoming established. Fluids should be forced, salt loss replaced and in severely ill, dehydrated patients plasma transfusion and the administration of saline by the intravenous route should be practiced.

a. Sulfaguanidine. Initial dose 7.0 grams by mouth. Subsequent dose 3.5 grams every four hours, day and night, until the stools number 5 or less per day. Then give 3.5 grams of Sulfaguanidine every 8 hours until convalescence is established.

b. Sulfadiazine. Initial dose 2.0 grams by mouth. Then give 1.0 grams every 8 hours until convalescence is established. If the response to therapy is not prompt, the dose of the drug may be increased.

SURGICAL MEMORANDA ESPECIALLY APPLICABLE TO AMPHIBIOUS OPERATIONS

1. General Principles of Wound Management:

a. Surgical operation performed under unfavorable conditions without facilities for proper after care is often more hazardous than prompt evacuation if the patient is transportable or can be made so.

b. Wounded evacuated by water should, particularly during early phases of combat, be so bandaged and splinted that they can swim or at least remain afloat should emergency require it.

c. Overdosage with morphia produces dangerous coma and respiratory depression that may delay the administration of an anaesthetic or render evacuation transport hazardous.

d. All wounds are left open after debridement, frosted with sulfonamide and loosely filled with vaseline gauze. There are no exceptions. (See below for specialized regional situations).

e. Only bruised and devitalized skin need be excised, and this with narrow margin. Avoid circumcision of wounds leaving circular defects by using linear extensions to gain exposure.

f. During debridement open all deep pockets and transversely divide fascial planes.

g. Do not pack wounds with gauze or sulfonamide.

h. Immobilize site of extensive injury even if fracture is not present.

i. Continue oral administration of sulfonamide.

j. Make notations on casts and on Field Tags and Records, (casts are frequently changed) particularly of what was done at operation. These notes are not merely for statistical purposes although essential as such. They are required for the subsequent care of the patient.

2. Plaster Casts.

a. Split or bivalve all casts as soon as dry. There are no exceptions.

b. Pad all casts and split padding as well as cast. Non-padded plaster is not suitable for transportation splinting.

c. Apply no circular adhesive or bandage under cast.

d. Maintain foot in neutral position with correction of tendency toward equinus, valgus or varus.

3. Compound Fractures.

a. Objects to be achieved in initial surgery are control of infection and safe, comfortable transportation. Reduction and rigid fixation of fracture can be accomplished at the Base.

b. Careful debridement as priority case. No internal fixation forward of Field or Evacuation Hospitals. Do not pack wound - loosely fill with vaseline gauze. Splint for transportation. Skeletal fixation or traction not recommended for transportation splinting.

c. Femur: Evacuate in Tobruk splint (see appendix) as early as circumstances permit to reach Base for correction of deformity. A fractured femur should reach a General Hospital in the rear within 10 days. Do not evacuate with clove hitch or boot traction-use skin adhesive.

d. Knee-joint: In debridement minimize incisions that compound joint. Remove accessible foreign bodies. Irrigate joint with saline. Close synovial membrane. Loosely fill debrided wound with vaseline gauze. Evacuate early, immobilized in plaster or preferably, Tobruk splint.

e. Leg: Carefully debride all wounds in multiple injuries, as circulation frequently impaired and gas gangrene likely. Penetrating wounds of calf may require incision for hematoma impeding circulation. Bivalve rather than split casts so inspection dressings may be possible without losing position in compounded fractures. Hold patient if circulation is questionable, otherwise evacuate as early priority.

f. Humerus: Use modified Velpeau plaster bandage to hold arm to trunk, or "U" plaster. Skin traction, skeletal fixation, high abduction spica and hanging cast unsuitable for transportation splinting.

4. Neuro-surgical:

a. Cranio-cerebral. Shave scalp three inches around wound. Remove gross superficial debris by gentle separation edges of scalp. Apply sulfonilamide; cover with sterile pad. Evacuate as priority case preferably by air.

b. Spinal Cord: Same. Suprapubic cystostomy postponed until neurosurgical and x-ray evaluation of injury.

c. Peripheral Nerve: Describe findings on record. No suture.

d. Note the following abstract from "The Treatment of Head Wounds in Forward Area" by Brigadier Hugh Cairns, Consultant Neuro-surgeon, B.A.M.C.

(1) Middle East experience suggests that when the patient with a head wound is in good condition he should be evacuated without operation if he can be delivered to a Head Center within 72 hours of injury. The decision to hold or to evacuate should be made at the earliest possible moment after the patient reaches the forward hospital. Too often 24 hours or more are lost before the decision is taken.

(2) In cases which must be operated on in the forward area because there is no possibility of evacuation, the general surgeon should perform a limited operation. He should excise obviously necrotic skin, but not do a formal excision of the scalp wound. He should remove superficial blood clot and debris (dirt, hair, necrotic brain and bone), place in the wound sulfanilamide (unless there is a hole into the ventricle, apply a firm dressing (but no plugging or packing of the brain wound) and evacuate the case to the head center as soon as possible. Arrived at the head center, such a case should, after x-ray examination, be operated on again to complete the toilet of the brain wound.

(3) A small proportion of cases will require operation in the forward area because they are rapidly developing cerebral compression, with increasing depth of unconsciousness and the other symptoms of extradural and subdural clot. In these cases the wound must be thoroughly explored and the clot evacuated.

(4) Head injuries have proved to be among the most favorable cases for prompt evacuation by air.

5. Eye:

a. No excision of eyeball because of damage - only if necessary as part of wound debridement. Penetrating wounds evacuate lying. For injuries and foreign bodies instill 1% atropin. Apply soft pad and bandage both eyes if safe for method of transport available (see Section 1, b).

6. Maxillo-facial:

a. Clear respiratory passage. Maintain sitting or face down position. Tongue traction. Do not remove fragments of fractured mandible unless certainly devitalized. Soft part closures only after dental splinting.

b. Inter-dental wiring with elastic band traction fixation. Evacuate by air to avoid sea-sickness.

7. Chest:

a. Temporarily close sucking wounds by pad of vaseline gauze held firmly by adhesive strapping. Insert small catheter 2nd interspace anteriorly to relieve pressure pneumothorax. With extensive surgical emphysema relieve pressure pneumothorax.

b. Initial definitive surgery limited to debridement and closure wound of chest wall without complete suture of superficial layers and skin. Local anaesthesia often satisfactory and avoids hazards of asphyxia. Transfuse slowly and only when essential.

c. Evacuation by air as priority case. Preliminary aspiration hemothorax without air replacement.

8. Abdomen:

a. First priority for emergency surgery. Close abdominal wall with stay sutures.

b. Exteriorize large bowel and rectum perforations or perform proximal colostomy. There are no exceptions.

c. Examine carefully for evidence of abdominal penetration all casualties with entrance wounds in buttocks or chest.

d. Perforation of intestine, particularly ileo-cecal region and multiple, is caused by hydraulic blast wave from bombs exploding in water. No external evidence of injury.

e. Always leave supra-pubic cystostomy in closure of perforation of bladder.

f. Hold abdominal cases after operation until equilibrium is established (4-5 days). This is essential, as even simple cases die as a result of early transport. Leave Levin tube in place during transport.

9. Burns:

a. Cleansing may be limited to removal of gross debris and thick coating of oil by mechanical means.

b. Apply boric ointment or vaseline gauze, cover with sterile mechanics waste and bandage firmly. Burns damaging eyes require closure by bandage.

c. For emergency transport by water do not obstruct vision or respiration by bandaging. Leave jaw free for possible vomiting.

d. Shock in burns is often delayed for 4 to 6 hours. Use this period for evacuation when possible. Otherwise extensive burns must be held until equilibrium is established. Most flash burns are partial thickness injuries with small patches of full thickness loss. Life endangering shock not common unless surface area is unusually extensive, or unless environmental temperature is immoderately high.

10. Amputations:

a. Circular type guillotine is amputation of choice. In forward surgery performed for control of hemorrhage, destruction of circulation, removal of an irreparably destroyed extremity, and as a step in the debridement of a traumatic amputation. The site is the lowest possible level of viable tissues regardless of the eventual utility of the stump.

b. Gas gangrene infection occurs in certain cases with 24 hours delay in evacuation from the field. Amputate only if more conservative surgery and full dosage (80,000 to 100,000 units of polyvalent anti-toxin) are judged inadequate.

c. Apply skin traction on the operating table and maintain during evacuation.

d. No sutures. There are no exceptions.

APPENDIX

Tobruk Transportation Plaster. Recommended for fractures of the femur, wounds involving the knee-joint and fractures of the leg near the knee.

1. Dress wound and retain dressing with stripe of adhesive plaster. No circular dressing or bandages should ever be put on under a plaster case.

2. Support patient with a pelvic rest, or bowl under sacrum. One assistant holds the foot by the heal and toes and exerts traction. The foot is kept at right angles. A second assistant supports the fracture and keeps the knee bent at 10 degrees flexion with the palms of the hands not the fingers.

3. Apply traction strapping as close up to the wound as possible. Fold distal ends of straps into cords.

4. Pad the heel and malleoli with wool. Turn back the traction straps from the region of the malleoli while winding the wool around. Pad the knee prominences similarly. There have been some cases of foot drop from pressure on the external popliteal nerve. Pad the upper part of the thigh close to the ring of the splint with a layer of wool. Pad the entire extremity with sheet wadding or stockinette.

5. Lay a strip of tin (obtainable from ration boxes, etc.) wrapped in paper over the anterior surface of the length of the limb to beyond the toes.

6. Prepare a plaster slab (6 thickness) - apply posteriorly as high as possible and distally over heel and sole of foot to project 3-4" above the toe

7. Complete plaster cast with circular bandages round the slab enclosing the whole of the leg and foot except the dorsum of the toes and mould. Do not cover over traction straps further than just above the malleoli.

8. The traction straps are now emerging from the plaster just above the malleoli. Turn them back and cut the plaster away from where they emerge, sufficiently to free the straps from the plaster. This allows the traction to be on the leg and not on the cast. Trim the plaster over the dorsum of the toes. See that the little toe is free.

9. Apply Thomas Splint preferably half-ring and fit lower part of ring against Tuber Ischii and adductor muscles. Hold up ring so as to obtain correct position and insert pads of wool anteriorly and laterally between the ring and the thigh to maintain the position. Tie traction straps to notch in splint and insert spreader and Spanish Windlass.

10. Wind plaster bandages round the side bars of the splint and round the limb to anchor the splint to the limb.

11. Support distal end of splint with splint bracket.

12. When plaster is moderately firm cut down on thin strip over whole length plaster and withdraw strip and split the plaster. Cut the underlying padding with scissors or knife. It is not necessary to cut stockinette.

13. With indelible pencil draw diagram of fracture and write simple details, date of wounding, treatment, date of application of plaster, unit, etc.

NOTE: This splint is only intended as a transportation splint for the journey to the base. There is no need to aim at accurate apposition in the Forward Area. On arrival at the Base Hospital x-ray examination should be made, position corrected if necessary and routine treatment employed.

This form of fixation will do quite well even for fractures of the upper third of the femur for transport.

NEUROPSYCHIATRIC CASUALTIES IN COMBINED OPERATIONS

GENERAL CONSIDERATIONS:

Because of the relatively great percentage of neuropsychiatric casualties under modern battle conditions and because of the marked disturbance and panic possibilities created by such cases, it would appear advisable to give special consideration to the handling of this problem during Combined Operations.

There are few available statistics on the rates of occurrence of neuropsychiatric casualties during such operations and those which are available are of a general nature. It is thus obvious that any calculations of this type must be based on inductive reasoning from these general figures and may be subject to wide error. In spite of this possibility of error it should be possible to formulate a moderately close approximate of expected results.

Neuropsychiatric cases comprise about 3-5% of total hospital admissions in the European and North African Theater of Operations during non-combat times. It therefore seems reasonable to suppose that, allowing for the effects of anticipatory fears and of bombing, 10% of the total non-fatal cases occurring during the Waterborne Phase of the Operation will be neuropsychiatric in origin.

During the Landing Phases only three figures are of any significance:

(a) Dieppe Raid - The neuropsychiatric casualties constituted 2% of the total battle casualties returned to England following this heavy but short duration fighting.

(b) Navrik Operation - The neuropsychiatric casualties constituted 33% of the total battle casualties returned to England following the landing, fighting under unfavorable circumstances, and withdrawal from Norway.

(c) Maknassy-El Guettar - The neuropsychiatric casualties constituted 20% of the total battle casualties occurring during this moderately heavy battle engaged in by American troops.

From these figures it seems reasonable to suppose that neuropsychiatric casualties will comprise 15-20% of the total non-fatal battle casualties developing during the first ten days of the Landing Phase.

From previous experience with this type of case it can be stated with reasonable certainty that with adequate sedation 75% of the total neuropsychiatric case will be of the walking wounded category, 20% sitting, and 5% will require litters ashore and hospital bed space on shipboard.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

TREATMENT:

The general principles of the treatment of these neuropsychiatric cases are, with modifications, the same during all phases of a Combined Operation. In essence this treatment consists of heavy and prolonged sedation which materially decreases the severity of the symptoms and thus makes much easier the handling of such cases both ashore and on shipboard. This therapy should be continued until the cases are returned to the treatment center ashore.

During the pre-embarkation phase a determined attempt should be made to eliminate all of those men who show probability of developing a psychiatric disorder during or immediately following a Combined Operation. This process is already being undertaken.

During the Embarkation Phase any man developing marked psychoneurotic manifestations should immediately be disembarked and sent to a shore medical installation to avoid later occurrence and the contamination of other troops.

During the Waterborne Phase of the Operation any man developing disabling psychiatric manifestations should be at once placed on heavy sedation and segregated from the rest of the troops. He should be kept in a drowsy state, although not necessarily in bed, and if possible returned to a Base medical installation with the ship. His treatment should be the responsibility of the senior medical officer of the ship, or his delegate, and the patient should not be allowed to land on the hostile shore.

During Phase I of the Landing Operation (FM 8-25, 23 a) psychiatric casualties should be given a heavy initial dose of sedative by the Bn. Surgeon (or Company Aid man if feasible) and evacuated as an ordinary casualty.

During Phase II of the Landing the same general principle should be followed. Since by this time moderately large numbers of such cases will have begun to collect ashore, one psychiatrist, either from hospital installations of low landing priority or on special assignment., should be sent to each major beach head or hospital ship where needed to handle these cases.

During Phase III the principle of heavy sedation should continue and as bedspace becomes available in the Semi-mobile Evacuation hospitals those cases which have a favorable short term prognosis will be retained in such units for treatment. Those cases with poor prognosis will be evacuated in the usual manner.

Treatment on the hospital ships during all phases of the operations should follow the general sedation policy mentioned above. If non-hospital ships are designated to receive minor cases the majority of the neuropsychiatric cases could be usefully sent to those ships.

EVACUATION:

During all phases of the operation up to and including the second phase of the landing operation all cases, with rare exception, which develop should be considered unfit for further general combat duties and evacuated to the Communications Zone. In general this can be accomplished by means of the returning Troop Ships designated to receive minor patients, the special exceptions to this rule being those cases who are dangerous to themselves or to others. These latter cases must be evacuated in the locked facilities of a hospital ship.

During the third phase of the Landing, or as soon as beds are available, only those cases which cannot be treated in the shore installations will need to be evacuated. These evacuable cases will comprise 40% of the total neuropsychiatric casualties or in other terms 8% of the total battle casualties.

PERSONNEL:

The only specially trained personnel needed will be one psychiatrist per Force. He should be landed during Phase II of the Landing Operation as indicated above and should be obtainable from medical installations of low landing priority or by special assignment.

SUPPLIES:

No special supplies are needed. However, it must be made certain that each Bn. Aid Station, Medical Bn., Mobile Evacuation Hospital, and Ship has an ample supply of Sodium Amytal and Phenobarbital readily at hand. In addition each Hospital Ship should have an available stock of intravenous Sodium Amytal and if possible some paraldehyde.

SUGGESTION:

It has been clearly shown that barbiturates decrease the incidence of Seasickness in doses which do not impair mental function. The routine administration of Phenobarbital Grains I to all men landing in initial phases should be seriously considered. This would be best given 2-5 hours before the landing attempt and it would not only materially decrease Seasickness but would also decrease natural but excessive nerve tension.

THE TREATMENT OF BURNS

1. Classification.

a. Depth of Burn. Principles determining local treatment are based on two depths of injury of the skin:

(1) Partial thickness skin loss (1st and 2d degree)

(2) Full thickness (3d degree)

A partial thickness burn may be converted into full thickness loss of skin by infection or by the application of strong chemical coagulants or antiseptics.

b. Surface Area of Burn. The severity of shock and consequently the measures necessary for its prevention and correction are determined more by the extent (surface area) of the burn than by its depth. The application of Berkow's formula provides a convenient estimation of the burned area in terms of percentage of the total surface area of the body.

Berkow Formula

Head		6.0%
Both arms and forearms	13.5%	
Both hands	4.5%	
Total		18.0%
Trunk: Anterior surface	20.0%	
Posterior surface	18.0%	
Total		38.0%
Both Thighs	19.0%	
Both Legs	13.6%	
Both Feet	6.3%	
Total		38.9%

In describing a burn both the depth and the surface area is recorded. For statistical purposes it is also important to record the causative agent, e.g., gasoline, flame, tracer bullet, steam, etc.

2. First Aid. A burn is treated as a fresh open wound, the basic principle being prevention of contamination. Infection is prevented by avoiding seeding the surface with bacteria from the noses and throats of those taking care of the patient, contact with blankets, careless dressing technique and exposure by non-occlusive bandaging and dressings.

Burned clothes are left undisturbed, and exposed areas covered with shell dressings or sterile gauze held in place by firm occlusive bandaging. Morphia is given to relieve pain. Flash burns in enclosed spaces such as tanks may cause pulmonary damage and anoxia. Under such circumstances the respiratory depressant affect of large doses of morphia may be dangerous.

Plasma therapy need not be instituted in the field if a Clearing Station or Hospital for definitive treatment can be reached in approximately two hours. When a longer period may elapse before a center for definitive treatment can be reached, plasma infusions should be given to extensive cases. A first dressing of boric ointment or vaseline gauze is applied without attempt at preliminary cleaning.

A booster dose of tetanus toxoid is recommended.

3. Definitive Treatment. (At a Clearing Station or Hospital where full aseptic surgical technique can be observed).

a. Treatment of Shock. Shock should be anticipated and prevented rather than combatted. To anticipate shock an estimate of the area of the burn is informative. For each 10% of the body surface involved by a blistering burn, 500 cc of plasma will be required.

When shock is already present, blood-pressure readings and pulse rate provide indications for plasma dosage. With a low blood-pressure, plasma is given rapidly--at a rate of 100 cc per minute--until 1000 or 1500 cc have been given. Plasma infusion is then continued at a slower rate. In severe cases 4000 to 8000 cc may be required during the initial 48 hour period.

The degree of hemoconcentration is also a useful guide to shock treatment. 50 cc of plasma is indicated for every point that the concentration of hemoglobin exceeds the normal of 100%. Or, 100 cc of plasma for every point that the hematocrit determination exceeds the normal of 45.

These "rules of thumb" guides to therapy based on percentage of surface area and hemoconcentration are approximations, and will be found to vary with the man's condition before injury (dehydration, fatigue), environmental temperatures, particular body regions burned, associated wounds and other variables.

b. Local Treatment. Military conditions are distinctly unfavorable for the treatment of burns by coagulants. Sealing of the surface by an eschar is comparable to primary suture of a wound. The use of tannic acid and silver nitrate, and the use of gentian violet or triple dye cannot be recommended. This also holds for the use of jellies and ointments containing these ingredients either for first aid or definitive treatment.

A possible exception may be noted. With large area, partial thickness burns of the trunk when the casualty arrives for definitive treatment within 12 hours of injury, tannic acid may be a preferable form of treatment. The eschar should be formed by the rapid method, i.e. with the addition of silver nitrate, as prolonged methods of tanning may produce liver damage.

An essential step in the ritual of the coagulant treatment of burns was an elaborate cleansing of the surface. With the use of an "open" method of treatment cleansing need be less meticulous or if circumstances demand, dispensed with altogether. When cleansing of the burn surface is carried out it is done with all of the aseptic precautions of a major operation. Every person in the operation room including the patient is masked. Cleansing is done with extreme gentleness. The use of irritant soaps, detergents and antiseptics is avoided; cotton swabs replace scrubbing brushes and only a limited part of the burn is exposed to the air at any one time. The cleansing should be so gentle that anaesthesia other than preliminary sedation with morphia or barbiturates is not required. Blebs may be left intact or aspirated.

(1) Boric ointment or vaseline. Fine mesh gauze (see 8) impregnated with boric ointment or vaseline is applied to the surface. This is covered with a bulky dressing of sterile gauze or sterile mechanic's waste. A firm bandage exerting an even pressure is then applied. In burns of the forearm or leg the bandage starts at the digits and is carried upward. Fingers are separated and the hand bandaged in the position of function in burns of the hand. Remove finger rings. Burns of the face may be similarly treated, padding behind the external ears and carefully noting injury to the eyes before bandaging. Sodium sulamyd solution or an eye ointment is recommended for the eyes, with instillation of a mydriatic if corneal injury is present. Sulfadiazine ointment as issued is not suitable for the eyes because the ointment base is irritating.

As a further protection, extremities should be splinted or may be enclosed in a plaster of Paris casing particularly during evacuation. Plaster casings are split immediately to allow for swelling. Smearing the edges of the plaster with boric ointment is said to prevent maggot infestation.

When a boric ointment or vaseline dressing is used on extensive burns, oral or intravenous sulfonamide (preferably sulfadiazine) is immediately instituted and continued.

(2) Other ointments and emulsions. The use of cod-liver oil ointment appears impractical in this theater because of limitation of supply by W.P.B. order; rapid deterioration in hot weather, and its attraction for flies.

(3) Local application of sulfonamides.

(a) Sulfadiazine ointment may replace the bland ointments particularly in minor burns when it is not necessary to institute an intensive course of chemotherapy.

(b) Sulfanilamide in crystalline form frosted on the surface of the burn is rapidly absorbed, and if applied liberally to a large area may produce serious or fatal overdosage. No more than 10 grams can be used at one application. No supplemental chemotherapy should be given by other routes. Repeated appliontion requires dressings at four day intervals. The absorption rate and concentration established at the surface of the burn is unpredictably modified by a vaseline gauze covering.

(g) Water soluble base ointments and jellies containg sulfonamides evaporates rapidly and cause the dressing to adhere to the surface.

4. Continuing General Treatment.

When shock has been adequately controlled with plasma, saline or glucose saline may be used to supplement the oral intake and maintain fluid balance. Fluids are given to establish a urinary output of 1200 cc in 24 hours. Urinary output should be measured and charted. After any initial chloride deficiency has been corrected, intravenous infusions should be glucose in water.

Severely burned patients may be expected to develop a secondary anemia after 2 to 4 days. This may require whole blood transfusions as well as iron therapy. Repeated whole blood transfusions are required in extensive full thickness burns. No more than one or two transfusions should be given from "O" (universal) type if the patient is another type. Select a donor of the same group.

High protein diet and supplemental vitamin therapy are recommended for full thickness burns.

5. Continuing Local Treatment.

Change of dressings becomes necessary when the outer layers become soaked with exudation despite reinforcement, or when the clinical course suggests infection. The general condition of the patient, comfort, appetite, and mental clarity are as reliable indices of infection as the temperature chart which may remain elevated for some days even with clean healing. When the clinical course is satisfactory, dressings need not be changed until 10 to 14 days.

Dressings are carried out with the same aseptic technique recommended for the initial treatment, preferable in the operating room.

6. Full Thickness Skin Loss.

Partial thickness burns heal kindly in two weeks unless they become heavily infected. Enthusiasts can show miraculous results with almost any new form of treatment provided its use is limited to partial thickness burns. The majority of "flash" burns encountered in military surgery are of partial thickness.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

A full thickness burn demands untiring labor by the surgical team and may be a trying ordeal for the most courageous patient. Infection of the necrotic skin is inevitable, and chemotherapy at the best can only prevent extension of the infection to normal tissues or systemic dissemination.

If it were possible to recognise full thickness skin destruction at the onset, primary excision might be desirable. Early recognition is rarely certain in the absence of actual charring. Particularly in regions where function must be conserved, the natural separation of sequestrum from viable tissues must be accepted as the best method of management.

Full thickness areas are usually recognisable as such toward the end of the second week. Dressings are then done more frequently and separation of the slough hastened by instrument dissection. Wet saline dressings are recommended. If heavy infection is present, chlorinated dressings may be helpful. Pain during dressings is best controlled by sedation (morphine addiction is not infrequent) or pentothal anaesthesia.

Skin grafting is essential in every full thickness burn over an inch in diameter and is to be done at the earliest moment possible. Split thickness grafts cut with the razor or dermatome are preferable to pinch grafts. Traction, splinting or active motion will not prevent contractures during prolonged healing. The only means of minimising scar formation is early closure of the defect by grafting.

Corrective plastic procedures are not the function of this theater.

7. Evacuation. Casualties with severe burns do not travel well until the initial febrile stage is past and areas of full thickness skin loss are covered with healthy granulations. They should be kept at the place of primary treatment if the tactical situation permits.

8. Materials. It is recommended that medical units prepare sterile tins of fine meshed gauze or four thickness folds of hospital gauze impregnated with boric ointment or vaseline for use in burn casualties. (Boric ointment may be somewhat preferable to vaseline as it tends to inhibit the growth of B. pyocyaneus, a frequent secondary contaminant, and is said to discourage flies and maggots). Thirty-six inch hospital gauze is folded lengthwise to nine inches, giving a strop nine inches wide and four layers in thickness. Rapid application is favored by enclosing the strip in sheets of cellophane or paper (preferably waxed) and cut to proper sizes for face and hands. Longer strips for larger areas may be stored with an accordion fold in sterile tins. Prepared gauze may be packed in improvised containers for field, airplane or vehicle first aid kits.

MEMORANDA ON FORWARD SURGERY

1. Surgical Echelons.

a. The welfare of the patient and the tactical necessity for rapid evacuation demand a clear understanding of the function or mission of each unit of the Army Medical Corps. This is best arrived at by dividing the treatment of a casualty into two stages - primary and definitive. Separate groups of units provide each stage of treatment. In general, the equipment of each group is designed for that purpose only.

b. Stations of the first and second echelons - Aid Stations, Collecting Stations and Clearing Stations are equipped and staffed for the primary phase of treatment. Arrest of hemorrhage, splinting of the injury, resuscitation measures needed to make the patient transportable and administration of sulfonamides are the urgent functions of these stations. In addition, the treatment of minor injuries that allow immediate return to duty is carried out without evacuation. A Clearing Station is not designed to provide definitive treatment of battle casualties.

c. During combat, especially with long distances in evacuation to the rear, Surgical Teams are attached to certain Clearing Stations. It is their function to give emergency surgical treatment to selected cases requiring operation. This treatment would not otherwise be available in this echelon. The lack of facilities for pre-operative X-ray examination and for post-operative care of adequate duration place a grave responsibility on the surgeon in the selection of cases for surgery. These same limitations exist during quiet times The length of the evacuation line to the next echelon and changing tactical conditions require frequent redefinition of the surgery undertaken in the clearing station.

d. It must be remembered that the lightly wounded soldier, or a casualty due to accident may regain full combat status within the Theater if proper surgical treatment is carried out, but the Theater may be deprived of his service by faulty surgical judgement. Because a surgical procedure appears simple it is not sufficient reason for performing it in a Clearing Station unless the man can be returned to immediate duty without evacuation to the rear.

e. Hospitals of the third echelon (Evacuation Hospitals) are designed to initiate definitive surgical treatment to battle casualties. The more delay there is before reaching this echelon and the more hands the patient passes through in reaching it, the poorer will be the final result. The evacuation line is not an assembly line in which surgeon does his bit to the patient. It is a conveyance line along the course of which the progress of the patient may be halted to save life or limb or render him transportable.

f. While Evacuation Hospitals are adequately equipped and staffed to perform rehabilitation operations, it is not the function for which they were designed. Even in quiet times these patients are evacuated to the fourth echelon for operation unless the Commanding Officer assumes full responsibility based on a knowledge of the existing tactical situation as well as the surgical aspects of the individual case.

2. Surgical Procedures.

a. Dressings: Ideally, the primary phase of treatment is completed in the first unit reached that is equipped to provide it. The dressing is then left undisturbed until the patient reaches an Evacuation Hospital for operation. There are certain safeguards and adjustments that must take place enroute, but these do not include inspection of the wound by removal of the dressing unless definite indications are present. A compound fracture is halted at the Clearing Station for more adequate immobilization or resuscitation, but this need not involve redressing the wound unless there is reason to arrest continuing hemorrhage. A wound is not redressed solely for the purpose of reapplying local sulfonamide. Oral administration is sufficient safeguard.

b. The same principles apply after operation has been completed and the patient is being evacuated to the rear.

c. Uninformed hands do unnecessary dressings. The best safeguard for the patient is an adequate and legible record that accompanies him. A receiving officer is then in a position to refer to the record instead of looking at the wound. Many wounds after debridement and arrival at the base can be closed by secondary suture. Infection arising from contamination at the time dressings are changed makes this impossible.

d. Wound Management: Common mistakes in war surgery are: (1) Suture of wounds. (2) Tight Plugging by Packs. Hemorrhage is controlled by a stitch ligature if from a large vessel. Otherwise, by a temporary pack, elevation and firm pressure. If a pack is left in a wound make a note that it should be removed at the first opportunity. Vaseline gauze is laid loosely in a wound, not packed in. (3) Failure to Immobilize Site of Injury. Large wounds are immobilized even though fracture has not occurred. (4) Overexcision of skin. Circular defects are slow to heal. Very little skin need be excised, and in some instances none at all. (5) Failure to Open Deep Spaces during definitive treatment by freely incising fascial planes.

e. Head Wounds: Gently separate the edges of the scalp wound, remove superficial dirt and blood clot, and cover with gauze. Holding the gauze in place, shave the scalp for three inches away from the wound. Remove the gauze, frost the wound with sulfanilamide (not sulfathiazole) and apply dry gauze sponge held in place by suture to the wound edges or stripe of adhesive and bandage. Write on the S.W.T. - Dressing not to be removed before operation. Note the time of the wound and the duration of any period of unconsciousness or mental confusion if these facts can be obtained. Commence or continue sulfadiazine by mouth. Evacuate as priority case to nearest Hospital equipped and staffed for neuro-surgical procedures. A transport time of 48 to 72 hours is not an indication for an attempt to carry out surgery forward of an Evacuation Hospital.

f. Eye Injuries: It is never necessary to excise an eyeball in the Forward area because it is damaged. There is no danger of sympathetic opthalmia for two weeks. Any man suspected of having a penetrating wound of the eye is to be evacuated lying in order to prevent escape of vitreous. For injuries and foreign bodies in the eye instill 1% atropin and apply an anaesthetic ointment such a butyn and metaphen. Immobilise the lid with a patch or bandage. Many patients evacuated for eye injury arrive at a hospital with the pupil contracted in spasm so that examination and treatment is delayed.

g. Unless wounds and lacerations of the eye-lids are sutured with special plastic procedures, function is disturbed.

h. Ear: Do not put drops in the ear for blast injury. Lightly pack with cotton.

i. Chest: A sucking wound of the chest is closed tightly enough to prevent to and fro blasts of air with respiration, but not so tight that air cannot escape from the chest if a pressure pneumothorax builds up from an accompanying wound of a bronchus. Close with a pad of vaseline gauze folded to fit the wound and hold in position by adhesive plaster. One or two sutures penetrate the pad so that it is not lost into the pleural cavity.

j. Pressure pneumothorax requires prompt release by needle aspiration. If it reforms, insert a small catheter in the second interspace anteriorly.

k. Oxygen therapy may be as important as plasma. Aspiration of blood and air may make a man transportable that cannot otherwise be moved. Replacement of aspirated blood by air is rarely advisable. Internal bleeding is usually from the chest wall requiring revision of the (1) wound of exit and (2) wound of entrance; or it is from a large visceral or mediastinal vessel requiring thoracotomy.

l. Definitive surgery for thoracic wounds is postponed until X-ray examination can be carried out. It is disastrous to assume that large retained foreign bodies will not promote infection.

m. Abdomen: Perforation of abdominal viscera occurs with unusual sites of entry. Casualties with wounds of the thighs, buttocks and chest are examined with this in view. Transfer as priority case to a Clearing Station with Surgical Team attached or to an Evacuation Hospital, whichever is quicker. The large intestine must be exteriorized or drained after any injury, however trivial. If the injured part is mobile, it is respected and brought to the surface as a double barrelled colostomy. If it is fixed, the injury is repaired and a proximal colostomy performed. Any injury of the rectum, especially an extra-peritoneal one, demands a proximal colostomy. In the Middle East this principle of exteriorisation of colon injuries has been cited as perhaps the most important advance in the surgery of this war.

n. Abdominal incisions are closed with the added support of through and through stay sutures. When the large intestine has been perforated it is not advisable to suture the skin. Insert a folded strip of vaseline gauze held in place by the stay sutures tied over it.

o. Bladder: No perforating wound of the bladder is closed without establishing suprapubic drainage. Cord injuries complicated by retention of urine may be managed by an indwelling urethral catheter until the neuro-surgical implications of the case have been studied.

p. Compound Fractures: It is essential to distinguish splinting applied for a limited time as a transportation splint from apparatus or splinting designed for reduction and prolonged or rigid immobilisation. An adequate transportation splint prevents additional soft part injury and further deformity. It cannot in itself cause nerve injury, pressure sores, or jeopardise the circulation of the extremity. It provides adequate fixation for ambulance transport over rough roads, but may not secure the fragments in rigid fixation or exert the traction necessary for further reduction.

q. Plaster Casts: A more liberal use of plaster of paris casting is urged. Plaster casings or slabs applied as temporary transportation splints are padded and either bivalved or completely split. Encircling bandages and cotton rolling under the cast is also split as it soon becomes inflexible with dry blood or serum. Plaster casings applied directly to the skin are rarely found advisable in forward areas. If a skin plaster is applied for a definite indication, bony prominences are paded and the cast is immediately split in its full length. No encircling bandages or adhesive strips are placed under a plaster.

(1) All plaster casts applied in forward areas should be split or bivalved as soon as sufficiently dry.

r. Skeletal Traction: There is no indication for the use of skeletal traction or skeletal fixation in conjunction with transportation splinting in the forward area.

s. Internal Fixation: The use of bone plates or screws is not recommended in stations forward of an Evacuation Hospital.

t. Humerus: Skin traction, skeletal traction and high abduction spica plasters or splinting are not only uncomfortable but dangerous transportational methods. A hanging plaster is unsuitable for transportation purposes. A simple U plaster slab running from the affected shoulder over the anterior aspect of the forearm and upward to the axilla is usually sufficient. The wrist is supported by a bandage sling. Following definitive surgery, the same type of splinting may be used for further transport, or a carefully applied spica with limited abduction (30° - 35°) may be used.

u. Femur: Traction applied by a clove hitch, ankle bracelet or through the boot is not advisable for longer than six hours. This type of traction should be changed to skin traction at the Clearing Station.

v. Attention is drawn to the Tobruk transportation splint highly recommended by the R.A.M.C. reports from the Middle East. Medical Officers should be familiar with the design and methods of application of this splint and a more frequent use is suggested.

w. If a plaster spica is used the extremity is fixed in slight abduction and care taken to see that the upper part of the cast does not impinge on the costal margin. If the other leg is not tied into the spica, and it rarely need be, the plaster casing is extended well above the costal margin with fenestration provided for the abdomen.

x. Spica casting for either the upper or lower extremity must be well applied with adequate padding to avoid discomfort and pressure sores during transportation. These complications as well as easier application have led to the development of the Tobruk splint.

y. Amputation: In military surgery an amputation is a two-stage operation - the first stage performed in the overseas theater, the final stage, if necessary, in the Zone of the Interior.

(1) The circular type Guillotine is the amputation of choice. The indications for primary amputation are control of hemorrhage, destruction of circulation, removal of irreparably destroyed extremity and as a step in the debridement of a traumatic amputation. The site of primary amputation is the lowest possible level of viable tissues regardless of the eventual utility of the stump so formed.

SECRET

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(2) Delayed amputation is performed for circulatory insufficiency, infection, gas gangrene in which more conservative measures have been inadequate, or in the judgement of the surgeon will be inadequate, and uncontrollable in secondary hemorrhage. The site of secondary amputation is determined by the judgement of the surgeon with respect to preservation of maximum bone length.

(3) Sulfanilamide is dusted on the end of the stump and vaseline gauze dressing applied. Skin traction is applied on the operating table and continued until the stump is healed. All lower leg amputations are splinted with a posterior slab to prevent flexion deformity of the knee. The splint extends below the level of the stump. Transport in ¥ ring Thomas splint with support of the stump and continued skin traction.

(4) Adhesive plaster traction is recommended in the forward areas where a bulky dressing may be desirable. Stockinette applied with skin glue may be substituted at the base. Adhesive plaster traction strips must extend to the edge of the incised skin and be anchored by two circular strips. They should not extend upward beyond the base of the limb.

(5) Secondary closure of amputation stumps is not recommended.

a. Peripheral Vascular Insufficiency: Following wounds that jeopardize the blood supply of an extremity transport beyond an Evacuation Hospital is delayed until the collateral circulation has been demonstrated adequate or until amputation has been performed. Immobilization for transport, or the additional trauma and shock incident to transport may be a determining factor in producing gangrene.

(1) Principles guiding treatment of a limb with defective circulation are as follows: (1) Immediate restoration of blood volume with plasma supplemented by whole blood transfusion to establish normal oxygen carrying capacity of the blood. (2) Prevention of loss of body heat by dry woolen covering for body and limbs. (3) Do not ligate a major artery in continuity. Divide vessel between ligatures. (4) Ligate and divide the companion vein. (5) The extremity supplied by the divided vessel should not be elevated but slightly depressed. Wrap in wool or cotton. Do not directly heat.

(2) To stimulate the development of collateral circulation the following measures are recommended: (1) Heat the body (not the limb) under a cradle. (2) Novocain block of sympathetic chain repeated daily if necessary. (3) Under special circumstances, sympathectomy (4) Vasodilating drugs are of questionable efficacy. (5) Passive vascular exercises. (6) Incision of deep fascia planes if a tense hematoma is present.

(3) Arterial spasm may be encountered when a missile passes close to an artery or there is an adjacent fracture. There is no external bleeding or hematoma. The limb is cold, numb and muscle action lost. Peripheral pulses are absent. There is no pain in contract to occlusion of the artery by an embolus.

(4) Peripheral pulses return in a few days as color and warmth reappear in the limb. Treatment is directed toward warming the body, and the use of sympathetic novocain block. If the vessel is exposed during debridement direct application of procain solution may be tried.

(5) All casualties with defective circulation in an extremity, particularly of the leg should be under close observation for the development of gas gangrene.

3. Whole Blood Transfusion. During the malarial season all personnel AUS, North African Theater of Operations, will be on suppressive atebrin therapy. It is recommended that no additional anti-malarial therapy be given either to recipients or donors of blood for emergency transfusions. If the transfusion is elective, atebrin 0.2 grams is given to the donor on the night before the blood is drawn. Quinine 0.64 grams (10 grains) given six hours before the transfusion may be substituted for the atebrin "booster" dose.

a. In addition to the above, the following precautions should be observed:

(1) The donor is questioned as to whether or not he has had chills, fever or malaise.

(2) The donor's abdomen is palpated for the presence of an enlarged spleen. If the spleen can be felt, the donor is rejected.

(3) Thick and thin films of the donor's blood are examined for malarial parasites if laboratory facilities are available.

b. Wounds and surgical procedures that of necessity interrupt the atebrin suppressive regimen may lead to the appearance of clinical malaria during the surgical recovery period. Surgical officers are to be on the alert to differentiate malaria from other surgical complications. Atebrin administration is resumed at the earliest possible time in surgical patients.

SECRET - BIGOT

EVACUATION POLICY FOR GAS CASUALTIES

1. Any plan for evacuation of gas casualties must be highly flexible and susceptible to rapid alteration as enemy chemical tactics develop. The policy herein outlined will serve as a guide in the formulation of these various plans.

2. Vesicant contaminated casualties should not be evacuated with non-gas casualties unless they have been treated and contaminated clothing removed. Initially, separate services for first aid and personnel decontamination must be maintained. After the casualty has been decontaminated and treated, his subsequent evacuation will be via normal channels with no special precautions. This should be accomplished as far forward as possible.

3. The speed with which personnel decontamination and first aid is rendered is most important, but subsequent to this the speed of vesicant casualty evacuation need not be considered as so urgent. Early evacuation is desirable to prevent clogging of the system.

4. The personnel of the attached medical detachments of divisional medical services should be able to care for chemical casualties if they occur only in small numbers and irregularly through the command. In a concentrated chemical attack provision must be made to augment and often replace portions of the 1st and 2nd echelons of normal medical service by moving forward a supporting medical unit. This will be especially feasible in an offensive situation, and enemy vesicant chemical action will probably be essentially a defensive procedure. Sections, platoons, or detachments of corps medical installations should be made readily available and alerted for such a mission.

5. Separate evacuation hospitals are not necessary for chemical casualties but later segregation in hospitalization is desirable.

6. The following factors are especially referable to the 1st and 2nd echelons of medical service:

a. The most important sector in the care of gas casualties is the forward medical installation. The extent of evacuation and the period of hospitalization are inversely proportional to the speed and effectiveness of first aid and personal decontamination.

b. Lung irritant casualties are all evacuated as litter cases and treated as severe battle casualties.

c. Skin contamination with vesicant agent is not adequate reason for evacuation while action is still in progress. By self decontamination with protective ointment most individuals can continue fighting until the tactical situation permits their release.

d. All significant skin casualties due to lewisite or nitorgen mustard should be evacuated when the situation permits.

e. Skin vesicant casualties and eye casualties are walking cases except as local lesions prohibit.

f. Irritant smoke and lacrimator casualties are not to be evacuated.

g. Casualties with vesicant chemical and surgical wounds may be evacuated directly through normal channels, the surgical wound regulating the urgency of evacuation. First aid for the chemical injury should be co-incidental.

h. If vesicant contaminated casualties are carried in an ambulance, suitable decontamination precautions must be taken before carrying other casualties.

i. The evacuation of potential casualties of the lung irritant groups is entirely dependent upon the feasibility of their release by the line commander. This is a command decision and not a medical decision, the medical officer being responsible only for his recommendation.

V HOSPITALS INCLUDED IN THIS REPORT:

VI REMARKS:

HEADQUARTERS FORCE 343
Office of the Ordnance Officer

THN/am
15 June 1943.

ANNEX NO: 3

TO ACCOMPANY ADMINISTRATIVE
ORDER NUMBER 1, HEADQUARTERS FORCE 343

1. Ammunition

Units of Fire as used in all administrative plans referred to is that published in Incl. No. 2, letter AG 471 (2-13-43) AB-S-D-M, dated Feb. 16, 1943, copy of which is attached.

It is the responsibility of all units to obtain their organic loads of ammunition and have it in their keeping at all times. Ammunition shown under Column B, "Beach or Shore Reserve", is in addition to organic ammunition. The latter will be supplied from stock piles placed at Ports of Embarkation by SOS.

2. Waterproofing

Waterproofing to be accomplished by each individual unit as directed by CG, Sub-Task Forces. Ordnance troops have been made available to each Sub-Task Force for maintenance and supply. Such Units may be used at the discretion of the Sub-Task Commander in connection with waterproofing. Supplies for waterproofing will be drawn from Base Sections as outlined in letter, this HQ, dated June 7, 1943, subj: Waterproofing Material.

3. General Supplies and T/BA

It is the responsibility of Sub-Task Forces Commanders to submit requisitions for all shortages in T/BA and organic supplies for their units to the nearest base section. In case of failure of Base Sections to meet these requirements, prompt report should be made to this Headquarters as to the actual shortages. This Headquarters only enters the picture if supply is unavailable or when special priorities are established. Priorities for equipment covering all units of I Armored Corps, Reinforced, have been established with SOS. Each "Administrative Plan" shows clearly the respective responsibilities of Sub-Task Force Commanders and CO, Force 343.

4. Maintenance

Suggested method of packing "over the beach" maintenance kits and tool kits has been published and distributed to all Ordnance Units (Memorandum, Ordnance Office, Hq. I Armored Corps, dated 2 May 1943). These instructions are to be considered as advisory and may be modified as deemed advisable by Sub-Task Force Commanders. Plans should be made to move organic spare parts into the target as rapidly as shipping and other transportation permit. It is not anticipated that it will be possible for Force 343 to place bulk supplies at the target prior to D + 30. Special requirements will be met if possible upon request to Force 343, African Headquarters.

A generous proportion of Ordnance maintenance and supply troops has been given each Sub-Task Force. It is anticipated that these troops should provide adequate maintenance and supply until such time as service troops under direct control of Force 343 can be placed at the target. After Force 343 assumes supply responsibility at the target, readjustment of assignments of Ordnance units will be made. At all times, Force 343 will follow the principle of pushing supplies and maintenance forward.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

Demands of forward units will be assumed to be correct and will be met if physically and tactically possible. Units should be governed accordingly in making requests on I Armored Corps as overordering may result in overburdening the available transportation.

ENGINEER ANNEX TO ADMINISTRATIVE ORDER #1 (ENGINEER PLAN)

A. WATER

Water to be provided on the basis of one gallon per man per day. A sufficient supply on this basis for five days' operation to be brought in in five gallon cans or by the Navy in bulk.

Sources of water are available to sub-task forces as follows:

Force	5-gal Cans	Bulk-LSTs	Local (g.p.d.)
CENT	24,000	30,000(3)	497,000 Vittovia aqueduct 1,000,000 Springs-S Croce Camerina
DIME	13,000	50,000(5	367,000 - Gela aqueduct 250,000 - Gela river wells
JOSS	17,500	90,000(9)	450,000 - Licata aqueduct Selso River
KOOL	7,500	30,000(3)	-------

*A spring of 79 gpm has been reported at Berdia but not confirmed.

A limited number of 2,000 gal. distillation units are also available.

Five-gallon cans to the above total have been ordered to the ports of embarkation where they will be filled by the S.O.S. base section.

The decision as to how many 5-gallon cans will be taken and whether any distillation units will be included rests with each sub-task force commander.

Organic engineers will perform their normal functions including the necessary development of water sources.

The 401st Engineer Water Supply Bn. will develop water supplies in the rear areas, including decontamination of sources and boring wells. It will furnish water in 750-gallon tankers to division and corps water points and to beach groups as required.

The 402d Engineer water Supply Bn. will be on call in North Africa to supplement the work of the 401st if necessary.

B. MAPS

1. Initial issues.

a. Sub-Task Forces - coverage of their area of initial operations, to be delivered packaged for the following lower units:

(1) Each Infantry Regiment.
(2) Division Artillery.
(3) All other divisional troops and Divisional Headquarters.
(4) Each Regiment not part of a division.
(5) All other Sub-Task Force troops.

b. Airborne Units - coverage of the areas of Joss and Shark.

c. The 9th Division - coverage of the area of immediate operations of Joss and Shark.

d. Headquarters II Corps and Headquarters I Armored Corps - complete coverage.

e. Navy - sheets requested by them.

2. Reserves.

a. Sub-Task Forces - a limited reserve to be carried by the sub-task force engineer to provide for unforseen contingencies in the following quantities per division:

1/100,000 - - - 100 copies
1/250,000 - - - 200 copies

b. Beach Reserve - a beach reserve carried by the Map Depot Detachment attached to each sub-task force. This consists of:

(1) 20% of the initial issue in 1a above.
(2) 200 copies of 1/100,000, 1/50,000 and 1/25,000 sheets covering the area of anticipated subsequent operations of each sub-task force.

3. Stocks.

a. Coverage of the balance of the island in all scales to be stocked half in the main depot on the island and half in North Africa.

4. Issue.

a. On D - 14 - The Engineer, Force 343, will deliver initial issues and reserves to the Sub-task Forces on D - 14.

A Map Depot Detachment will be attached to each Sub-Task Force on D minus 14. This detachment will consist of:

Dime and Joss - 1 Officer, 4 E.M.
Cent and Kool - 4 E.M.

b. D - 7 to D - Between D minus 7 and D day a map depot will be established at Bizerte to hold reserve stocks and serve reserve troops not included in sub-task forces. Prior to D minus 7 the depot will be at Constantine.

c. D day to D plus 4 - On D day the map depot detachments will form emergency depots stocked with the beach reserve at the beaches on which they land.

d. D plus 4 to D plus 8 - Between D plus 4 and D plus 8, depots will be consolidated to form two depots in two towns within the beach head. One Depot will serve Cent and Dime, one will serve Joss and Kool. These depots will be reinforced as soon as possible by reserve stock held in Africa and will be moved as the situation requires.

e. Maps will be delivered in rolls of fifty, each roll being coded. Each sub-task force engineer has been furnished with:

(1) A code list.
(2) Breakdown units and begmarking.
(3) Quantities of sheets in unit bags.
(4) Assortment of sheets for each distribution with indices.

C. CONSTRUCTION

1. Policy - Only the works essential for military needs.

2. Docks - Immediate repair and expansion and maintenance to provide maximum unloading facilities.

3. Communications - In conformance with policy. No extensive repairs.

4. Utilities - In conformance with policy to include necessary sanitation.

5. Shelter - Depots - Wood frame, tarpaulin covered warehouses only for supplies liable to damage by exposure.

Hospitals - Tent floors only.

Troop Housing - Latrines, kitchens and bath facilities only if situation becomes stabilized to permit.

Other - None initially.

6. Labor - Hired and paid for direct by using unit and not through any labor agency.

7. Real Estate - Initially by direct requisition in accordance with Annex of A.F.H.Q. When Task Force 343 assumes control, by requisition through the Engineer, Task Force 343.

8. Funds - Division - Engineer share of $100,000 to be allotted each division.

Corps - Engineer share of $50,000 to be allotted II Corps.

/s/ GARRISON H. DAVIDSON,
GARRISON H. DAVIDSON,
Colonel, C. E.,
Engineer.

HEADQUARTERS, FORCE 343
Office of the Quartermaster

GRAVES REGISTRATION DIRECTIVE

1. RESPONSIBILITY:

a. Each company, battalion, regiment, and division, as well as hospitals, depots, and other separate organizations will appoint an officer to perform the duties of Graves Registration Service Officer. Graves Registration Service officers, within divisions and higher units, are responsible to the unit Quartermaster who in turn is responsible to the Graves Registration functions. The Sub Task Force Graves Registration Officer will be responsible for the planning, operation, and coordination of all burial functions within his unit. He will make appropriate recommendations to Sub Task Force G-4 concerning burial and to facilitate this will maintain liaison with G-2 and the Sub Task Force Surgeon and be familiar with the Surgeon's recommendations to G-4 concerning evacuation. Graves Registration Service Officers of separate units and establishments are responsible directly to Force 343.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

2. OPERATION:

a. In the event a Graves Registration Platoon is attached to a division or Sub Task Force, the platoon commander will work with the Division GRS Officer under the supervision of the unit Quartermaster, but he will not be designated Division Graves Registration Officer. The platoon commander will assign section of his platoon to elements of the division and coordinate and supervise their work. If any unit of the division becomes isolated or operates at such distance that it cannot be served by the Graves Registration platoon, the division GRS officer will call upon the unit GRS Officer (appointed as in Par. 1 Above) to perform burial and Graves Registration functions for the organization concerned with troops detailed by the organization commander.

b. If Graves Registration personnel are not attached to a division or Sub Task Force, a provisional organization will be established under the supervision of the officer appointed as per Par. 1 above. A recommended organization is listed below but this may be altered in any way desired by division or Sub Task Force GRS Officer to fit circumstances encountered.

Graves Registration Personnel and Equipment:

(1) Office of the Division GRS Officer:
- (a) One Graves Registration Officer
- (b) Two NCO's (Draftsmen for layout, plot, and map of cemetery)
- (c) One Pvt. - Clerk
- (d) One Pvt. - Driver
- (e) Two Pvts. - Basic
- (f) One ¼-T Truck
- (g) Office and Drafting Equipment, GRS Forms.

(2) Elements of Division:
Three registration sections, (one section per combat team) each consisting of:

- (a) 1 NCO (Section Chief)
- (b) 1 Pvt. (Clerk)
- (c) 4 Pvts. (Laborers)
- (d) 1 NCO (Attached Medical)
- (e) One 3/4 ton Weapons Carrier
- (f) Litter, rubber gloves, absorbentcotton, disinfectant, blankets, shelter halves, lashing straps, rope, compass, map of area, notebook, pencil, twine, knife, inkpad, heavy shears, or tin snips.

c. Attached Medical Personnel
- (1) As outlined above
- (2) Equipment
  - (a) EMC tags (WD MD Form 52B)
  - (b) Ink pad, notebook, and pencil

d. Service Unit Personnel -
(1) NCO's and men to be detailed by division or separate unit commander upon call by Graves Registration Officer. Number and disposition of service troops determined by type of action involved, number of casualties, and terrain fought over.
- (2) Equipment -
  - (a) One shovel per man
  - (b) One pick per two men
  - (c) Additional details and equipment from Engineers if rock encountered.

e. Duties - Graves Registration Personnel -
- (1) Accomplishing and forwarding burial reports and records.
- (2) Proper identification of body
- (3) Collection of personnel effects.
- (4) Marking of Grave
- (5) Cemetery Maps

NOTE: GRAVES REGISTRATION PERSONNEL ARE NOT TO BE USED FOR GRAVE DIGGING.

f. Duties - Attached Medical Personnel -
- (1) Identification of portions of body dismembered.
- (2) Fingerprints in event identity is open to doubt.
- (3) Preparation of tooth charts, notation of anatomical characteristics, inspection of body for identifying media when identity is open to doubt.
- (4) Preparation and disposition of WD MD Form 52B.
- (5) First aid in emergency.

g. Duties - Service Unit Personnel -
- (1) Collection of bodies to avoid isolated burials.
- (2) Digging of Grave.
- (3) Assists in search for unfound dead.

h. Transportation -
(1) Transportation will be furnished by Division Quartermaster if that of the provisional graves registration units is insufficient to meet requirements. Transport to be by routes not used by troops if possible.

3. BURIALS:

a. United States Personnel -

(1) In cemeteries, bodies will be buried in graves dug in accordance with the cemetery plan to a depth of approximately 5 feet. In hasty battlefield burials, the location and depth will be such as to prevent the elements from exposing the body. Only one body will be placed in a grave. Military honors will be rendered and Chaplains of appropriate faith will officiate when possible for all burials. The latter will be dispensed with only when the lives of the burial parties are in danger.

(2) Burial of general prisoners, deserters, or dishonorably discharged men will be made in separate plots in United States Cemeteries.

b. Allied Dead -

(1) Burial will be made in separate plots in United States Cemeteries. Coordination with the Graves Registration Service of the force concerned with respect to burial reports and disposition of personal effects will be by Graves Registration Service Officer, Force 343. An additional copy of burial report will be forwarded thru normal channels.

c. Enemy Dead -

(1) Enemy dead will be reported as in the case of American dead. Separate reports will be rendered on members of the enemy forces, which will be clearly marked as such.

(2) Enemy dead are entitled to the same burial as members of American or Allied forces, but will be buried in separate sections of the cemetery. Graves will be marked, registered, and reported through channels to Prisoner of War Information Bureau.

(3) Marker on enemy grave is to be marked "ED".

(4) The following procedure governs the disposition of Enemy Identification tags:

(a) One-half of the tag remains on the body and is buried with it.

(b) The information on the other half is copied in English in pencil on the marker, or the information is placed in a bottle and placed in the earth near the head of the grave.

(c) The duplicate or other half of the tag is forwarded to Prisoner of War Information Bureau thru channels.

e. REBURIALS:

a. Combat conditions will necessitate some hasty burials made in the absence of Graves Registration personnel. However, hasty burials do not relieve burial parties from the responsibility of following prescribed regulations as to the manner and place of burial, marking of graves, forwarding the prescribed reports, and the proper handling of personal effects, nor do hasty burials made by other personnel relieve Graves Registration personnel from the responsibility of verifying identity of graves, eliminating isolated graves, searching of battlefields for unburied dead, marking of unmarked graves, and the correcting of all errors made by other personnel in the performance of burial activities. Reburials made to eliminate isolated graves will be reported as for original burials but burial forms will be marked Reburial.

5. CEMETERIES:

a. Officers in charge of burials should be familiar with the location of all authorized military cemeteries within the area of the respective commands, and should see that none but authorized cemeteries are used except in unusual circumstances. A DIVISION CEMETERY WILL BE ESTABLISHED IN ALL CASES.

b. When it is necessary to lay out new temporary cemeteries, the standard plan furnished by the Quartermaster General (copy attached) will be strictly followed both as to plotting and to the numbering of graves, except when division is actually required by the terrein conditions, in which case a report of the modifications and reason therefor will be forwarded thru military channels to the Graves Registration Service Officer of the Force 343.

c. Graves are to be layed out as per Quartermaster plan in accordance with an accurate survey. To save confusion during times of heavy action, graves in at least one section may be layed out ahead of time and countersunk to a depth of three or four inches.

d. Graves will be aligned both laterally and longitudinally.

e. Cemetery will be inclosed at the earliest opportunity with a fence of sound material and construction.

f. Once a cemetery has been established and burials therein begun, neither the plan nor the number of the graves will be changed except by authority of the Graves Registration Service Officer of the Force 343.

g. Local labor may be used whenever available for grave digging, reburials, fencing, and landscaping. Such labor must be supervised by GRS personnel.

6. GRAVE MARKING:

a. At time of burial each grave must be marked in such a way as to insure identification. Combat conditions will necessitate the use of such materials as are at hand, such as, driftwood, lumber from the ration boxes, crating material, and etc. When no better marker is available the information from the identification tag will be copied on a piece of paper and placed in a bottle, spent shell or other receptacle that can be tightly sealed and placed so as to mark, and identify the grave. In this event such marking will be indicated on report of burial. These are to be replaced as soon as possible with a more permanent marker. The identification tag will be forwarded with the report of burial, and not left at the grave, if it cannot be inserted in the container.

b. When markers are available, crosses may be used to mark the graves of those of Christian faith and the Star of David to mark the graves of those of Jewish faith. In the event Hebrew markers are not available, the cross piece of the cross will be removed prior to placement.

c. If markers are not available, name pegs may be used. These pegs are V-shaped wooden pegs or boards 1" in thickness, 9" wide at the top, and 36" in length as measured from the center of top to tapering point at bottom of peg.

d. Each Graves Registration Section will serve as a base for supplies, for all graves registration personnel in the area which it serves. Supplies will include burial report forms, temporary grave markers, and personal effects bags.

7. IDENTIFICATION TAGS:

a. The emergency medical tag attached to the body will be removed at the time of burial either by a Medical Department representative or by a responsible member of the burial party, and will be forwarded in either case direct to the Chief Surgeon who will transmit the tag to the Surgeon General.

b. One of the two identification tags worn as prescribed in Army Regulations will be left upon the body to be interned with the body. The duplicate tag will be removed at the time of BURIAL and securely attached to the grave marker about 2" from the top.

c. When tags are found entirely detached from bodies, effort will be made to ascertain to whom they belong, and if same can be identified as coming from a body, then they will be treated in the same way as those found upon the body. If they cannot be identified as belonging to a body in the vicinity where found, inquiry will if practicable, be made of the organization of which the owner was a member to ascertain if they were lost or thrown away, with a view to restoration to the owner, and to enable action by his commanding officer. If they cannot be identified as belonging to either a deceased or living person, they will be forwarded to the office of the Chief Graves Registration Service, with full report as to the locality and circumstances attending their discovery. Where tags found on a body are illegible, effort will be made to identify the body by other means, and properly mark the grave for future identification. The illegible tags and full information including the identification of the wearer, if established, will then be forwarded the Chief, Graves Registration Service.

d. If only one of the two identification tags is found with the body, it will be interred with the remains. When identification tags are missing an exact copy of the report of interment to be submitted will be completely accomplished, will be sealed within a container, and buried with the body. Notation as to type of container and to the fact that report was buried with remains will be made on report of interment.

8. UNIDENTIFIED DEAD:

a. Prior to the burial of unidentified dead every effort will be made to secure the fingerprints of both hands. Burial parties should be equipped with stamp pads. Fingerprints should be placed on EACH copy of the burial report. On each report will be entered a brief description of such features as may contribute to identification. Features reported will include apparent weight, height, color of hair, description of scars. The report will include a brief description of the enemy action involved, location in which the body was found, estimated date of death, and any other data which might give a clue to identity. A dental chart will be made in cases where fingerprints are impossible.

9. PERSONAL EFFECTS:

a. Personal effects of deceased personnel will be disposed of as follows:

(1) Those effects found upon the body will be listed on G.R.S. Form No. 1 and will be promptly bundled and turned over the Graves Registration Service for forwarding to the nearest Base Section for disposition. Each package should contain full data pertaining to the owner's identity, and also a list of items contained therein.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

SECRET

(2) Other personal effects of the deceased will be collected, inventoried, and listed on Form No. 54 by organization commander. Any article which might cause embarrassment to relatives of the deceased will be removed. The effects will be prepared for shipment and storage and conspicuously marked with the name, rank, serial number, organization, type and date of casualty, and forwarded to the G.R.S. Officer, Force 343 for disposition. A copy of WD AGO Form No. 54 will be inclosed in the package.

(3) Money found in the effects of the deceased will be turned over to the Finance Officer by the organization commander or other officer handling the effects and receipt obtained in duplicate. One copy of the receipt will accompany service record when forwarded thru channels.

b. Personal effects of individuals reported "Missing in Action", "Captured", or "Interned", will be disposed of as follows:

(1) As soon as the status of the owner becomes "Missing in Action", his belongings will be placed in the custody of the supply officer and an accurate inventory made.

(2) At the time replacement is requested, normally after thirty (30) days absence, the effects will be forwarded to the G.R.S. Officer, Force 343 with an inventory and statement of circumstances inclosed or attached.

(3) Such effects received by G.R.S. Officer, Force 343 will be held ninety (90) days, available for return in case the owner rejoins his unit. If not claimed in ninety (90) days they will be forwarded thru the appropriate port of embarkation to the Effects Quartermaster, Kansas City Quartermaster Depot, Kansas City, Missouri, with an inventory or statement of circumstances inclosed or attached.

c. Government Property:

(1) Clothing and other Government property issued to deceased personnel, other than those items necessary for burial, will be collected and turned in to the unit, or other supply officer, with individual mess equipment.

d. Effects of Enemy Dead:

(1) Effects of enemy dead will be recorded and dispatched under the same arrangement as our own troops except that final routing (along with inventory and statement of circumstances) will be to Prisoner of War Information Bureau, Officer of the Provost Marshal General, Theater of Operations.

e. Effects of personnel who have been evacuated by reason of sickness or wounds or who are patients in hospitals will be disposed of as follows:

(1) Personnel being sent to hospitals will take with them only such personal effects as will be required for reasonable needs and small luxuries. This should include one musette bag or haversack, toilet articles, one complete set of outer clothing, including a raincoat (or overcoat when indicated), one pair of shoes, extra underwear, socks, and handkerchiefs. Hospitals have no place to store and secure the personal effects of individuals.

(2) The gas mask and helmet will normally be the only items of equipment to accompany hospital patients. Mess gear, arms, and ammunition, blankets and other items of equipment will not be sent with or to a patient. Commanding Officers of hospitals will collect arms and ammunition from U.S. patients at the time of entry and turn this material over to the nearest Ordnance Depot or Maintenance Company. Other items of equipment collected from patients will be turned over to the nearest salvage collecting point.

(3) Unit supply officers will collect and inventory the effects of personnel who have been evacuated or are patients in hospitals. Items indicated in (1) above should be sent to the patient if possible. Unless it is known definitely that the soldier will not return, personal effects will be held in the unit for at least thirty (30) days and then transmitted with inventory setting forth the circumstances under which they are being forwarded.

(4) When effects are received by the Base Quartermaster they will be held until such time as they are applied for by the owner or the owner has been located by the Base Quartermaster.

f. Deserters:

(1) Public property will be turned in to the unit supply officer and the enlisted man will be credited on the Clothing and Equipment Record. Personal effects will be listed and forwarded to the Base Quartermaster serving the area where they will be retained for one (1) year unless he is returned to military control within that period. In the event he is returned to military control, the effects will be delivered to him. At the expiration of one (1) year if the deserter has not returned to military control, the Base Quartermaster will dispose of the personal effects as prescribed by AR 615-300.

g. Disposition of effects when location of owner is unknown:

(1) Effects of individuals not included in the above categories, who cannot be located will be inventoried and sent to the Base Quartermaster serving the area. A statement setting forth the circumstances under which the effects are being forwarded will be transmitted with the effects.

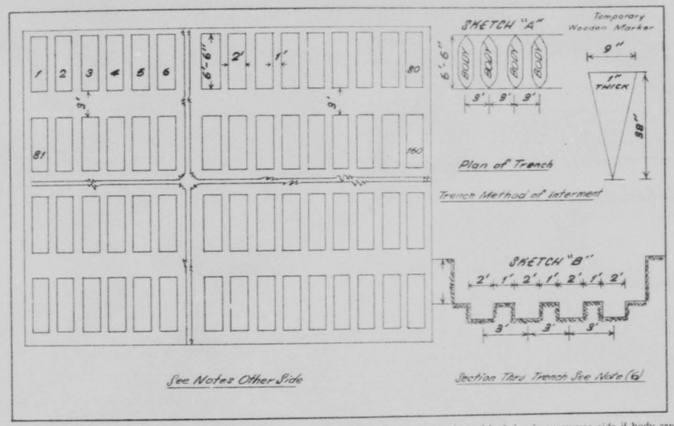
10. MAPS:

a. Cemetery Maps will be forwarded to the GRS Officer, Force 343, shortly after burials are begun in a cemetery. Location of isolated battlefield graves will be accurately reported on the report of burial by means of map references or by reference to permanent landmarks, such as: bodies of water, railways, wooded areas, cross roads, etc. These sketches must be accurate and complete.

11. RECORDS AND REPORTS:

a. Record of Burial (QMC Form No. 1 GRS) will be filled out as completely as possible and forwarded to the Graves Registration Officer, Force 343, in quadruplicate through the division or separate unit personnel section where the report can be checked against casualty reports. An additional copy of the burial report for all burials of other than U.S. Army personnel will be forwarded thru channels for notification of the Force concerned. In all cases the burial report will be signed by the officer or person in charge of burial and verified by the GRS Officer of the administrative headquarters who checks burial reports against casualty records.

b. Graves Registration Platoons or similar provisional units will submit to GRS Officer, Force 343, Weekly Report of Burials Recorded, QMC Form No. 2-GRS, in quadruplicate. (to be submitted directly)



c. At the time a cemetery is closed a complete map and final report will be submitted to GRS Officer, Force 343.

Typical Layout for GRS Temporary Cemetery

NOTES

1. Graves to be a minimum of 5 feet in depth.
2. All interments to be made with head in same direction.
3. Markers to be placed at head of grave.
4. Graves to be numbered consecutively, starting with No. 1 at left (standing at foot of grave and facing head) and following row to end, then continuing with first grave at left of second row.
5. Where terrain or other reasons necessitate excavation of trench for burial purposes, the remains will be interred therein in the same manner and distance apart as per this plan, (see Sketch "A"). In such cases extreme care must be taken to insure marker being placed at grave to which it pertains.
6. In light or sand soil, where excavation will not stand, it is sometimes necessary to dig trenches to a depth of 4 feet and then make excavations 1 foot deeper. (see Sketch "B").
7. Care should be taken so that graves are in line with one another, both laterally and longitudinally.
8. The meridan (Directional Arrow) indicating North should be shown on all plans and sketches.
9. Separate layout plans should be prepared for each cemetery and/or burial plot.

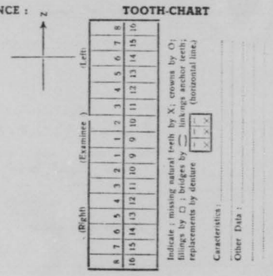
INSTRUCTIONS FOR FILLING OUT BURIAL REPORT : Make out QMC Form 1 - GRS in quadruplicate for U. S. dead, one additional copy for allied and enemy dead. Sign all copies. Submit report to nearest member of Graves Registration Service. Graves Registration Service will forward the original and two copies through at least one higher administrative headquarters to be checked against Casualty Reports and allied papers and all copies verified by the Graves Registration Officer of that headquarters to Base Section Graves Registration Service Officer.

INSTRUCTIONS FOR BURIAL

1 PREPARATION OF BODY: Have body examined by member of Medical Department whenever possible (to attach E.M.T. Form 52b.) Remove all personal property; remove one identification tag, leave other on body in protected position (in case of enemy dead, leave ½ tag on body, forward ½, with personal effects). If no tag present, make notation of identifying data on form, protect in sealed bottle, canteen, spent shell, or best available container, and bury with remains. If unidentified, take fingerprints of both hands; if this is not possible fill out tooth-chart and note height, weight, color of eyes and hair, tattoo marks, birthmarks, etc., and other data as serial no. of weapon, laundry marks, where body found, etc. Wrap body in shelter half, mattress cover, or blanket when available.

2. BURIAL : Dig grave to a depth of five feet (hasty battlefield burials, to sufficient depth to prevent elements from exposing the body). *Place only one body in a grave.* Dig graves side by side, row behind row.



3. MARKING OF GRAVE : Fasten identification tag to temporary name peg and place at head of grave. For enemy dead, write data on peg. When pegs are not available, copy data on a piece of paper, place in bottle, spent shell, or other receptacle, seal tightly and place so as to mark and identify grave. If identification tag cannot be fastened to peg or placed in container, do not leave at grave but forward with report of burial. If only one tag is found on body, it should be buried with body. The information thereon should be written on marker or placed in container at head of grave. Do not use weapons or helmets to mark graves.

4. LOCATION OF GRAVE : Report burials in established cemeteries by plot, row, and grave number (or show on cemetery map). For all other burials prepare sketch in space provided below; and give location by means of map references, or by reference to prominent permanent landmarks. Information must be specific, accurate, complete. Stand at foot of grave facing head to determine bodies buried to the left and right.

5. PERSONAL EFFECTS : List only personal effects taken from body on the Burial Report form. Place these with information as to identity of owner, organization, emergency addressee, in personal effects bag, or wrap in handkerchief, towel, or other available material, and turn over to Graves Registration Service Personnel with report of burial. Government property is not to be included in personal effects but is to be turned in to Salvage Collecting Point.

c. Situation.

In this operation there will be special situations arising in addition to the normal duties and functions covered in B, 1 above for which special measures must be planned.

(1) The landing will be made on a definitely hostile shore. After forcing back of hostile troops, a certain amount of fifth column activity is to be expected requiring constant surveillance and guard.

(2) Sniping will undoubtedly be prevalent, especially in towns where there is an opportunity for cover and hiding. Snipers must be ferreted out and either killed or captured.

(3) The civilian population cannot be expected to be friendly. Therefore, rigid control and regulation of their movement will be required.

(4) During the assault phases at least, no reliance can be placed upon the use of any existing civil law enforcement groups. Even should one or more organizations as a whole be found cooperative a certain period of time will be necessary for reorganization before it can be allowed to function. Even then close supervision and coordination by the Provost Marshals and Civil Affairs Officers will be required.

(5) In the territory covered by the initial operations there are about twenty towns and villages, six of which have a population varying from 20,000 to 40,000. They are:

HAREM	31,028
QUEENREX	21,914
FIGULA	30,641
FEDERAL	31,918
DOGMATIC	40,180
BRUTE	34,769

These towns will present special problems as related to the above situations.

15 June 1943

MILITARY POLICE PLAN

1. MISSION.

The mission of this TASK FORCE will involve a "Theatre of Operation" and a landing over an extended and hostile beach line. Since there are no suitable harbors capable of being used for supplying the Sub-Task Forces, it will be necessary to supply these forces over beach heads for considerable time. The following plan is set up as a guide to Sub- Task Force Provost Marshals in the preparation of their plans of operation.

2. MILITARY POLICE.

a. Military Police duties in the area of each Sub-Task Force will include:

(1) Traffic control at the beach heads and along the lines of communication thereto.

(2) Guarding and disposition of Military Prisoner of War and Civilian internees.

(3) Maintenance of Law and Order in towns and areas occupied by our troops.

(4) Coordination with Civil Affairs personnel in these areas.

(5) Cooperation with the Counter Intelligence Corps in the apprehension of individuals and facilitation of searches and seizures.

(6) Control of movements of individuals including evacuation of civilian population.

(7) The protection of vital installations, including deposits and records of financial governmental institutions.

b. Personnel.

(1) Assigned units.

	Officers	EM	Veh
* 504th Military Police Battalion.			
HQ & HQ Co	10	69	16
Co "A"	5	192	26
Co "B"	5	192	26
Co "C"	5	192	26
342 MP Escort Guard Co	3	134	4
379 MP Escort Guard Co	3	134	4

d. Distribution.

The organic Military Police of the Sub-Task Forces will be required by those forces to handle the normal military police functions and duties within these forces such as, tactical traffic control, operation of straggler lines and straggler collecting points, handling of Prisoners of War at Division collecting points and C.P. operation. They cannot therefore, be considered as Force troops. This leaves the 504th Military Police Bn, the 342nd and 379th Prisoner of War Escort Guard Companies, and two Prisoner of War Processing Detachments available for assignment to assist Sub-Task Force Commanders in their mission. They have been allotted initially as follows:

(1) Co "C", 504th Military Police Bn is assigned to the "CENT" Assault.

(2) The 504th Military Police Bn (less companies "A", "B", and "C") the 342nd Military Police Escort Guard Co, and one Prisoner of War Processing Detachment is assigned to the "DIME" Assault.

(3) Co "A", 504th Military Police Bn, the 379th Prisoner of War Escort Guard Co, and one Prisoner of War Processing Detachment is assigned to "JOBS" Assault.

(4) Co "B", 504th Military Police Bn, is assigned to "KOOL" Force (Reserve).

These units will be required for beach control, traffic control in the beach areas, at dumps, along the lines of communication, and as Prisoner of War Guards, Prisoner tagging and preparation of nominal rosters. With the taking and occupation of towns in each Sub-Task Force area the problems previously discussed will present themselves. At the present time there are no reserve Military Police units available to meet any situations arising therefrom. It will be necessary for the Sub-Task Force Provost Marshals to meet them with combat troops or to substitute combat troops in some of their other installations to relieve sufficient Military Police for these special duties. Should additional Military Police Units be made available later to Force 343, they will be held as Force 343 reserve to make available to Sub-Task Force Commanders on request for use as aid to the Civil Affairs officers and as security police in captured towns and areas.

3. PRISONERS OF WAR AND CIVILIAN INTERNEES.

Until such time as there is a Force 343 enclosure established on HORRIFIED evacuation of Prisoners of War and Civilian Internees will be accomplished by the NAVY direct from Sub-Task Force beaches to enclosures at ACCUTI and LAUNDON in NORTH AFRICA. Prior to movement for evacuation, Sub-Task Force commanders will be responsible for having them properly tagged and that a nominal roster has been prepared in quadruplicate. The Navy escort commander will receipt for the prisoners and Internees received by him at the beach by signature on one copy which will be retained by the Sub-Task Force. One copy will accompany the Prisoners or Internees and the remaining two copies will be forwarded direct to Commanding General, Force 343.

Until a Prisoner of War enclosure is established on HORRIFIED by Force 343, daily radio reports will be made by each Sub-Task Force Commander to Commanding General, Force 343, giving only total number of prisoners evacuated during day. As soon as conditions permit the Provost Marshal, Force 343, will establish a Prisoner of War and an Internee enclosure on HORRIFIED in the vicinity of FEDERAL with a capacity of approximately 15,000. Sub-Task Force commanders will be notified of the time and date of opening and its exact location. Upon receipt of this notice all Prisoners of War and Internees will be evacuated to the Force 343 enclosure by Sub-Task Forces together with all four copies of the nominal roster. The enclosure commander will receipt by signature for the prisoners or Internees on the file copy and return it to the escort commander for return to the apprehending unit. He will keep one copy for his file and forward the remaining two copies to Commanding General, Force 343. The Provost Marshall Force 343 will assume control of Prisoners of War and Internees at the Force enclosure.

He will be responsible for feeding prior to their transfer to NORTH AFRICA. Evacuation will be as rapid as rostering and available shipping space will permit. It is contemplated that Prisoners and Internees will not be held for more than a maximum of three to five days for turn around of ships. Civilian Internees will be kept separately from Prisoners of War. The Commanding Officer of the Force 342 enclosure will segregate and hold, upon request from G-2 prisoners or Internees desired for special interrogation. The estimated daily rate of flow of Prisoners based on G-2 estimates is:

	D to D/5	D/5 to D/15	After D/15
Maximum	2500	8000	8000
Minimum	1000	1000	830
Total estimated to D/30		30,000	

Medical. Emergency medical treatment for Prisoners of War and Internees at Sub-Task Force Collecting Points will be arranged for by Sub-Task Surgeons. The Surgeon, Force 343 will provide a Medical Detachment at Force 343 enclosure by D/10 or upon the opening of the enclosure.

Quartermaster. The above mentioned supplies and equipment have been requisitioned.

Engineers. Request has been submitted to Corps of Engineers for material, location and construction of force enclosure to accomodate 15,000 prisoners and Internees on HORRIFIED, to be ready by D/10.

Civil Affairs. The Provost Marshal will coordinate closely with the Public Safety Division of the Civil Affairs Section Force 343. Initially and until such time as existing civil police have been reorganized the Provost Marshal 343 and Provost Marshals of Sub-Task Forces will be responsible for the control of Military and Civilian personnel, the maintenance of law and Order, the control of traffic, registration and circulation of civilians, and recommendations for the protection of vital installations. In so far as available, Military Police personnel permits, the Provost Marshal Force 343 and Provost Marshals of Sub-Task Forces will furnish detachments of Military Police for assistance of the Public Safety Officers of the Civil Affairs Section. These detachments will assist the Public Safety Officers in the enforcement of the laws and regulations of the Military government and in the reorganization and supervision of any existing civilian police forces.

AMENDMENT NO. 1 TO ANNEX 6, ADM. O, NO. 1.

MILITARY POLICE PLAN

1. Classified Document above subject this headquarters, dated 15 June 1943, is hereby amended and amplified as follows:

2. The first paragraph of Section III is rescinded and the following is substituted therefor: Until such time as there is a Force 343 Enclosure established on HORRIFIED, evacuation of Prisoners of War and Civilian Internees will be accomplished by Sub-Task Forces to Enclosures in NORTH AFRICA. Escorts will be found from personnel already on HORRIFIED as determined by Sub-Task Force commanders. Prior to movement for evacuation, Sub-Task Force commanders will be responsible for having Prisoners of War and Internees properly tagged and a nominal roster prepared in quadruplicate. The Commanding Officer at the Enclosure in NORTH AFRICA to which the prisoners are evacuated will receipt for them on one copy which will be retained by the Sub-Task Force. One copy will accompany the prisoners and the remaining two copies will be forwarded direct to Commanding General Force 343.

3. Persons suspected of threatening security will be arrested by combat troops or CIC personnel. After preliminary interrogation such persons will be released or turned over to Prisoner of War details for evacuation. Prisoner of War escort personnel will accept for evacuation such civilian prisoners, both male and female, as may be turned over to them by CIC Detachments or combat troops. Civilian prisoners will be segregated from military Prisoners of War and will be evacuated to Division and Corps Prisoner of War cages (Civilian Wing) to the rear. Such prisoners should not be evacuated from HORRIFIED without prior consent of the security staff.

4. Prisoners of War, whether civilian or military, will not normally be evacuated in ships carrying Allied, lying wounded, and will not be evacuated on combat loaders. The number of prisoners embarked on any ship will be governed by the sanitary facilities aboard.

PROCUREMENT POLICIES AND PROCEDURES
FORCE 342

1. The following instructions will govern all procurement of supplies and services for Force 343, and is published for the information and guidance of all concerned.

a. Procurement under this order will not be effected on the African Continent.

2. References:
a. FM 27-10 Rules of Land Warfare.
b. FM 27-5 Military Government.
c. FM 100-10 Field Service Regulations.
d. W.D. Circular #21, dated 15 January 1943.

3. Policy:
a. To immediately secure supplies and services necessary to accomplish the tactical mission.
b. To insure prompt payment for certain supplies and services as hereinafter described.
c. To insure prompt consideration of those items for which immediate payment is not made.
d. To provide for a uniform method of operation throughout Force 141, 343 and 12th Army.
e. To establish a central control for purposes of coordination with other Allied Forces within the Theater.
(1) The Fiscal Division, G-4 Section, Force 343, consisting of forward and base echelons, is charged with the responsibility for control and coordination of all matters pertaining to this directive.
(2) An Assistant Fiscal Officer, G-4 Section, Force 343, will be attached to each Sub-Task Force, G-4 Section, to assist in the administration and accomplishment of procedures set forth herein.

4. Money Contributions:
a. Money contributions will not be levied nor collected except upon direct command of the Commanding General, Force 343.

5. Purchases:
a. It is the responsibility of the Commanding Generals of Sub-Task Forces and the Special Staff Officers, Force 343, charged with procurement functions, to secure the appointment of sufficient officers under their command to insure compliance with this order. Such officers to be appointed in orders as both Purchasing & Contracting Officers and Class B Agent Officers.

(1) Price lists will be furnished Purchasing Officers by Fiscal Officer, Force 343, and such prices will be strictly adhered to except in the case of immediate emergency.
(a) Price lists will be augmented and revised consistent with the situation.
b. Public Property:
(1) No property of the Enemy State will be purchased or paid for. (Par. 6 b).
(2) Where the ownership of property is unknown, or doubt exists as to whether the property is public or private, it shall be treated as public property until ownership is definitely settled EXCEPT all such doubtful ownership property will be reported in accordance with Par. 6 b (3).
(3) Property of municipalities and that of institutions dedicated to religion, charity, and education, the arts and sciences, even when Enemy State property shall be treated as private property.
c. Private Property:
(1) In general, all supplies, land and buildings owned by individuals and services needed by the United States will normally be obtained by agreement between the appropriate officers of the Army of the United States and the owners or persons whose services are desired.
(2) Exceptions to Par. 5 c (1) supra wherein requisitioning will be used rather than purchasing are as follows:
(a) All motor vehicles.
(b) All procurement involving large stocks or payments and continuing payments.
(c) In the event failure to reach an agreement occurs between appropriate officers of the Army of the United States and the vendor(s).
(3) The use of privately owned immovable property including billets will be acquired without agreement as to compensation, for convenience the requisition form will be used. (Par. 6 c).
d. Purchasing Procedure and Payments:
(1) Class B Agent Officers, who will also be designated as Purchasing & Contracting Officers, will act as procuring, receiving, and paying officers and all procurement will be so accomplished EXCEPT as limited in Par. 5 c and 6.

(2) Pertinent Army Regulations will apply in this instance with particular reference to AR 35-320 and AR 35-6300 with the following exceptions:
(a) The certificate required by Par. 5, AR 35-6300 will be modified to read:

"I certify that the supplies and/or services were purchased and received by me and that payment therefor was made by me as Agent Officer in cash this ____day of ____19__, from funds entrusted to me by, _____, Finance Officer. Procurement Authority No.__ _____, the available balance of which is sufficient to cover the cost thereof".

_____
(Name and Grade)
Agent Officer,
Purchasing & Contracting Officer.

(3) Payment for purchases will be made in cash immediately.

6. Requisitions:
a. Requisitions for supplies and/or services will be made only upon the authority of the Commanding General, Force 343, and the Commanding Generals of Sub-Task Forces.
(1) Requisition forms and instructions for their use will be furnished by Fiscal Officer, G-4 Section, Force 343.
(2) Where possible, requisitioned supplies and services will be obtained by requisitioning on local Civil Officials, thru District Commanders, by Supply Services of Force 343 and the Sub-Task Forces, rather than by the smaller units.
(3) Complete records of requisitioned items will be maintained by all requisitioning agencies.
(4) Information appearing on all copies of requisitions will be compiled by Fiscal Officer, Force 343, and reports promptly made to interested Staff Sections.
b. Public Property:
(1) In general, Enemy State owned real property shall be utilized in accordance with FM 27-5 and FM 27-10, but the occupation and/or use of such property will be reported by means of requisition forms as described thereon.
(2) With reference to property of municipalities, etc., See Par. 5 (b) (3).
(3) Procurement of all property wherein a question as to public or private ownership exists will be accomplished in accordance with Par. 6 b (1).
(4) Movable property of the Enemy State needed for military operations will be appropriated by the Army of the United States without further reference to this order.
c. Private Property:
(1) Requisitioning of private property will be made only under circumstances established in Par. 5 c (2).
d. Requisitioning Procedure and Payments:
(1) Appropriate Staff Sections, Force 343, and Commanding Generals of Sub-Task Forces will be furnished sufficient booklets of requisitioning forms for compliance with this order.
(a) Booklets will contain twenty-five (25) requisitions, each requisition to be in triplicate.
(b) Complete information concerning the filling out and distribution of requisitions will be printed on the back thereof for the guidance of the requisitioning officer.
(c) All requisitions will be serially numbered and strict accounting will be required for each requisition.
(2) Original copies of all accomplished requisitions will be forwarded immediately to Fiscal Officer, Force 343.
(3) Any and all payments for requisitioned supplies or services will be made by Fiscal Officer, Force 343, only.

7. Accounting:
a. All recipients of W.D. Form 23, War Department Procurement Authority for the purpose of procurement under this order will make report to the Fiscal Officer, Force 343, of monthly obligations only. Reports will be submitted on a calendar monthly basis and will be forwarded to reach the Fiscal Officer not later than the 10th of the month following the month being reported upon. No particular form is prescribed for this report.
b. Requisitioning officers to whom serially numbered requisition blanks are issued will retain a copy of each requisition issued, and may at any time be required, by competent authority, to account for all requisition blanks issued them by either producing their copy of an accomplished requisition or the blank forms with which they are charged.
(1) The loss or misappropriation of requisition blanks will be reported immediately to Fiscal Officer, Force 343, in order that such blanks may be promptly invalidated.

8. Hire of Civilian Labor:
a. All civilian labor will be hired and paid by the using Arm or Service.
b. Labor will be hired by direct negotiation and not thru any labor agency, labor organization or labor service.
c. Contracting for construction, etc., will be accomplished in the usual manner, provided, such contracting is not in violation of Par. 8 b supra, and it has been determined that the Enemy State is not a party to the contract, either directly or indirectly.
d. Prevailing wage rates will be paid but in no case will the maximum rates of pay, as published in the price list, be exceeded without prior approval of the Fiscal Officer, Force 343.
e. Revised and detailed pay rate schedules will be issued at the earliest practicable date.
f. Pay periods will not be longer than on a calender week basis, Sunday thru Saturday, except to provide for emergent conditions.
g. Payrolls will be promptly paid by Class B Agent Officers.

By command of LIEUTENANT GENERAL PATTON:

HOBART R. GAY,
Col. G.S.C.,
Chief of Staff.

OFFICIAL:

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

SUPPLEMENT #3

17 June 1943.

PROCUREMENT INFORMATION AND PRICE CONTROL LIST

1. Reference: Annex #7, Adm. Order #1, Field Order #1.

2. The following is published for the information and guidance of all concerned.

a. Augmented and revised price lists will be published periodically as additional information becomes available.

3. Commodity Prices and Supplies.

a. Supplies of olive oil, wine and citrus fruits appear to be plentiful. Wheat supplies are adequate but distribution irregular with local shortages. There is a definite shortage of meat and fish. Sugar is very scarce and butter unobtainable. All Class III supplies are very scarce.

b. At the present, there are many discrepancies between various reports about commodity prices. This may be due to the fact that the rationing system is on a municipal basis and there may be local surpluses of commodities.

c. The following controlled prices are reported for the vicinity of BIOOT (ENNY Operation.

Commodity	Unit	Price in Lire
Bread	Kg	1.30 to 2.30
Meat	"	11
Pasta	"	1.70 to 2.30
Olive Oil	Litre	7.50 to 10
Soap	Kg	4 to 5
Flour	"	2.50
Oranges	"	1.20 to 3
Pears	"	1.60 to 2
Wine	Litre	2.50 to 3.50
Cheese	Kg	20 to 24

4. Black Market.

a. There appears to be a black market everywhere for rationed commodities which includes almost all foodstuffs and clothing, though it seems that the system is not uniform and some municipalities do not ration a few commodities. Black market prices vary enormously from district to district and from commodity to commodity. There is also a barter trade in foodstuffs between producers in certain agricultural districts.

(1) Representative black market prices are as follows:

Commodity	Unit	Price in Lire
Bread	Kg	20
Pasta	"	4 to 10
Flour	"	5
Olive Oil	Litre	20 to 25
Meat	Kg	50

5. Wage Rates.

a. The daily wage rates of common labor varies slightly between districts but the general average is 70 lire per day.

24 June 1943

SUPPLEMENT #2

PROCUREMENT INFORMATION AND PRICE CONTROL LIST

I. INSTRUCTIONS ON REQUISITIONING.

1. Reference: Annex No. 7, Adm. Order #1, Field Order No. 1.

a. The third copies of all requisition forms are amended to read as follows:

"Authority: Annex No. 7 to Adm Order No. 1 to Field Order No. 1"

II. PRICE CONTROL LIST. (Change #1)

1. Prices indicated herein are official prices and are representative as of this date. Care will be exercised not to exceed maximum official prices insofar as the tactical situation permits:

COMMODITY	UNIT	PRICE
Bread	Kg	3.0 Lire
Pasta	"	4.0 "
Meat	"	16 to 20.0 "
Olive Oil	"	25.0 "
Sugar	"	10.0 "
Cheese	"	25 to 30.0 "
Potatoes	"	1.6 "
Flour (Whole wheat)	"	3.0 "
Rice	"	3.5 "
Chicken	"	18 to 20.0 "
Vegetables	"	2 to 3.0 "
Ham	"	20 to 25.0 "
Rabbits	"	12 to 15.0 "
Eggs	ea	1.0 "
Milk	Litre	5.0 "

III. WAGE RATE CONTROL.

1. Par. 5, Supplement No. 1 is amended as follows:

a. This wage schedule has been prepared from the latest available intelligence and is published for the information and guidance of all concerned. Under the circumstances, this schedule cannot fit all areas, but will serve as a rough guide as to representative wages to be paid initially in Horrified.

Common Labor	55 lire per 8 hour day
Heavy Labor	65 " " " " "
Skilled building workers	75 " " " " "
Transport workers	80 " " " " "
Skilled factory workers	80 " " " " "
Unskilled factory workers	50" " " " "
Supervisory workers	20% more than the workers

b. While the above schedule can only be used as a rough guide, employing Arms and Services will endeavour to ascertain existing local wage rates by checking workers' employment cards. These cards contain the record of the worker's previous employment.
All workers are supplied with these cards as part of the Enemy State employment system. They are similar in appearance to U.S. Army Officers' Pay Data Cards (W.D.A.G.O. Form 77).

c. Wage rates in existing services, e.g., railroad personnel, public utility concerns, etc., will be continued unchanged until further notice. In such concerns, even when they are taken over by the Army, the operating personnel will continue to be paid by the existing local organization, if possible, e.g., by municipalities in the case of municipally owned utilities. In the event such practice is impossible, the Fiscal Division, G-4 Section, Force 343, will be notified immediately.

By command of Lieutenant General PATTON:

HOBART R. GAY,
Colonel, G.S.C.,
Chief of Staff.

OFFICIAL:
/s/ W. G. CALDWELL,
W. G. CALDWELL,
Lt. Col., A.G.D.,
Adjutant General.

HEADQUARTERS SEVENTH ARMY
A.P.O. #758, US Army

1 August 1943.

SUPPLEMENT #3 (To Annex #7, to Adm. O. #1, Hq. Seventh Army).

PROCUREMENT INFORMATION AND PRICE CONTROL LIST

1. Effective immediately the following rates of pay will be used for the hiring of civilian labor by all components of the Seventh United States Army.

a. No exceptions will be permitted without prior approval of the Fiscal Officer, Seventh Army.

2. A labor pool has been established for Palermo, Sicily, and surrounding territory and, except under emergent conditions, all civilian labor hired by the Seventh Army in this district will be secured through the labor pool.

a. Labor of all classifications will be secured by informing the Labor Advisor, Civilian Supply Branch, AMGOT of such labor requirements.

(1) The above agency can be contacted by phoning 16990 or by making personal call at #22 Via Phillipo Parlatore, Palermo, Sicily.

(2) 24 hour service will be maintained by this agency.

(3) Any transportation required will be furnished by using Arm or Service.

(4) All timekeeping and payrolls will be the responsibility of the using Arm or Service.

(5) The above agency will be informed of labor requirements at least 24 hours prior to the time the labor will be required.

b. All civilian labor now employed by the Seventh Army who are not registered with the above agency will be required to register not later than 5 August 1943.

(1) All non-registered civilian labor that may be employed by reason of emergent conditions subsequent to this date, will be required to register within 48 hours after employment.

3. The following rates apply to a day of 8 actual working hours exclusive of meal time or time required to travel to and from the job.

4. A normal work week will be considered to be 48 actual working hours, 6 days of 8 hours each.

5. Overtime will be paid for all time over 8 hours worked in one day, at the rate of one and one half times the regular rate.

6. All civilian labor will be hired at the minimum rates, for a probationary period of one work week.

a. After working one week the rate of pay for the civilian employee may be revised within the maximum limit, at the discretion of the employing Arm or Service.

7. Arms or Services hiring and paying civilian employees will make no deductions from the civilians pay for unemployment or sickness benefits or similar reasons.

a. Such payments for the benefit of the worker will be made by the worker as, and when he is able to, at his own discretion.

8. Contractors working for components of the Seventh Army will be bound by the labor laws of the areas in which they operate and are not exempt by reason of being employed on military projects.

a. Such contractors will be required to make customary payroll deductions for the workman's unemployment and sickness and similar benefits but will not make any deductions in behalf of any labor organization, or society or for any commission to any organization, society, or individual, or for any similar reason.

9. Wage rates in existing services e.g., railroad, public utility, etc., will be continued unchanged until further notice. In such instances, even when taken over by the Army, the civilian personnel of the organization should not be placed on the Army payroll.

ANNEX NO. 9 CHEMICAL WARFARE SERVICE Hqrs Force 343
To 15 June 1943
ADM. O. NO. 1

1. Class II CWS Supplies.

No Maintenance for Class II Supplies other than items peculiar to Chemical Motorized Battalions and Flame Throwers will be provided for shipment to HORRIFIED. Maintenance stocks of other Class II Supplies will be set up for Force 343 and held in North Africa subject to call forward as the tactical situation dictates.

2. Class V CWS Supplies.

Basic load for white and colored smoke, incendiary and frangible grenades as set forth in Basic Load plan (copy attached). Maintenance for grenades as listed on Basic Load plan set up for assault, first and second follow-ups in accordance with Administrative Plan, Hqrs. Force 343, dated 31 May 1943. Maintenance for hydrogen, nitrogen and NaPalm for portable Flame Throwers set up on the basis of 3 UF for each Flame Thrower in the assault, first and second follow-ups.

Reserves of 4.2" Mortar ammunition set up in accordance with Administrative Plan, Hqrs. Force 343, 31 May 1943 (2 1/3 units of fire for assault, 1 1/6 for each follow-up, in the ratio of 50% HE and 50% WP).

It is the responsibility of all units to obtain their basic load of Class V CWS Supplies. Maintenance of Class II Weapons and Class V Supplies to accompany assaults, first and second follow-ups are being laid down at Fort of Embarkation by SOS.

3. Smoke Munitions for Area Screening.

Smoke Pots, HC M1 and Smoke Floats, HC M4, set up for JOSS, KOOL, CENT and DIME sub-task Forces in following quantities:

ITEM	Assault	D/A	D/8
* Pot, Smoke, HC M1	8300	8300	8300
** Float, Smoke, HC M4	4200	4200	4200

* 8300 for KOOL Assault, 8300 KOOL follow-up.
** 4200 for KOOL Assault, 4200 KOOL follow-up.

4. Training Gas Masks.

All Assault troops will carry the Training Gas Mask. Service or Diaphragm Masks of individuals furnished the Training Gas Mask will be turned in to be boxed and shipped forward with other T/BA equipment for reissue as soon as the tactical situation permits.

The command group of the Seventh Army, with the exception of the Commanding General, consisted of the Deputy Commanding General, the Chief of Staff, the Tactical Deputy Chief of Staff, the Administrative Deputy Chief of Staff, a Secretary of the General Staff Section, and the personal staffs of the general officers of the group.

Its purpose was to provide an immediate agency through which the Commanding General could most efficiently and properly discharge his responsibility of command.

The duties and responsibilities of the Deputy Commanding General and Chief of Staff followed the necessary and well defined practices previously established. It was the process by which the mass of tactical and administrative detail was collected, coordinated and dispatched, which requires some additional comment in this report.

The mechanical phases of this process were largely accomplished through the Secretary of the General Staff Section, commonly referred to as "Chief of Staff Section". It was gradually formed during the planning phase of the operation in order to carry out certain duties designated by the Commanding General of Force 343. Without precedent as regards many of its ultimate over-all functions, those responsible for the establishment of the section had to proceed slowly by trial and error to crystallize its duties and responsibilities by the time the operational phase commenced.

Based upon his experience in the Tunisian campaign, the Commanding General insisted that there be at all times connected with the forward echelon, sufficient officer and enlisted personnel to perform the following duties:

1. Maintain a record of, and coordinate, all orders and instructions emanating from the various staff sections, together with orders and instructions received. A record of the action taken in each case was likewise to be recorded.

2. Make available for ready reference by the command group complete up-to-date reports on:

   a. Casualties.
   b. Replacements.
   c. Prisoners of War.
   d. Materiel losses.
   e. Captured materiel.

3. Coordinate, through the Chief of Staff, all requests for: a. air support; b. Corps (Army) artillery support, and later, Naval fire support and record the time, action taken, time support was received, and results.

4. Accomplish the administration of the command group, and distribute information to the interested sections.

At the outset of the planning phase, the Adjutant General of the I Armored Corps, Reinforced, had set up a special classified section, the sole duties of which were to receive, distribute, record, and transmit all of the classified material relating to the Sicilian operation. It was anticipated that the highly specialized duties of this classified section would make its personnel completely familiar with the plans, records and administrative responsibilities within the Corps with regard to the operation, and thus permit them, without further briefing, to be incorporated in the Chief of Staff Section at the outset of the operation proper.

Moreover, it had become apparent by the time Corps Headquarters moved to Mostaganem, Algeria, on 26 April, that because of the numerous complexities and difficulties elsewhere mentioned, in the preparation for the operation, an administrative assistant to the Chief of Staff was highly desirable. Consequently, on 12 May, the Corps Adjutant General was relieved from such assignment and made Administrative Deputy Chief of Staff. Thereafter, all of the administrative matters pertaining to the Corps, including those involved in the Sicilian operation, were routed through the Chief of Staff Section to the Administrative Deputy Chief of Staff, for action.

At the same time, the section took over from the special classified section of the Adjutant General the receipt, approval, and transmittal of all outgoing classified messages relating to the operation, and kept the complete records thereof. The section also established and maintained a complete planning and operational file for ready reference by the command group, as well as special operational files for the Commanding General, Deputy Commanding General, Chief of Staff, and Tactical Deputy Chief of Staff.

At the conclusion of the planning phase, the Chief of Staff Section, in addition to the Chief of Staff and the Tactical and Administrative Deputy Chiefs of Staff, consisted of three commissioned officers in the Secretary of the General Staff Section, and three staff sergeants who functioned as stenographers and file clerks.

Thus, the section, although a little short of personnel for the additional clerical work involved, was able during the planning phase of the operation to render considerable and constant assistance to the Chief of Staff and the Deputy Chiefs of Staff in the discharge of their duties. The orders, instructions, and other activities of all sections of the general and special staffs of the Corps were coordinated and expedited through the Section to the Chief of Staff and Commanding General with very little delay.

In preparation for the operation proper, with the extremely limited space and transportation facilities available, certain carefully selected files relating to the Sicilian operation were taken to the headquarters ship, and the Chief of Staff Section was increased by the addition of one officer and four enlisted men who had previously worked in the special classified section under the Corps Adjutant General. The section was now complete for the operation, and consisted of the Chief of Staff, two Deputy Chiefs of Staff, four officers and seven enlisted men who were also familiar with the planning, tactical and supply phases involved in the operation.

With the opening of headquarters aboard the U.S.S. "Monrovia", the section functioned on a twenty-four hour duty basis, with at least one officer and two enlisted men on duty at all times. The section's functions in assisting the Chief of Staff during the initial operational phase until the Army headquarters was established at Gela, Sicily, on 12 July, consisted principally of receiving, recording, distributing, coordinating, and preparing for radio transmittal all communications to and from the command group and staff sections in the forward echelon. The record of the planning phase of the operation was also made available for frequent reference by the command group and officers of the Army staff.

Meantime, during the planning phase, Corps unit staff sections, including divisions, had been specially instructed in administrative matters involving the collection and preparation of information to be provided the Chief of Staff Section. Schools were conducted for units from whom such information was desired.

In anticipation of the receipt of such information, files were opened and prepared to record:

1. Orders and instructions given and received during the operational phase.

2. All air support requests, the action thereon, the result, and the time period therefor.

3. Materiel gains and losses.

4. Casualty, replacement, Prisoner of War, and enemy personnel loss files.

One statistical clerk was assigned to keep a cumulative daily report on such information.

Casualty, replacement, and Prisoner of War reports had a necessary lag, as did the reports of materiel losses, such lag averaging about three days. These reports depended largely upon the time required by the lower echelons to assemble the information. In order to obviate this lag, G-2 commenced the publication of a daily estimate of casualties, Prisoners of War, materiel losses, enemy casualties, and captured equipment, from its available sources of information. G-1 and G-4 soon adopted this practice with regard to the information for which they were responsible. The estimates of G-1 and G-4 were revised daily to conform with the actual figures as they arrived and, on the whole, the estimates proved extremely accurate. They were of considerable assistance in providing the command group with vital information.

As the Advance C.P. moved East from Palermo, the section established a daily officer courier service by Cub plane to Main Headquarters to insure the delivery of important communications. This was maintained until the close of the campaign.

During the entire operation, checks and follow-ups were constantly made on delivery and dispatch of important messages to other headquarters, and the section continued to receive and distribute all incoming radio messages and other material at the Advance C.P.

At the conclusion of the Sicilian operation, the section was charged with performing the following duties:

1. Coordinating all orders and instructions relating to the operation issued from the various sections of the Advance C.P.

2. The receipt, coordination, recording and distribution of radio messages to interested staff sections, designating by whom action should be taken.

3. Maintaining as an official record, the file of all incoming and outgoing radio messages.

4. Receiving and consolidating all reports relating to:

   a. Casualties.
   b. Replacements.
   c. Prisoners of War.
   d. Enemy casualties.
   e. Materiel losses.
   f. Captured equipment and enemy materiel losses.

5. Handling the receipt and distribution of miscellaneous material to the interested sections in the Advance C.P., and accomplishing the administration for the command group.

6. Operating an officer courier service.

7. Maintaining, insofar as possible, records of artillery and naval fire support requests and air support requests.

8. Handling stenographic work originating in the section and the command group.

9. Following up the dispatch and delivery of orders and instructions issued by the command group to lower echelons.

CONCLUSIONS

1. The clearance of all tactical and certain administrative orders and instructions through the Chief of Staff Section were handled expeditiously and produced the following additional benefits:

   a. Inconsistent orders and instructions were obviated before transmittal.

   b. Outgoing messages were reclassified through a central agency to insure their proper priority in transmittal.

   c. Enabled the Chief of Staff Section to provide a central agency for the follow-up and check on the delivery or transmittal of important documents and messages and to furnish a special messenger service where the circumstances required it.

   d. Enabled the Chief of Staff Section to maintain a complete record of the operation available for the proper coordination necessary to its direction.

2. For future operations, where it appears probable that Army Headquarters will operate an Advance C.P., supervision of Main Headquarters and its coordination with the Advance C.P. must be effected through an over all executive head in command of Main Headquarters.

RECOMMENDATIONS

1. In future operations, a Chief of Staff Section similar to the one described in this report should be established, prepared to operate indefinitely on a twenty-four hour duty basis.

2. Prior to the operation, an operating procedure in connection with requests for Naval fire support and Air support should be carefully worked out with the Naval and Air operations staffs, which should also provide for such additional information as may be required by the command group.

3. A general officer, thoroughly familiar with all phases of the operation, should be placed in command of the Main Headquarters (when separated from the Advance C.P.) whose sole duties should be the coordination and control of Main Headquarters and the various general and special staff sections thereof, and the coordination of the Main Headquarters with the Advance C.P.

I GENERAL

On receipt of outline plan for HUSKY Operation, the first problems confronting G-1 were the selecting and assembling of officers for the various headquarters Staff Sections and building up to T/O strength of all units assigned to the command.

There were assigned to headquarters at this time 85 officers, organized under T/O 100-1. Recommendation was made to higher headquarters for organizing under 100-1, with certain modifications, providing for a total of 178 officers. This was approved and the necessary officers to bring headquarters up to this new strength were assembled, in many cases by name, and in others by qualification, from practically every source within the theater, including higher headquarters, Base Sections, Replacement Depots and subordinate units.

The replacement procedure at this time provided for requisitions to be submitted through Headquarters I Armored Corps and Fifth Army to NATOUSA, where they were approved and sent to Replacement Depots for filling.

Concurrent with the assembling of personnel, special units necessary for the particular operation being planned, were activated under approved T/O's and personnel provided for them.

Outline plans for the operation were prepared, covering all phases of G-1 responsibility. Plans included securing and distributing replacements; the receiving and disposing of Prisoners of War; coordination with Civil Affairs officer and AMGOT; Military Police plans; the preparation of directives on administrative procedures covering G-1 reports, promotions, decorations and awards, Prisoner of War reports and Graves Registration; the securing and distribution of an adequate initial supply of medals, and many other diverse phases.

III ADMINISTRATIVE INSTALLATIONS

- Headquarters Installations -

All properties occupied within cities and towns occupied by Seventh Army Headquarters during the campaign were requisitioned through, and approved by G-1; this applied also to bivouacking within the cities and towns occupied.

Seventh Army Headquarters was moved from the headquarters ship and established in GELA on 11 July 1943. It was divided into a Forward Echelon, established in a fortified park area just outside the town, and a Main Headquarters Echelon which was established in the Ecola Communal. Forward Echelon consisted of the Commanding General, the Deputy Commanding General, The Chief of Staff, Deputy Chiefs of Staff, Aides, Secretaries, G-2, G-3 and a detachment of the Adjutant General Section.

G-1 Billeting Officer reconnoitered and made detailed assignments of the space in these headquarters installations and also provided office space and billets for the XII Air Support Command, Headquarters Seventh Army, Provisional Car Company, and other units which it was necessary to establish in town. Officers' billets were provided by requisitioning several apartments and two hotels.

On 21-22 July the headquarters was moved in two echelons from GELA to AGRIGENTO into facilities previously reconnoitered by Billeting Officer G-1; the Forward Echelon was established in Fascist headquarters, and the Main Headquarters Echelon was established in a German Marine Barracks. The Hotel Des Temples was requisitioned for billets for field officers, and an officers' mess was established therein. Company grade officers of headquarters were billeted in a portion of the Marine Barracks.

On 23 July 1943 headquarters was moved from AGRIGENTO to PALERMO in two echelons, and into previously reconnoitered facilities. The Forward Echelon was established in the Palazzo Reale and the Main Headquarters in the Palazzo Del Poste E Telegrafi. The Hotels Excelsior, Grand, and Sole, and an apartment building at 39 Via Liberta were requisitioned for the billeting of headquarters and transient officers.

The problems of assigning billets and bivouacs to Allied Military as well as civilian agencies within the PALERMO area proved to be of some magnitude. A Billeting Section was established under Billeting Officer, G-1, Seventh Army, consisting of 4 officers and 3 enlisted men. Over 200 buildings and properties were requisitioned by Seventh Army in PALERMO for various command groups including Naval, Air, and Ground Forces, as well as for the Base Area Group, and the many tactical and service units necessarily located within the city for defense and for operation of the port and other facilities. All of these properties were formally requisitioned through G-1 and checked by the Engineer Section. Inventories of all moveable property were taken and, where necessary, civilians were evacuated, coordination being effected with Civil Affairs Officer, AMGOT.

- Prisoner of War Inclosures -

Prisoner of War Inclosures established in SICILY included:

Operated by Seventh Army -

GELA Inclosure:
Opened 15 July, closed 28 July.
Capacity - 8,000 prisoners.
Operated by 342nd Military Police Escort Guard Co., and Prisoner of War Processing Detachment.
2360 Prisoners of War handled thru Inclosure.

LICATA Inclosure:
Taken over by Seventh Army from 3rd Division, 18 July.
Operating capacity - 8,000 prisoners.
Operated by 179th Escort Guard Company and 261st Prisoner of War Processing Detachment.
29,050 Prisoners of War handled thru Inclosure.

PORTO EMPEDOCLE Inclosure:
Opened 19 July, closed 14 August.
Capacity - 20,000 Prisoners of War.
Operated by Detachment 379th Military Police Escort Guard Company and Detachment of 261st Prisoner of War Processing Detachment, relieved by 342nd Escort Guard Company and Prisoner of War Processing Detachment, 28 July.
33,130 Prisoners of War handled thru Inclosure.

CEFALU, TUSA, NICOSIA Inclosures operated by Army personnel as transfer Inclosures only. Prisoners of War received held only long enough for transportation by rail or motor, to PALERMO or LICATA. CEFALU Inclosure closed 9 August. TUSA and NICOSIA opened 9 August. 342nd Military Police Escort Guard Company and Processing Detachment moved to TUSA 22 August.

THIS PAGE IS DECLASSIFIED IAW EO 13526

Operated by other units assisted by Seventh Army personnel -

PALERMO Inclosure.
Opened by 3rd Division, taken over by 2nd Armored Division about 1 August.
Assisted by Processing Personnel Seventh Army, and Military Police Escort Guard platoons loaned Seventh Army by NATOUSA.
Capacity - 10,000 Prisoners of War.
41,750 Prisoners of War handled.
Now operating.

PRIZZI Inclosure.
Opened by the 3rd Infantry Division, taken over by 2nd Armored Division about 1 August.
Processing Personnel from Seventh Army assisted in processing.
Prisoners of War evacuated through PORTO EMPEDOCLE and PALERMO Inclosures.
Capacity - 20,000 Prisoners of War.
Approximately 20,000 Prisoners of War evacuated to this Inclosure by 3rd Division, 2nd Armored Division and 82nd Airborne Division.

SCIACCA Inclosure.
Opened and operated by 82nd Airborne Division.
Capacity - 4,000.
Closed 12 August.
Processing Detachment and a Processing Platoon processed and evacuated to PORTO EMPEDOCLE Inclosure 7,261 Prisoners of War.

TRAPANI Inclosure.
Opened about 22 July and closed about 12 August.
Operated by 82nd Airborne Division assisted by Processing detail from Army troops.
7,000 Prisoners of War evacuated thru PALERMO Inclosure.

ENNA Inclosure.
Opened about 20 July.
Operated only as transfer Inclosure to LICATA

- Straggler & Casual Installations -

Initial plans for handling casuals and stragglers provided for the early establishment of Replacement Battalions at suitable locations, three such battalions having been requested of NATOUSA. These battalions, besides their normal function for handling replacements, would perform the function of receiving, housing, caring for and re-equipping casuals from hospitals and returning them to their units.

The battalions were never approved and, until August 5th, when authority was received to provisionally organize the 6648 Casual Battalion with personnel drawn from units assigned to Seventh Army, the Provost Marshal was forced to depend on Army and Unit ration trucks, supplemented at times by special truck convoys and special trains when available.

The Provost Marshal provided military police personnel at Class I Supply dumps, both Army and Divisional, and also at straggler collecting points, whose sole responsibility it was to see that casuals, including those returned from hospitals, were provided water, food and necessary shelter and transportation to their units, usually via ration trucks or rail.

Due to the complex supply system necessitated by the supplying through ports on both sides of the Island - and over great distances; and due to the shortage of transportation caused by these complexities, the system of return was not entirely satisfactory. As soon as authority was received to organize the 6648 Casual Battalion, it was established and seperated into two echelons, one at PALERMO, the other at CEFALU, and later a third at LICATA, and all incoming replacements, as well as casuals returning from hospitals, were handled by it under the close supervision of G-1. This worked very satisfactorily, however, it was still necessary to depend largely on retion trucks and supply trains for transportation, and the Provost Marshal still was required to keep military police personnel at each retion dump to control the return of casuals and to see that they were fed and cared for between arrival and departure of transportation.

It is believed that the original plan of establishing Replacement Casual Battalions on the Island, as soon as the tactical situation would permit, would have greatly improved this important function. The size of the problem can be understood when the figures are considered. Replacements brought in to the Island and distributed to the units over this period totaled 7,226; the casuals returned from hospitals, both on the Island and from North Africa totaled 7,414.

Army Straggler lines and Collecting Points were established successively as follows:

Initially, on 12 July, the City square at GELA, with sub-posts on the highways leading into town. By 14 July, Straggler lines were extended on all roads out of GELA approximately 5 miles. July 21 Straggler lines were established along Army rear boundery Route 115, from GELA to AGRIGENTO. July 26 Army Straggler line established along roads in the vicinity of PALERMO. The main Straggler Collecting Point was set up near the post office in PALERMO and later moved to the Class I Supply Dump at PALERMO. The second Army Straggler lines were established on Highway 120 from TERMINI IMPRESE to CALAVATURA, thence along highway southeast to road junction Route 121, extended along Route 121 to Army boundary.

Collecting Points were established at TERMINI IMPRESE, CALAVATURA and ST. CATARINA.

August 12 the Army Straggler line was moved to Route 117, extending from SAN STEFANO to ENNA. Collecting Points were established at TUSA, NICOSIA, and ENNA.

IV CASUALTIES & RETURNS

Due to the rapidly moving tactical situation and accompanying communication difficulties, regular daily G-1 Reports were often received too late to be of current value in reflecting casualties.

In addition to the regular G-1 reports, the Commanding General was provided twice daily - at 6:00 A.M. and 4:00 P.M. - with up to the minute, carefully checked reports, covering for our own forces — Killed - Wounded - Missing in Action and Replacements; and for enemy forces — Prisoners of War - Estimated Killed and Wounded. Data for these reports was secured in code by every available means, including phone, air courier and radio. Final figures from casualty reports and G-1 reports proved that these estimated daily reports were remarkably accurate. Some pertinent data extracted from the afternoon edition of these reports is tabulated herewith:

TIME & DATE	KILLED	WOUNDED	MISSING	TOTAL
1600, 10 July	58	205	787	1050
1600, 11 July	175	615	2581	3371

Signal Corps	39	5,879	.68
Medical Corps	7	864	.55
Quartermaster	27	11,112	.24

CASUALTIES EXPRESSED IN PERCENTAGE OF TOTAL TROOPS IN ACTIVE ZONE, FOR EACH TYPE CASUALTY

	NUMBER OF CASUALTIES	TROOPS ACTIVE ZONE	PERCENT
MIA	971	166,212	.58%
KILLED	1,240	166,212	.74
DEAD	109	166,212	.062
SW	1,863	166,212	1.12
LW	2,915	166,212	1.75
CAPTURED	36	166,212	.022
TOTALS	7,134	166,212	4.23%

CASUALTIES EXPRESSED IN PERCENTAGE OF TOTAL CASUALTIES, FOR EACH TYPE CASUALTY

	TYPE CASUALTY	TOTAL CASUALTIES	PERCENT
MIA	971	7,134	13.6%
KILLED	1,240	7,134	17.2
DEAD	109	7,134	1.4
SW	1,863	7,134	26.1
LW	2,915	7,134	40.7
CAPTURED	36	7,134	.50

Note: Above figures are based on M.R.U. figures as of 31 August 1943

MIA - Missing in Action.
K - Killed.
D - Died of Wounds.
SW - Seriously wounded.
LW - Slightly wounded.
C - Captured.

V GRAVES REGISTRATION

Outline plans called for the landing with the assault echelons of the various Task Forces, of eight Graves Registration Platoons, earmarked for Force 343. In addition to Graves Registration troops, it was contemplated that additional Graves Registration and burial details would be furnished from Division Quartermaster battalions or other service troops, this extra personnel to be assigned and trained in each Task Force before the assault. Complete, detailed instructions for Graves Registration personnel was prepared and distributed to all units 31 May 1943. Actually only six platoons were made available and in one case a Task Force did not land its Graves Registration Platoon with the assault. However, graves registration was completed without mishap and according to plans.

Identification was difficult in many cases because of lost identification tags and dismembered bodies. This difficulty was largely obviated and Graves Registration was immeasurably facilitated by requiring the identity of every officer and enlisted man to be marked inside of each legging.

- Cemeteries -

Data on all important cemeteries established by Seventh Army units is outlined below.

During the early stages of the Sicilian campaign the Third Infantry Division established a cemetery at LICATA, SICILY, 1,000 yards northeast of the town on Highway 115. This cemetery, now known as United States Military Cemetery No. 1 was opened 11 July and closed on 1 August. It was operated by the Company Headquarters and one platoon of the 48th Quartermaster Graves Registration Company. There are buried in this location 176 American, 7 Allied and 163 enemy dead.

At a point seven miles north of BELA, the first Infantry Division started making burials on 10 July 1943 and continued doing so until 20 July 1943. On 21 July the 1st Platoon of the 45th Quartermaster Graves Registration Company started making burials, as the 4th Platoon of this unit attached to the First Infantry Division, sent bodies back to this cemetery. In this place there are buried 1,008 American, 126 Allied and 588 enemy dead. This cemetery is known as United States Military Cemetery No. 2.

The second Armored Division established a cemetery three and one-half miles west of PALERMO, on Highway 113, on 5 August 1943, which is being operated by the 2nd Platoon of the 48th Quartermaster Graves. This cemetery has a capacity of 1,000 American graves. 133 American and eight Allied soldiers are buried there.

About 12 August 1943 the temporary cemetery established at SAN STEFANO was discontinued as a burial ground and sixty bodies were moved to CORONIA. On 15 August 1943 burials were begun here and total 451 American and 408 enemy. Company Headquarters and one platoon of the 48th Quartermaster Graves operated this cemetery. This cemetery is known as United States Military Cemetery No. 3.

The above figures include Air Corps, Naval and Ground Force personnel and unidentified dead.

- Temporary Cemeteries -

Among the many temporary cemeteries established during the course of battle, the following are most important:

Third Division cemetery at AGRIGENTO, one and one-half miles southeast of the city. All bodies have been disinterred.

COMISO Airfield cemetery which contained 64 Americans who were moved to United States Military Cemetery No. 2. Sixty enemy remain in this cemetery.

CEFALU cemetery established by the 45th Division with 84 Americans and 48 enemy, now being disinterred to Military Cemetery No. 3.

TROINA cemetery, established by the Ninth Infantry Division with 56 Americans and 74 enemy, now being disinterred to Military Cemetery No. 3.

MONTEVAGO cemetery, established by 82nd Airborne Division with 11 Americans and and 7 enemy, is being disinterred to Second Armored Division cemetery.

In addition to these, the Third Division and Ninth Division established temporary cemeteries at ACQUI DOLCI and SAN STEFANO.

VI REPLACEMENTS

Replacement plan prepared by G-1 was predicated on anticipated losses during the period D to D+7, 15% of all assault units - 12,000; D+7 to D+15, 8% of total build up to date - 12,000. By D+21, 4% of total build up to date - 6,000; a Grand Total 15% overstrength to assault divisions and attached assault units at the earliest practicable date. And secondly -to operate 3 Replacement Battalions, initially on the North African side and later on the Island, and to secure a flow to these Replacement Battalions from North Africa Depots at an approximate rate of 1,500 per day; replacements to be furnished by branches and arms in the same proportion as received in North African Theater.

NATOUSA approved in principle the 15% overstrength but the personnel never became available for assignment. NATOUSA also initially approved Replacement Battalions as requested - later they proved not to be available. G-1 then requested that shipping be allocated in Shipping Priority Tables, for the flow of approximately 1,500 replacements per day, and requested that NATOUSA, upon radio requisition, organize required replacements into march groups of suitable size, each under the command of an officer, and land them on appropriate Sub-Task Force beaches where guides and, when possible, transportation from the units would meet them. This plan was approved and was followed.

Transportation for movement of replacements was not available to bring all units up to T/O strength before departure for SICILY and all outstanding requisitions were cancelled by NATOUSA on the 10th of July.

NATOUSA was requested to have all assault units mounted in United States for Force 343 arrive on D-day 15% overstrength in enlisted men and officers of company grade. This was not done.

Plans called for a pool of 6,000 replacements being available at E.B.S. by D-day. G-1 left an officer with Seventh Army Rear Echelon to facilitate the forwarding of replacements. On D-day, only a small number of replacements were in the 7th Replacement Depot, while in the 2642 Armored Replacement Battalion, approximately 1,500 replacements were available for assignment.

The first Radio requisition was submitted on D+3 by this headquarters for 1,039 enlisted men and 665 actual replacements were delivered over the beaches on D+ 8. This requisition was shipped 374 short because replacements were not available in the 7th Replacement Depot.

The shortage of replacements in the depot on D-day was attributed to the fact that transportation in North Africa was primarily being allocated for movement of units rather than filler replacements.

Subsequently, requisitions were received from units regularly by telephone, radio, and courier, forwarded by radio to NATOUSA, and the replacements received with reasonable promptness, until 14 August when last shipment was made with a large number on outstanding requisitions unfilled, due to shortage of replacements and lack of shipping facilities.

The total number of replacements shipped and delivered to units in SICILY and in Africa after D-day was 8,752.

- Miscellaneous Personnel -

Early in June, three courier officers were procured and air courier service between headquarters Force 343 and NATOUSA established.

In mid June a staff was assembled for the 1st Engineer Special Brigade, using officers selected from Corps units.

The 204th Military Police Company was reinforced by two officers and ninety enlisted men on Detached Service from low priority units.

A Provisional Engineer Utilities platoon was approved as temporary increase to Headquarters Company and organized, specialist personnel being assembled from I Armored Corps Units.

Additional administrative personnel for Task Force Kool was approved and personnel so assigned.

The 6616 Provisional Car Company was activated and personnel assigned.

VII PRISONERS OF WAR

Plans for handling Prisoners of War prepared by G-1 were based on estimated average daily rates of flow as follows:

	D to D+5	D+5 to D+15	After D+21
Maximum	2,500	8,000	8,000
Average	1,000	1,000	830 (for 1st 30 days)

Plans made Sub-Task Force Commanders responsible for the preparation of nominal rosters, the evacuating of prisoners to Naval craft, and the providing of guards to accompany them to Inclosures in North Africa, all processing being done by NATOUSA after reaching North Africa. It was further planned that Provost Marshal, Seventh Army, would establish Army Inclosures as soon as practicable and facilitate the actual evacuation. The usual Prisoner of War reports to G-1 Force 343, including copies of nominal rosters, were to be furnished by Sub-Task Force commanders. Two Military Police Battalions, two Prisoner of War Escort Guard Companies, and two Processing Detachments were requested in addition to the organic Military Police Companies and platoons.

Actually, one battalion, two Guard Companies and two Detachments were assigned. The great number of prisoners captured made it necessary for Army to assist Divisions earlier than had been planned; and the great numbers captured at the time the beaches were still under fire made the preparation of nominal rosters on initial troops practically impossible. The number of guards required became a serious factor because of depleting the strength of combat units. On 15 July, 8 officers and 200 enlisted men were brought over from low priority Force 343 units in North Africa, to serve as guards for prisoners during evacuation. An additional 200 more men were brought over for the same purpose. In addition ninety extra enlisted men were attached to 204th Military Police Company, prior to sailing and later it became necessary to add one hundred enlisted men to the 204th Military Police Battalion. On 29 July authority was granted to parole Sicilian Prisoners of War. Necessary forms were printed and parolling began August 1st. Actual prisoners captured and processed are shown in table below:

parole of Sicilians, B-6

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

G-1 Reports from units showed the following Prisoners of War captured and evacuated during the period of the campaign:

WEEK ENDING	CAPTURED	EVACUATED FROM UNITS
17 July	22,153	14,386
24 July	31,389	26,179
31 July	24,683	16,907
7 August	13,158	19,383
14 August	5,860	20,098
21 August	5,696	5,696
TOTAL	102,939	102,649

Provost Marshal, Seventh Army, Report of Status of Prisoners of War at termination of the campaign follows:

P/W On Hand in Sicily:	Total	German Officers	German E.M.	Italian Officers	Italian E.M.	Other Prisoners
P/W Inclosure No. 1	9,299	0	0	66	9,233	
Labor Camps outside Palermo	3,715	0	2	1	3,712	
Military Hospitals (Staff & Patients)	1,470	0	9	145	1,239	77 (Sicilians)
Paroling Teams outside Palermo	15			5	10	
TOTAL	14,499	0	11	217	14,194	77
Evacuated:						
Palermo	14,202	4	492	925	11,893	873 (Slovene) 15 (Pole)
Enpedocle	30,335	14	1,002	1,182	28,137	
Gela W/O nominal Rolls	2,360		270	90	2,000	
Licata W/O Nominal Rolls (Estimate)	25,310	4	574	408	24,324	
	1,428				1,428	
TOTAL	73,635	22	2,338	2,605	67,782	888
Paroled:						
Sicilians	33,762				33,762	
Chaplains & Doctors	308			308		
GRAND TOTAL	122,204	22	2,349	3,130	115,738	965

Difference between total reported by units and total reported by Provost Marshal may be attributed to the fact that Sicilians turned themselves in to Army Inclosures in order to be paroled.

VIII MORALE

- Battlefield Promotions and Appointments -

On 19 June 1943, the Commanding General, NATOUSA, authorized the Commanding General, Seventh Army, to promote officers, up to and including the grade of Lieutenant Colonel, and to appoint Warrant Officers and enlisted men to the grade of Second Lieutenant who demonstrated outstanding ability to command in actual combat. This authority did not apply to Staff promotions, and it authorized promotions or appointments to fill existing Table of Organization vacancies only. Staff promotions were to be processed in the usual manner. The intent of this authority was that officers and enlisted men who showed outstanding leadership in battle could be immediately promoted or appointed to fill a Table of Organization vacancy. The usual situation for these appointments was one in which officers were lost, due to casualties or transfers and the enlisted man took command and let his platoon, and in some cases his company, to the successful accomplishment of its battle mission.

- Regular Promotions -

During the period of the operation, normal promotions were processed in the usual manner. Those Staff Officers and Administrative officers not eligible for promotion under the authority granted for battlefield appointments, but who were eligible for regular promotions, were promoted by the Commanding General, NATOUSA.

The following is a tabulation of recommendations for promotion processed by G-1 after 10 July 1943:

REGULAR PROMOTIONS	BATTLEFIELD PROMOTIONS	BATTLEFIELD APPOINTMENTS	TOTAL
1,435	141	122	1,698

- Decorations & Awards -

Based on War Department figures and a review of the records of the TORCH, DIEPPE, and TUNISIAN operations; and considering the number of troops, type of operation and estimated casualties for Operation HUSKY, requirements of all types of decorations were estimated. The medals were requisitioned to be shipped in two equal shipments, the first to arrive not later than D minus 15 and second not later than D-Day. Medals requisitioned were as follows:

Medal of Honor	16
Distinguished Service Medal	30
Distinguished Service Cross	150
Silver Star	900
Purple Heart	30,000
Distinguished Flying Cross	500
Soldiers Medal	200
Good Conduct Medal	1,000
Oak Leaf Cluster (L)	6,000
Oak Leaf Cluster (S)	1,500
American Campaign Ribbons	125,000
Battle Stars (Bronze)	125,000

The first shipment was received and distributed to units assigned to Force 343 early in June. In order to insure the 45th Infantry Division having medals with it when it landed, the Commanding General was instructed by radio, 26 May 1943, to bring the necessary medals with the Division, and a list of appropriate medals, and quantities of each needed, was supplied. These medals were actually brought over by the Division. In addition to the medals distributed to the units, a supply was retained for Headquarters Seventh Army, and each sub group of G-1 Section, Seventh Army, brought on D-Day a sufficient number of medals and ribbons for use in making any merited awards promptly. The remaining medals retained by headquarters were brought to SICILY on D plus 14.

Two Silver Stars were presented aboard the headquarters ship en route to SICILY.

Awards authorized to be made by Commanding General, Seventh Army, include the Distinguished Service Cross, the Silver Star, the Distinguished Flying Cross, the Soldiers Medal, the Purple Heart and the Air Medal.

Complete directives to all units on procedures in the preparation and processing of recommendations for awards were published to all units on 6 June 1943 in Memorandum No. 55, Headquarters I Armored Corps, and covered orally in administrative schools attended by personnel sections of all major units. Particular stress was placed on promptness of investigating, and recommending all deserving cases for the appropriate award.

Under column "Awarded", below, are tabulated awards made after 10 July 1943 by NATOUSA, Headquarters Seventh Army, Corps, Divisions and Brigades, exclusive of Purple Heart. Under column "Recommended", are tabulated recommendations forwarded to higher headquarters but not yet acted upon:

	AWARDED	RECOMMENDED
Medal of Honor		1
Distinguished Service Medal	1	8
Distinguished Service Cross	29	
Legion of Merit	75	287
Silver Star	476	
Soldiers Medal	45	
TOTALS	626	296

At the time of writing this report recommendations are still being received daily, based on action during the Sicilian Campaign and are being processed.

- Special Services -

Plans were made for the assembling and distribution of supplies to all units on troop list. Concurrently with the planning, Special Services clubs and movies were opened and operated in MOSTAGANEM and film service arranged for. Request was made to NATOUSA for two Special Services companies for Task Force 343 but these did not arrive in the theater in time for assignment. Units which had been engaged in the Tunisian Campaign were re-equipped and re-supplied by the Special Services Officer.

The E. F. M. system was established.

Plans were completed for Special Services activities in SICILY. Requisitions were submitted for necessary supplies and equipment. Supplies and equipment were distributed to units, including books and small games for use on board ships. Special stress was placed on sufficient supplies of cigarettes, reading material, cards and small games, solely for hospital use. Arrangements were made by the Army Special Services Officer with the Stars and Stripes to have the newspaper furnished free, 60,000 per week, starting with the issue of 3 July to all troops in the combat area.

Army Special Services Officer and forward Special Services group landed on D plus 4, the remainder of the Section arriving on D plus 8 and D plus 14. Surveys and reconnaissances were initiated immediately and supplies distributed to units. Movies were supplied to units through the use of portable equipment. A theater was secured and put in operation in PALERMO. August 11, radio station A.E.F. commenced operation, and on 12 August the first Sicilian edition of the Stars and Stripes appeared.

At the conclusion of the campaign, movies and supplies were pushed to all units in the field and personal contact made with all units by the Special Service Officer; also, a recreational program was available in PALERMO, including movies, clubs and bathing beaches.

- Religious Activities -

During actual operations in the Sicilian Campaign, members of the Chaplain Corps served with their respective units, ministering to the wounded and dying and assisting in the care of the dead. They helped to direct the evacuation of the dead from the battlefield and performed appropriate religious rites in burials. In some instances Chaplains served as Graves Registration officers of their respective units. Appropriate religious ceremonies for all faiths were held as frequently as the tactical situation and the number of Chaplains available permitted. The work of the Chaplains of Seventh Army and subordinate units was a great factor in the maintenance of high morale.

- Payment of Troops -

On 31 May 1943, an Army Finance Officer was assigned to Special Staff. Based upon troop list and strength of command, immediate steps were taken to provide necessary disbursing detachments, and personnel therefor was assembled by G-1. The 6055-E Disbursing Detachment was redisignated as the 25th Finance Disbursing Section to serve Army troops.

A special finance section for 1st Engineer Special Brigade was approved, activated, and personnel furnished from units in Task Force 343.

Due to the fact that many of the troops were on shipboard at usual time of payment of June rolls, and were in action in July, the payment of some troops was delayed. However, with the arrival of the Rear Echelons of the major units, followed by the withdrawal of other units in action, troops were paid without undue delay. A large percentage of pay received by troops was sent home or put into one of the various types of saving.

- Courts Martial -

Courts martial cases handled by the Staff Judge Advocate, Seventh Army, for the period 10 July to 21 August were as follows:

Summary courts martial cases	432
Special courts martial cases	136
General courts martial cases	12
Total	580

- Postal Service -

Thirteen postal units participated in the campaign. A.P.O. #45 landed on D-Day, the remainder of the A.P.O.'s arriving in SICILY by D 15. All available mail was brought over to SICILY by the A.P.O.'s. The first follow-up from Africa of 700 sacks arrived at LICATA on 21 July and was promptly delivered to various organizations. Outgoing mail was dispatched regularly to Africa by air. Incoming mail from Africa by air averaged 1,000 pounds daily, in addition to a considerable volume coming in by water transportation. Mail service on the island was considered good, units having received mail in record time.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

- American Red Cross -

Field directors landed with combat teams to handle soldier's welfare work and to distribute supplies.

American Red Cross also had workers in each hospital to distribute cigarettes and supplies.

American Red Cross was furnished with, and operated, facilities secured and established by Special Services Officer, Seventh Army, including beach club at MONDELLO, the Massimo and E.N.I.C. theaters, clubs at 110 and 115 Via Cavour and two large shower installations in PALERMO.

IX CIVILIAN POPULATION

Original plans called for the Provost Marshal to coordinate closely with the Public Safety Division of the Civil Affairs Section, Force 343. Initially and until such time as existing civil police had been reorganized, the Provost Marshal, Force 343 was responsible for the control of Military and Civilian personnel; the maintenance of law and order; the control of traffic, registration and circulation of civilians, and recommendations for the protection of vital installations. Insofar as available, Military Police personnel permitted, the Provost Marshal, Force 343, and Provost Marshals of Sub-Task Forces furnished detachments of Military Police for assistance of the Public Safety Officers of the Civil Affairs Section. These detachments assisted the Public Safety Officers in enforcement of the laws and regulations of the Military Government and in the reorganization and supervision of any existing civilian police force.

A Civil Affairs officer was assigned to the staff of the Commanding General, Seventh Army and accompanied his headquarters on the initial landing. Civil Affairs officers also accompanied the Sub-Task Force units. As towns were occupied, Security officers of divisions continued in operation the municipal administration and essential local services, utilising existing personnel wherever possible; published proclamations and orders of the Military Governor, and with the Military Police officers enforced the law of Military Government; on behalf of local unit commanders, issued local regulations to insure security and local order; coordinated with combat units in requisitioning, procuring, and billeting in the local areas and assisted local unit commanders in other matters involving the civil population. Security officers turned these duties over to AMGOT officials within a matter of a short time.

As the action progressed and was completed, more and more of the civil functions were supervised by AMGOT and Civil Affairs Officers. Price lists of commodities and services were posted in each town. Civil police were organized and inferior courts were established. Within two days after the landing the local police force at GELA was functioning.

On 8 August, Civil Affairs Officers of Seventh Army including those assigned to Divisions, reverted to control of AMGOT, 15th Army Group.

The civilian populace was as a whole friendly and cooperative, tired of war and anxious for its completion.

X CONCLUSIONS

1. The approved plan for replacements for HUSKY left a great deal to be desired. G-1 original plan is considered sound.

2. Military Police, Prisoner of War Escort Guard and Processing personnel were inadequate. Additional personnel actually found necessary, and secured, was approximately equal to that originally recommended by G-1.

3. The twice daily estimated G-1 Reports proved accurate and an invaluable supplement. Verified reports are oftentimes received too late to be of current value.

4. Identification of personnel killed in action was greatly facilitated : units requiring the identity of every officer and enlisted man to be marked on the inside of each legging.

XI RECOMMENDATIONS

1. In order to maintain effective strength in combat units, it is considered essential to:

a. Have 15% overstrength in enlisted men and company grade officers assigned to all assault troops in time to have them assimilated, and to allow for plans to be worked out for their transportation with the rear echelons well before D-Day.

b. Assign replacement battalions to the Task Force to be operated by it, initially on the mainland and as soon as practicable on the land invaded, not only to furnish flexible replacement reserve but also to care for, re-equip and re-distribute casuals, including those returning from hospitals. In this connection, the landing of replacements in organized march groups on the appropriate Sub-Task Force beaches was not entirely satisfactory because, due to the rapid shifting of the tactical situation and the delay between the radio requisitions and actual receipt of the replacements, the units were actually being supplied, at the time of the arrival of the replacements, over beaches or through ports many miles from the ones designated in requisitions. The answer to this, of course, is to ship all replacements through central depots operated by replacement battalions, from where they would be distributed to units.

c. To have a pool of replacements available on D-Day, convenient to shipping and representing at least 25% of the anticipated losses for the first 30 days, and a definite shipping schedule for movement of replacements into the depot after D-Day to insure continued availability of replacements.

d. Again in the matter of maintaining effective strength, requisitioning on the basis of battle casualties alone will not work. There is too much lag between the time when a verified requisition can be submitted and the time when actual replacements can arrive. In addition to the procedure listed in paragraph above, troop units must be allowed to requisition in the early stages against anticipated losses.

2. For future similar tasks imposed, at least two Military Police battalions, two Prisoner of War Escort Guard Companies and two Prisoner of War Processing companies, in addition to all organic police units should be provided and landed on D-Day.

3. The identity of all officers and enlisted men of combat units be required to be marked on the inside of each legging.

4. Estimated G-1 Reports should be utilized in order to give up-to-the-minute reports.

DAVID D. ZINK,
Lt. Col., G.S.C.,
~~A. C. of S., G-1~~

ANNEXES

HEADQUARTERS I ARMORED CORPS, REINFORCED
A. P. O. #758

6 June 1943.

PERSONNEL MEMORANDUM:

NUMBER 2:

G-1 REPORTS

1. All units assigned or attached to I Armored Corps, Reinforced, will submit G-1 Reports as follows:

a. Reports will be submitted weekly as of 2359B, Saturday. Reports to reach this headquarters by the most expeditious means available.

b. Reports will be prepared in accordance with Form 19, Field Manual 101-5, with Annexes No. 1 and 2, copies of which accompany this Memorandum.

c. All units assigned or attached to a command under Corps control will be included with the report of that command.

d. When a subordinate unit is attached to another headquarters its strength will be dropped from that of the parent unit and a remark made in Part 3 of Annex No. 1. Individual attachments will be shown in Annex No. 2.

e. When a new unit is gained by assignment or attachment to a reporting unit, its strength will be included and entered under Part 1 or Part 2 of Annex No. 1. When it is relieved from assignment or attachment, it will be listed as a loss under this annex.

f. Replacements received from Replacement Depots will be listed as replacements regardless of whether they were former members of the unit or not.

g. Weekly check against Forms 303 will be made to see that all gains and losses have been included in the G-1 Report.

h. Sick, evacuated, is personnel transferred to a Detachment of Patients and dropped from the unit roster. Sick, not evacuated, is hospitalized personnel still carried on unit roster. Day to day sick book cases are not listed.

i. No cumulative figures will be used. Only events occurring within the period covered by the report will be included.

j. Annex No. 2 will contain all information necessary to reconcile strength from Saturday to Saturday. This annex may be consolidated by each successive headquarters.

2. Absolute accuracy of reports is necessary. Every means must be used to expedite transmission of report. Reports will be classified "SECRET".

By command of Lieutenant General PATTON:

EDWARD FOX,
Major, A.G.D.,
Asst. Adj. Gen.

NUMBER 3)

CHECK LIST ON OFFICERS PROMOTIONS

I - REGULAR PROMOTIONS.

1. The Commanding General, North African Theater of Operations, U. S. Army, has the authority to make temporary promotions of officers in the Army of the United States to include the grade of colonel. This authority is limited to promotions to fill existing position vacancies in current Tables of Allotment and Tables of Organization.

2. Recommendations for promotions will be governed by the following current directives: WD Circular #161 (1942) as amended by WD Circulars #218, 290, 417 (1942), WD Circular #15 and 27 (1943), and in accordance with the principles outlined in General Eisenhower's letter dated 15 March 1943, and Circular #101 NATOUSA, dated 31 May 1943. Circular #101 has attached, as an appendix, form letter to be used in submitted recommendations.

3. Many errors are found in the mechanical preparation of this form letter. Prior to submission the following points will be carefully checked for correctness and completeness:

a. Is the officer's serial number correct and the branch of service correctly shown?

b. Is the component, Reserve, Army United States, Regular Army, National Guard shown; not branch of service?

c. Is the date of entrance on current active duty used; not date of commission, unless both dates are the same?

d. Is the date of rank, the date of rank in present grade?

e. Is the date of order announcing promotion to present grade correct?

f. Does the total length of commissioned service include only actual active commissioned service? In the case of Reserve or National Guard officers, actual service spent on training and CCC service may be included.

g. Is the position vacancy occupied by the officer recommended clearly indicated? Use only title shown in T/O, or if amendments thereto exist, attach a certified copy, as Amendment may not be on file in each headquarters through which recommendation must pass. Do not indicate merely as Company Officer.

h. Is length of time position vacancy has been occupied correctly shown?

i. Is the manner of performance of duties entered and initialed by the recommending officer? Recommendations with efficiency ratings below excellent or superior will not be considered.

j. Has the recommending officer satisfied himself that the officer recommended fully meets the requirements set forth in the statements regarding the demonstrated fitness, and that he has achieved desired results in raising disciplinary standards?

k. Does the date on which the position vacancy is certified to exist agree with the date of the letter of recommendation?

l. Is statement on the relative rank of the officer entered where the promotion is to field grade? (Major or higher).

m. Are the statements that I will be glad to have this officer under my command in the grade to which recommended and that he is the best qualified officer present eligible and available for assignment to position vacancy included?

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

n. Is a relative rank list for promotion to Colonel included? (To include name, rank, ASN, grade, and date of present rank only for those of same grade and senior in rank).

o. Does each indorsement indicate approval or disapproval and the statement on disciplinary results achieved? If promotion is to field grade indorsement must also include relative rank statement.

p. Is basic recommendation and all succeeding indorsements signed personally by appropriate commander concerned?

q. Are sufficient copies prepared to allow four (4) to reach this headquarters?

4. When recommendations for promotion are submitted on officers who have served for a relatively short period of time it is advisable to include additional information, particularly of commendable services, which indicates that promotion to the next higher grade is merited. In many instances recommendations are based solely on the existence of a position vacancy.

5. Recommendations will be submitted through command channels.

II - BATTLEFIELD PROMOTIONS.

1. The authority to make battlefield promotions and to make appointments from enlisted men and warrant officers is normally delegated to the Commanding General of a large force engaged in combat. Promotions include the grade of Lieutenant Colonel, and appointments to the grade of 2nd Lieutenant. This authority is limited to existing table of organization vacancies and recommendation must state that vacancy exists. This authorization does not include staff officers whose recommendations must be processed in the usual manner.

2. Only outstanding cases of leadership and demonstrated ability to command in actual combat will be recommended for promotion to the next higher grade or for appointment as 2nd Lieutenant in the Army United States.

3. Recommendations for battlefield promotions or appointments will be submitted in letter form through command channels in sufficient number to allow four (4) copies to reach the promoting or appointing authority.

4. The demonstrated outstanding ability to command in actual combat will be explained in detail and will clearly show that the service rendered was of such outstanding nature that the promotion or appointment is merited.

5. Battlefield Appointments:

a. For the protection of the officer and his dependents, the War Department requires that certain forms be accomplished, as follows:
(1) Report of entry on active duty; includes name and grade, serial number, assignment, place and date of entry, and authority. Under authority the Special Order assigning the officer appointed to the unit will be cited; not letter of appointment.
(2) Personnel placement questionnaire (WD Form 0850) (triplicate).
(3) Reports of physical examination (WD For 63) (triplicate).
(4) Oath of office (WD Form 0337T).
(5) Letter of acceptance. (triplicate)
(6) Copies of letter of appointment. (triplicate).
(8) F. B. I. Fingerprint card.
(9) Designation of Beneficiary (WD AGO Form 41).

b. The above information will be submitted, thru channels, as soon as practicable after appointment.

c. Battlefield promotions will be reported by the authority making the promotion.

6. In the event the Commanding General, I Armored Corps, Reinforced is granted the authority to make battlefield appointments or promotions, a form letter indicating the information required and the authority therefor will be published. A model form for use in reporting entry on active duty and letter of acceptance will also be furnished.

III - CHECK LIST FOR APPOINTMENTS IN ARMY UNITED STATES.

1. Applicants from United States forces for Officer Candidate Schools, and Aviation Cadet training, will not be returned to the United States or to the United Kingdom for training. Applicants for Officer Candidate School and other enlisted men and Warrant Officers who are sufficiently outstanding in the opinion of the commanders concerned, to warrant commissions direct from the ranks, may be so recommended to Headquarters NATOUSA, thru channels. Such recommendations must be signed by a Corps or higher commander stating that the applicant has appeared before a board of officers and has been duly recommended; that the applicant meets the mental, moral and physical qualifications for appointment and that he has exhibited outstanding qualities of leadership which warrant the appointment - Reference AR 605-10, Circular #73 NATOUSA and Sect. II, Circular #24 Fifth Army.

2. To avoid unnecessary delay in processing and returning incorrect applications the following check list is provided.

a. Is letter of application accompanied by the following supporting papers?
(1) WD AGO Form #0850 and 0850A (in triplicate).
(2) Report of Physical Examination WD AGO Form #63 (in triplicate).
(3) Three letters of recommendation (in triplicate).

b. Is applicant's AGCT score included in 1st indorsement or separate statement?

c. Qualifications for appointment:
(1) Applicant must have displayed outstanding qualities of leadership which warrant appointment.
(2) Must meet mental, moral and physical qualifications of grade to which recommended.
(3) Must have AGCT score 110 or higher.
(4) Must have four months of active military service immediately preceding recommendation for appointment.
(5) Must have personally appeared before, and been recommended by a board of officers.

d. Board of Officers:
(1) Does the board have a member of the branch of service for which applicant is requesting appointment?
(2) Are all members of the board senior in grade to that for which applicant has applied?
(3) Is one member of the board Regular Army?
(4) Are 3 copies of Special Order Appointing the board attached?

e. Board Proceedings:
(1) Do the proceedings of the board conform generally to provisions of AR 420-5?
(2) Do the board proceedings include a paragraph headed findings? Findings to include a brief word picture describing the applicant and covering the following:
(a) Physical fitness.
(b) Moral character.
(c) Professional and technical qualifications.
(1) Military service.
(2) Civilian experience.
(d) Leadership.
(e) General estimate of the applicant.
(3) Are board proceedings attached in triplicate?

f. Are waivers for all deficiencies, including physical, requested and approved or disapproved in each subsequent indorsement.

g. Does each forwarding indorsement indicate whether or not a suitable T/O vacancy exists and whether or not applicant is desired by the organization?

h. Where request for appointment, and recommendation is to a higher grade than Second Lieutenant is a statement included, in the accompanying papers, showing whether or not applicant is willing to accept appointment in a lower grade?

i. For appointment in Corps of Military Police the following additional requirements must be fulfilled by the applicant:
(1) Have excellent records.
(2) Have at least 8 years continuous service, at least four of which have been served in a warrant officer or Non-commissioned officer status.
(3) Be Regular Army.

j. A detailed check list of WD AGO Form 0850, is not included, however, it should be carefully checked for correctness. The Report of Physical Examination should be examined by the Surgeon to insure completeness.

By command of Lieutenant General PATTON:

W. G. CALDWELL,
Lt. Col., AGD,
Adjutant General.

DISTRIBUTION:

HEADQUARTERS I ARMORED CORPS, REINFORCED
A. P. O. #758

6 June 1943.

MEMORANDUM)
:
NUMBER 56)

PERSONNEL REPLACEMENT REQUISITIONS

In order to establish uniformity throughout this command the following Standard Operating Procedure for the preparation and disposition of replacement requisitions is presented:

I - General.

1. All units are directed to submit personnel replacement requisitions promptly upon loss of personnel.

2. All units will report immediately, by the most expeditious method (Radio, telephone, courier or letter) the receipt of replacements.

3. The persons responsible for preparation of requisitions will study carefully the instructions contained in this memorandum and will be guided accordingly.

4. Requisitions for replacements will be submitted normally through command channels on proper forms. Each headquarters through which such requisitions pass will indorse each requisition, making such comments as to priority, propriety, substitution, shipment, etc., as may be indicated.

II - Accomplishment of the Requisitioning Form.

1. All unit personnel replacement requisitions are to be prepared on the W. D., A. G. O. Form No. 211. If additional space is required, the W. D., A. G. O. Form No. 211-1 is to be used. For purposes of consolidation, the W. D., A. G. O. Form No. 212 is to be used. All units not possessing these forms are to requisition them as soon as practicable.

2. All units are to supply all information requested by the requisitioning form in so far as practicable.

3. FM 100-10, Field Service Regulations - Administration, sets forth the procedure in handling requisitions in Chapter 8, Section II, as amended by Change No. 1, 29 April 1942. WD AGO Forms 211 and 212 are illustrated and are self-explanatory. Whenever a requisition is prepared on Form 212, which does not include a comparison of T/O and M/R strengths, it will include or be accompanied by a certificate to the effect that filling of the requisition will not result in over-strength, with detailed explanation of exceptions, if any.

4. It is desired that the figures appearing on the requisitioning form be checked carefully so as to insure accuracy. Thus, the number of one type of specialist requisitioned is to be equal to the difference between the number of such specialists authorized and the number present; consolidated totals are to equal the sum of unit totals, etc. If consolidated totals do not agree with the sum of the unit totals a complete explanation will be made in the covering indorsement.

5. The information contained in requisitions is "Secret". Accordingly, all requisitions are to be classified as such, the stamp to appear on both sides of the requisitioning form, if both sides are used.

6. All unit requisitions are to be numbered successively, beginning with "1", and carrying on therefrom, regardless of the time period concerned and regardless of whether commissioned or enlisted personnel are being requisitioned for. All consolidated requisitions are to be numbered in this same manner. Thus, the number of every requisition is to be equal to the number of the preceding requisition plus one.

7. Total figures of the number of men requisitioned for are to be included in all requisitions, all totals to be plainly labeled, such as Total Enlisted Men and Total Officers. It is not necessary to combine the totals for commissioned and enlisted personnel or for Warrant Officers. If the requisition calls for personnel of different arms and services a separate total is to be included by branch, such as Total Enlisted Men, Infantry, or Total Officers, Cavalry, in addition to the final totals.

III - Specification Serial Numbers and Job Titles.

1. All units are to carefully check on the accuracy of the Specification Serial Numbers placed on the requisitioning form.

2. It should be determined that there is agreement between the Specification Serial Numbers and corresponding Job Titles.

3. In emergencies, requisitions need not specify SSN's, be prepared on designated forms nor follow normal channels. However, in every such case, a confirmatory requisition in proper form will be forwarded promptly, through normal channels accompanied by a complete statement of the circumstances involved.

IV - Transmittal of Requisitions.

1. One copy will be retained by the requisitioning unit, and the original and three (3) copies will be forwarded to Division Headquarters. Division Headquarters will consolidate all Unit Personnel Replacement Requisitions and will forward Consolidated Requisition in quadruplicate, together with three (3) copies of each Unit Personnel Replacement Requisition, retaining one (1) copy of Unit Requisition and Consolidated Requisition. Requisitions forwarded unconsolidated to this Headquarters are to arrive in quadruplicate - (See Para. 2, Section VI).

2. Corps Troops and attached units will forward Unit Personnel Replacement Requisitions to this Headquarters, in quadruplicate, where they will be consolidated and forwarded.

3. All units are urged to make liberal use of their covering indorsements in order to explain any difficulty that might be expected to arise from a lack of clarity of certain features of the requisition itself. Requisitions which include replacements for anticipated losses will list such personnel separately, in order that the requisition may be approved for personnel to bring the unit to T/O strength without requiring return to the originator for separation. If a unit indicates a shortage of Warrant Officers, but does not wish to requisition for any, as it is desired to grant warrants to enlisted men of the unit, this fact is to be explained.

THIS PAGE IS UNCLASSIFIED

SECRET

0998

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

4. In accordance with instructions on the reverse side of the W.D., A. G. O. Forms No. 211 and 212, Unit and Consolidated Personnel Replacement Requisitions, replacements for attached troops are a responsibility of the headquarters to which attached. Accordingly, requisitions of units attached to other than their parent units are to be forwarded to the headquarters to which attached.

V - Tables of Organization Strength.

1. The date of the current T/O is to accompany the number of the T/O under which the unit is operating in filling out the blank entitled "T/O No." on the W. D., A. G. O. Form No. 211.

2. The blank entitled "T/O Strength" is to be filled out so that Table of Organization strength for Enlisted Men, Officers, and Warrant Officers, is listed separately, each figure to be clearly labeled.

3. The figures entered in the "W/R Strength" are likewise to be separate for Enlisted Men, Officers, and Warrant Officers.

4. The number of men necessary to bring the unit to T/O Strength is also to be listed separately for Officers, Warrant Officer, and Enlisted Men.

5. The figures that are to appear in the columns under the headings, "Number Authorized" and "Number Present", are figures applying to the corresponding Specification Serial Number only. Thus, in the case of a unit requisitioning for Light Truck Drivers, if the unit is allowed 50 men in the Transportation platoon, only 35 of whom are Light Truck Drivers, the figure that is to appear in the column headed "Number Authorized" is to be only 35.

VI - Consolidation of Unit Reports.

1. On consolidated requisition forms the unit requisitions of attached units are to be included in the consolidated requisitions of the headquarters to which attached.

2. Consolidated requisitions are to be prepared only when the consolidating headquarters possesses two or more unit requisitions to be forwarded. In instances where such headquarters possesses only one unit requisition, four copies of that requisition are to be forwarded unconsolidated, to this headquarters, with approval of the forwarding headquarters indicated on the requisiton or in the forwarding indorsement.

VII - Forwarding of Requisitions Superseding Previous Requisitions.

1. A requisition once submitted will be considered as in force until it is filled or disapproved. Inquiries as to the status of a requisition or requests to cancel a requisition will be made by normal communication methods. Requests to amend a requisition will be accompanied by a new requisition bearing the same number and clearly labeled "Corrected Copy". Personnel requested on a previous outstanding requisition and not yet received will not be listed in the tabulation showing SSN's and number required. For example, a unit requiring twenty-five men to bring it to T/O strength which has previously requisitioned for but has not yet received ten men should initiate a new requisition calling for fifteen men. Each requisition is to call for only the difference between the number of men authorized by the T/O under which the unit is operating and the number of men on hand plus those requisitioned for previously.

2. No unit is to submit a requisition superseding previous requisitons of that unit.

3. In instnaces in which men previously requisitioned for by a unit are no longer desired for any reason, immediate correspondence is to be initiated by the requisitioning unit explaining the circumstances and requesting cancelation of so much of the requisition as applies to the replacements no longer desired.

By command of Lieutenant General PATTON:

HOBART R. GAY,
Colonel, G.S.C.,
Chief of Staff.

6 June 1943

CHECK LIST FOR DECORATIONS & AWARDS

1. GENERAL POLICY:

a. The award of decorations must be given the gravest consideration by all concerned in order that no deserving case may be overlooked, and at the same time, that the recommendations for awards does not cheapen the value of the decoration.

b. Promptness in the award of decorations, consistent with proper verification and investigation is essential.

c. Awards for individuals include decorations (AR 600-45, with C2 and 6, incl., and Section III, Cir. 342, WD, 1942, Cir. 391, WD, 1942) Service Medals (AR 600-45, 600-68, Sec. I, Cir. 44, WD, 1942 as amended by Sec. II, Cir. 123, WD, 1942, and Cir. 176, WD 1942 and Commendations (AR 600-55). Awards for units include streamers for colors, standars and distinguishing flags to denote service in war and meritorious service in action (Par. 12, AR 260-10 and Sec. III, Cir. 342, WD, 1942). Also see Cir. No. 50, NATOUSA, 5 April 1943, and Cir. No. 85, NATOUSA, 13 May 1943.

2. LETTER OF RECOMMENDATION:

a. Is the proper award recommended?
b. Is a separate letter including appropriate citation submitted for each individual recommended for award?
c. Does citation include:
(1) Full name, rank, serial number, and organization (both at time of act cited, and present)?
(2) The individual's home town and State at the time of enlistment, induction, entry into West Point, or present home town?
(3) The date, time, place and all pertinent details of action; such as terrain, enemy forces, morale, weather, etc., and in case of service decorations such as Legion of Merit, etc., complete description of service rendered, in detail?
(4) Statement as follows: (Appropriate statement must be in body of the citation, see Par. 2, model letter.

MEDAL OF HONOR - "For conspicuous gallantry and intrepidity above and beyond the call of duty against the enemy."

DISTINGUISHED SERVICE CROSS - "For extraordinary heroism in action."

DISTINGUISHED SERVICE MEDAL - "For exceptionally meritorious service in a duty of great responsibility."

SILVER STAR - "For gallantry in action."

PURPLE HEART - No citation required, but is desirable when merited.

SOLDIERS MEDAL - "For extraordinary heroism, not in action."

DISTINGUISHED FLYING CROSS - "For extraordinary heroism and achievement while participating in aerial flight."

AIR MEDAL - "For meritorious achievement while participating in aerial flight."

GOLD LIFE SAVING MEDAL - "For extreme and heroic daring and risk of life in saving (or attempting to save) lives from drowning."

GOOD CONDUCT MEDAL - "For exemplary behavior, efficiency, and fidelity." Awarded to enlisted who complete 3 years service on or after 27 August 1940, or who complete one (1) year's service after 7 December 1941. (AR 600-68, WD Cir. #104, 1942, NATOUSA Cir. #85, 13 May 1943.

LEGION OF MERIT - "For exceptionally meritorious conduct in the performance of outstanding service." Recommendations to be submitted in proportion of 1 field officer, or higher grade, to 10 E.M. and officers of Company grade. (See Cir. #32, NATOUSA, particularly paragraphs 5 and 6, and Cir. #23, Headquarters Fifth Army). In addition to proposed citation, does recommendation contain a complete description of the service rendered in such detail that it may be determined whether the performance was of sufficient character to meet the requirements of responsibility and merit?

d. Does letter include a statement by the recommending officer that he has personal knowledge of the above facts? If not, are two certificates or affidavits attached?
e. Does letter of recommendation include statement that entire service of individual, since performing the act cited, has been honorable?
f. Does each indorsement by a higher headquarters approve citation as drafted, or include a more appropriate one?
g. Does each recommendation for Purple Heart include a certificate of Medical Officer that medical treatment was required, and a citation if appropriate? (Medical officers may furnish the Unit commander with a certified list of the personnel requiring treatment for wounds received in action.)
(1) The following interpretation of wounded in action, or wounded as result of enemy action, is quoted for your information and guidance. "The term Wounded in action, or wounded as a result of enemy action" is defined, for this purpose, as physical injury (injuries) requiring treatment by a medical officer. Included in this category are those wounds resulting from the piercing of the body by a projectile, a fragment of shell, an object set in motion by enemy weapons, or by weapons of United States or Allied Forces while engaging the enemy; the piercing of the body by any weapon in the hands of, hurled or thrown by the enemy; torn flesh or broken bones received from a moving object propelled directly, or indirectly, by United States or Allied Forces while engaging the enemy; any disabling contact with gas or flame released or propelled by the enemy or by United States or Allied Forces while engaging the enemy."
h. Are five (5) copies of letter of recommendation furnished? Number of copies may be less than five depending upon the headquarters competent to make a particular award.

3. ORDERS:

a. Have General Orders and unexpurgated letter orders been published? (See Par. 7 c., Cir. 50, NATOUSA, regarding security precautions) Note: Purple Heart award will not be published in G.O. but in a classified letter order.
b. Did General Orders contain citation, serial number of medal awarded, and individual's home town?
c. Have General Orders and unexpurgated Letter Orders announcing awards been distributed in accordance with Paragraph 2, Section I, Cir. #85, NATOUSA, dated 13 May 1943? Have copies been furnished this and other headquarters requiring distribution of orders?
d. Has individual concerned been furnished a copy of General Orders and unexpurgated letter?

4. REPORTS:

a. Have seven copies of reports of presentation of Silver Star, Purple Heart, Soldiers Medal, Good Conduct Medal, etc., awards been forwarded, thru channels, to higher headquarters? (See Par. 7f., Cir. 50, NATOUSA)?
b. Did reports give dates, times and places awards were made; names of officers making the awards, and the serial numbers of medals awarded; also full name, rank, serial number, and organization of each individual receiving awards?
c. If the Purple Heart is awarded in a Medical Installation where the individual's personnel records are not available, has the fact of the award been entered on the Eff or Report Card (WD, MD Form 52)? To avoid duplication, report of presentation will be made to the individual's Unit Commander, who will publish the letter announcing the award. (Par. 7d (3), Cir. #85 NATOUSA & Par. 7f, Cir. #50 NATOUSA).

5. GENERAL:

a. Have all deserving cases been promptly investigated and appropriate awards made, or recommended to higher headquarters for award?
b. Have awards of decorations been noted in Service Records of E.M., or on Classification cards (WD, AGO 66-1) of officers and warrant officers, and Unit Historical Records (to include serial number of medal)?
c. Does Unit have on hand a reasonable number of all decorations C.O. (or C.O.) is authorized to award? Unit Supply Officers in this theater will submit requisition for medals, etc., to CO of Base Section, thru this headquarters, for supply. (Sect. II Cir. 85, NATOUSA).

PERSONNEL MEMORANDUM:

NUMBER 4:

G-1 REPORTS

1. Personnal Memorandum #2 (copy attached), this headquarters, 6 June 1943, subject: Weekly G-1 Report, will remain in effect and will be complied with by all subordinate commands operating directly under Force 343. In addition, commencing on D Day, a daily report will be submitted as of 2359B, covering the preceding twenty-four hour period.

2. Reports will be submitted by radio using the code listed below:

J - Strength.
K - Time
L - Missing in Action.
M - Captured.
NA - Sick, gassed & wounded, evacuated.
NB - Sick, gassed & wounded, not evacuated.
P - Replacements.
Q - Killed.
R - Prisoners captured.

The code letters will not be used in regular series. Start with a different letter each date and shuffle the other letters in random order. Example: L 42 Q 29 R 150 K 4 MAR J 956 M 9 NB 36 NA 14 P 33.

3. Strength includes all personnel operating under the administrative control of the reporting unit.

Time - Midnight each night being the effective time of all reports, merely the date will be given, - Example: 2359B, 4 March would appear merely as 4 MAR.

Missing in Action - All not accounted for and not known to be hospitalised, killed or captured.

Captured - Report only those known to be in hands of enemy.

Sick, gassed & wounded, evacuated - Report only individuals evacuated by Navy or transferred to Detachment of Patients.

Sick, gassed & wounded, not evacuated - Report all of this type casualty not actually evacuated by Navy or transferred to Detachment of Patients.

Killed - No individual should be reported as killed unless positive evidence exists and there can be no possible chance of error. Until such time as this evidence is available, persons thought to be killed should be reported as "Missing in Action".

Prisoners captured - Prisoners captured during the twenty-four hour period covered by the report. Extreme care will be taken to avoid duplication of reports from successive headquarters to whose control the prisoners pass.

4. The following points must be thoroughly understood:

(1) No figures will be cumulative. Once a casualty has been reported, it will not be reported on a successive day even though individual is still "Missing" or hospitalized. Figures cover occurrences since submission of last report only.

(2) If no report is received from a subordinate unit, the strength of the unit as of its last report will be used.

(3) Unless positive evidence exists that a complete unit is lost, it will be carried in the strength.

(4) As soon as courier service can be established the radio report will be replaced with a daily report indicated on mimeographed form, page 1, attached to Personnel Memorandum #2. Annexes #1 and #2 need not be included on this daily courier report.

(5) The weekly report called for by Personnel Memorandum #2 will be submitted as of 2359B each Saturday and will cover all events during the preceding seven days. For instance, total killed during the week, total missing in action during the week, etc. will show on this report. The weekly report will be a summary of the daily reports during that period but if no daily reports were received this weekly report would account for all the activities during the week.

(6) Complete instructions relative to the preparation and submission of the weekly report are contained in Personnel Memorandum #2. All units whether using the daily radio or whether using the daily single page report will submit the weekly report with both annexes.

By command of Lieutenant General PATTON:

JOSEPH Y. RAHE,
Major, A. G. D.,
Asst. Adj. Gen.

HEADQUARTERS I ARMORED CORPS, REINFORCED
A.P.O. #758

AG 210.2-A

25 June 1943

SUBJECT: Battle Field Promotions and Appointments.

TO : All Units, I Armored Corps, Reinforced.

1. The Commanding General, I Armored Corps, Reinforced, has the authority to promote instantly to the next higher grade, including the grade of Lieutenant Colonel, any officer who has demonstrated outstanding ability to command in actual combat. This authority also permits appointments of enlisted men to grade of Second Lieutenant for the same reason.

2. When recommendations are made under this authority, by unit commanders, the following data will be included in each recommendation:

a. Full name, current rank, or grade, and serial number.

b. Branch of service, component, and present organization.

c. Statement that suitable vacancy exists.

d. Date of present rank.

e. Statement of demonstrated outstanding ability to command in actual combat. Statement must be complete and in detail.

3. This authority does not include staff officers whose promotions must be processed in the usual manner.

4. No oath of office or letter of acceptance is necessary for promotions of officers but is required where an enlisted man is appointed. (Reference Personnel Memorandum #3, Section 2, this headquarters, 7 June 1943, for reports on enlisted men appointed.)

5. All promotions are effective the date of letter or radio announcing promotion, and pay accrues from that date.

6. A position vacancy must exist for either promotion or appointment. Position vacancies do not have to be filled at all times and should not be filled unless there is an officer available who has clearly demonstrated his fitness therefor.

By Command of Lieutenant General PATTON:

JOSEPH Y. RAHE,
Major, A.G.D.,
Asst. Adj. Gen.

RESTRICTED

HEADQUARTERS I ARMORED CORPS, REINFORCED
A. P. O. #758

AG 210.5-A 26 June 1943.

SUBJECT: Decorations and Awards.

TO : Commanding Generals, Corps, Divisions and separate Brigades, I Armored Corps, Reinforced.

1. Attention is invited to Memorandum #55, this headquarters, 6 June 1943, subject: Awards and Decorations.

2. It is the desire of the Commanding General, I Armored Corps, Reinforced, that everything practicable be done to assure promptness in the making of awards to all deserving individuals.

An initial supply of all medals available has been issued to all commanders authorized to make awards.

To facilitate the processing of awards, from an administrative standpoint, the Commanding General desires that at least one officer in each separate brigade, division, and higher headquarters, acquire thorough and complete specialized knowledge of:

a. The character of citations that have already been approved by the War Department for various medals and decorations.

b. The particular shades of specific requirements for the various awards.

c. Current administrative procedures.

This officer should develop facility in adequately present work pictures of actions, in citations.

3. In connection with 2 b. above, the following typical examples are cited as a guide for further study:

a. One citation for an award to an officer was returned because it clearly set forth exceptional performance by the unit commanded by the officer, instead of presenting the actions or influence of the individual officer.

b. In some cases, recommendations for the Medal of Honor fail to establish the facts that the action was actually (1) extreme gallantry in action, and (2) beyond the call of duty.

c. In one case an officer was recommended for the Distinguished Service Cross for extraordinary heroism in action when, although being wounded, he exposed himself to enemy fire to take the controls of a landing boat after the Navy coxswain was killed. (For this act a Silver Star would have been appropriate.) He was then seriously wounded and knocked from the controls by gunfire and again returned to the controls, while still under fire, and safely landed the craft. (The latter act justified the D.S.C. rather than the Silver Star.)

d. A warehouse containing bombs was ignited by enemy fire; a soldier rescued a comrade from the warehouse and the exploding bombs. He was recommended for the Silver Star. Should have been the Soldiers Medal since enemy action had ceased at the time of rescue.

e. For extreme and heroic daring and risk of life in saving a person from drowning in waters in this theater, while not under fire, the Soldiers Medal is considered appropriate, rather than the Gold or Silver Life Saving Medal.

By command of Lieutenant General PATTON:

JOSEPH Y. RAHE,
Major, A. G. D.,
Asst. Adj. Gen.

Distribution "D".

HEADQUARTERS SEVENTH ARMY
APO #758

AG 210.2-A 22 August 1943

MEMORANDUM:

TO : All Corps, Divisions, Brigades and Separate Units.

1. Attention is invited to letter, AG 210.2-A, Hq. I Armored Corps, Reinforced, dated 25 June 1943, Subject: Battlefield Promotions and Appointments.

2. To be promoted or appointed under this authority the officer or enlisted man must have clearly demonstrated outstanding ability to command in actual combat. Superior performance of assigned duty or exemplary conduct at all times during combat do not, alone, qualify for battlefield promotion or appointment.

3. Numerous recommendations reach this headquarters with insufficient information to definitely indicate that the person being recommended has actually demonstrated outstanding ability to command in actual combat. Statements on demonstrated ability must be complete and in detail, citing dates, specific instances and circumstances.

4. a. Section II of Circular 127, NATOUSA, dated 3 July 1943, rescinds that portion of Circular 101 and Circular 112, NATOUSA, authorizing the promotion of 2nd Lieutenants to 1st Lieutenant without regard to T/O vacancy, providing the resulting total of 1st Lieutenants does not exceed the authorized combined total of 1st and 2nd Lieutenants.

b. Section II of Circular 127 is repeated for your information and strict compliance:

"II - Promotions of Officers in A. U. S. - Paragraph 3 f, Circular 101, this headquarters, 31 May 1943, and Paragraph 1 c, Section IV, Circular 112, this headquarters, 11 June 1943, are rescinded and the following substituted:"

"Second Lieutenants of Field Forces, who have demonstrated in combat their fitness for promotion, and are fully qualified therefore, may be promoted to grade of First Lieutenant, regardless of table of organization vacancy. However the resulting total of first lieutenants will not exceed the authorized combined total of first and second lieutenants. This policy does not effect the present policy of battle field promotions but is supplementary to it."

c. In recommending the promotion of 2nd Lieutenants to 1st Lieutenant under the provisions of Circular No. 127, NATOUSA, a statement will be included to the effect that the officer being recommended has demonstrated, in combat, his fitness for promotion.

By command of Lieutenant General PATTON:

W. H. Caldwell
W. H. CALDWELL,
Lt. Col., AGD,

REPORT OF THE A.C. OF S. G-2 (MILITARY INTELLIGENCE)

FOREWORD

The following is an attempt to paint a picture through the various steps of the build-up of G-2 activities from the initial steps of the planning stage through the final steps of the operational phase. It was expected that lessons would be learned and they were. Errors seemingly large but inconsequential in the big picture were made, noted and corrected. In final summation the report represents a picture primarily for future study of the unfamiliar so that in the future profit may be gained from experiences in the past. Conclusions drawn and recommendations made represent the combined thought of all of the members of the section and are submitted as matter of consideration for future plans.

I. INTELLIGENCE PLAN

About the first of March, a directive to prepare for the Husky operation was received. At this time, the G-2 Section was composed of five officers and ten men. Immediate steps were taken to increase this organization to meet the operational requirements of a planning staff for an amphibious invasion. The steps consisted primarily of a request, through G-1 channels, for a Photo Interpretation officer and for the necessary Counter Intelligence and Prisoner of War Interrogation personnel, to be assigned to major units to comprise the force. Furthermore, based on the experience in the Moroccan Campaign, a Translation and Document Section, composed of two officers and six men, was requested, and interpreters, based on the requirement of at least one per battalion plus an additional quota for each major headquarters, making a total of about 200, were requisitioned. In addition to the foregoing, experienced personnel were requested to fill the normal needs of the G-2 Section.

The preparation of a book, mimeographed form generally known as the "Black Book", was commenced. This Black Book was composed of pertinent data for the planned operation, including a topographic study, highways, railroads, airfields, communications, beaches, ports, port facilities, fixed defenses, and battle order of the land forces. Special studies were included of the local utilities, such as water and electricity, and other material resources which might affect the operation. The object of this book was to serve as a ready reference or synopsis of material available in more detailed form elsewhere.

OVERLAYS

In order that the commanding general, the staff, and commanding generals and their staffs of lower and higher echelons, could see quickly and clearly the enemy situation, either singly or in groups, the following procedure was used. Sheets of transparent acetate were prepared on a frame, behind which suitable lights were used to bring out details. Each sheet was an overlay which was colored and formed the basic study of different phases; for example, the basic sheet showed, to scale, a terrain study which included altitudes, rivers, etc.; a second, which could be placed on top of the first, showed the roads, railroads, and other items of interest which could be studies in relation to the terrain by super-imposing them on the same frame; a third important sheet showed the enemy battle order, which was tied in with the terrain and transportation facilities by further super-imposing this sheet on the previous two. The advantage of this procedure was that the detailed study of the terrain and other combinations versus the enemy forces presumed occupying it, and the defenses along the coast, provided a reasonably accurate method of estimation based on their dispositions of the probable enemy intentions and capabilities. As a matter of general interest there was prepared, likewise a terrain study in color, using the same scale, 1:100,000, of the North African coast for comparative study in terrain features in which a landing had been made previously by some of the troops involved in the new operation.

In connection with G-2 estimate for initial presentation to the tactical commanders and their staffs, the Intelligence Plan was prepared. It was attempted in this plan to anticipate as many questions and conditions as practicable. These were, in the main, ones which were laid down specifically by Headquarters 1st in the form of directives and various types of information, and with minor changes only the plan, as originally announced on 22 April 1943, was carried into effect. Certain special units were charged to the G-2 Section by higher authority too late to be considered in the planning stage, and, consequently, insufficient preparation could be made for their gainful employment. The Intelligence Plan briefly included the coordination of all intelligence activities and announced that the normal agencies in corps and lower echelons would be augmented by prisoner of war interrogation teams, counter intelligence corps personnel, photo intelligence personnel, signal intercept intelligence services, such as radio intercept, known as the "J" system, which is an intercept of our own front line battalions, and "Y", an intercept of enemy tactical agencies. The plan for providing interpreters and the availability of a translation and document section at Headquarters 5th, the progress concerning public relations, psychological warfare branch, and various types of censorship, were also announced.

A broad directive was given for the continuance of intelligence training with emphasis to be placed on enemy battle order organization and tactics, as well as an understanding of the British intelligence and tactical practices, particularly with reference to abbreviations, nomenclature, conventional signs and symbols, and the British grid system, with which our troops would probably not be familiar.

XII. Conclusions.
XIII. Recommendations.

INTERPRETERS

Although it was anticipated that Force Headquarters and corps would each be provided with four officers and six enlisted men interpreters, and all divisions ten officers and fifteen enlisted men each, none of these arrived in time for the operation. It was also planned that three officer interpreters would be available for censorship and psychological warfare branch; these also failed to arrive in time. Likewise, the translation section, which was to consist of an Italian and German team of one officer and three enlisted men each, failed to arrive, and prisoner of war interrogators had to be used for this purpose during the operation. The interpreters were obtained after the operation itself started by requesting eight Italian speaking soldiers, who were then attached to various headquarters sections for that purpose.

A cover plan originated from higher headquarters but was received at a date which was almost too late to be of material value. With spreading of troops, as it was necessary to do for their lift, the security involved presented a difficult problem, and such measures as were necessary had to be delegated to sub-force commanders to meet their local situations.

The plan further included the Navy air and Army air cooperation. An air observation plan was announced, with the observation squadron to serve the force from the African theater, and the plan later took concrete form in the assigning of missions to be flown if communications broke down. The plan included reconnaissance facilities from both, air observation, by means of the 111th Observation Squadron, and photographic reconnaissance, by means of a detachment from the North African Photo Reconnaissance Wing. In each case, plans were made for the use of these units with initial missions for each day after D-5 provided, anticipating communication problems as far ahead as possible.

Public Relations were planned in detail and were set up for various sub-task force headquarters with necessary equipment D-day and thenceforth. Psychological Warfare Branch activities were included to provide by D-30 ten officers and three interpreters, two drivers, and two clerks. The plan provided for and announced the method of map supply, anticipation of aerial photographs, and relief models. In addition, during the planning phase, high obliques from an altitude of approximately 200 feet were flown of the area in which the beach landings were to be made, and proved invaluable.

DISSEMINATION

During the actual operations the plan of reports followed was that any information of immediate value was to be issued as spot reports and that the G-2 Periodic Reports were to be issued on a twenty-four hour daily basis. In addition, instructions were received that intelligence summaries were to be sent classified for priority as "Operational Priority" to be closed as of 1600 hours. During the operation, this was augmented by addition of partial summaries each six hours, resulting in four scheduled reports to higher and lower headquarters during the twenty-four hour period.

The plan for interrogation of prisoners of war was to provide Army, Corps and Division headquarters each a total of four officers and eight enlisted men, consisting of two teams; one having a thorough knowledge of Italian, the other of German.

The Counter Intelligence activities were planned so that one Field Security Detachment would be assigned to Army headquarters and to Corps headquarters, consisting of two officers and eleven men each and two Port Security Detachments, consisting of two officers and eleven men be assigned to Army headquarters, and later used at designated ports. Each division was assigned a detachment of one officer and five men from the CIC. The counter sabotage plan involved only such personnel as were already available to tactical units and included instructions to prevent sabotage. Later, counter subversive control was announced and close cooperation was arranged for counter subversive control during the operational phase of occupied territory.

CENSORSHIP

Censorship was planned, to be provided by Force 141, to consist of two field press censors, three civilian mail censors, three telephone and telegraph censors, three officer interpreters and three clerks. The mail censor was to follow instructions then issued in the African theater, censorship of civilian mail in occupied territory was to become the function of Civil Affairs. The field press censor was to have as his sole responsibility the dispatches of war correspondents. Signal security plans were announced as conforming to signal operation instructions to be issued by the Signal Officer, Force 343.

As previously noted, all of these plans were laid for the invasion of Western Sicily, and, upon revision of the basic plan and announced directive that Force 343 would operate simultaneously with Force 545, in Southeast Sicily, minor changes only were made and the plan as a whole stood up. The late change caused a slight difficulty in such matters as were long range in preparation; for example, the beach models which were at that approximate time available for issue to troops were of no value, and new ones had to be prepared for the new area. On the 5th of May, 1943, an amended intelligence plan was issued for distribution to the sub-task force commanders.

As time progressed in the execution of this plan, the G-2 Section was broken up into various sub-sections which functioned in the planning phase. The future development of the Section into the operational phase followed with the functions being gradually changed to meet operational conditions. Annexes 1 and 2 show the organization of the G-2 Section.

Following are comments on those functions with their experiences.

II. ADMINISTRATION

PLANNING PHASE

This section was responsible for internal distribution of mail and messages and the circulation of intelligence and telephone traffic within the G-2 section, also publication, mimeograph material, letters and so forth, typing of outgoing G-2 radiograms and messages. Although in many instances other sub-sections repared their own copy, constant checking was necessary to secure a uniform and orderly publication policy. This section also maintained the journal and diary and other normal routine matters.

When the planning for the Husky operation began in Rabat, for security reasons, a separate filing and distribution system was maintained for these papers only.

The transition to planning administration was a gradual process. The influx of planning documents in increasing number made necessary a plan for distribution. This was based on a downward flow from higher headquarters, because little intelligence was being produced by lower units at this stage. The basic pattern was thru II Corps to its divisions, direct to the other divisions and Army troops. Limited personnel inhibited adequate distribution to Army troops, as their specialized character and the frequent changes in troop-lists called for more time and study than was available. To understand the problem it must be remembered that documents are topical, and a description of a mine should reach Army Engineer Units while a mine field pattern should also reach Army Tank Units. The inadequacy was not as serious as it might have been, as the majority of the Army troops were attached to Corps and Divisions.

Changes in the composition of the task force complicated the publication and distribution problems, as the early publications were run to meet existing demands, with no margin for expansion. A notable example was the "Black Book", a document of a hundred odd pages, of which only 35 copies were run. As a result of the increase in the force, the planning phase ended with only one copy in G-2. There were many times when the soundness of the practice of keeping all stencils, thereafter accepted, was justified.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

SUPPLY PROBLEMS

Supply was normal in aspect except for such hard-to-get things as clear acetate, which required all sorts of extraordinary efforts and even the use of discarded X-ray film from our hospitals. In the matter of equipment, continuous studies by the section of labor-saving and reproduction devices which could help out were made, and discussions with section chiefs and specialists led to the conclusion that certain business machines could be profitably employed by the section in improving the quality and speed of dissemination to the lower units. For example, a multilith was ordered to meet needs beyond the scope of the mimeograph and ditto machine. Due to supply difficulties this has not yet been obtained.

A large proportion of additional officers and men were attached for temporary duty in the late planning stage, and the task of orientation and training placed further burdens on a staff already carrying quite a load. In fact for several weeks they were of little or no value. This was not a question of experience, as among them were officers of considerable background in combat intelligence but at the army level the identity of units, their commanders, the names of the staff officers and the physical location of the offices, message channels, methods, and so on were a bewildering array that could not be assimilated at once.

The administration section had a considerable part in the work of dividing the section into three echelons, for travel respectively on the LST which left Mostaganem late in June, the headquarters ship which left Algiers the first week in July, and the rear echelon which moved to Bizerte and came over in odd lots from D plus two on. Space and passenger lists were arranged (an attempt was made to have an operating G-2 section on each boat), vehicle requirements were determined, and the equipment and supplies were apportioned and packed. During this last minute rush a large number of reference documents requiring careful checking were sent in by lower units. As it was impossible to handle them properly it became necessary to carry them along, resulting in several hundred pounds of useless freight, not to be forwarded until after processing for which there was no time, and not to be left behind as there was no provision for storage of highly classified documents.

The administration section reopened briefly in bivouac near Algiers, publishing a few mimeographed items, clearing some documents to Force 141, and accomplishing last minute distribution of data to units mounted in the harbor.

OPERATIONAL PHASE

Few of the administration section were included in the D-day mounting, and those primarily for transportation. The balance were set up in Bizerte for shipment. In Sela, the section was reassembled and at Affreville and thereafter the administration sub section split into two echelons. One was concerned with normal G-2 activities, and the other principally undertaking the administration of numerous special sections under the heading of the Miscellaneous Sub-section.

The several moves in the final phase of the operation, and an experiment with a captured truck used as an office indicated that the administration section could save about three hours on every move, and that it would operate more efficiently and with less harm to typewriters and mimeograph in a simply converted truck or trailer.

On D plus 1, an advance detail went ashore from the command ship to establish this section at [redacted].

From July 12 to the end of the operation a combined G-2 and G-3 War room was maintained. An operational map of the entire island, to the scale of 1:100,000, was mounted at each location, and the terrain model placed in a proper relative position with this map. G-2 Combat Section posted only general locations of known enemy units on this operational map.

It was found that several detailed maps were needed. A work map was maintained, on which was placed all intelligence information without regard to its credibility. This map was posted by the G-2 duty officer and was the basis for the G-2 Periodic Report issued daily.

A combined visual and photographic air reconnaissance map was maintained. All requested air reconnaissance was plotted on this map, which revealed at a glance those missions which were currently being flown. Visual reconnaissance and spot photographic coverage, as well as requests on G-2 showing profitable bomb targets, were initiated by the Combat Section based on the enemy situation.

During the latter part of the Sicilian campaign, it was found advisable to keep posted a map showing the road blocks and demolitions executed by the enemy, keeping abreast of enemy intentions portrayed thereby in his delaying action in the difficult terrain found in the northeastern portion of the Island.

A chart showing daily and aggregate total enemy prisoners of war, dead and wounded, aircraft, guns, and tanks was posted by the Combat Section duty officer in an attempt to have up-to-the-minute record of these enemy casualties. Since these figures were obtained from spot messages of subordinate units, the figures were not official.

The sources of Combat Intelligence information were normal, including the Navy, Air, and higher, lower, adjacent echelons of command, and radio intercept. Captured documents, prisoners of war, individual observation, and civilian informers proved invaluable.

ROUTING OF MESSAGES

All messages received in the Combat Intelligence Section were first examined by the officer on duty, who indicated on the message itself the action to be taken; that is, whether it should go the Battle Order, Situation Map, Work sheet, File, or be disseminated to high, lower, or adjacent units, or Staff Sections. Spot dissemination in the form of radio message or telephone was made immediately of those items requiring prompt action. Routine dissemination requiring reproduction, as prisoner of war reports, was accomplished by the Administration Sub-Section.

A G-2 Journal was kept, which included the disposition of action taken on each individual message. Intelligence Summaries (ISUM) for the preceding 24-hour period were prepared at 1600B daily, as directed by higher headquarters. Copies of such ISUMS were sent all subordinate units. To supplement these regular ISUMS, it was made general policy to send additional spot reports every six hours.

III. COMBAT INTELLIGENCE

Prior to D day all efforts were directed toward the collection and evaluation of all intelligence information concerning SICILY, and distribution of this information in digest form to all component units.

Overlays in color, on transparent acetate, showing terrain, roads, railroads, and disposition of enemy troops, were prepared for use of the Planning Staff and for presenting estimates of the enemy situation in briefing the various commanders.

Relief models of landing beaches for each specific sub-task force were ordered and delivered to the units concerned. One terrain model of the entire island to the scale of 1:100,000, was made during the planning phase, and this model was moved with the Combat Section. It was found invaluable for an overall study of planned operations, and permitted visualization of enemy capabilities from a terrain standpoint.

During the planning and operational phase, G-2 plans and publications issued consisted of the following:

a. Intelligence Plan.
b. Intelligence Annex to Field Order No. 1.
c. G-2 Estimates Nos. 1,2,3,4,5, & 6 (Annex No. 3)
d. G-2 General Information Bulletins (Annex No. 4).
e. Outline of Intelligence Information - "Black Book"
(Table of Contents only)(Annex No. 5).

On approximately D minus 10 the supplies, equipment, and personnel were divided into three parts, two of which were loaded on separate headquarters ships moving with the assault force. One unit moved on to BIZERTE and was scheduled for shipment on the D plus 8 convoy.

Initially, it was planned to operate this section in the Combined Air, Navy, Army Operations Room, aboard the headquarters ship. Limited space, however, made this impracticable. Since Navy and Air were chiefly concerned with operations during this transition period, the Combat Section was not physically present in the Combined Operations Room prior to D day.

OPERATIONS IN SICILY

Until rejoined ashore on D plus 2, the section operated with insufficient personnel due to the limited number of G-2 personnel which could be transported with the assault force. Operations were on a 24-hour a day basis, and the division of responsibilities during this period were:

2 officers on duty, situation map, (including maps kept up to date outside for general information), and reports.

2 typists on journal and stenographic work.

1 staff sergeant on battle order map and file system.

1 draftsman

Formal G-2 Periodic Reports were prepared daily. Initially these reports were closed as of 2400B; however, it was found that less confusion occurred in operation of the Work Sheet by changing this time to coincide with the ISUM report as of 1600 B (Annex No. 6).

IV. BATTLE ORDER

One non-commissioned officer, who was both a linguist and a trained PW interrogator, was charged with maintaining records of enemy battle order during the planning phase. He was assisted when necessary by personnel of the PW Interrogation Team assigned to Headquarters I Armored Corps, Reinforced.

Battle order information was supplied by higher headquarters. Complete data on enemy forces was republished as received, posted on a battle order map and entered in a card index file for ready reference.

Upon establishment of the headquarters ashore at Sela, two officers and an additional enlisted man - the latter also a trained PW and battle order clerk - were assigned to the section. In later stages one officer and two men comprised the section.

Activities as they developed resulted in division of responsibility whereby summaries and general supervision were charged to the officer. Posting of the battle order map and specialties reference Italian battle order devolved upon The non-commissioned officer, and matters pertaining to German battle order and records were the main effort of the other enlisted man. The two officers were used early ashore as battle order assumed major proportions early in the campaign and running estimates were necessary.

The section recorded all identified enemy units down to battalions (to companies and batteries in the case of armored forces, artillery or engineers). New information was entered promptly on the unit's individual card. The new position was posted on the map and any necessary comments were communicated to the A. C. of S., G-2 or to the Duty Officer.

Information of enemy units located was disseminated as part of the "Identifications" section of the daily G-2 Periodic Report, published separately as a complete enemy battle order, or issued as special reports to G-2 on enemy units to be expected in sectors of projected operations.

An overall picture of enemy strength was maintained in the form of a chart showing estimated number of enemy infantry battalions, number of tanks, and number of guns remaining and combat efficiency.

V. PHOTO INTELLIGENCE

On April 1, 1943 one officer constituted the Photo Intelligence Section. As the functions of the section increased and developed, personnel were added. During May two officer interpreters, one enlisted clerk and one enlisted draughtsman were attached to the section from Hq. I Armored Corps.

In June, the section was augmented by a detachment from the Northwest African Photo Reconnaissance Wing, composed of thirteen officer photo interpreters, two enlisted draughtsmen, one typist, one clerk, three cooks, three truckdrivers and one motorcyclist; equipped by the same unit with two 3-ton trucks (offices), one 1½ ton truck (office), one 3/4 ton truck and one motorcycle.

Shortly after their arrival at Hq. Seventh Army, six interpreters were detached, one to each of the Divisions and one to II Corps. Prior to D day, two artillery officers and two artillery enlisted men were also attached for counter-battery purposes. One officer and one enlisted man were from the artillery section, Hq. Seventh Army. The other officer and enlisted man were from Artillery Section, Hq. II Corps.

On D-1, a part of the 15th Photo Squadron composed of a flight section, photo section, and administrative section were in direct support. The flight section was composed of ten aircraft, fifteen pilot officers, and fifteen mechanics. The photo section was composed of one officer and twenty-four technicians, and the administrative section which included cooks, guards, etc., was composed of one officer and sixteen enlisted men. Thus, the section from the beginning of the planning phase when it was composed of one officer and no enlisted men was built up to a section of thirty-five officers and seventy enlisted men.

After D day, an Engineer officer was added to make detailed reports of demolitions and other matters of Engineer interest.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

The activities of this section fall into five categories: Photo Reconnaissance, Photo Processing, Photo Interpretation, Collation Maps, and Beach Evaluation.

PHOTO RECONNAISSANCE

During the planning phase all requests for photo reconnaissance flights were made to Fifteenth Army Group and sorties were flown by units of the Northwest African Photo Reconnaissance Wing. These followed a broad overall plan of coverage which was outlined and furnished that headquarters early in the planning phase. (Annex No. 7). Plans for the first six day's missions (D to D plus 5) were prepared on 3 June 17, 1943 in event of poor communication. (Bulletin No. 22, Annex No. 11). These proved invaluable.

Special requests for Photo Reconnaissance by Divisions and Corps were made through channels to Hq. Seventh Army, who coordinated the requests and made special demands on the Air Liaison Officer, Fifteenth Army Group. As this officer was stationed at Malta, requests from both Seventh Army and Eighth Army were thus cleared.

For the operational phase the 12th Photo Reconnaissance Squadron was placed in support of the Seventh Army. The squadron comprised ten F-5 aircraft, (P-38), each equipped with one 6" camera and two 24" cameras. One aircraft had two 36" cameras.

From D to D plus 10 (20 July) the squadron was based at the Ariana airfield, Tunisia. After 20 July, an average of 5 aircraft daily were flown to Ponte Olivo airport, Gela, Sicily, where the pilots were briefed for the days missions. Upon completion of a mission, the planes landed at this same airfield, the film was removed, and the pilots were interrogated. The planes were then flown back to Ariana to escape the dangers of nightly enemy aerial bombardment.

After satisfactory communications were established between Hq. Seventh Army and units (D plus 8), all requests for photo reconnaissance missions were made to AC of S, G-2. One officer of the section was stationed at the airfield from which the squadron operated. All requests for missions made by units of Seventh Army were cleared through this officer. Requests for missions were made by radio, air courier, and telephone.

Night photo reconnaissance missions failed early in the operation due principally to enemy searchlights setting off the cameras, which used up the film before the target was reached. A solution to overcome this shortcoming was not found by the end of the operation.

A total of 140 missions were flown during the operational phase.

Statistics on the missions flown during the operation are as follows:

Total number of missions	140
Total mission failures (Missing target, weather, mechanical)	5
Total successful missions	135
Percentage of sorties successful	96.5%
Percentage of sorties failure	3.5%
Average flying time per sortie	1½ hours
Average number of missions daily	3.7
Plane Losses	0
Pre D-day missions	130
Number of 36" sorties after D-day	4

PHOTO PROCESSING

During the planning phase all sorties were flown from Malta and North Africa, were developed and printed at the respective airports and one set of prints dispatched to Hq. Seventh Army by Air Courier. There was a lag of approximately 48 hours from the completion of the printing to the delivery of the prints to Hq. Seventh Army.

If reprints were desired requests were made through channels, viz: Division to Corps to Hq. Seventh Army to HQ, Fifteenth Army Group to N.A.P.R.W. Delivery of prints was made in reverse order. The time gap from the origin of request to delivery of prints varied from 3 to 10 days.

From 3 to 10 sets of each sortie were printed and distributed to lower units during the planning phase. The number of sets requested depended upon the importance of the coverage and the repetition of the coverage.

Mosaics at scale of 1/25,000 of the entire original Seventh Army area were prepared and 35 sets distributed to lower units. This area included 1260 1/4 map sheets 271, 272, 273, 275, and 276.

An estimated total of 199,000 photographic prints and 1,400 mosaics were distributed to lower units.

The photo section of the 14th Photo Reconnaissance Squadron began developing and printing photographs on D day with the flight at Ariana airfield, Tunisia. This continued to D plus 10, and during this period only one set of prints was printed, there being no means of transporting prints to Sicily. The average time for developing and printing a 250-print sortie was 9 hours.

From D plus 10 to the end of the operation the photo section was based near the Ponte Olivo airport, Gela, Sicily. Either 2 or 3 sets of prints were printed with distribution of one each to interpretation detachment at the airport, to the division interested and to II Corps. Each sortie averaged 235 prints.

Distribution was made to Corps the same day that missions were flown providing air transportation was available, otherwise it was on the morning following the previous day's missions. Prints were subsequently distributed to divisions by Corps. This system was so slow, in most cases, that Divisions received prints covering an area after they had passed it.

EFFICIENCY IMPROVED

The efficiency of the photo section increased to such an extent during the operational phase that 3 sets of prints were finished in 3 hours, as against one set in 3 hours at the beginning of the operational phase. If a request was made by Corps two sets were printed. If request was made by a Division, 3 sets were printed with both the Division and Corps receiving a set of prints. Upon completion of the two or three sets of prints, the negative was dispatched by air courier to N.A.P.R.W. located at La Marsa, Tunisia.

Requests by units for selected prints were made through channels to Hq. Seventh Army. Hq. Seventh Army radioed for prints to N.A.P.R.W. Delivery was made by air courier daily to Ponte Olivo from where the prints were distributed to Corps via air courier when available. Many times prints were delayed as much as 48 hours due to lack of transportation. Corps in turn distributed to Divisions by their regular courier. This means of distribution resulted in a further delay.

88,100 prints were made during the operational phase by the Photo section. In addition to the prints made by the Photo Section of 12th Photo Reconnaissance Squadron, N.A.P.R.W. printed about 155,000 photos for this Army.

Photo mosaics of the entire area through which the Seventh Army moved were printed and 75 sets were distributed to units prior to their advance into the area.

PHOTO INTERPRETATION

Prior to 1 June, all photo interpretation was carried out by Hq. Fifteenth Army Group. Reports of defenses, etc., were forwarded to Hq. Seventh Army.

On 1 June, a detachment from N.A.P.R.W. consisting of thirteen officer photo interpreters, two plotters, and two clerks were attached to Hq. Seventh Army. Six of these interpreters were placed on detached service, one with each Corps and Division. The remainder formed the Hq. Seventh Army Photo Interpretation Detachment.

Sorties were interpreted daily as received and interpretation reports were issued beginning 3 June. These reports described in detail all defenses, including enemy batteries, dumps, minefields, anti-tank ditches, barracks, etc. A total of 18 reports was issued between 3 June and D-day.

Special airfield reports were issued on the airports in the Seventh Army Area. Detailed descriptions were made of the airports including the defenses, type of aircraft, length of runway, bomb craters, etc.

A description of pre D-day and D-day targets for aerial bombing and Naval bombardment was also made by the section.

Daily interpretation reports were issued on the entire day's coverage. While located in Africa (D to D plus 10) reports were submitted by Artillery radio to the units in Sicily via 299 radio provided for this purpose.

After D plus 10 the unit was located with the photo section, adjacent to the Ponte Olivo, Gela Airport.

Photos were interpreted as soon as they were printed and significant changes found were phoned or sent by courier to Army and Corps. On 1 August, a 299 radio was attached to the section for rapid dissemination of information. This radio operated on the Artillery net. After the completion of the interpretation of the day's sorties a mimeographed report was prepared. This was usually completed by midnight and reports were sent the following morning via air courier to the Army and Corps, who forwarded reports to their respective organizations by the fastest available means. A total of 46 interpretation reports was issued. (Annex No. 8 for sample). The same difficulties existed in the distribution of reports as are outlined in the Photo Processing section of this report.

An Engineer officer was attached to the unit to report on enemy demolitions. Daily reports were issued.

Counter-battery officers from Hq. Seventh Army and II Corps were attached for the purpose of fixing coordinates of enemy gun positions. The coordinates of counter-battery targets were reported by radio to Hq. Seventh Army and II Corps.

COLLATION MAPS

Prior to D day all collation maps were printed by facilities available to Fifteenth Army Group.

The first edition was printed on 19 May in limited quantity (200 copies), and overprinted information was furnished by Hq. Fifteenth Army Group. This edition was for planning use only.

The second edition was printed on 20 June, the Photo Interpretation section of Hq. Seventh Army furnishing the overlays for the maps of Seventh Army area. Collated maps of the area adjacent to the Seventh Army area was furnished by Hq. Fifteenth Army Group. U. S. military symbols were used. 1,900 copies were printed of each map.

On D-10 the 66th Topographical Company located at Ariana airfield was made available for the purpose of printing collated maps. Base maps of the entire western portion of the island were prepared and overlays were kept up to date for immediate printing.

On D day, the Topographical Company started printing the collation maps of the Seventh Army area. Maps were printed and distributed from 11 July until 20 July.

After the movement of the Photo Interpretation Detachment to Sicily the facilities of the 62nd Topographical Company of II Corps were made available for the printing of the maps. Base maps were prepared of the new areas assigned to Seventh Army and collated maps were printed of the entire coastal area from TERMINI to CALASIBI, two days prior to the advance of a unit into a new area. This system was retarded at times due to the great distance between the Topographical Company and the Interpretation Detachment. Too much time was wasted traveling between the two organizations concerned. Two editions of some maps were issued, usually when the advance was difficult and retarded.

Field Manual distribution was made of all maps. 500 copies of each were made.

Copy of collation map and overlay showing maps printed are attached as Annexes 9 and 10.

BEACH EVALUATION

Preliminary Beach Evaluations were issued by Hq. Seventh Army as G-2 Information Bulletin No. 4 with 3 supplements.

The final beach evaluation issued to units of this command was a combination of Hq. Fifteenth Army Group, ZEMAMAN, and Hq. Seventh Army interpretations, and was issued as G-2 General Information Bulletin No. 23. (Annex No. 4)

Beach evaluations were prepared by Seventh Army of the beaches which were used for the 3 landings behind the enemy lines, during the closing phases of the campaign. Annotated photo strips, collages, collation maps, and a written description were furnished the units concerned in the operation 48 hours prior to the operation. (Annex No. 11).

VI. AIR LIAISON AND OBSERVATION

During the planning phase arrangements were made for an observation squadron to be in direct support of Force 343. The 111th Observation Squadron later designated the 111th Reconnaissance Squadron was assigned to the XII air support Command. Inasmuch as the personnel were mostly fighter pilots, the squadron requested and were furnished ground officers (one from the armored division, and one each from infantry and artillery) to assist in training the pilots in what to look for on their missions. These air liaison officers stayed with the squadron throughout the operations.

This squadron had twenty-five P-51 type aircraft. Two of these were equipped with cameras, each having one 70 mm vertical camera and one 70 oblique camera. Each mission was flown by two aircraft. The scale of photography taken with these cameras was usually too small to be efficient tactical interpretation, but inasmuch as the photographs were supplementary to the visual observation and usually were for target missions, the observation proved extremely successful. If the pilots saw targets of any value, the plane without cameras served as a lookout while the other plane photographed the target.

C-3

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

Missions were requested by H.Q. Seventh Army through XII Air Support Command. Corps and divisions submitted requests through their respective air support parties to the XII Air Support Command. The average time for submitting a request was two hours. Information derived was submitted to units as soon as available.

The use of the air support channel resulted in some confusion. Many requests were made by lower units to the squadron for photo missions which should have been directed to the Photo Reconnaissance Squadron.

MISSION PREPARATION

As with photographic reconnaissance, in addition for failure or lack of communications, this unit, which was based in North Africa until suitable airfields were available in Sicily, was assigned to advanced missions for the first five days after the landing. These covered all the indicated requirements, and were submitted through the XII Air Support Command. An understanding was also established with XII Air Support Command that if communications were unsatisfactory (as they later were during the assault phase) the results of the observation were to be acted upon without reference to the Seventh Army. This worked exceedingly well, and lack of information was compensated for by the knowledge that both turret guns could be taken under fire as standard procedure. (For further figures on fighter missions appear in [illegible] Information Bulletin No. [illegible] No. 4).

A total of 270 reconnaissance missions each consisting of two sorties were flown during the operational phase. Of the total, 90 or 35% were visual and 180, or 67% were visual only. A total of 10 or 4% of the missions were failures. The [illegible] were [illegible], an average of 1½ per photo sortie.

THE LIAISON OFFICER

Tactical reconnaissance required high performance, fighter type aircraft. The pilot must be a trained observer and thoroughly familiar with employment of tank and friendly infantry, armor, artillery, and air forces. It [illegible] in this training a ground school briefly covering the direction of Army, formations and tactics of infantry, tanks, armor, artillery, [illegible] shore, types of invasion craft and landing beach, [illegible] operations, tactical employment of artillery, artillery adjustment of fire, identification of ground vehicles, [illegible] required by units in march, bivouac and deployed formations, and the capabilities of German anti-aircraft artillery was conducted by three liaison officers referred to above. All instruction was of conference type supplemented with diagrams and pictures to depict target formations and troop movements.

Tours were made of nearby harbors where navy personnel cooperated in explaining various types of landing craft and vessels. Later pilots were sent out to observe these craft at various altitudes.

Advantage was taken of actual amphibious training of ground troops. Pilots observed these actual landing and ground maneuvers and took photographs. Results were checked with known dispositions of troops which had not been disclosed to the observers prior to their return.

On D minus 2 the section was briefed for Sicilian operation and studied the part the squadron was to play. Orders stated that the squadron would be prepared to fly 29 missions of 2 aircraft each between dawn and dusk of "D" day. First missions were reconnaissance of the three main landing beaches with instructions to report progress of landing and resistance being met. Other missions were briefed for reconnaissance of road nets to determine movement of enemy reserves.

All results were good. Pilots as a result of their training knew and recognized the types of ships and landing craft observed. At this time the squadron was operating from Korba on the Cape Bon Peninsula (Tunisia) and the only communication with Army Headquarters was by radio thru XII Air Support Command (Rear). Unfortunately the communications were not good and it was impossible to disseminate the information obtained. However, such information was very vital for dive-bomber targets.

On D plus 4, the air echelon of the squadron moved to Ponte Olivo (Sicily) airdrome and direct communications were established between XII Air Support Command and the squadron. The squadron later moved to Gela west where it continued to operate throughout the campaign, flying an average of 20 sorties per day.

FLASH REPORTS

II Corps established radio communications with the squadron for "flash" reports on the results of the missions. Otherwise, all reports of missions were required to be reported thru XII Air Support Command, who in turn gave the information to Seventh Army. Late in the campaign, radio communication with front line divisions was established. This contact was direct from plane to ground and listeners could get flash reports of pilot while the plane was still in air.

When distances permitted air liaison officers made visits to Army or Corps headquarters to keep the squadron posted as to ground action. When Army and Corps headquarters became so distant from the operating field, trips had to be abandoned. II Corps then established its liaison by air courier, via cub plane, and in addition direct radio channels were set up to Seventh Army as well as II Corps through the 3d Air Defense Wing, located at the same airfield. II Corps then began sending an officer daily by cub plane to visit the squadron and 3rd Air Defence Wing also had radio communications with II Corps.

VII. MAPS

With the announcement of the operation HUSKY early in March, immediate steps were taken to ascertain what maps of Sicily were available. At this time it was found that a map to the scale 1/100,000 in one color, and decidedly not satisfactory, was the only thing available in this scale. Similarly, a black and white map, scale 1/250,000, was available and it was found that black and white maps to the scale 1/50,000 and 1/25,000 were available of portions of the Island but neither scale covered the island completely.

ROAD MAP

No road maps similar to the type published by the oil companies in the United States could be found.

In the operation Torch, the road map of Morocco, provided on a per vehicle basis, proved to be of inestimable value. Therefore, it seemed obvious that a road map must be prepared for similar use in Sicily. It was decided to take the I.S.T.S. road map, which was on the scale 1/250,000, reduce it to 1/500,000, and print it in four colors showing roads, railroads, towns, etc., in an effort to hastily improvise.

This road map was not very satisfactory because it did not show third-class roads and names of small localities. A more suitable map was made in the United States to the scale 1/200,000, and would have been very satisfactory for our purposes, but, since our channel of command was through Force 141, British Headquarters, there was no way for us to ascertain what was available in the United States for our purposes.

COLORED MAPS

In order to rectify the larger scale maps, such as 1/100,000, 1/50,000 and 1/25,000, second editions were prepared and published in five colors. This map was a five color multigraph map with red roads, brown contours, blue water, green woods, and coordinates, grid lines, towns, etc., shown in black. These proved to be quite satisfactory.

At a conference with G-2, Engineer and Artillery, it was decided to make the 1/50,000 scale available as the basic map for field manual distribution. The 1/100,000 scale map was made available for higher headquarters, planning purposes, and the 1/25,000 scale available for the use of the Artillery, augmented by the 1/25,000 photo maps of areas not available in the 1/25,000 scale map. Besides these, the 1/250,000 scale map in color, showing contours, was provided for general utility purposes.

The Engineer Section was responsible for and handled the production and distribution of all maps and these phases are discussed in the Engineer report.

During the operational phase it was found that map stocks in large quantities were not available in forward areas.

Collated maps were prepared by the Engineer from drawings from overlays provided by the Photo Interpretation Section of G-2. Further details on this subject will be found in the Photo Intelligence Section report.

VIII. COUNTER INTELLIGENCE

At the start of the planning phase, one of the officers of the G-2 Section was placed in charge of security for the planning at Headquarters I Armored Corps, then at Rabat, French Morocco, the main responsibilities being reflected in intensification of operation of the security for the War Room, and CE system throughout the Corps. Liaison was carried on with local CIC agents and later with CI Section, MBS, Oran; and with Office Naval Intelligence at Arzew.

The Counter Intelligence Plan was also immediately drafted for inclusion in the intelligence plan. Upon advice of the move of Headquarters to Montagnon an advance officer proceeded there and supervised arrangements for the security of the Headquarters and final planning room for Force 343 (I Armored Corps, Reinforced). And there, as previously, physical security of the buildings in which planning took place, was accomplished in cooperation with the Force Provost Marshal.

The plan for distribution of CIC personnel originally was based on the then tactical plan of taking the western portion of the island of Sicily. As this portion included two major ports, two port type CIC detachments, composed of two officers and eleven men each, were requested. One field security type of the same number of officers and men for the Army and the Corps Headquarters were also requested, and one officer and five men were requested for each Division.

SECURITY PLANS

A security memorandum was published following a directive from higher Headquarters which resulted in the classification of XO and TO officers and Pigot clerks of all members of the planning staff of this and lower Headquarters. (See Annex # 12). A Counter Intelligence plan for operation HUSKY was drawn up, high lights of which were to secure, plot and disseminate CI missions to be accomplished by the Army, Corps and Division Counter Intelligence Corps Detachments. The section prepared lists of railway facilities, tunnels, communications, power and light stations, water facilities, military establishment, and certain important civil establishments which were indicated on town plans. These town plans were then sent to interested CIC detachments with directives that such facilities be either captured and protected or destroyed depending upon their nature. Unfortunately, the securing and protection of important installations was sometimes hampered due to a lack of transportation, lack of linguists and lack of available guards to fulfill security recommendations.

Countersigns to include Dyl were issued for all Army Troops - thereafter delegated to lower echelons of command. As that caused some confusion, unforeseen by augmentations of unrelated troops in the same area, these were later changed to one set for all Seventh Army troops. Of interest is that to insure complete distribution of countersigns, a safe margin was found to be seven days in advance.

Higher headquarters had established a CIC training school of approximately three weeks duration for CIC personnel later to be assigned to the units of Seventh Army. Upon completion of this course sections reported to Rear Commands and a portion of one of the Port Sections was placed with the 1st Engineers Special Brigade to learn first-hand the most likely problems of security in "over the beach supply".

CIC personnel attached to all echelons of Seventh Army totaled 13 officers and 68 special agents and agents. One Field Section and Port Sections "A" and "B", each consisting of two officers and 11 men, were attached to Headquarters Seventh Army. The Field Section was attached to Headquarters II Corps. These members were sufficient for tactical operations but due to speed of the operation, and lacking follow-up were not sufficient to insure prompt, complete counter intelligence coverage of towns captured or by-passed during the operation.

Charged as it was with the preparation of the cover plan and countersigns, the personnel of the section was changed to 2 officers and one clerk and later to 3 officers and 2 clerks. The cover plan was prepared by higher headquarters and required assembling and reporting all rumors, in order that those authorities might determine what success their propaganda was having. Other matters such as sealing of troops were, because of distances and subdivisions employed in organizing of task forces, delegated to the sub-task force commanders.

ENEMY AGENTS

Operationally, the CIC sections of divisions landed with assault troops on D-Day according to the CIC Plan and without loss. Others landed with their proper headquarters during the operations. They located and arrested leading military and civil Fascists of which 222 were interned; generally, these were Segretario Politico, Segretario Federale or vic segretario; Members of G.V.N.A.; Members of Squadra di Azione; Commandante of G.I.I.; Commissario di Publica Sicurezz; Inspectors of P.N.F.; Commandante M.V.S.N.; or, Agents of Centro Contra Spanaggio.

It is estimated that the number of Political Prisoners interned as dangerous or potentially dangerous to security during the active phases of operation was over 500, of which probably one-third remain detained. Wherever practicable, AMGOT officials were contacted before taking action. Former party members vital to the operation of the civil government, key installations and police were continued in their positions where adequate replacements could not be found.

It must be borne in mind that the military mission was to obtain unconditional surrender of Sicily. The detachments were, hence, interested in political as well as military resistance, and with that in mind made arrests according to their best judgment. The decision was theirs, during the tactical phase, and so performed though occasional mistakes were made.

CIC searched enemy CPs and military and civil headquarters resulting in large numbers of maps, overlays of minefields, gun positions, supplies, etc., which proved of great value to tactical units. Volumes of documents, orders, data, military codes, handbooks, etc., were forwarded to AFHQ through the Documents Section. Counter Intelligence material of immediate interest was forwarded to 15th Army Group.

Overlays were found of nearly all minefields in Sicily; a copy of Battle Order of enemy units operation in Sicily; at the former headquarters of the Centre Contra Spanaggio, papers giving considerable information including names

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

and addresses of Colonel de Leo's organization, and a list of potential enemy agents. This information was immediately dispatched to interested agencies.

GERMAN RADAR UNITS

Complete codes of German Radar Units, of wireless transmitter units, and of code "K" with seals unbroken which carried radio code information for use until September 1943 were found and dispatched. Other documents included data on the Prison system of Italian PW group, including the informant system, location of Italian PW camps, rules, regulations, etc. A detailed Battle Order information of enemy in Balkans and Greece was also taken. Thirteen wireless transmitters (eight intact) and four Radar units were located and turned over to or reported to the Army Signal Section for disposition. Over 200 sacks of enemy mail and 18 sacks of postage stamps and volumes of telegrams were turned over to ACLS.

The Port Sections installed and operated port security and "over the beach supply" security measures. One handled security for the ports of Licata, Porto Empedocle and Palermo, and the other in Port of Gela and "over the beach supply" from a point south of Vittoria to east of Licata. To insure port security pass systems were installed and interestingly, to date, no sabotage has been noted.

IX. PRISONER OF WAR INTERROGATION

INTERROGATION SYSTEM

During the operations FWI personnel attached to Hq Seventh Army consisted of 1 officer, 3 enlisted men (German); 2 officers and 5 enlisted men (Italian). This detachment was employed during the initial operations in Gela for spot interrogation of prisoners assembled at the Gela cage. Prisoners of war were questioned hastily and briefly for immediate tactical intelligence such as battle order, troop dispositions, minefields, etc. The prisoners during this early phase were principally from a battalion sector. Hence, initial information obtained was limited to that of a tactical nature only.

As combat elements progressed, prisoners evacuated through Gela became more diverse and Army interrogators initiated more detailed and thorough interrogation. They conducted special interrogations of enemy high ranking officials and selected prisoners were referred to G-2, Seventh Army at Gela and later at Agrigento and Palermo. A directive was issued by this headquarters that all enemy admirals, general officers, colonels, and separate unit commanders be sent to Army cage for interrogation. Information sought covered all phases of intelligence, including broad strategic questions: Battle order, troop movements, plans, armored forces, artillery, reserves, missions, effects of bombings, etc. Italian generals, escaped German and Italian prisoners, enemy aviation personnel (in conjunction with special air interrogators with and through the XII Air Support Command) and enemy technical experts were interrogated in detail. Particular reference is made to the interrogation of an Italian general from whom a complete battle order and personalities of two Italian Divisions was obtained.

In February, 1943, the I Armored Corps laid plans for a school for the training of Prisoner of War Interrogators. For six weeks extensive planning, interviewing of prospective students of all I Armored Corps troops, and administrative preparations continued. The school was ready for operation; instructors had prepared a curriculum, and housing and messing facilities were arranged for. The course failed to materialize but was compensated for by the Corps and unit commanders gaining a personally authenticated file of all linguists in their command. This was to stand in good stead later, particularly with reference to linguists.

Two FWI teams were allotted to each division and to each higher headquarters. Personnel assigned to AFHQ were attached directly to divisions. Assigned I Armored Corps personnel were retained at its headquarters or sent on detached service to subordinate units.

PARATROOP-JUMPER INTERROGATORS

During the planning period changing operational requirements necessitated shuffling of personnel and presented interesting but complex problems. The 82nd Airborne Division, for example, made an urgent request for volunteer parachute-jumper interrogators. Canvassing of units produced two. Excess personnel was detached from the division planned for force reserve and attached to the 2nd Armored Division combat teams, who were scheduled to perate early in the campaign.

Vehicles and trailers were requisitioned for the intergral transportation that Interrogation Teams require. In addition a small reserve was arranged for to replace shortages, losses or damges which later proved its worth.

Operational procedure was drafted and included in the G-2 Intelligence Plan. Its basis was coordination with the Intelligence Situatin or Combat Sections. The planned system was reciprocal whereby essential elements would be furnished Interrogation Teams by Intelligence Combat sections and FWI findings given to Intelligence Combat sections through daily reports and weekly summary reports.

One hundred-forty prisoners were interrogated by Army interrogators during the operation. Irregular cases arose regarding prisoners of war and Sicilians. Army interrogators handled and affected the settlement of problems involved. Reference is made to the case of Italian lieutenant colonel and party of 5 enlisted men (carrying large sums of money) captured at sea by Navy and confined to civil jail in Palermo. Also the case of a civilian anti-Fascist who was released from prison and delivered a list of Fascist names numbering 200.

PRISONERS PAROLED

At the request of the Army Provost Marshal, interrogators assisted in expediting the paroling of approximately 5,000 Sicilians following a directive issued regarding such paroles. Work was done at cages at Palermo, at Prizzi, and later from local prefectures at Corleone, Misacuire, and others.

The distribution of personnel of FWI teams in the divisions was supervised by Seventh Army when required by the tactical situation or by casualties among interrogators.

Additional activities of FWI personnel as interpreters, translators and miscellaneous document activity, are covered elsewhere in this report.

Extracts from lower echelon reports:

2d Armored Division - Armored Division FWI personnel worked best when distributed into bi-lingual teams as follows: 4 interrogators each with Reconnaissance Battalion, CCA, CCB, and Division Headquarters. Enemy documents picked up by soldiers, and sent back, and gone through by interrogators have uncovered some highly important items such as new locations of enemy units, location of enemy minefields, defenses and installations, signal operating instructions, and lists of paroles and countersigns.

45th Division - FWI personnel was distributed approximately evenly between RCT's Hq and Division Headquarters. Each group was bi-lingual and had an officer in charge. Principal objectives in interrogation were identification strength, equipment, and location.

1st Division - Interrogators were distributed throughout Division Headquarters and RCT headquarters. In addition, 4 enlisted men, FWI, were with the Clearing Company of the Medical Battalion. Interrogation personnel acted as part of the staffs of the units to which they were attached. Officers participated in staff conferences and their opinions were given weight in any consideration of enemy capabilities.

The major advantage of interrogation at combat team headquarters is the time element; information received one or two hours after capture is still "fresh".

II Corps - The FWI personnel with II Corps was used partly to reinforce division interrogation teams, and partly in the Corps battle order section. There was no Corps cage and, therefore, no interrogation at Corps. Prisoners were evacuated directly from Division cage to Army cages.

The translation section scheduled to arrive from the United States with the 45th Division did not arrive. To meet this deficiency a Translating Section consisting of 1 enlisted man (translator) and 1 officer (translator), and 1 typist was improvised by Hq Seventh Army from its own FWI personnel.

Translations were made for the Commanding General, AMGOT, and all staff sections. (Number of typewritten pages of translations approximately 200).

The requested number of interpreters for Seventh Army was not received. To further alleviate conditions the Army Italian FWI team was used extensively on interpreting missions. Such missions included: Interpreting for the Army Commander, Hq. Commandant, Billeting Officers, CIC, visitors from higher headquarters, and the Army Engineer, Artillery and Provost Marshal Sections.

X. INTERCEPT SERVICES

"Y" SERVICES REPORT

It was contemplated that an intercept of enemy radio traffic would be made available to the Seventh Army. Actually the campaign progressed so fast that these services were not established until the last two or three days when useful information was obtained. Further details concerning the original plan and the final outcome will be found in the report on the Signal Section.

"J" SERVICES REPORT

To regulate the introduction of "J" Service into the United States Army and to train personnel in its functions, orders from Allied Force Headquarters attached two British officers to Headquarters I Armored Corps late in May. The officers attached had wide experience with the British First Army and thus were well qualified to introduce it. Briefly, the service was to provide a speedy and accurate source of information to G-2 and G-3 staffs at Army, Corps, and Division headquarters by intercepting radio traffic of friendly forward nets. As a secondary purpose, it was to monitor those nets with a view to checking on breaches of radio security.

The activity was assigned as a G-2 function. The technical requirements, qualifications, capabilities, and limitations are covered in greater detail in the Signal Officer's report.

Inasmuch as this was to be an educational as well as an operational project, the staffs of sections concerned were oriented as to the advantages and limitations of the service. The officers arrived at MOSTAGANEM on 1 June and immediately set up their establishments. Contacts were made with the various headquarters, and plans were laid for technical arrangements to provide the necessary intercept on board headquarters ships. In the main, operating personnel was to be furnished by the Radio Intelligence Platoon of the infantry divisions.

It was stipulated that "J" Service was under control of the G-2 of the headquarters being served. In that way, the officers in charge could be briefed as to anticipated activity, and could be oriented for the traffic anticipated. Inasmuch as this traffic was to produce the messages of our lower combat echelons, it would, likewise, serve as an enemy intelligence agency.

USEFUL IN ASSAULT

During the landing operations, this service served as a valuable link and some success was achieved by direct intercept with a FM set on the bridge of the Army command ship, which augmented the situation reports of the actual landings of the assault waves.

When the Command Post moved from GELA to AGRIGENTO, communication was poor and not very prolific. Due to the speed with which units were progressing they passed beyond the range of the intercept sets and, in addition, telephonic communication was used. A set dispatched with the 2nd Armored Division arrived too late in the PALERMO area to be useful but it was then shifted to the 1st Division, where a total of 60 messages was received in one day. This material included intercepts from the British 78th Division and 1st Canadian Division on the right flank of the Seventh Army and proved a valuable source of information.

A valuable contribution was made as a source of early information, wherein there were reported such important items as the capture or fall of ENNA, TROINA, BRONTE, MALETTO, RANDAZZO, CASTIGLIONE, and others. It contributed early lateral information reference minefields, blown bridges, and disposition of enemy forces. It proved to be a considerable source of operational information not received otherwise from the division and brought to light grave breaches of radio security in lower units.

XI. MISCELLANEOUS

Although during the planning phase, the miscellaneous subsection was to tie in such activities as Prisoner of War Interrogators, Translators and Interpreters, immediately upon entry into the operations this section grew by leaps and bounds. As a result of the division of the command post into an "advanced CP" and "Main CP", the miscellaneous subsection functioned at the Main CP and, as it finally developed, supervised and coordinated activities of the following:

A. Counter Intelligence Corps.

B. Prisoner of War Interrogators.

C. Psychological Warfare Branch.

D. Experimental Detachment G-3 (O.S.S.).

E. Experimental Detachment G-3 (X-2)

F. Secret Intelligence (b) (BRITISH)

G. Advance Censorship Liaison Section.

H. Field Press Censor.

I. Advance Document Section.

J. Special Liaison Unit. (British)

K. Translators and Interpreters.

L. Press Censorship Liaison Office.

M. Public Relations. (See Public Relation's Report).

To digress briefly, a tactical commander is primarily interested in tactical results. His investments must pay prompt dividends. Many detachments sent by higher headquarters made their appearance with vague missions, some

THIS PAGE IS UNCLASSIFIED

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

entirely strategic, and without advance notice. Had their purpose in the picture been more clearly defined, briefing and employment in the operation might have been more intelligently performed and no immediate results would have been sought. So some, later to prove themselves of inestimable value, joined during the operational phase under handicap. Some, instead of joining at a late date should have accompanied the assault. All should have been coordinated at this Headquarters in the planning phase. This subsection report emphasizes the importance of these activities.

This section also served as liaison between the G-2 section operating at the advanced CP and other agencies such as AMGOT (Allied Military Government of Occupied Territory) and the Public Relations section. As stated before, the purpose of this Section was to coordinate these various miscellaneous units, the members of which were in many cases unfamiliar with American Army command procedure, and lacked administrative self-sufficiency, so that it was necessary to have a central head for the purpose of seeing that rations, transportation, billets, pay, etc. were obtained.

Another important purpose of the Section was to insure that these various activities and agencies were properly coordinated and controlled with a minimum of overlap. Daily activity reports from these units were rendered to the chief of the Subsection for consolidation and recommendations were made to the A.C. of S., G-2.

Several of these units arrived unannounced without any warning from higher headquarters, and without authentic written orders.

A. COUNTER INTELLIGENCE CORPS.
(See Part VIII Preceding)

B. PRISONER OF WAR INTERROGATORS.
(See Part IX Preceding)

C. PSYCHOLOGICAL WARFARE BRANCH

Early in the planning phase advice was received that Psychological Warfare personnel would be provided for the operation by higher headquarters. Beyond this, very little was known about its activities other than what was contained in a general directive. No specific contacts were made, and as far as the Seventh Army was concerned, PWB entered the operation as an intangible activity of doubtful and questionable value. Results, however, were convincing of the important part this activity plays.

The PWB team consisting of a detachment of seven landed in Sicily on D+4 and reported to Headquarters. It was intended for direct tactical action, principally through propaganda leaflets. Two further echelons arrived subsequently, to deal with the civil population during the periods of consolidation and occupation.

Propaganda leaflets were the principal PWB weapon against enemy morale (Attached Annex #13 - Sample leaflets in Italian and German). The dropping of strategic leaflets began in the middle of May, dissemination being made by tactical bombing force. In one week, July 10-31, it is reported 15,000,000 leaflets were dropped. Seven million leaflets were dropped in sectors specified by Psychological Warfare forward teams in twenty-three bombing missions from North Africa.

After the landing, further leaflets were edited in Sicily, based on information obtained from interrogations, captured documents and mail. These proved valuable and enabled PWB to determine the relative effectiveness of various forms of leaflets. New leaflets continued to be printed and distributed from Africa. Interestingly, some 500,000 copies were printed in Sicily, distributed by Cub planes, and in some cases shot into enemy lines by twenty-five pounder guns at the specific request and suggestion of tactical units. In several instances these leaflets contained the names of enemy commanders obtained through prisoner of war interrogations, which are believed to have proved especially effective psychologically in softening enemy morale. In other cases, the surrender of Sicilian towns was probably hastened by the dropping of leaflets on immediate military objectives urging them to fly white flags to prevent further destruction. As an indication of the effectiveness of these leaflets in inducing enemy troops to surrender, approximately 80% of Italian prisoners of war interrogated were in the possession of, or thoroughly familiar with, Psychological Warfare Branch leaflets.

RADIO PROPAGANDA

Other activities during the operation, although of less tactical significance, consisted of propaganda radio programs, first from North Africa, and later from the Palermo broadcasting station. This station was seized by Psychological Warfare Branch personnel immediately on the surrender of the city and started operating on 5th of August.

Moving picture films were seized throughout Sicily and carefully censored. Movie theaters were reopened in Palermo and began showing American and British films of propaganda value on August 14th. A daily newspaper "Sicilia Liberata" started publication August 4th with a news column in English utilizing staffs and plants of two existing newspapers. PWB photographers took pictures of American troops being welcomed as liberators by the local populace, and other pictures showing return to normal conditions, for use in propaganda.

Subversive efforts were made through rumor spreading, the most effective being of clashes between Germans and Italians. Contacts were established throughout Sicily with underground anti-Fascist organizations and much valuable intelligence information was obtained from these sources.

On August 18th, the detachment commander, with an important group of his personnel, were ordered back to North Africa and subsequently the detachment commander was replaced several times. This led to some confusion through lack of continuity of command, and reduced the effectiveness of the section which was then rapidly expanding its activities.

D. EXPERIMENTAL DETACHMENT G-3 (O.S.S.)

The first detachment composed of three officers and nine enlisted men landed at Licata on July 15th and immediately reported to this Headquarters. The detachment commander was informed of the desirability of obtaining intelligence information from the Palermo area, and consequently, two attempts to infiltrate missions through the lines were made; military movement was so rapid that both of these missions were unable to infiltrate.

After the capture of Palermo, two three-man teams were attached to a front line division and succeeded in infiltrating behind enemy lines on several occasions, furnishing information of tactical value. An important mission consisting of the detachment commander, four enlisted men and two civilians was organized for the purpose of penetrating enemy lines in the direction of Messina. The mission was ambushed by German troops and several of its members were captured and wounded. All but the detachment commander eventually succeeded in returning through enemy lines and brought with them information of tactical value to our front line troops.

Several agents were landed, with the cooperation of the Navy, on the Italian mainland and at the request of the Navy, members accompanied the U. S. Naval expedition which captured the LiPari Islands, and proved useful in negotiating with the enemy authorities occupying the Islands. Close cooperation was affected with C.I.C. and AMGOT, and assistance was rendered in locating enemy agents, dangerous Fascist officials and important documents.

E. EXPERIMENTAL DETACHMENT G-3 (X-2)

As this detachment, which consisted originally of two officers, operated directly under higher headquarters, it is not further included in this report.

F. SECRET INTELLIGENCE (b) BRITISH

This unit, consisting of a party of five, also operated under higher headquarters and with experimental detachment G-3 (X-2), maintained close contact with C.I.C. and supplied valuable information.

G. ADVANCE CENSORSHIP LIAISON SECTION

The section consisting of two officers and one enlisted man and equipped with one 1/4 ton 4x4 landed at Gela July 15th and with the mission of seizing all enemy mail found in Post Offices, military Headquarters, and places of concealment.

No advance indication of its attachment had been received but it too soon proved its worth. By energetically following close behind tactical units, it succeeded in seizing over 110 tons of mail, several millions lire in currency and important documents. The mail was examined for material of immediate tactical value and after sorting, was sacked and shipped by air to the organizations Examination Center in Tunis. Currency and stamps found were turned over to AMGOT. Among important documents discovered, was a complete list of all Italian A.P.O.'s with their locations in Russia, Germany, Italy, Sicily and the Balkans. Also found were maps showing the complete signal installations of all islands belonging to or occupied by Italians. All documents of immediate tactical value were turned over to A. C. of S., G-2, for disposition.

H. FIELD PRESS CENSOR

The field Press Censor was in contact with Public Relations Officer in ample time to prepare plans for his activities which were stipulated to be the censoring of all press material prepared by correspondents, the giving of censorship guidances to war correspondents in the field in order to reduce subsequent censorship, and the sending back to higher headquarters as the operation proceeded of information and suggestions affecting censorship guidance.

The Field Press Censor censored about 900 words per day of radio copy sent to Algiers during the first two weeks. Thereafter, when radio congestion prevented press radios, he remained with correspondents in the field using II Corps Headquarters as a base. There, he attended daily briefing of correspondents by A.C. of S., G-2, II Corps, and advised them of any changes in censorship regulations. He also accompanied correspondents on trips to other headquarters and to the front giving on-the-spot guidance.

I. ADVANCE DOCUMENT SECTION.

Again during the planning phase no indication was received of the existence or proposed activity of this important organization.

This section, which consisted of one officer and one enlisted man, seized, examined, packed and shipped through channels to the Document Section, G-2, A.F.H.Q. a great volume of captured enemy documents. Data of immediate tactical importance was turned over to G-2, Seventh Army, including details of the previously unidentified German Panther Tank and of German and Italian Battle Order. Arriving without organic transportation, an Italian truck was requisitioned to handle its large volume of business. The ground floor with loading ramp of the Post Office building at Palermo was used to advantage. Again, as with allied activities, additional personnel and assistance was given by the G-2 section during peak-load periods. Upon the withdrawal of its detachment commander during the operation, the G-2 section cooperated to the completion of its mission.

J. SPECIAL LIAISON UNIT (British)

As with several other detachments this unit worked directly under supervision of higher headquarters.

K. TRANSLATORS AND INTERPRETERS.

Following emphasis laid on lack of language personnel during the invasion of French Morocco, this Headquarters requested early in the planning stage that adequate Italian speaking personnel be supplied for the Sicilian operation. In April it was announced to this Headquarters that the following interpreters and translators would be available thru A.F.H.Q. and the War Department:

a. Interpreters:

Army Headquarters	4 officers, 6 enlisted men
Corps Headquarters	4 officers, 6 enlisted men
Each Division	10 officers, 15 enlisted men

b. Translators:

Army Headquarters

Italian - 1 officer, 3 enlisted men

German - 1 officer, 3 enlisted men

None of the above personnel arrived, and had to be provided for from available personnel. As shown elsewhere in this report, Italian speaking enlisted men, mostly of mediocre language ability, were drawn from lower units to act as interpreters for various staff sections, and F.W.I. personnel was utilized for interpretation and translation. Similar emergency measures were taken by all units of Seventh Army.

This failure proved a handicap to every phase of the operation, not only in administrative contacts with civilian population, but in combat operations when combat units were restricted in obtaining much essential information concerning roads, terrain features, enemy locations, water supply, etc. from local inhabitants.

L. PRESS CENSORSHIP LIAISON OFFICE.

The unit consisted of one Italian speaking officer from Censorship Branch (INC) A.F.H.Q., who reported to this Headquarters August 12th. He censored local newspapers and photographs for inclusion in press, publications of local origin, and Italian and United States radio scripts, also "Stars and Stripes, Sicily", organization publications, P.W.B. photos, etc., and successfully carried out its mission.

MISCELLANEOUS SECTION VALUABLE

The Miscellaneous Sub-section, born in combat, proved of real value in facilitating the operation of units attached to it. All of the units supplied information of great value, and cooperated in every way, not only with G-2 and other headquarters sections, but with each other.

The effectiveness of most of these units would have been greatly increased if this Headquarters had been advised during the planning stage that they would be made available and what their functions were to be. Their arrival in the theater after D-day, in the full course of the operation, with no prior opportunity for the Army and lower headquarters staff to learn what each unit could furnish or how they were to operate, inevitably led at the outset to confusion, misunderstanding and waste of valuable time and effort. Had these been coordinated in this Headquarters in the planning phase, the time lag necessary for familiarization would have been eliminated.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

XII. CONCLUSIONS

XII. CONCLUSIONS

1. General.

a. The most effective device developed during the planning phase was the pictorial method of displaying terrain, communications, enemy dispositions and fortifications on overlay sheets of clear acetate, which enabled the staff to be kept informed of the enemy situation and assist in the preparation of the tactical plan more quickly than ever before. It proved a most desirable method of briefing both higher and lower general staffs as required.

b. Another important innovation was the attachment of a photo interpretation section to the G-2 section. This, for the first time, provided facilities immediately available to G-2 to keep abreast of enemy installations and to provide a means, under G-2 control, for the rapid dissemination of information so gained, and proved most successful, particularly in the planning phase.

c. The measures to provide security taken with the inception of the operation HUSKY and carried on relentlessly through the campaign, were most successful as tactical surprise was attained at the time of the assault.

d. The greatest weakness turned out to be inadequate preparations for the sudden shift from the planning to the operational phase of the campaign. This shift requires a complete change in the activities of the personnel of the G-2 section and considerable training and experience is required to make it function smoothly. Personnel added late are of little value.

e. Another weakness was lack of appreciation of the importance of enemy Battle order, which requires long and comprehensive study by competent personnel. It is an uninteresting evolution and hypothetical peacetime training and presents a most difficult problem. In operations it becomes instantly important. By piecing its results with combat intelligence gained, particularly in landings on hostile shores, enemy capabilities become immediately apparent.

2. Administrative Section.

a. An administrative section is required to tie in the numerous G-2 activities so that uniformity and coordination is attained.

b. Additional office appliances are required such as a machine capable of reproducing fine line sketches, maps, etc., and a machine to produce battle order information, beach data, and other intelligence matters or else Engineer equipment must be available.

c. Inadequate transportation particularly handicapped the personnel of this section in rapidly moving situations. Field offices should be improvised in motor vehicles or trailers were frequent moves of the CP are anticipated. In the assault phase due to shortage of available space, the administrative section was left behind for future follow-up. It was difficult enough for the combat section to switch from the planning phase to operational phase without having the added burden of disposition, dissemination and administrative details which it had under this procedure.

d. G-2 was particularly vulnerable to certain administrative problems outside of the normal province of the section, such as the appearance of numerous groups dispatched for special missions with no orders at all, or inadequate orders which were obviously assigned to G-2 for supervision and coordination. In some cases section chiefs of headquarters, out of normal command channels, issued orders to this type personnel without it passing through the normal channels. Obviously, advance notice should be received by G-2 of the intended attachment of personnel so that plans can be made for their proper use and administrative details, such as loading, messing, etc., can be arranged for.

3. Combat Intelligence.

a. Estimates based on careful studies of terrain, communications, enemy dispositions, using terrain models, proved accurate. Beach information and enemy fortification information proved adequate.

b. War gaming the enemy based on his disposition, terrain, and communications proved of inestimable value in arriving at correct conclusions.

c. During the planning phase 3 officers assigned to combat intelligence proved adequate, but as soon as operations go on a 24-hour basis five officers are required. The two officers to augment this section cannot be plunged into operations. They must be kept in contact with the situation and kept thoroughly familiar with operating procedure.

d. Enemy battle order proved its worth in this operation. It was only by means of statistics available from this source that the tactical staff could determine enemy losses, reinforcements, and even dispositions in many cases.

e. It was found that one officer and two enlisted men is the minimum for the organization to operate efficiently.

f. The "Y" and "J" message service proved invaluable as well as the information obtained through the Prisoner of War Interrogation Teams.

4. Photo Intelligence.

a. In the early stages the most important information required by the tactical staff was beach information and enemy fortifications and dispositions along the coast. The development of a section devoted to the acquisition and interpretation of photographs of the area involved, provided a most successful solution to the problem. In this manner not only were most useful beaches selected, but the type of sand and exits, with under-water barbed wire leading up to the beaches, and shore defenses could be accurately determined. This is a practical realization of how far photographic interpretation has gone.

b. From the American Army point of view, there were two great weaknesses. To be self-sustaining, we lacked sufficient American photo interpretation personnel. This deficiency was made up by drawing on the British who furnished adequate and proficient personnel. The other weakness was the lack of communication whereby units needing prints could receive them in the shortest possible time.

c. This campaign demonstrated that photos must be flown over a period of time for comparison. In the latter phase when capabilities indicated an enemy organized defensive position in depth, although sorties gave negative results, by comparison over a period of two weeks, no changes were noted. This was proven to be correct, but no chances can be taken. Some logical positions of defense (based on terrain studies) were flown twice daily - for comparison. This procedure must always be emphasized as there is a tendency to consider such action uneconomical, but the balance of cost versus saving of American soldiers' lives gives the answer.

d. The three elements (airplanes, photo laboratory and interpretation section) making up this section were initially scattered over too wide an area. For example, the planes were flown from Malta and La Marsa, Tunisia, a point over 1,000 miles away from the interpretation section, causing too much of a delay at a time when every hour counted. Later, during the operational phase, this situation was partially corrected but then there was no quick communication with the divisions in action. For example, by approximately 22 July the three elements were together at the Ponte Olivo airfield. The planes were flown, the pictures developed and interpreted at this point. But, since no courier planes were available to dispatch the results obtained, this improvement was wasted.

e. The beach high obliques were most important and gave those concerned a visualization of the terrain which they were to meet.

5. Air Tactical Reconnaissance and Air Liaison.

a. The assignment of ground force officers to the Tactical Reconnaissance (Air) Squadron proved most effective in briefing and interrogating pilots as well as helping staff officers in their appreciation of the advantages and limitations of this service during the operation.

b. Visual reconnaissance in modern aircraft cannot detect details such as gun installations, small caliber, except when the guns are firing, dispersed front line troops, pinpoint targets considering that the pilot must observe, fly his ship, and manipulate his map all at once. The lack of understanding of ground officers as to the capabilities and limitations of tactical reconnaissance aircraft and strategic photo reconnaissance aircraft led to a waste of the tactical reconnaissance squadron as far as tactical observation was concerned. A system of drop messages or special communication must be arranged from the airfield from which these planes fly to the divisions in the line.

c. Another weakness was the lack of the ability to get the information obtained to the units concerned promptly.

6. Maps - Relief Models.

a. In general, available maps were adequate, the 1:50,000 scale, 4-color, edition of Sicily being most effective.

b. The collation map of beach defenses was of inestimable value.

c. The photo maps, scale 1:25,000, were used very little and apparently not worth while.

d. The road map as issued, although sound from the viewpoint of putting a map of one sheet into the hands of drivers, was not adequate because of the lack of sufficient details.

e. Town plans are most effective. Characteristic of this area, main roads lose their identities in villages, usually narrowing to secondary or 3d class roads.

f. Beach relief models and other terrain models again proved their effectiveness.

7. Counter Intelligence and Security.

a. Four basic considerations influenced the operations of CIC activities; (1) lack of transportation, (2) lack of linguistical ability, (3) insufficiency of personnel, and (4) insufficiency of civil government personnel to follow through. Of these, the latter two were mainly caused by the speed of the operation.

b. Security was definitely menaced by the distribution of small handbooks on Sicily to the troops and they were of no apparent value in this case. A final one day should have been established and distribution to the troops effected under careful supervision at that time.

c. The method of processing maps was an extremely dangerous practice and although not anticipated, recurrence would probably result in the compromise of the operation. Field security was seriously jeopardized and several violations were caused by the delay of documents which had been scheduled to arrive and did not appear.

d. Countersigns and paroles, if used, must be kept under Army control, published at least seven days in advance and disseminated by lower headquarters with decreasing time intervals. Thus, the company should be issued theirs within 24 hours of use to prevent compromises difficult to correct. Great care must be taken to insure separate units serving a large headquarters (Army and Corps troops) receiving them on regular distribution.

8. Prisoner of War Interrogation.

a. All prisoners must be tabulated by their organizations for battle order purposes upon entering cages, and this information must be forwarded forthwith in consideration of enemy capabilities portrayed thereby. In a number of cases, destroyed units up to the size of battalions were considered effective long after destruction.

b. A definite psychological reaction was noted in grouping German Prisoners of War without regard to their political beliefs.

9. Intercept Services.

a. The "Y" service (monitoring enemy tactical radio) and the "J" service (monitoring our own forward tactical radio) proved extremely valuable.

b. The innovation of the "J" service proved a stumbling block in taking full advantage of it, due to staffs not being fully familiar with this type of service. For further information, see Signal Corps report.

10. Miscellaneous Activities.

a. The procedure of lumping the various attached units serving G-2 in one way or another into a miscellaneous subsection, proved most valuable, providing the necessary coordination. There were too many individuals belonging to independent agencies, each responsible to different and uncoordinated heads and lacking, apparently, definite or planned missions. This resulted in uncoordinated duplication of similar missions. Insufficient information was available during the planning phase concerning many diversified but allied intelligence activities to permit greatest efficiency during the operation.

b. The Psychological Warfare Branch proved to be of inestimable value. Missions given on the ground proved most successful.

c. Failure of arrival of interpreters and translators, as such, tapped other activities, precluding the full benefit to be gained from them as contemplated. Although the original request was made early in March, a translation and document section for the Army headquarters fell by the wayside for the same reason and definitely handicapped the G-2 Section.

XIII. RECOMMENDATIONS

1. Administrative.

a. That Army Headquarters be authorized in tables, a multilith unit, including operating personnel, and that a HSHB-C-MAPH (a device which projects vertical plans from a horizontal plane, as tracing contours on a map to get reliefs of the terrain) be included in the T/BA.

b. That experiment be conducted to provide built-up vans or trucks as mobile field offices.

c. That, if for no other purpose than security, the necessity for competent orders be stressed.

2. Combat Intelligence.

a. That it be recognized that a minimum of 4 officers in this section is necessary from a physical standpoint - operating continuously on a 24-hour basis. By three 8-hour shifts with overlap, the same officer would go on endlessley - say from midnight to 8 a.m. He would under those conditions never receive an uninterrupted night's rest, and more so might on another shift be required to get his rest in the heat of the day.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

b. That an enemy battle order be emphasized and stressed in peace time training.

3. Photo Intelligence.

a. That training of qualified photo intelligence personnel be stressed, and that such personnel have qualifications of (1) a desire or special aptitude for the work, (2) basic military training of the Scope of their studies, (3) that they have had combat experience to know the type of objects of interest. As a side light it is recommended that combat officers incapacitated for actual field work be selected, other qualifications considered.

b. That photo interpretation detachment become an integral part of all headquarters down to include Divisions.

c. That a Photo Intelligence officer (an officer familiar with the problems of P.I.) be incorporated in each G-2 section, not as an additional member, but one of the regular personnel, if necessary, qualified in this specially important activity.

d. That when the components are physically separated (i.e. the P.I., the photo reconnaissance aircraft and processing, and the units to be served) either a radio link be established, or preferably, air courier be instituted.

e. That all effort be directed to get photos to the using units (generally the division) by passing momentarily higher headquarters, which, though interested, will be served by copies later to be received.

4. Air tactical Reconnaissance.

a. Steps must be taken to educate ground officers in the capabilities and limitations of tactical reconnaissance aircraft and the technical differences between that type of service and the photo reconnaissance units.

b. A system of drop messages or special communication must be arranged from the airfield from which these planes fly to the divisions in the line.

5. Maps.

a. That wherever practicable, and based on air photo interpretation or suite guides, line drawing of town plans be made up, in booklet form, arranged alphabetically, of towns through which main roads change direction, and that these booklets be distributed, with the road map on a basis to include one per vehicle.

b. That road map must include 3d class roads, streams, railroad crossings, towns located at crossroads, and other information for drivers, M.P.'s and guides.

6. Counter Intelligence and Securitr.

a. In that tactical CIC personnel is inadequate, a follow up, to take up territorial, political and economic activities pending arrival of civil government agencies should be provided early in an operattion. If trained personnel is not available, CIC should be augmented by preselected personnel who can be given specific missions with complete understanding of what is desired.

b. To avoid compromise of the cover plan, cover maps should be of the same scale as those used in the actual plan.

7. Prisoner of War Interrogation.

a. G-1 channels should develop a method of enrollment of Prisoners of War to include their organizations.

b. German Prisoners of War should be further separated according to their political (Nazi or non-Nazi) beliefs or affiliations. If no other way, the younger should be separated from the older groups.

8. Intercept Services.

a. A decision of security versus utility must be reached early. As it happened in this campaign once security was established the arrival of the "Y" service was set too far back to be of material assistance in this operation.

9. Miscellaneous.

a. That Psychological Warfare Branch activity and all other special intelligence agencies combined be represented on the planning and operational staff, each by an individual who would be directly responsible to G-2 for the proper placing of personnel and the coordination of its activity.

b. That (as in the case of interpreters and translators) where special attachments cannot be supplied by higher Headquarters, if such qualified personnel is located in tactical units, such units be authorised under proper T/O's to form their own, permitting the use of the allotted grades and ratings to prevent attached personnel from being deprived the ratings they would normally enjoy.

ANNEX 3 G-2 ESTIMATES

G-2 ESTIMATE OF THE ENEMY SITUATION #1

20 April 1943

1. SUMMARY OF THE ENEMY SITUATION:

a. Assumption.

This estimate is based on the continued defense of Tunis and Bizerte by the German and Italian forces now operating in Tunisia. To date, no indications of organised withdrawal from the North African theater have been observed. It is also assumed that operations against Sicily will not begin prior to 60 days after the Tunisian campaign is terminated.

b. Over-all Strength and Neighboring Troops.

The Italian forces in Southern Italy and the Mediterranean Islands consist of a group of armies composed of the Seventh Army (Southern Italy), the Sixth Army (Sicily), the XIII Corps (Sardinia), and the VII Corps (Corsica), under the command of the Prince of Piedmont.

Known German forces in this theater are those listed below under "Tunisia". It is estimated that approximately 24,000 German Air Force ground personnel are, at the present time, manning the airfields and their defenses in Sicily. The presence of other German troops in Southern Italy, Sicily, Sardinia, or Corsica are unknown at this time. It is estimated that approximately 5,000 German troops intransit from the mainland to Tunisia may be expected to be in Sicily when the North African campaign is over.

(1) TUNISIA

Axis forces in Tunisia, as of 14 April 1943, were estimated to be about 160,000, consisting of 110,000 Germans and 50,000 Italians. More recent defeats have inflicted heavy losses on Axis forces.

Italy has insignificant remnants of 2 infantry divisions in Tunisia; and 1 complete infantry division. They are organized as follows:

XXX Corps - 1st (Superga) Division (complete)
10th Pistoia Inf. Division (incomplete)
Young Fascist Division (incomplete)

Rommel's Afrika Panzer Army in Tunisia is now combined with von Arnim's 5th Army, under the latter's command.

The following German divisional units are now in Tunisia:

10th Panzer Division (incomplete)
15th Panzer Division (incomplete)
21st Panzer Division (incomplete)
Goering Airborne Division (incomplete)
Manteufel Infantry Division
90th Light Infantry Division (incomplete)
334th Infantry Division
164th Light Infantry Division (incomplete)
999th Africa Division (elements)

The tank strength estimated total is 100 tanks, as of April 14. What percentage of these are Italian and what are German is not known at this time, but the complete destruction of the single Italian Armored Division indicates that the Italian tank strength is now practically zero.

(2) SOUTHERN ITALY

The 21st (Sardinian Grenadiers) Division has returned from YUGOSLAVIA to its home station, ROME. It is possibly intended to replace the 4th (Livorno) Division. Identifications of the latter have been reported in SICILY. Although the "Sardinian Grenadiers" Division is reputedly composed of picked personnel, it did not particularly distinguish itself in the Greek war nor, more recently, against the Yugoslav guerillas. In view, however, of its battle experience, it must be rated as one of the more seasoned of Italy's divisions. Depot elements have been sent with other miscellaneous units to CORSICA.

Recent identifications suggest the possible presence in the BARI area of remnants of the 52d (Torino) Division. It is believed that this formation was largely destroyed in RUSSIA, but a nucleous of it may still exist; composed of survivors from the Eastern front, and depot units from the home country.

10th (Mantova) Autotrasportabile (literally "motor-transportable") Division has moved from PIEDMONT to the COSENZA - NICASTROL area in CALABRIA. Little is known of this unit, which was formed a year ago. It has not yet seen active service. The term "autotrasportabile" merely implies an infantry division organized in such a way as to enable it to be transported when allotted motor transport from Corps or Army pool. It does not indicate permanent motorization. In view of the moderate fighting value of more experienced Italian divisions, it is unlikely to be of high quality.

There are no other first line divisions in Southern ITALY. 152 (Piceno) Division is responsible for coast defense in the LECCE area. This is described as a Territorial Defense Division. Its training is believed to be inadequate, and it may be considered to be very little different from the three Coastal Divisions which are located respectively in the SALERNO-CATANZARO - REGGIO CALABRIA area. Coastal Divisions are static units to which are allotted vulnerable stretches of coastline. In addition, there are considerable numbers of Independent Coastal Battalions and Coastal Regiments, similarly responsible for local coastal defense.

The garrison of Southern ITALY is, therefore, composed of:

Three Italian Infantry Divisions (one of which may have moved):

(1) 21st (Sardinian Grenadiers) Division
1st Infantry Regiment
2nd Infantry Regiment
13th Artillery Regiment
4th Blackshirt Legion

(2) 4th (Livorno) Division
33rd Infantry Regiment
34th Infantry Regiment
26th Artillery Regiment

(3) 10th (Mantova) Division
113th Infantry Regiment
114th Infantry Regiment
11th Artillery Regiment

Survivors of one further Infantry Division:

52nd (Torino) Division
81st Infantry Regiment
82nd Infantry Regiment
52nd Artillery Regiment

Four Coast Defense Divisions: one of which is the 152nd (Piceno) Division, consisting of the 235th Infantry Regiment, 236th Infantry Regiment (detached from Division), 336th Infantry Regiment, and 152nd Artillery Regiment.

Though strong numerically - possibly 300,000 - 350,000 men - the garrison of Southern ITALY can barely be considered adequate for defense purposes; even the first-line divisions are probably not of the highest quality, and the remaining units consist mainly of low category and depot troops. Large forces are necessary to guard the long and vulnerable coastline, in close proximity to which run the main north-south road and rail communications, despite the fact that in many areas the defense is naturally helped by the very difficult and mountainous terrain.

Disposition of units in Southern ITALY at the present time allows for no central mobile reserves. The main line of resistance is expected to be the coast itself, followed by a secondary position stretching from the sea to inland rugged terrain, obstructing the natural passageway northward along either the east or west coasts.

(3) SARDINIA

The 44th (Cremona) Division has recently been transferred to CORSICA, leaving only two mobile and two coastal divisions on the island. There is no evidence, at the present time, that the garrison of SARDINIA has been reinforced with additional troops; however, it is not improbable that the former strength of the island may be maintained. Although the garrison is at present surprisingly small (90,000), the defense is facilitated by the general difficulties of the terrain and by the virtual neutralization of the greater part of the eastern half of the island, owing to its lack of communications with the main centers.

The mobile divisions are the 30th (Sabauda) Division, consisting of the 45th Infantry Regiment, the 46th Infantry Regiment, the 10th Artillery Regiment, 176th Blackshirt Legion; the 31st (Calabria) Division, consisting of the 59th Infantry Regiment, the 60th Infantry Regiment, the 40th Artillery Regiment, and the 177th Blackshirt Legion.

(4) CORSICA

The garrison of CORSICA is now made up of the 44th (Cremona) Division, consisting of the 21st Infantry Regiment, 22nd Infantry Regiment, 7th Artillery Regiment, and the 90th Blackshirt Legion; and the 20th (Friuli) Division from the Italian mainland, consisting of the 87th Infantry Regiment, the 88th Infantry Regiment, the 35th Artillery Regiment, and the 88th Blackshirt Legion; plus miscellaneous depot units. Italian morale is low, and the occupying troops are reported to walk in fear of the inhabitants. These feelings are understandable in view of the taste of Corsicans for the vendetta and the aversion they have always shown to Italian propaganda regarding their Italian origin.

The garrison is apparently split up into small groups occupying the main towns and centers of communication. There are few mobile reserves. Apart from the erection of road blocks, the Italians have done little to improve the defenses of the island or to supplement the dismantled guns taken over from the French. The total garrison now amounts to some 40,000 men.

(5) SICILY

The total Italian garrison is estimated at 153,000, which is made up as follows:

(a) Army Ground Troops.

Three divisions and corps and army troops, totaling 78,000 men. These divisions are distributed in three main concentrations, in the Western, Central and Southeastern parts of the island. There are apparently few first-line troops in the MESSINA area (northeast part of the island). Included in the corps and army troops are two battalions of French 11-ton R 35 tanks, and one battalion of light Italian L 6 tanks; each battalion is equipped with about 50 tanks. None of the mobile divisions has actually been in combat, and all have done a protracted period of garrison service in the island.

Recent evidence suggests that elements of the principal components of the 4th (Livorno) Division located in the ROME area have now reached SICILY.

The following identifications have been received:

8 Co. 33 Inf. Regt. (CALTANISSETTA), 20 Feb.
7 Co. 34 Inf. Regt. (FAVARA)
4 Tp. 28 Arty Regt. (In SICILY)
152 Autoreparto (CALTANISSETTA)
11 C.C.N.R. (MESSINA)

A battery of self-propelled artillery has been identified with this Artillery Regiment. All batteries of the Artillery Regiment are reported to be mechanized.

(b) Coast Defense Organization.

About 75,000 men, organized in 84 Static Infantry Battalions and various artillery and machine gun units, whose duties consist of beach defense, guarding of vulnerable points, and dealing with the initial shock of invasion. Though their standard of equipment and training have recently been improved, they are still inferior in both respects to the Army Ground Troops.

Known fixed defenses (see special overlay attached to sub-force Hq. copies only) indicate that very formidable defenses are installed around the ports and airfields. Emplacements and machine gun positions have been constructed at vulnerable points on the coast. Information at the present time indicates a lack of depth to the coastal defenses; however, it may be expected that improvement of these beach defenses and coast watching will be increased as a result of our occupation of North Africa. Detail studies (now in progress of aerial photographs may reveal secondary defensive lines back from the coast. Supplementary overlays showing installations located will be furnished sub-task forces as they become known. The probability of obstacles, defended road blocks, mines, and observation points must be considered part of the enemy's defensive plan. There have been no reports of beach mines or of under-water obstacles.

(c) Reinforcement Prior to Allied Assaults.

For the past several years, there has been no increase in the number of first-line divisions in SICILY, but it is estimated that at present three or four Italian divisions could be made available to reinforce the garrison. It is, however, improbable that such a large force would actually be employed because of the difficulty of maneuvering in broken country with poor communications; in addition, it is expected that Germany will assist with such units as might have been evacuated from TUNISIA.

The probable scale of reinforcement prior to "D" Day is, therefore, estimated at:

(i) Two Italian Divisions, with up to 50 tanks.
(ii) Additional German elements, including MARSCH battalions and some armor, possibly making the equivalent of one division, with about 50 tanks.
(iii) The provision of further equipment and transport for the present garrison, aimed in particular at raising the standard of the coastal units to that of the field forces.

At the close of the Tunisian campaign, considering the probable effect of naval and air action, the Axis may succeed in withdrawing up to 20,000 personnel with personal equipment but without many vehicles or tanks. In this event, SICILY may be strengthened by the equivalent of one German division, not fully mobile. Closer than this, it is impossible to estimate.

The total estimated garrison on "D" Day is, therefore:

Five Italian Divisions.

Two German divisions, of which one will have been evacuated from TUNISIA and may not be fully equipped or armed.

The equivalent of six coastal divisions (84 battalions), which may or may not be mobile.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. DISPOSITIONS AND ENEMY CAPABILITIES.

a. Enemy Air Capabilities.

As of July 1943, based on assumptions that Russia is active and has gained, since April 1943, modest successes in addition to those achieved prior to that date, and that losses are normal in the interim, it is estimated that the Axis Air Order of Battle for the Central Mediterranean (to include Italy, Sardinia, and Sicily, and close by islands, as viewed from sustained fighting value), are as follows:

	German	Italian	Total	Maximum Combined Effort For a Few Days Per 24-hour Period In Sorties
LRB(Long Range Bombers)	250	90	340	125 - 150
HR(Bomber Rcn.)	40	—	40	Intensive, & if inadequate, use other types to augment.
DB(Dive Bombers)	80	—	80	80 - 100
GA(Fighter Bombers)	50	—	50	85
SEF (Single Engine Fighters)	190	225	415	250
TEF(Twin Engine Fighters)	80	—	80	40 - 50
Army Coop.	10	25	35	(Not accounting for successful paratroop operations in Sicily or by Russia.)
Coastal	—	60	60	
	700	400	1100	

Serviceability estimated at 50 - 60%.

Primary targets will probably be Allied convoys and ports, with subsidiary effort against Allied airdromes.

b. Enemy Naval Capabilities.

It is estimated that based on past performances, it is unlikely that any substantial reduction of the Italian Navy can be achieved except by air and submarine action. It is considered possible, but improbable, that land reinforcements may, from time to time, be attempted, moving at night through Palermo and Catania.

c. Enemy Ground Capabilities.

(1) General

a. Assumptions.

Enemy air reconnaissance of the North African coastline will reveal our preparations for movement. Continued bombing from the air will, undoubtedly, alert the entire forces for an expected attack. Surprise can only be achieved through the time and location of our attacks. But it must be presumed that hostile troops are alert, and that all beach installations are manned.

b. Concentration of Forces.

(1) Coastal Divisions.

These are generally disposed around the island for coastal defense. The divisions are not mobile. It is therefore believed that they are incapable of rapid concentration to carry out a mobile reserve force mission. However, it is reported that the artillery units of these divisions may be motorized.

(2) Mobile Reserves.

These are divided into three forces, disposed as follows:

(a) Western Support Units.

28th (Aosta) Division, in the area CASTELVETRANO - SALEMI - S. NINFA. Role: Mobile reserve against an enemy landing in the western section of the island.

(b) Southeastern and Eastern Support Units.

54th (Napoli) Division in the area MODICA - CALTAGIRONE - VIZZINI. Role: Mobile reserve against a landing in the southeast section of the island.

(c) Central Support Units.

26th (Assieta) Division in the area CALTANISSETTA - PAVARA - CANICATTI. Role: Probably as a mobile force against a landing on the south coast. Note: The identification of components of the 4th Livorno in this area indicates that this division may be centrally located to carry out the mission of additional support in any direction.

(2) South Coast Landing.

a. Assumptions.

It is assumed that Army and Corps troops in the vicinity of (1) the landing field north of SCIACCA, (2) at the airfield at CASTELVETRANO, (3) on the high ground at S. MARGHERITA, support installations in those areas, and that it is possible, though not probable, that the howitzers located at POGGIOREALE may be part of an Army or Corps mobile reserve.

Likewise, it is assumed that the coastal defense units in the vicinity of CASTELVETRANO may or may not be reserve for beach defenses or defenses entirely for the protection of the airfield at CASTELVETRANO.

The coastal defenses in the vicinity of SALEMI are regarded as area defenses rather than as supporting troops, and that the reserve of the area are the forces of the 28th Division, generally in the area SALEMI - S. NINFA - PARTANNA.

It is assumed that the disposition of troops are as known to be at this time and that there is no shift between "D" Day landings in the southeast and the "ENSA" landing on D+2.

It is assumed further that the Army and Corps troops known to be in the vicinity of MARSALA are defensive for the seaplane alighting area in the port but that troops of the 28th Division may be available to reinforce troops on beach defense to the southeast. This force then becomes a possible reinforcement for Beach 88.

It is assumed that the corps troops to the east of the beach zone - namely, in the vicinity of AGRIGENTO - PAVARA - ARAGONA - PORTO EMPEDOCLE, are basically installed for the protection of the port proper and probably to act as a reserve for coastal protection either to the east or to the west. The latter is discounted slightly because of lack of motor transportation, unless unknown pools are available.

With the location of the 26th Division, which is a mountain division, in the high ground in the vicinity of CALTANISSETTA, it is believed that the reaction to the D-Day landing will cause this force to move east, if any movement in a supporting nature is contemplated. Inasmuch as most of the units of this division are disposed to the west of the location of the Division Command Post, some reinforcement, to the west, particularly of artillery, may be expected. This division is uniquely equipped, mostly with howitzers and mortars, and as such would probably reinforce installations in the high ground to the west of their location rather than as initial beach and beach-head defenses.

The known locations of the coastal defense units in the general area bounded on the east by SCIACCA and on the west by MAZZARO DEL VALLO, both inclusive, based on terrain and road network, indicate the established defenses of the beaches proper.

It is presumed that other defensive positions have been prepared but are not occupied and will, if necessary, be occupied by troops from the reserve. It is not known if any of these positions are immediately on the coast.

The estimated enemy forces opposing "ENSA" are as follows:

	H HOUR	H + 8 HOURS Reinforcements	H + 16 HOURS
AT BEACH			
Coastal Troops	2300 (a)

NOTES:

* indicates that none have been identified in the area considered.

(a) In the vicinity of SCIACCA, troops of the 26th Mountain Division, consisting of 1200 men, 39 light machine guns, 9 heavy machine guns, 18 45 mm mortars, and 7 trucks, are known to exist. As indicated before, the artillery of this division is believed to be in the process of being motorized, but the presence of this unit indicates such missions, probably along the inaccessible places on the coastline. Aerial photographs indicate existance of such terrain features both east and west of SCIACCA. These troops may or may not be considered as reinforcing the beach defense.

(b) For central reserve, H48 hours by marching, for Beach 88; proportionately longer for others. No motor transportation known to be available.

(c) These are known to be motorized and are able to reach any of the assigned beaches in that period of time via the general route initially to the east and south.

(d) Reinforcement from this group would, in all probability, consist of automatic weapons and mortars, other personnel remaining in the general area of the high ground, on which it is now situated, for secondary or depth defenses.

(e) About 50 tanks, equipped with 47 mm guns are reported in the vicinity of MAZZARO, which, based, on the road network, may act as a mobile reserve to oppose any action against the beaches in the area under consideration.

(f) Not cumulative but can reach Beach 87 and eastwards by this time.

(g) The organic motor transportation with this element is probably administrative only, but by utilization of the motor transport of Army and Corps troops, in emergency this entire force could be moved to Beach 88 by H48 hours, and to Beach 87 by H+16 hours.

CAPABILITIES AGAINST THE ENSA FORCE

(1) To defend on the beach proper.

(2) To hold the beach lightly withdrawing to defend along the general line of high ground through CALTABELOTTA - M. GRANT - MONTEVAGO - PARTANNA - SALEMI.

(3) After being driven from the beaches to effect the minimum delay with the high ground in capability (2) to be the final defensive position.

Capability (1) is indicated for adoption because of the nature of the terrain immediately to the north; the location of strategic objectives such as airfields, and landing fields, the loss of important ports, fixed installations, and a governing roadnet.

Capability (3) will follow subsequently with utmost use being made in the employment of road blocks and other forms of such defenses, rather than an organized defensive position.

Organizational procedure can be anticipated in Capabilities (1) and (3). It may be anticipated that the enemy's plans provide for development from (1) to (3) with procedure organized to the status of S.O.P.

(3) North Coast Landing.

(a) Assumptions.

It is assumed that Army and Corps troops in the vicinity of TRAPANI support installations and beach defenses on the western coast of landing expected on the shores of the GOLFO DI CASTELLAMARE.

It is assumed that Army and Corps troops in the vicinity of PALERMO support installations and beach defenses in that area; with a secondary role as a mobile reserve to counter-attack against any landings effected immediately east or west of PALERMO.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

It is assumed that the western support units in the area CASTELVETRANO - SALEMI - S. NINFA are available for counter-attacking against landings on either the north or south coast in the general area west of the line TERMINI - AGRIGENTO.

However, it is assumed that the "ENSA" landing will cause employment of some of the troops of the 28th Division in a counter-attacking role. It is reasonable to presume that by D+5, the enemy's reaction to our landings on D and D-2 will be a general movement to the south and southwest. In that case, few, if any, troops of the western support units will be available for use against "FISH-GROG-HOOK".

It is assumed that troops on the west and north coasts have been alerted but that no movement has occurred by D+5 in expectation of further landings. Hence, troops located at PALERMO will be intact in operations against "HOOK"; and reserves from TRAPANI will not be moved until after the "FISH-GROG-HOOK" assault has been launched.

It is also assumed that the "ENSA" landing has been successful and on schedule according to plan.

The estimated enemy forces opposing "FISH" and "GROG" are as follows:

	H (Alerted)	H+8 Reinforcements
At Beach		
Coastal Troops	2170	
" M. G.	78	
" Arty.	24

Recruits	none*	9,000	9,000
M. G.	144	532	676
Arty.	unknown	70+	70+
Mortars	18	36	54

* Indicates none have been identified in the area considered.

CAPABILITIES AGAINST THE "FISH" FORCE.

(1) Defend at the landing beaches.

(2) Hold the beaches lightly to afford time for occupation of defensive positions on high ground inland.

(3) Utilize defensive positions in (2) as successive delaying positions in a withdrawal to the heights on the general line west of CASTELLAMMARE - CALATAFIMI to provide time for maneuver of the TRAPANI forces to counter-attacking positions.

Capability (1) must be presumed as indicated against the landing on Beach 1, where a determined defense must be expected.

Capability (2), in combination with Capability (3), is indicated against landings on Beach 2 and 3 because of the small number of troops reported in this area as beach defenses. It must be presumed that some of the western support units will be available to oppose this landing at or before arrival at the main road leading west from ALCAMO. In addition, a strong counter-attack must be expected from the west (troops from TRAPANI).

CAPABILITIES AGAINST THE "GROG" FORCE.

(1) Defense at the beaches.

(2) Utilize beach defense as initial delaying positions in withdrawals to the high ground on the line PARTINICO - CARINI, where a determined defense must be expected, allowing counter-attack from the south on the exposed flank delivered by troops from the western support units.

It is presumed that a combination of capabilities (1) and (2) is likely. Forces available for immediate beach defense are considered inadequate for a prolonged defense. Hence, the enemy will probably be forced to retire to the high ground in the vicinity of PARTINICO, where, it must be assumed, he will interpose himself between "GROG" and the objective. Some reinforcement must be expected from the PALERMO area.

CAPABILITIES AGAINST THE "HOOK" FORCE.

(1) Defend at landing beaches.

(2) Defend the beaches lightly; succeeded by withdrawals to the mountains west, south and east, of PALERMO.

In view of the importance of the port and air installations in this area, capability (2) is considered unlikely.

It must be presumed that a desperate defense of the beaches, as in capability (1) will be met, in view of the importance attached to the locality and the large number of troops available for its defense.

G-2 ESTIMATE OF THE ENEMY SITUATION #2

5 May 1943

1. SUMMARY OF THE ENEMY SITUATION:

a. Assumption.

See Estimate #1, 20 April 1943.

b. Over-all Strength and Neighboring Troops.

See Estimate #1, 20 April 1943.

(1) TUNISIA.

Axis forces in Tunisia, as of 24 April 1943, were estimated to be about 155,000, consisting of 110,000 Germans and 45,000 Italians. The 110,000 Germans are estimated to be made up of 83,000 combatant troops, 14,000 anti-aircraft personnel, and 13,000 service troops. The 45,000 Italians are estimated to consist of 27,000 combat troops, 5,000 anti-aircraft and coast defense personnel, and 13,000 service troops.

Italy has two very reduced Infantry Divisions in Tunisia; and remnants of three others. They are organized as follows:

1st (Superga) Division (much reduced).
Bersaglieri D'Africa (Young Fascists) Division (much reduced)
80th (Spezia) Division (Remnants).
16th (Pistoia) Division (Remnants).
131st (Centauro) Division (Remnants).
XX and XXI Corps Artillery (Remnants).

The following German divisional units, comprising the 5th Panzer Army under Col. General Jurgen Von Arnim, are in Tunisia:

10th, 15th, and 21st Panzer Divisions (reduced strength).
Hermann Goering Division (much below strength).
334th Infantry Division (much below strength).
90th Light Infantry Division (much below strength).
164th Light Infantry Division (much below strength).
Manteuffel Division (a small provisional formation).
999th Africa Division (four battalions).
19th Anti-Aircraft Division.
20th Anti-Aircraft Division.

It is estimated that the enemy still disposes of some 115 German and 35 Italian tanks, as of April 24. The serviceability of the Italian tanks may be estimated at about 30%, while the serviceability of the German tanks may now be as high as 60%.

(2) SOUTHERN ITALY.

See Estimate #1, 20 April 1943.

Revise paragraph 4 with the following:

152nd (Piceno) Division which is responsible for coast defenses in the LECCE area, had been described as a territorial defense division but may now be considered a first line unit.

In paragraph 5 the following changes should be made:

(2) 4th (Livorno) Division
33rd Infantry Regiment (minus 1st and 3d Bns.)
34th Infantry Regiment (minus 1st and 3d Bns.)
28th Artillery Regiment (minus 1st, 3d, 4th & 5th Bns)

(4) 152nd (Piceno) Division
235th Infantry Regiment
236th Infantry Regiment (in SARDINIA)
136th Infantry Regiment
152nd Artillery Regiment

Three Coast Defense Divisions.

(3) SARDINIA.

The 236th Regiment of the 152nd (Piceno) Mobile Division has been located in SARDINIA in addition to the two mobile divisions and two coastal divisions previously reported, increasing the total number of troops to approximately 65,000. This increase gives sufficient evidence, at the present time, that the garrison has been reinforced with additional troops making it probable that the former garrison of the Island may be maintained.

(4) CORSICA.

See Estimate #1, 20 April 1943.

(5) SICILY.

The total Italian garrison is now estimated at 165,000 which is made up as follows: See Estimate #1, 20 April 1943, with the following revisions:

(a) Army Ground Troops.

3 1/2 divisions and corps and army troops, totaling 90,000 men. Recent evidence has revealed that the following units of the 4th (Livorno) Division located in the Rome area have now reached SICILY:

1st and 3d Bns. of the 33d Infantry Regiment
1st and 3d Bns. of the 34th Infantry Regiment
1st, 3d, 4th and 5th Bns. of the 26th Artillery Regiment

Indications have been given that whatever mobile troops were located in the Northeastern part of the Island have now been moved west toward the North Central section.

(c) Reinforcement Prior to Allied Assaults.

See Estimate #1, 20 April 1943. The only change which has occurred is the late arrival of the 4th Division.

The total estimated garrison on "D" Day is, therefore:

Six Italian Divisions.

Two German Divisions, of which one will have been evacuated from TUNISIA and may not be fully equipped or armed.

The equivalent of five Coastal Divisions (24 battalions) which may or may not be mobile.

C-12

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

3. DISPOSITIONS AND ENEMY CAPABILITIES.

a. Enemy Air Capabilities.

See Estimate #1, 20 April 1943.

b. Enemy Naval Capabilities.

See Estimate #1, 20 April 1943.

c. Enemy Ground Capabilities.

(1) General.

See estimate #1, 20 April 1943.

(2) Against Force 343.

a. Assumptions.

(1) That this operation takes place simultaneously with the operation of 505.

(2) That enemy troops are in position as indicated in battle order as of 25 April 1943.

(3) That no augmentations take place in the area.

(4) That the entire Italian 4th Division is in the area LICATA (8434) - CALTANISSETTA (8577) - FAVARA.

(5) That all Infantry troops are alerted.

b. Enemy Dispositions.

(1) Troops of coastal divisions at the following locations are estimated as purely defensive occupying previously prepared positions for beach defense at the water's edge: ISPICA (8189), POZZALLO (7592), MAGUSA (8515), GELA (2230), BUTERA (8174), LICATA, AGRIGENTO (6257), PORTO EMPEDOCLE (9585), REALMONTE (9557), MILERA (9378), SCIACCA (6179). Those at ISPICA and SCIACCA do not immediately affect the 343 operation. The others in the order from east to west, MAGUSA to BUTERA, are capable of opposing the landing against beaches 64 - 68, and those from BUTERA to include REALMONTE are capable of opposing the landings on beaches 70 - 73. This will place an immediate strength of coastal units against DIME and GENT of 6650, and against ENSA PRIME of 6090. The nature of the troops of the 54th Division in the area COMISO (8516) (Infantry), MAGUSA (Mortar, Anti-Tank and Anti-Aircraft), MODICA (Infantry and Portee Artillery), indicates probable available motor transport for a portion of the command. The motorized elements are capable of opposing the landing against Beaches 65 to 68 by H+5, and dismounted elements thereof, are capable of making themselves felt by D+1. The units of the 54th Division, in the area BUCCHERI (8736)(Infantry), GRAMMICHELE (8747)(Infantry), CALTAGIRONE (8469)(Artillery), are located on commanding terrain on the principal ridge line, extending southeast-northwest, and are, in all probability, there to occupy an organized defensive position. The remainder of that division at NISCEMI (8439)(Infantry) is, in all probability, a force to assist in the defense of the airport in that vicinity. The COMISO (8516) force indicated above occupies commanding terrain overlooking the airport to the north and, although capable of supporting the troops on beach defense, is probably a defensive organization for that airport. The force at CALTAGIRONE (8469)(Artillery 75 mm howitzers) may be used as a mobile fire reserve to support the defensive positions along the ridgeline. The small force (Headquarters) at PALAZZOLO ACREIDE (8803) is considered an administrative unit for purposes under consideration.

The Army and Corps troops reported in the vicinity of MAGUSA are, by their nature, indicated to be armed with coast defense weapons and, being mobile, are capable of supporting the defenses from previously prepared positions anywhere against the DIME - GENT assault by H+5, unless occupying an alert position at H-Hour elsewhere. The Army and Corps troops in the vicinity of the airfield north of COMISO are considered local defense, in addition to an estimated 2000 German air ground troops at that field. Additional Army and Corps troops at GALILEO are also estimated as airfield defense. The Army and Corps troops at VITTORIA (8471?) are estimated to have the same mission as the similar unit of large caliber guns at MAGUSA. The same applies to Army and Corps troops at S. CROCE CAMERINA (8603). The disposition of the four guns, 149/35, at S. CROCE CAMERINA, and the lack of others of this type in the southeast, indicates that the MAGUSA detachment is separately located for commitment to the south or east, and the VITTORIA detachment to the west and northwest. Army and Corps troops on the ridge from VIZZINI (8674) (east) to S. MICHELE (8854) (west), consisting principally of heavy caliber guns, indicate a Corps and Army reserve to be committed in any direction for an initial coastal defense or long range defense of the predominating terrain feature (the northwest - southeast ridge). It should be noticed that there are at least 36 guns of 149/35, 12 guns of 105/28 and 60 guns of 100/17 in this general area. Although the eastern assault will, no doubt, attract some of these weapons, it must be estimated that at least 50% will be available to support the defense against DIME and HOOK assaults by H+12, unless occupying an alert position elsewhere.

(2) Against Beaches 70 - 73, troops of the 26th (Mountain) Division, in the vicinity of CALTANISSETTA (Infantry), S. CATALDO (9976) (Infantry and Artillery), SERRADIFALCO (8897)(Artillery), CANICATTI (8476?) (Infantry), FAVARA (Infantry), ARAGONA (8668)(Artillery), PUNTALLERTO (8605?) (Infantry), AGRIGENTO (Artillery), occupies commanding terrain on a general ridge line extending from northeast to southwest. Some significance must be attached to the fact that all of these units, in addition to being on commanding terrain, are on a principal roadnet, and thus must be considered as being able to support a defense to include CANICATTI to the south, and those to the west thereof can immediately support a beach defense from PORTO EMPEDOCLE by H+ hours and assist in the defense of LICATA, D-6 by H+8 and D+1 by D+1. It is presumed that this division is a support division, and significance must be attached to the fact that previous reports indicate that artillery units are motorized and consist chiefly of mortars and howitzers. Other units of this division are not considered as an immediate factor in the defense against this operation.

Army and Corps Troops: Again in this area - CALTANISSETTA - CAMPOBELLO (0935) - AGRIGENTO - PORTO EMPEDOCLE - are found a large number of large caliber guns, with the larger calibers (150 mm) in the first two places and 90 mm in the latter two. As these large caliber guns are situated on a principal highway, it is estimated they are thus a mobile reserve for either seacoast defense or long-range fire. Troops at AGRIGENTO and PORTO EMPEDOCLE are considered seacoast defense installations and can become a support to the defense against any action in the vicinity of LICATA by H+12 hours. Significance must be attached to the concentration of artillery of various types and calibers, some being probably dual purpose, at CALTANISSETTA, which are available as a mobile fire support unit against the LICATA and GELA (H2230) beaches by D+1.

Approximately 50% of the Italian 4th Infantry Division has been identified in the general area CALTANISSETTA - LICATA - FAVARA. This division, consisting at full strength of a proximately 14,000 men, may be entering this area as a reserve division to take over some of the installations of the 26th Mountain Division, and as such becomes a serious threat against the beaches of LICATA at H-Hour and can seriously interfere with any movement contemplated along the coastal road to the northwest by the ENSA PRIME force.

From the locations of the troops in the area of operations of Force 343, it can be remarked that strong elements are located on the commanding ground to the east, to the north, and to the northwest of the assault landings. The result will be an attempt to contain the landings within this natural semi-circle, and will provide the defenders with strong defensive position on the high ground.

CAPABILITIES AGAINST FORCE 343.

In order to determine the capabilities against each of the attacking forces, that is ENSA PRIME and DIME - GENT, it is necessary to consider the enemy capabilities as a whole because of the restricted area in which Force 343 will operate: a crescent-shaped coastal plain approximately 15 to 20 miles deep bounded by predominating ridge lines and faced by approximately 45 miles of shore-line (from Beach 65 to 73, inclusive). With this in mind the following are considered enemy capabilities against Force 343:

(1) To defend at the waters edge.

(2) To defend on the ridge-lines running perpendicular to the coast, especially on the eastern side, to canalize any advance inland.

(3) To defend along the ridge-line: MAGUSA - VIZZINI - CALTAGIRONE - MAZZARINO - RAVANUSA - CAMPOBELLO.

(4) To defend at the waters edge and counter-attack to the east from a general line from LICATA - RAVANUSA.

Capability No. 4 is selected for adoption because the port and four airfields are of the utmost strategic importance and can only be defended satisfactorily at the waters edge.

The counter-attack from the northwest is logical because of the concentration of the mobile Army and Corps troops in the vicinity of CALTANISSETTA.

The terrain lends itself to counter-attack from the northwest and the rivers would not form a serious obstacle at this time of the year because they are reported dry.

Recapitulation of enemy strengths opposing various landings:

KOCH
AC of S. G-2

G-2 ESTIMATE OF THE ENEMY SITUATION #3

9 June 1943

1. SUMMARY OF THE ENEMY SITUATION.

a. Assumption.

The evacuation of enemy personnel from TUNISIA was confined entirely to air material and personnel. The completion of the North African campaign now alerts the entire Southern Coast of Europe and the intermediate islands in the Mediterranean for a probable invasion by the Allies.

b. Over-all Strength and Neighboring Troops.

The Italian forces in Southern ITALY and the Mediterranean Islands consist of a group of armies composed of the Seventh Army (Southern ITALY), the Sixth Army (SICILY), the XIII Corps (SARDINIA), and the VII Corps, (CORSICA). See Intelligence Information Bulletin No. 7, this headquarters, June 1943, for Battle Order.

Approximately 24,000 German Air Force ground personnel are, at the present time, manning the 30 airfields and their defenses in SICILY. It is not known, but it is probable that this personnel is confining its efforts to the more important fields, three of which are included in the zone of action of Task Force 343. The presence of other German troops in Southern ITALY, SICILY, SARDINIA, or CORSICA is not definitely known. The Germans have broadcast that they are reinforcing the Italian garrison of SARDINIA with German troops. It is estimated that approximately 5,000 German troops originally intransit from the mainland to TUNISIA must have been left in SICILY when the North Africa campaign ended.

(1) SOUTHERN ITALY.

The 21st (Sardinian Grenadiers) Division has returned from YUGOSLAVIA to its home station, ROME. It has possibly replaced the 4th (Livorno) Division, which is now in SICILY. Although the "Sardinian Grenadiers" Division is reputedly composed of picked personnel, it did not particularly distinguish itself in the Greek war, nor, more recently, against the Yugoslav guerrillas. In view, however, of its battle experience, it must be rated as one of the more seasoned of Italy's divisions. Depot elements have been sent with other miscellaneous units to CORSICA.

Recent identifications suggest the possible presence in the BARI area of remnants of the 52d (Torino) Division. It is believed that this unit was largely destroyed in RUSSIA, but a nucleous of it may still exist; composed of survivors from the Eastern front and depot units from the division may be reorganizing.

10th (Mantova) Autotransportable (literally "motor-transportable") Division has moved from PIEDMONT to the CONSENZA - NICASTRO area in CALABRIA. Little is known of this unit, which was formed a year ago. It has not yet seen active service. The term "Autotrasportable" merely implies an infantry division organized in such a way as to enable it to be transported when alloted motor transport from Corps or Army pool. It does not indicate permanent motorization. In view of the moderate fighting value of more experienced Italian divisions, it is unlikely to be of high quality.

The 152 (Piceno) Division is responsible for coast defense in the LECCE area. It has been previously described as a Territorial Defense Division but now may be considered a first-line unit. There are three Coastal Divisions located respectively in the SALERNO - CATANZARO - REGGIO CALABRIA area. Coastal Divisions are static units to which are alloted vulnerable stretches of coastline. In addition, there are a considerable number of divisions responsible for local coast defense.

It is reported that the 12 (Sassari) Division has moved from YUGOSLAVIA to the vicinity of ROME. The 47 (Bari) Division is now believed to have moved from the area of BRINDISI to SARDINIA.

The garrison of Southern ITALY is, therefore, composed of:

Four Italian Infantry Divisions:

(1) 21st (Sardinian Grenadiers) Division
1st Infantry Regiment
2nd Infantry Regiment
13th Artillery Regiment
4th Blackshirt Legion

(2) 10th (Mantova) Division
113th Infantry Regiment
114th Infantry Regiment
11th Artillery Regiment

(3) 152d(Piceno)Division
235th Infantry Regiment
236th Infantry Regiment
336th Infantry Regiment
152d Artillery Regiment

(4) 47th (Bari) Division
139th Infantry Regiment
140th Infantry Regiment
47th Artillery Regiment

Survivors of one further infantry division:

52d(Torino) Division
81st Infantry Regiment
82nd Infantry Regiment
52nd Artillery Regiment

Three Coast Defense Divisions.

Though strong numerically - possibly 300,000 - 350,000 men - the garrison of Southern ITALY can barely be considered adequate for defense purposes; even the first-line divisions are probably not of the highest quality, and the remaining units consist mainly of low-category and depot troops. Large forces are necessary to guard the long and vulnerable coastline, in close proximity to which run the main north-south road and rail communications, despite the fact that in many areas the defense is naturally helped by the very difficult and mountainous terrain.

Disposition of units in Southern ITALY at the present time allows for no central mobile reserves. The main line of resistance is expected to be the coast itself, followed by a secondary position stretching from the sea to inland rugged terrain, obstructing the natural passageway northward along either the east or west coast.

(2) SARDINIA.

Three mobile divisions are believed located in SARDINIA, the 30th (Sabuda) Division, consisting of the 45th Infantry Regiment, the 46th Infantry Regiment, the 156th Artillery Regiment, 176th Blackshirt Legion; the 31st (Calabria) Division, consisting of the 59th Infantry Regiment, the 60th Infantry Regiment, the 40th Artillery Regiment, 170th Blackshirt Legion; and the 47th (Bari) Division is believed to have moved from the Brindisi in ITALY to SARDINIA.

The 236th Infantry Regiment from the 152d (Piceno) Division is also located in SARDINIA, as well as two coastal divisions, in addition to the mobile divisions listed above, increasing the total number of troops to approximately 65,000. This increase gives sufficient evidence that probably the former garrison of the island may be maintained. Although the garrison of 65,000 may be considered small, the defense of the island is facilitated by the general ruggedness of the terrain and by the virtual neutralization of the greater part of the eastern half of the island owing to its lack of communications with the main centers.

(3) CORSICA.

The garrison of CORSICA is now made up of the 44th (Cremona) Division, consisting of the 21st Infantry Regiment, 22d Infantry Regiment, 7th Artillery Regiment, and the 90th Blackshirt Legion; and the 20th (Friuli) Division from the Italian mainland, consisting of the 87th Infantry Regiment, the 88th Infantry Regiment, the 35th Artillery Regiment, and the 88th Blackshirt Legion; plus miscellaneous depot units. Italian morale is low, and the occupying troops are reported to walk in fear of the inhabitants. These feelings are understandable in view of the taste of Corsicans for the vendetta and the aversion they have always shown to Italian propaganda regarding their Italian origin.

The 226 Coastal Division has been identified in CORSICA (AJACCIO) area; formerly in the LEGHORN area.

The garrison is apparently split up into small groups occupying the main towns and centers of communication. There are few mobile reserves. Apart from the erection of road blocks, the Italians have done little to improve the defense of the island or to supplement the dismantled guns taken over from the French. The total garrison now amounts to some 46,000 men.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

(a) SICILY.

SICILY and the adjacent islands form the Sixth Army Command. The Sicilian garrison itself consists of two Army Corps - XII and XVI. XII Corps is composed of 28 (Aosta) Infantry Division, and 202, 207, and 208 Coastal Divisions. XVI Corps is composed of 26 (Assietta) and 54 (Napoli) Infantry Divisions, and 206 and 213 Coastal Divisions. The garrison has recently been increased by the addition of 4 (Livorno) Infantry Division. This division may be under direct Army command, although its present disposition suggests that it may be part of XVI Corps. The 4 (Livorno) Division has taken over from the 54th (Napoli) Division at CALTAGIRONE. Location of the 54th Division unknown. In addition to Army and Corps troops, there are thus four field divisions and five coastal divisions.

Recent information states that the 26 (Assietta) Division, which, in previous Orders of Battle, has been shown at CALTANISSETTA, is now known to have moved to Western SICILY, probably the SCIACCA area.

Whether these movements have reconstituted the composition of the two Corps as above shown is unknown.

The total Italian garrison is now estimated at 208,500, which is made up as follows:

(a) Army ground troops.		57,000
Artillery(29 Bns,mainly medium,identified)	15,400	
A.A. Artillery (some 26 Bns identified)	11,200	
Two Bns French R-35 (11-ton) tanks	900	
One Bn Italian L-3 (3 1/2 ton) tankettes	350	
Two M. G. Bns.	900	
Four Anti-Tank Bns.	2,000	
Two C.W. Cos., and Misc. C.W. Troops	750	
Independent Infantry Units.	6,000	
Engineers	9,500	
Services	10,000	
Field Divisions.		58,500
4 (Livorno) Division	13,000	
28 (Aosta) Division	16,000	
26 (Assietta) Division	15,500	
54 (Napoli) Division	14,000	
Coastal Divisions.		61,300
202 Division	14,000	
206 Division	12,100	
207 Division	11,500	
208 Division	10,700	
213 Division	13,000	
Miscellaneous.		31,700
Unplaced Coastal Bns.	16,000	
Unplaced M.G. and Mortar Units	1,300	
Unplaced A.A. and C.D. Units (about 35 Bns)	14,400	
TOTAL -		208,500

The above estimates are based on the assumption that generally units are up to strength.

There is, in addition to the forces identified in the island, a considerable potential reserve of man-power. The recent call-up of an additional class in ITALY means that troops should be in training at all depots. The depot of 29 (Piedmonte) Division (serving in GREECE) at MESSINA may well be full, and replacements are almost certainly at the depots of the garrison divisions, 26 ASSIETTA and 28 AOSTA.

The presence of numbers of Carabinieri (semi-military police), coastguards, and Blackshirts, means that the military could be relieved of certain tasks, especially on the lines of communication, such as traffic control, organization of civilian evacuation, etc. Alternatively, such personnel would provide a nucleus for local defense forces.

From the foregoing, it is seen that there are four divisions, plus Corps and Army troops, on the island. The recent reports indicate that the Central Group may be eliminated by the 26th Division moving into the SCIACCA area and the 4th Livorno Division from this Central group taking over the area of the 54 Napoli Division in the southeastern sector of the island. It may be expected that the 54th is possibly moving toward the CATANIA area.

Based on this assumption, a redistribution of the field units in SICILY toward strengthening the coastal defenses along the Southern coast from SCIACCA around to CATANIA on the east coast has been effected.

There are very few first-line troops in the MESSINA area (northeast part of the island). This area is the most easily reinforced from the mainland. None of the mobile divisions has actually been in combat, and all have done a protracted period of garrison service in the island.

(b) Composition and role of various types of defense units.

(1) Field Divisions.

(i) 26 Assietta, 28 (Aosta), and 54 (Napoli) Divisions are organized as normal infantry divisions, namely two infantry regiments, one Blackshirt Legion, of two battalions, 47 mm Anti-Tank Gun Company, 81 mm Mortar Battalion, one Field Artillery Regiment, auxiliaries, and services. The normal composition is:

12,500 men
290 L.M.G.
86 M.M.G.
126 2" Mortars
36 3" Mortars
24 47 mm. Anti-Tank Guns
8 20 mm. A.A. Guns
360 M.T. vehicles
2,000 Animals
36 Artillery Pieces

Transport is mainly pack. The following are the more significant variations from the normal which have been noted:

26 (Assietta) Division has a Field Artillery Regiment of five instead of three battalions (batteries), and possibly two Mortar Battalions.

28 (Aosta) Division has a Field Artillery Regiment of four instead of three battalions, and one of its Infantry Regiments (No. 5) has one extra battalion for mobile defense.

54 (Napoli) Division has a Field Artillery Regiment of four instead of three battalions, and also has a divisional M.G. Company.

(ii) 4 (Livorno) Division is known as an "assault and landing division", its organization being designed for combined operations. The main differences between this and the normal infantry divisional organization is the decentralization of all regimental heavy support weapons (anti-tank guns and 3" mortars) to battalions, and the decentralization of all battalion light support weapons (heavy M.G.'s and 2" mortars) to companies. This has been accompanied by an increase in the number of mortars and anti-tank guns. The infantry platoon also consists of three sections, each armed with one L.M.G., instead of two sections, each armed with two L.M.G.'s. In addition, the division should have certain special auxiliary units, such as assault engineers, rock-climbers, and also a battalion of 75mm guns on 13-ton chassis, attached to the field artillery Regiment. This special type of division has no Blackshirt Legion, and its normal composition is:

13,000 men
170 L.M.G.
92 M.M.G.
54 2" mortars
63 3" mortars
48 47-mm anti-tank guns
36 field guns
12 75-mm S.P. guns
8 20-mm A.A. guns
450 M.T. vehicles
2,000 Animals

(iii) The role of the field division is (1) to support the beach defenses as a secondary defense, and (2) to repel invasion by counterattack. At the present time, they are somewhat scattered but not to such an extent that concentration could not easily be accomplished, and such concentrations may be expected within a few hours of an alert. The additional mobility of these field divisions, and the fact that they are situated where they would be immediately engaged in the event of invasion, are strong indications that their actual mission is counterattack, once the location of the most serious breach of beach defenses has been determined.

Too sharp a distinction between the coastal and field formations and their respective functions should not be made. At the present time, there are indications that elements of field divisions may be brought directly into the coastal zones (the 26 (Assietta) Division), and, similarly, the mobility of at least some of the coastal divisions makes it possible that the field units can be reinforced by coastal units drawn from less threatened areas.

(2) Coastal Division.

It is assumed that Coastal Divisions control all coastal defense and artillery units within their areas. These units are coastal battalions (normally grouped as coastal regiments), M.G. and mortar units, and coast defense artillery units.

There are, however, special defense areas in addition to coastal division sectors. Such areas are normally around the defended ports and naval bases. In these, the coastal regiments appear to be under command of the Army Corps, whereas the coastal artillery units are believed to be under naval control.

There are also independent coastal regiments outside both the coastal divisional sectors and the special defense areas.

It is reasonable to suppose that certain Mobile Groups - see paragraph (3), following, may also be subordinated to the Coastal Divisions.

The average strength of the Coastal Divisions is 12,000 men. The role of the Coastal Division is the immediate defense of the coastline and resistance to the first stages of invasion. For this purpose, they are composed of coast defense units and territorial defense units, largely, but not necessarily, static, equipped with some arms and light support weapons. The recent improvement in equipment and increased mobility of the coastal battalion may render them more capable of tactical movement. The main functions of the coastal units, in the event of their being unable to actually prevent landings, are to hold up an invading force after the initial landing until the mobile groups are ready to counter-attack.

(3) Mobile Groups.

Seven 'mobile groups' have been identified. They do not form an entirely independent element in the composition of the garrison, as they are formed from units detached from larger organizations. The composition of the 'mobile group' many vary and may contain a combination of any of the following: Infantry Company, Motorized M.G. Company, Anti-tank Company, Artillery Battery, 20-mm. A.A. M.G. Company, Light Tank Company.

(4) Anti-Parachutist Groups.

About sixty 'anti-parachutist groups' have been identified. They are composed of some 40 men, similar to a home guard unit, equipped with suitable weapons.

(5) Tank Battalions.

At present, three tank battalions have been identified. Two of these are equipped with French 11-ton R-35 tanks, and the third with Italian 3-ton L-3 tankettes. The former is a low-powered and unreliable vehicle, and the latter cannot be considered more than a tracked M.G. carrier. Normally, each battalion should have some 50 tanks.

(c) Reinforcement Prior to Allied Assaults.

Maintenance of increased forces in SICILY should not create a serious problem in view of the short lines of communication with the mainland and the probability of considerable accumulation of all essential supplies in the island. Evidently,there is no limit to the reinforcements that can be made available from the mainland by the Italian Army due to the fact that the Italians are not committed in RUSSIA or on any other front at the present time. Therefore, additional reinforcements are entirely limited by logistics based on the terrain, communication, transportation, and port facilities in SICILY. A total of 8 or 9 field divisions on the island appears to be reasonable in view of these limitations. Seven Italian divisions might be disposed in areas (based on movement of the 4th and 26th Divisions) as follows:

54th - CATANIA
4th - CALTAGIRONE
? - CANICATTI
26th - SCIACCA
28th - MARSALA - TRAPANI
? - PALERMO
? - MESSINA

Two German divisions might be disposed, one in Army reserve, in the general CALTANISSETTA - ENNA area; the other broken into special battle groups to be disposed in support of principal ports and airfields. Additional forces are likely to include a proportion of armor, one or two German tank battalions, and possibly one Italian. There are at least four medium tank battalions in Metropolitan ITALY. Reinforcements of existing mobility forces in SICILY must be expected. No definite information of such reinforcements is known at the present time.

The total estimated garrison on D Day is, therefore:

a. Six or seven Italian divisions.
b. Two German divisions.
c. The equivalent of six coastal divisions (84 battalions), which may or may not be mobile.

2. DISPOSITIONS AND ENEMY CAPABILITIES.

a. Enemy Air Situation (by A-2, XII ASC).

(1) Type of Enemy Planes Likely to be Within Effective Range. (In order of their importance).

	Est. Quantity Total	Serviceable
(a) Long range German JU 88 bombers	290	190
(b) Single engine German Me. 109 fighters	200	130
(c) Italian single engine fighters (Macchi 200, 202, 205 and RE 2001)	300	130
(d) German two engine Me. 110 fighters	100	66
(e) German single engine FW 190 fighter-bombers	55	36
Unimportant:		
(f) Italian S. 79, S. 84 torpedo bombers	50	22
(g) German JU 88 and He III bomber-recce.	35	22
(h) Italian bomber-recce. S. 79, S.84, Cz 1007	80	36
(i) Italian coastal Cz. 501 and Cz. 506	80	36
(j) German JU 87 dive bombers	20	14

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

	Est. Total	Quantity Serviceable
(k) German Me. 109 Army Co-op.	10	6
(l) Italian Army Co-op. CA 311, 312 & 313	25	12
Totals -	1245	700
Totals assuming Italian planes half as effective as Germans - -	977	582

The last total as above can again be broken down into (a) Strictly combat types, and (b) "Others", listed in the above table as unimportant:

	Total	Serviceable
(a) Combat types	800	490
(b) Others	177	92
	977	582

(2) Tactics likely to be used by above types:

(a) German JU 88 Bombers are the best the Axis has but still are none too good, and easy to shoot down. They may be expected to bomb from medium or low altitudes, and are used either by night or day, although there is a shortage of trained crews for night bombing. All the Axis air bases south of ROME, and in SARDINIA, are within effective bomber range.

(b) Single Engine Me. 109's are easily the best Axis airplane at high, medium, or low altitudes (although latest models of the FW 190 may show high performance). They will be used for fighting, light bombing, or ground strafing, at high speed, and will operate at first from all Sicilian airfields, later withdrawing to the north and west.

(c) The Italian Fighter Planes are obsolete in part, and their latest are not as good as the German fighters. They will be held largely for the defense of airfields and harbors, rather than offensive missions, and serviceability rate will be low.

(d) The German 2-Engine Me. 110 has many combat uses, such as light bombing, ground attack, and heavy bomber protection, but it is semi-obsolete and should be replaced fairly soon with the more recent Me. 210.

(e) The German FW 190 Fighter-Bombers will be dangerous and effective on combat missions, although it is estimated that there will be only about 50 in this theater.

(f) Italian S 79 and S 84 Torpedo Bombers used to be a serious threat, but they are very vulnerable, semi-obsolete, and crew morale has deteriorated from heavy losses.

(g) (h) (i) Both German and Italian Reconnaissance Planes will, of course, avoid combat missions, and contact with fighter or anti-aircraft units, either by staying largely out over the sea, or at very high altitudes when on photo missions over our forces. All Italian coastal seaplanes will be slow, vulnerable, and of little use.

(j) The German JU 87 or "Stuka" Dive Bomber has served its usefulness, lost its terror, and will probably not be seen in future operations.

(k) (l) Italian Army Co-op planes are also obsolete and will probably not be seen. Only 10 German Co-op planes are reported in the theater and are, therefore, not important.

(3) Latest Estimate of Air Strength, this theater. This has largely been covered in paragraph (1), above, although various intangibles are involved which may neutralize each other. For instance, instensive bombing of enemy fields in the nex few weeks should destroy a considerable number of planes, both in the air and on the ground, which will have to be replaced. On the other hand, Germany may be able to spare a certain proportion of her planes now located in France, on the Russian Front, or in the Balkans, to strengthen this theater's air defenses. From a replacement point of view, she is considered to be better off on planes than on experienced crews.

Final estimates, therefore, should run about 270 serviceable German fighters, including their equivalent in semi-obsolete Italian fighters, and about 230 serviceable German bombers, all stationed within a circle of about 325 miles, or effective bombing range.

(4) Probable Routes of Approach - Enemy Aircraft. At least until our fighter aircraft can be established on the ISLAND, the enemy airforce will have every important strategic advantage, in the location of its operating bases. All fields on the island (including REGGIO CALABRIA, on the toe of ITALY) are within 120 miles, or good fighter range, from the southern beaches. Their bomber fields in Southern SARDINIA, around ROME, NAPLES, FOGGIA, etc., are grouped roughly in a semi-circle 300 to 325 miles away, which is good bombing distance, out of range of our fighters. JU 88's, now in SICILY, are likely to be withdrawn to Italian and Sardinian fields, and replaced by additional fighters from ITALY.

The approach angle of combat planes to a target bares no relationship with the location of their home bases. In the forthcoming operation, the original approaches will come mostly overland to obtain the protection from ADF interception afforded by the high hills and ridges. The direction of actual attack, however, is likely to be along the beaches or shoreline, with the sun at their back, if possible.

b. Enemy Naval Capabilities.

It is estimated that, based on past performances, it is unlike. that any substantial reduction of the Italian Navy can be achieved excepn air and submarine action.

c. Enemy Ground Capabilities.

(1) General.

(a) Assumptions.

Enemy air reconnaissance of the North African coastline will reveal our preparations for movement. It must be assumed that the enemy will have knowledge of the place of the attack, unless NDF interference is arranged to make that agency impotent, and air cover prevents organized hostile air reconnaissance while our troops are in the transport or rendezvous areas, by H minus 6 hours.

CAPABILITIES AGAINST FORCE 343:

The following is factual data reference actually known dispositions of divisions:

The 5th Division has moved out of its previously known location; present location unknown.

The 4th Division has moved into the area formerly occupied by the 5th Division.

The 26th Division has moved into the SCIACCA area.

The 28th Division remains unchanged.

Army and Corps troops remain unchanged.

Based on the obscure situation, the lack of a new Battle Order, and the thought that doubtelessly other divisions will be identified in areas vacated, no definite capabilities can be attempted. The capabilities previously presented are completely changed, but it is still considered that the enemy is capable of the following:

(1) To defend at the water's edge.

(2) To defend on ridge-lines running perpendicular to the coast, especially on the eastern side, to canalize any advance inland.

(3) To defend along the ridge-line: RAGUSA - VIZZINI - CALTAGIRONE - MAZZARINO - RAVANUSA - CASTORELLO.

Capabilities 1 and 3 are considered most likely of adoption because of the known position of the 4th Division and the known locations of Army and Corps troops. Capability 1 is favored, because of known locations of coast defense installations and the vital airdromes and ports they are designed to defend.

KOCH
AC of S, G-2

G-2 ESTIMATE OF THE ENEMY SITUATION #4.

18 July 1943

1. SUMMARY OF THE ENEMY SITUATION.

a. With exception of scattered and now unidentified units presumably remaining for local counter attack and to bolster Italian troops, it is indicated that German elements involved in the defense of Sicily have drawn to the east and northeast.

b. Recent movements from the northwest indicate that the following major Italian elements have moved toward the southeast toward our western flank:

26th ASSIETTA Division from the SCIACCA area.
28th AOSTA Division from the TRAPANI - PALERMO area.

Some elements of both of these have been identified on our western flank.

c. As this operation opened it was believed that there were three elements comparable to regimental combat teams, a total of which comprising the Division Sicily, later renamed the 15th Panzer Division. It was further believed that one of these combat teams was in the CATANIA area, one in the GELA area, and the third in the TRAPANI - MARSALA area. Although unconfirmed, of these three it is believed that two are now in the east and northeastern part of the island and the third, originally in the GELA area, remains in the general area ENNA - S. CATERINA.

d. Identifications of new minor elements (Harsh Battalions) previously unreported on the island, indicate reinforcements are probably being pushed across the STRAITS of MESSINA in small increments as rapidly as possible.

e. Enemy activity opposing the advance of the Seventh Army has been light with the exception of that opposing the central portion of the zone of advance.

f. Movements in general have been to the north and east and no movements have been noted in the western part of the island in the past few days.

g. The terrain in the directed zone of action is extremely rugged, the main ridge line running generally east and west. The highest portion is in the area PIZOANTENNA (002) with an elevation of about 6000 feet. The ridge has numerous passes but limited number of first-class roads. The coastal plain on the northern part of the island is narrower than those of the southern part now occupied.

h. Numerous streams enter the northern waters, these are presumably dry at this time of the year. Notably these are from east to west, the F. DI POLLINA (C13), F. GRANDE IMERA, and, F. TORTO (both B82). Influencing the terrain also in the projected operation are the northern reaches of the SALSO, which extend within a few miles of Pzo ANTANA (002) and the V. di FICARELLA (G37), which enter the Mediterranean between SCIACCA and AGRIGENTO, and the BELICA (G09), which enters the Mediterranean to the west of SCIACCA.

2. CONCLUSIONS.

a. Enemy Capabilities Against the 15th Army Group as a whole.

(1) To withdraw major enemy forces to the general area CATANIA - REGALBUTO (H59) - NICOSIA (C30) - S. STEFANO, and detaching armored elements as a delaying force for local counter attack.

(2) To withdraw to the general line CATANIA - PATERNO (H78) - REGALBUTO (H59) - ENNA (H28) - MUSCARELI (G78) - BIVONA (G59) - CATTOLICA (Gh7).

(3) Same as (2) and counter attack in the CATANIA Plain area with major German elements.

(4) Same as (2) and counter attack against our west flank with major Italian elements reinforcing them with German armored elements.

(5) Same as (3) and (4) either independently or simultaneously.

Capabilities (1) and (2) are favored at this time.

b. Enemy Capabilities Against the Seventh Army.

(1) To defend along the general line ENNA (H28) - MUSCARELI (G78) - BIVONA - CATTOLICA (Gh7).

(2) Same as (1) and counter attack against the west (left flank) with major Italian elements reinforced by German armor.

(3) To delay in successive positions along our general front to the north and west with local counter attacks to relieve the pressure during withdrawal.

Capability (1) is favored. Italian reaction has been purely defensive. Wht aggressive action has been taken against this Army has been by German elements, which it is believed, with exception of portions remaining in the ENNA - SAN CATERINA area, have been withdrawn along our front. A final defensive position will very likely be taken in the difficult terrain leading to the MESSINA peninsula, in an effort to either launch vigorous counter attack from that general direction at a later date or to permit withdrawal of German units to the Italian mainland. Sacrifice of the Italian troops in thewest to fulfill that mission is indicated.

3. ESSENTIAL ELEMENTS OF INFORMATION.

a. In general does the enemy have an organized defensive system anywhere within the coastal area which had initially been defended by the coastal divisions?

b. Is he capable of important resistance and if so is he actually offering It?

c. Is the movement to the east continuing? Will Italian divisions also move to the north and east?

d. Are there any German units of any size left in the zone of advance of this Army?

e. What is the strength of the units remaining in this Army's zone of advance?

f. What are the available resources reference ammunition, fuel and food?

g. Are airports in the zone of advance in use or serviceable?

h. Does resistance and reinforcement in the east beyond the Army boundary indicate a defensive or offensive attitude?

G-2 ESTIMATE OF ENEMY SITUATION #5

23 July 1943

1. SUMMARY OF ENEMY SITUATION.

a. German.

(1) Forces.

The German units known to be on the island of SICILY include the Herman Goering Division, the 15th Panzer Division, elements of the 29th Motorized Division, the 3d and 4th Parachute Regiments, and a few miscellaneous units. Recent movements and present dispositions indicate that the Herman Goering Division and the Parachute Regiment will be contained by the Eighth Army in the CATANIA area. Of the remainder, including possible reinforcements equivalent to one motorized division, it is believed that some 25,000 German troops are capable of being employed against our operations; including 16 infantry battalions (10,000 men), 21 artillery batteries (84 guns), 2 A.A. battalions (60 guns, 20mm and 37-mm), 3 tank battalions (150 tanks). Approximate deductions from the above T/O figures for organizational shortages and battle losses leave a net estimate of German strength as follows:

16 Infantry Battalions	10,500 men	
21 Artillery Batteries	60 guns	
2 A.A. Battalions	60 guns	(20,37)
3 Tank Battalions	65 tanks	

(2) Movements.

During the past week, the Germans have completed the consolidation of their forces in the eastern part of the island. Whereas the component elements of the original German divisions were initially widely scattered, they have now been regrouped, with the Herman Goering Division engaged with the Eighth Army in the CATANIA area, and the 15th Panzer Division on its west flank, where it furnished most of the opposition in the ENNA area prior to it withdrawal to the north and east. It is now believed to be organizing defensive position to the northwest of Mt. ETNA.

b. Italian.

(1) Forces.

The sudden fall of PALERMO and the seaward drive of the II Corps introduces some speculation as to the number and identity of the Italian units capable of opposing our operation. However, it is estimated that the Italian force may consist of remnants of the 4th Livorno, the 26th Aosta, the 28th Aosta, and the 206th Coastal Divisions, with a total not to exceed 25,000; including 21 infantry battalions (10,500 men), 49 artillery battalions (196 guns), 5 anti-tank battalions (128 guns), 2 tank battalions (11 tanks). With appropriate allowances for known battle losses, potential Italian strength may be tabulated as follows:

21 Infantry Battalions	13,000 men	
49 Artillery Batteries	96 guns	
5 AT Battalions	75 guns	
2 Tank Battalions	60 tanks	

(2) Movements.

Italian movements of the past week, aside from those with a surrender objective, have tended toward consolidation in the north and west of the island, apparently aimed at the defense of PALERMO. Of the units thus involved, it is believed that elements of the 4th, 26th, 28th, and the 206th Coastal will attempt to escape to the east after the fall of PALERMO and assist in the defense of MESSINA. Reports do not yet indicate to what extent this escape has been accomplished.

c. A recapitulation of total prospective opposition shows:

37 Infantry Battalions	27,500 men
70 Artillery Batteries	156 guns
4 A.A. Battalions	60 guns(20,37)
5 AT Battalions	75 guns
5 Tank Battalions	145 tanks

d. Terrain.

(1) Topography.

The terrain in the indicated zone of advance is more difficult than any yet encountered. From MISTRETTA (D25), the elevation rises sharply, reaching a height of 6,020 feet at M. SORI (C86). From MISTRETTA, east for a distance of 60 miles, the elevation of the ridge line averages more than 5,000 feet. Between this ridge and the coast, the littoral has an average width of less than 10 miles. This coastal area, in turn, is cut by numerous streams, forming a series of transverse cross corridors between the ridge and the sea along the entire coast.

(2) Roads.

East-west communication is limited to the coastal road, Highway 113, and Highway 120, which runs south of the main ridgeline. Lateral communication is provided at approximately 15-mile intervals by Highways 120, 117, and 116, in turn supplemented by the secondary roads through CASTEL-BUONO (D02) and the north-south road through S. FRATELLO (C53).

(3) Streams.

The streams in the area are short coastal rivers draining the northern slope of the main ridge, and believed to be mostly dry at this season. While constituting considerable obstacles to tanks, they cannot be considered water barriers.

2. CONCLUSIONS.

a. Enemy Capabilities.

(1) To withdraw east of the general line S. STEFANO (C33) - NICOSIA (G30).

(2) To defend on general line CEFALU (G03) - GANCI (G11) - NICOSIA (G30) - AGIRA (H49).

(3) To delay in successive positions from line in Capability (2), pivoting on AGIRA, with final position along line in Capability (1).

(4) To counterattack with the 15th Panzer Division and/or the 29th Motorized Division in the vicinity of LEONFORTE (H39) in the general direction CAGLIANO (G40) - CALASCIBETTA (H28).

b. Capability No. (3) is favored, implemented by Capability No. (4). Recent movements to the northwest indicate that the general line S. FRATELLO (C53) - TROINA (C50) - CENTURIPE (H69) - CATANIA (H57) might become a final defensive line with organized positions. Stubborn resistance to the Eighth Army advance in the south portion tends to confirm this. Sufficient time has elapsed to permit organization of the ground in the Northern sector. The surprise of the landing prevented organized inland defense, and it may be anticipated that none now will exist until that line is reached. The counterattack capability is discounted because of the lack of sustaining support and its vulnerability to encirclement by the 1st Division and the Canadian Division.

3. ESSENTIAL ELEMENTS OF INFORMATION.

a. What Italian units have escaped to the east and what is their status as to strength, equipment, and morale?

b. Where is the main defensive position; what is its organization, strength and equipment; and what is the location and strength of delaying or covering forces?

c. What additional German or Italian troops have already been brought into SICILY from the Continent, and will the importation of reinforcements continue?

d. Will German or Italian units now in SICILY attempt an evacuation to the Mainland?

e. Will the enemy assume the offensive; if so, when, where, and in what strength?

KOCH
AC of S, G-2

G-2 ESTIMATE OF THE ENEMY SITUATION #6

1 August 1943

1. SUMMARY OF THE ENEMY SITUATION.

a. See G-2 Periodic Report Number 23, dated 1 August.

2. CONCLUSIONS.

a. Enemy Capabilities (Long Range)

(1) To defend east or west of the general line S. FRATELLO (C53) - CESARO (C63) - BRONTE (C71) - NIANGAVILLA (H79) - PATERNO (H78) - CATANIA.

(2) a. To defend along the general line NASO (C84) - RANDAZZO (C82); and

b. MOUNT ETNA - ACIREALE (J90)

(3) Defend along the general line NASO (C84) - RACCUJA (C84) - FRANCAVILLA (C92) - TAORMINA (D11).

(4) Defend along the general line FITNARI (C94) - FRANCAVILLA (C92)-TAORMINA (D11).

(5) Commence an evacuation in the vicinity of PATTI (C84) - MILAZZO (D55) upon completion of the defense in Capability (2).

(6) Evacuation from the beaches east of MILAZZO (D55) and MESSINA upon completion of the defense in Capability (4).

(7) Start the evacuation along the Eastern Coast from ACIREALE (J90) to MESSINA upon crumbling of defenses along that coast.

b. The above capabilities are the anticipated capabilities in the order in which they will be undertaken, and, hence, none is favored. The defensive attitude has been demonstrated throughout in the latter stages of this operation, accompanied by rear guard actions, some stubborn in nature but none so far reported, by counter-attack. The enemy has held and withdrawn, and there have been no indications of relieving the pressure to accompany the withdrawals by aggressive action. Instead, a shell has been left, and withdrawal has taken place prior to actual close contact.

c. It must be assumed that a final stand will be made. Constant surveillance is being kept of the roads, and constant photo reconnaissance is being made to determine where the organized defense will take place. To date, none has been located. For this there may be two reasons: (1) that, in fact, no defensive position has been organized, and (2) that an organized position has been developed and carefully camouflaged. The latter should be accepted, because mobile reinforcements have been sent in in sufficient size to effect a mobile north flank. No reports have been received from the British Eighth Army areas as to photographic interpretations indicating an organized defensive position.

d. Should a beach head be established for the evacuation of the island, the terrain favors the general line NASO (C84) - RANDAZZO (C82) - MOUNT ETNA, and along the coast north to FILDMEPRENO (D11). Again, however, there are no indications of a general defensive line being organized along that line. To the east, one other line, listed in Capability (4), is the last connecting road between the two main coastal roads.

e. Some shipments have been observed from the air along both coasts and, no doubt, carry equipment, personnel, and supplies. A logical place for supply points to serve forces operating both north and east of MOUNT ETNA, would be FRANCAVILLA (C92), based on road network, and hence the defense should be west of that point.

f. No doubt, the operation to the north of MOUNT ETNA will affect the operation east of MOUNT ETNA, and vice versa, so that as one attack progresses, the other may be expected to progress to maintain lateral communications and avoid defeat in detail.

3. ESSENTIAL ELEMENTS OF INFORMATION

a. Where and when are demolitions being executed by the enemy.

b. Are organized defensive positions being prepared. If so, where and to what degree?

c. Are German or Italian units now on SICILY attempting to evacuate to the Mainland. If so, where, how and in what strength.

G-2 GENERAL INFORMATION BULLETIN #1

1. Symbols.

It has been agreed that all military conventional symbols on data to be published, from now on, will be the United States Army standard map symbols; this is to include the overprinted maps.

2. The general map supply and distribution program is as follows:

a. Maps to the scale of 1/50,000 will be made available to all units in the zone of action of Task Force 343.

b. Uncontrolled mosaics to the scale of 1/25,000 will be made of the following area:

The lower half of sheets 267 and 268,
The southwest quarter of 269,
All of sheets 271 and 272,
The western half of 273,
All of sheet 275
The western half of sheet 276

c. 1/25,000 scale maps of the entire zone of action of Task Force 343 will be made available for the use of the artillery. In certain areas, where no 1/25,000 scale map is available, 1/50,000 scale will be blown up to 1/25,000. These maps will be made available on basis of two per battery, six per battalion headquarters or higher, and one for the Artillery officer.

d. Enlarged 6" wide angle photographs will be made available for artillery study of the areas not now mapped to the scale of 1/25,000.

e. Additional planning maps to the scale of 1/250,000 and 1/100,000 are available upon request.

3. Road Maps

A road map, to the scale of 1/500,000, is being prepared and will be available at approximately D-14 for distribution on a per vehicle basis.

4. Sardinia and Corsica maps will be distributed without request on the basis of approximately 5 - 10% of normal map requirements. These maps must be posted with the proper battle order. The battle order of Sardinia and Corsica islands are shown below:

SARDINIA:

XIII Army Corps	Cagliari
30th (Sabauda) Inf. Div.	"
31st (Calabria) Inf. Div.	Sassari
236th Inf. Regt.	Location unknown
204th Coastal Division	Porto Torres
205th Coastal Division	Cagliari Area (?)

CORSICA:

VII Army Corps	Location Unknown
44th (Cremona) Div.	" "
20th (Friuli) Div.	" "

5. Change name of ENSA ro ENSA PRIME to JOSS.

6. Relief Models.

One set to MSASE around May 20th; three sets to arrive in this theater approximately June 10. Models are as follows: Beaches 64 and 65; beach 66; beaches 67 and 68; beaches 69, 70, 71, 72 and 73.

17 May 1943

G-2 GENERAL INFORMATION BULLETIN #2

1. Tables for the hours of moonlight, daylight and twilight have been requested.

2. Consideration is being given to the need for destroying RFD (Radio Direction Finder) installations.

3. Excerpts quoted from Security Instructions No. 1 (6 May 1943) Force 545 not necessarily Force 343 doctrine but of interest to all are shown below.

a. Rumors.

That individuals must not speculate in public as to their destination. The possibility always exists that they may be right.

b. Personal Documents.

During every exercise all diaries and letters will be removed from troops before going into action, in order to accustom them to this drill.

c. Lectures.

Lectures must be given instructing troops as to their action if captured. This should include an explanation of International Law covering conduct towards prisoners.

d. Briefing.

Officers and the troops themselves will be briefed on board ship in the case of ship to shore expeditions. In the case of shore to shore expeditions briefing will be at the latest moment the Corps Commander considers practical, in the assembly area. This should not be more than four days before the anticipated date of sailing.

e. Assembly Area.

The Assembly Area will be sealed off to prevent both entry and exit as far as operational requirements permit. It should be a wired camp or perimeter, sited preferably remote from a civilian center. A supervised Compound for visitors, and the collection, delivery, etc. of stores should be created.

f. Casualties.

Arrangements must be made to insure that personnel going sick after briefing and before departure are kept segregated and are warned against discussing the expedition.

g. Civilians.

Arrangements must be made to prevent civilians approaching the Assembly Area. No civilians will be permitted to enter the Assembly Area, the boundaries of which must be defined.

h. Movements.

Movements to the Assembly area will be arranged if possible so that long convoys of troops do not all pass the same point, or if this is unavoidable, that they do so by night, or under cover of an "Exercise" plan.

i. Bills, Contracts, etc.

There will be no final settlement of accounts until the day after departure. Rear parties will deal with outstanding matters."

4. Photographic Interpreters. Two photographic interpreters are being set up per division. Four to six for Hq. Force 343. Request is being made for Corps Headquarters.

22 May 1943.

G-2 GENERAL INFORMATION BULLETIN #3

1. Troop Lists.

Provisions are being made for the following G-2 personnel and vehicles for the assault echelon:

Unit	Officers	Men	Vehicles
PRISONER OF WAR DET.:			
I Armored Corps	4	8	1 - 3/4-ton 4x4,
			2 - 1/4-ton with trailers.
Also II Corps, 1st Inf. Div., 2d Armd Div., 3d Inf. Div., 9th Inf. Div., 45th Inf. Div., 82d Airborne Div. - A complete unit for each same as for I Armored Corps.			
COUNTER INTELLIGENCE DET.:			
I Armored Corps	4	22	8 - 1/4-ton 4x4 with trailers, 2 - 3/4-ton 4x4s.
II Corps	2	11	4 - 1/4-ton 4x4s with trailers, 1 - 3/4-ton 4x4, with trailer.
1st Inf. Division	1	5	3 - 1/4-ton 4x4s - 2 trailers.
2nd Armd Div., 3d Inf. Div., 9th Inf. Div., 45th Inf. Div., 82d AB Div. - Same as 1st Infantry Division.			
TRANSLATION DETACHMENT:			
I Armored Corps	2	6	1 - 3/4-ton Weapons Carrier.
PUBLIC RELATIONS:			
I Armored Corps	7	5	2 - 1/4-ton 4x4; 2 motorcycles
CENT	3	1	1 - 1/4-ton 4x4
DIME	3	1	1 - 1/4-ton 4x4
JOSS	3	1	1 - 1/4-ton 4x4
PSYCHOLOGICAL WARFARE			
I Armored Corps	4	3	1 - 3/4-ton 4x4 - 500 lbs. leaflets,
			1 - 1/4-ton 4x4

3 June 1943.

G-2 GENERAL INFORMATION BULLETIN #5

STRENGTH OF GROUND FORCES

1. The attached estimate of strength of the ground forces at the airfields quoted covers both the German and Italian Army and Air Forces which would be employed on ground defense of these airfields.

2. It is not possible to estimate the proportion of German to Italian personnel but trained Italian personnel would represent a small proportion of the whole.

31 May 1943.

The following information has been received from Force 141:

Appn/615/43/M.I.3.b. MOST SECRET

APP "A"

Estimated STRENGTH OF GROUND FORCES employed at certain Airdromes in Sicily

A. General

(1) As the four airdromes in question are in the concentrations areas of first line divisions it is likely that considerable outside assistance will be available for their defense in addition to the A.A. and static defense troops already employed.

(2) Mobile Defense Groups ("Nuclei Celeri") improvised to suit local requirements, but consisting generally of 600-800 men (lorryborne) well equipped with A/Tk guns, H and L.M.Gs and some A.F.Vs (probably L.3 tanks or armored cars) will be stationed where they can best be employed as Reserve Striking Forces in the event of enemy air or sea-borne landings in their proximity. An Order of Battle for these groups is given on page 32 of Sicily Order of Battle dated 18th April 1943.

(3) German Air Force personnel are known to man some of the A.A. defenses. In estimating the strength of A.A personnel no difference has been made between Italian and German batteries.

(4) The estimates for A.A guns etc, are based largely on C.I.U. Report XI.36 of 13th April 1943 after allowance has been made for a certain number of emplacements being empty or dummy. This report should be of considerable assistance in showing the extent of wiring, position of pill boxes etc. in the perimeter of the airdromes under consideration.

(5) It should be remembered that in many cases the A.A batteries are sited for ground as well as A.A defense, and will therefore be of some value in a dual purpose role.

THIS PAGE IS UNCLASSIFIED

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(6) Anti-Parachutist Groups (Nuclei Antiparacadutisti) - small units of 25-50 men, specially trained in anti-parachutist warfare and working under command of the Coastal Battalions may be expected in the vicinity of airdromes. A list of these units with their location will be found in the Sicily Order of Battle of 18th April 1943.

B. SOUTHERN SICILY

The two airdromes under consideration are in the area covered by 54 and possibly by 4 Inf. Div. BISCARI airdrome is probably within the boundary of 207 Coastal Div. and the defenses of COMISO are probably in 206 Coastal Div. area.

(1) BISCARI AIRDROME

	Hy. A.A.	Lt. A.A.	M.G.	A/Tk	Mortars	L.M.Gs	Personnel
A.A. Defenses	12	48	8	-	-	-	1,600
Mobile Forces (Probably includes 250 Cav. and 16 Lt. tks.)	-	-	12	8	6	24	900
Static Defense Tps. (C.Bns.Militia and elements 54 Div.)	-	-	18	4	9	60	1,500
Services etc. (Carabinieri, Medical, MT Supply)	-	-	-	-	-	-	300
TOTAL:	12	48	38	12	15	84	4,300

(2) COMISO AIRDROME

	Hy. A.A.	Lt. A.A.	M.G.	A/Tk	Mortars	L.M.Gs	Personnel
A.A. Defenses	20	24	6	-	-	-	1,500
Mobile Forces	?						
Static Defense Tps. (exclusive 1st line elements)	-	-	24	8	9	80	2,300
Services etc. (Carabinieri, Medical, MT Supply)	-	-	-	-	-	-	500
TOTAL:	20	24	30	8	9	80	4,300

C. EASTERN SICILY

GERBINE, its 8-9 satellite landing grounds, and the airdrome at CATANIA come within the area of 54 Inf Div and 213 Coastal Div. At SCORDIA is a Battalion of R.35 (11 ton) French Tanks,* Copy of which have probably been allocated to the local Mobile Groups. The large number of MT units in the CATANIA area suggests that a considerable part of the defense troops may be lorry-borne. These mobile forces in the CATANIA area will be available as reinforcements or reserves to the static airdrome defense troops.

(1) CATANIA AIRDROME

	Hy. A.A.	Lt. A.A.	M.G.	A/Tk	Mortars	L.M.Gs	Personnel
A.A. Defenses (some of these may be for the defense of the town)	42	34	12	-	-	-	3,500
Mobile Defense (probably includes 16 L-3 tks, Mot. M.G. Coy, etc.)	4 x 75 mm guns		12	16	9	24	900
Static Defense Tps.	-	-	24	8	9	40	2,000
Services	-	-	-	-	-	-	300
TOTAL:	42 (+ 4 x 75 mm guns)	34	48	24	18	64	6,700

* Described in FM 30-42 - p. 50-51.

(2) GERBINI AIRDROME (excl. satellites)
(Some of the defense troops may be employed at CATANIA)

	Hy. A.A.	Lt. A.A.	M.G.	A/Tk.	Mortars	L.M.Gs	Personnel
A.A. Defenses	24	48	-	-	-	-	2,000
Mobile Defense (probably includes tkn. Mot. M.G. Coy etc)	-	-	12	8	9	24	800
Static Defense Tps	? 12 guns (Div Arty)		24	8	9	40	2,500
Services	-	-	-	-	-	-	300
TOTAL: (+ 12 Fd guns)	24	48	36	16	18	64	5,600

9 June 1943

G-2 GENERAL INFORMATION BULLETIN #7

BRIEF ORDER OF BATTLE: ITALIAN ARMY
(Information dated 29 May 1943)

A. SUMMARY OF DIVISIONS

51 Infantry (c. 12,500 men each)
2 Mobile (c. 8,000 men each), numbered 1, 2 Mob.
1 Motorized (c. 8,000 men), numbered 10
1 Parachute (c. 6,000 men), numbered 184
3 Alpine (c. 13,000 men each), numbered 1, 5, 6 Alpine

Total - 58 Divisions

Note: No allowance is made for the 10 divisions routed in Russia, of which considerable elements remain. Most of these have returned to Italy where an attempt will probably be made to re-form them.

B. HIGHER COMMAND

War Minister and C. in C. (delegated from the King)	Signor Benito MUSSOLINI
Under-Secretary of State for War	H.E. Antonio SORICE
Chief of G.S. of the Armed Forces	Army/Gen. Vittorio AMBROSIO
Deputy C. of G.S. of the Armed Forces	Div./Gen. Francesco ROSSI
Chief of the Army Staff	General MARIO ROATTA
Deputy Chief of Army Staff	Div./Gen. Antonio GANDIN

C. ARMY GROUP

	Commander	Composition
Group of Armies of Central and Southern Italy and the Islands	Army/Gen. H.R.H. Duke of Piedmont	5, 6, 7 Armies

D. ARMIES

Composition of armies is largely conjectural.

Army	Commander	H.Q.	Composition	Area
First Italo-German	Destroyed in TUNISIA.			
Second	See G.H.Q. Slovenia	Dalmtia		
Fourth	Army/Gen. Mario Vercellini	Menton	I, XV, XXII Corps	East of MARSEILLES-GENOA
Fifth	?Army/Gen. Mario CARACCIOLO	Florence	?XVII Corps VII, XIII Corps	Area Tuscany, Emilia, Central Italy Sardinia, Corsica
Sixth	?	Enna	XII, XVI Corps	Sicily
Seventh	Army/Gen designate HRH Duke of Bergamo	Salerno	IX, XXXI Corps	Southern Italy
Eight	Army/Gen Italo GARIBOLDI	?Poltava	Remnants of II, XXXV Alpine Corps	Russia
Eleventh	See G.H.Q. Greece			
GHQ Albania (Note 1)	Corps/Gen Lorenzo DAMAZZO	Tirana	IV, XXV Corps	Albania
GHQ Montenegro (Note 1)	Army/Gen Alexandro PIRZIO-BIROLI	? Cetinje	VI, XIV Corps	Montenegro
GHQ Greece (Eleventh Army)	Army/Gen Carlo GELOSO	Athens	III, VIII XXVI Corps	Greece
GHQ Slovenia Dalmatia (Second Army)	Corps/Gen Mario ROBOTTI	Susak	V, XI, XVIII Corps	Yugoslavia north of Dubrovnik
GHQ Aegean	Admiral Inigo	Rhodes	50, 6 Divs	Dodecanese and Aegean Islands

Note 1: Formerly part of Ninth Army which covered Albania and Montenegro.
Note 2: It is not known what Army controls XIX and XXIII Corps.
Note 3: 46 and 51 Divs, Crete, are under German command.

E. CORPS

Corps organization, particularly outside Italy, is very fluid and divisions are frequently transferred from one corps to another.

Corps	Commander	Headquarters	Composition
I	Corps/Gen Federico ROMERO	Sospel, near Grasse, France	58 Inf Div. 2 Mob Div 223, 224 C. Div.
II	Corps/Gen Giovanni ZANGHIERI	Russia	Remnants of 3 and 5 Inf Divs 52 Lorry-borne Div.
III	Corps/Gen ? ROSSI	Thebes, Greece	11, 24 & 36 Inf Divs.
IV	Corps/Gen Carlo SPATOCCO or Div/Gen Pietro MAGGIANI	Durazzo, Albania	38, 41 & 53 Inf Divs.
V	Corps/Gen Alessandro GLORIA	Susak, Slovenia	13 & 57 Inf Divs. 1 Mob Div.
VI	? Corps/Gen Paride NSORI	Dubrovnik, Yugoslavia	18, 32, 155 Inf Divs.
VII	Corps/Gen Giacomo CARBONI	Corte, Corsica	20 & 44 Inf Divs. 226 Coastal Div.
VIII or	Corps/Gen Giuseppe PAPUNDI Corps/Gen Mario MARGHINOTTI	Xylocastron, Peloponnese	29 & 59 Inf Divs.
IX	Corps/Gen Luigi DE BIASE	Bari	47 & 152 Inf Divs.
X	Destroyed in Egypt		
XI	Corps/Gen Gastone GAMBARA	Ljubljana Slovenia	14, 22, 153 Inf Divs.
XII	Corps/Gen Mario ARISO may have succeed Gen. Angelo ROSSI	Corleone, Sicily	28 Inf Div. 202, 203 207 Coastal Divs.
XIII	Corps/Gen Antonio BASSO	Cagliari, Sardinia	30, 31 Inf Divs, 204 205 Coastal Divs 236 Inf Regt.
XIV	Div/Gen Luigi MENTASTI	Centinje, Montenegro	19, 23 Inf Divs
XV	Corps/Gen Emilo BANCALE	Genoa	103, 105 Motorized Divs.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

212 Coastal Div. (Brig/Gen Ugo MEDORI)	Catanzaro, Calabria
213 Coastal Div. (Brig/Gen Angiolo TOSI)	Catania
221 Coastal Div.	?
222 Coastal Div.	Salerno
223 Coastal Div.	Nice
224 Coastal Div.	Cannes
226 Coastal Div.	? Alate, near Ajaccio, Corsica

NOTES: Coastal divisions, which cannot be regarded as first-line units, are mainly responsible for the immediate defence of coastal regions. They are organized into regiments and battalions and are provided with a certain amount of medium artillery as well as M.G. battalions drafted from the old Frontier Guard organization. There are at present some 450 Coastal and Territorial Battalions composed of second-line troops with a low scale of equipment.

Militia

In theory all infantry divisions have a Blackshirt Legion of two battalions included in their organization; there are also a number of independent battalions. Recently many battalions have been detached from their divisions and grouped into separate formations, called "Raggruppamenti" or groups. The following have been identified:-

30 Blackshirt Raggruppamento	Sardinia (contains at least 5 battalions).
3rd January Blackshirt Raggruppamento 23rd March Blackshirt Raggruppamento "Valle Scrivia" Blackshirt Group "Montebello" Blackshirt Group	Recently destroyed in Russia. (Remnants only)

Note:

A substantial number of troops will be found at all depots. These will have some fighting value, though equipment will be inadequate.

It must be borne in mind that this order of battle is only a summary of more important units and should not be regarded as by any means a complete statement of the forces available in any area.

12 June 1943.

G-2 GENERAL INFORMATION BULLETIN #9

PSYCHOLOGICAL WARFARE ACTIVITIES (PWB)

I. TASKS

The following tasks will be performed by the P.W.B. Combat Teams:

1. Tactical propaganda against enemy troops.
2. Local propaganda amongst the civilian population.
3. Radio propaganda.
4. Collection of propaganda intelligence.

II. METHOD

The above tasks will be accomplished by the following methods:

1. Tactical propaganda against enemy troops.

(a) Leaflets. If the local military situation permits, previously prepared leaflets of general application, but addressed to enemy troops may be distributed by means of:

(i) Patrols.

(ii) Converted 25-Pdr. base ejection smoke shells. Combat Teams will take with them 100 "mushrooms", i.e. modification of smoke shell, together with 50,000 special leaflets.

If necessary tactical leaflets can be produced locally at a later stage for distribution to enemy troops by either of these means.

(b) Loudspeakers. If available, portable loudspeakers of the Naval Fortovox type will be taken and used for front-line enemy propaganda if circumstances require and permit.

2. Local Propaganda amongst the civilian population.

(a) Posters. A supply of suitable posters will be taken by the Combat Teams for displaying in occupied localities.

(b) Leaflets and Circulars. A supply of leaflets and circulars will be taken by the Combat Teams for hand distribution amongst the civilians in occupied areas.

(c) Printing Press. Any printing press available will be taken over and used for the local production of leaflets, posters, etc., as required.

(d) Newspapers. If it is decided to continue publication of an existing newspaper, or even to launch a fresh one, the Teams will undertake this task.

NOTE : Above will be done in close liaison with AMGOT.

3. Radio Propaganda.

In the event of a local radio station being discovered intact, it will be taken over and worked in cooperation with the C.S.O.* Radio will be used for:

*Chief Signal Officer.

(a) Broadcasting announcements by C-in-C, Force Commander or Military Governor.

(b) Propaganda to civilians in HORRIFIED and the mainland.

At a later stage, as practicable, mobile radio transmission units will be landed and operated as required.

4. Intelligence.

Information will be collected regarding the morale of enemy troops and civilians for the purpose of immediate tactical and local propaganda from base. Good communications from Force Headquarters to base via Force 141 will be essential.

The principal heading for the types of information required are as follows:

(a) Attitude of military and civilians to Allied landings.

(b) Information on the political situation, both local and on the mainland.

(c) Reactions of military and civilians to our propaganda as guide to future psychological warfare.

III. LOADING SCHEDULE

Psychological personnel and vehicles will report to the CP of Task Force 343 in the vicinity of AGOUTI on D Day, on D+10 and D+30, in accordance with the following schedule, where they will stand by to be ordered in the theater of operations by this Headquarters.

FORCE 343	D - DAY	
PSYCHOLOGICAL WARFARE	3 Officers 1 Enlisted Man	1 Car 500 lbs. leaflets 1 Typewriter 1 Desk - Small Field 2 Chairs - Folding
	D + 10	
HQ FORCE 343		
PSYCHOLOGICAL WARFARE	4 Officers 2 Enlisted Men	2 Jeeps
	D + 30	
HQ FORCE 343		
PSYCHOLOGICAL WARFARE	13 Officers 7 Enlisted Men	3 Jeeps 2 trucks 1/2 ton (radio) 1 truck 1 1/2 ton (loudspeaker) 1 M/C

12 June 1943.

G-2 GENERAL INFORMATION BULLETIN #11

I. COVER PLAN.

1. The Cover Plan embraces only such activities as are to deceive the enemy and does not involve any of our security in reference to the handling of our troops to prevent leakages, which would normally be picked up through our Counter Subversive system.

2. The Cover Plan for the 82d Airborne Division has been prepared. In outline, the plan is that after concentration in a certain area, parties will be sent to another area and preparations made for the move of the 82d Division to another staging area prior to the actual assault on the cover destination.

3. The use of dummy parachute landings is proposed and under consideration.

II. BEACH STUDIES.

Two hundred copies of 1/12,500 beach studies are being made, 25 going to Navy; 25 to go to Headquarters 343; 150 to the force concerned. These copies will be ready about 14 June.

III. PRISONER OF WAR INTERROGATION TEAMS.

Prisoner of War Interrogation teams are being ordered directly to their divisions. They will have 1/4-ton 4x4's but lack trailers.

IV. INTERPRETERS.

It has been requested that interpreters be placed on the convoy that is bringing the 45th Division. However, in the event they do not arrive, it is recommended that all Divisional G-2's, through the proper staff section, canvass their own personnel for Spanish, German, Greek, and Italian linguists, with a view to using the latter when the need arises.

V. ROAD MAPS.

Road maps will be available subject to Force 343 Engineer Distribution Plan, at the warehouse in Constantine, after June 16. This is a 1/500,000 scale road map in four colors, to be placed in every vehicle.

VI. RELIEF MODELS.

Additional relief models will be dispatched as they arrive in LAUGHTER, directly to sub-units concerned.

VII. "TARGET" BOOKLETS.

A booklet entitled "Target" will be distributed to units on the following basis; 4000 to JOSS; 4000 to SHARK; 1000 to WILDCAT; 750 to WOLF; 250 to Hq. 343.

VIII. COLLATION MAPS.

One hundred proof sheets of the final collation maps of the beach areas will be ready approximately 14 June. They are to be regarded correct as of 7 June. This headquarters will make distribution to lower echelons immediately thereafter.

IX. PUBLIC RELATIONS.

Public Relations personnel will be distributed to units as early as possible. It is considered good cover to have them dispatched to units early, as ordinarily they arrive just before a new venture is to take place. This personnel will not be classified until necessary for the actual operation but will be considered a part of the organization reference restrictions, etc.

X. CENSORSHIP.

1. One field press censor will be with Hq. 343. The purpose of this censor is to pass on all publicity material after consultation with G-2, 343, and then forward it to Force 141. No press information is allowed to pass by radio below Hq. 343 at any time until the instructions are received from Hq. 141.

2. The remaining post office, telephone, and telegraph censors will be brought over as soon as requested by Hq. 343 and will be held in readiness at the AGOUTI Headquarters of 343.

XI. PSYCHOLOGICAL WARFARE.

1. Personnel and equipment for Psychological Warfare is being provided by Hq. 141. This personnel will report to Hq. 343, at AGOUTI, on approximately D Day, where they will be held in readiness until called for by Hq. 343.

2. Advance copies of Psychological Warfare leaflets will be made available to all major headquarters as soon as printed.

XII. SECURITY PASSES.

1. Two types of security passes will be issued to Corps and Division Headquarters. The white security passes are for issue to United States and British civilian organizations, such as the Red Cross. A brown security pass will also be issued for emergency use only to special individuals for counter intelligence purposes.

2. The above two types of passes are not to be confused with the passes issued by the Allied Military Government of Occupied Territory (AMGOT), which will probably be red in color and are for the purpose of identifying civilians in their normal civilian pursuits.

3. Embossed stamps will be issued for use with the white and brown security passes.

4. Sets of three date stamps, designed to enable local pass systems to be established for employees working in docks, service installations, etc., will be issued. They are for stamping daily the actual person (e.g., wrist) of the employees on their entry to the docks or installations, etc.

XIII. CAPTURE OF ENEMY AGENTS.

1. If an enemy agent is captured in HORRIFIED, the nearest CIC officer will be notified at once.

2. This is particularly important in the case of an agent equipped with some means of communication with the enemy, such as a radio transmitter or secret ink. Such an agent must be held in custody and forwarded to Hq. 343, through channels, as quickly as possible.

3. The fact that an enemy agent has been captured must be treated with the greatest secrecy, and knowledge thereof must be strictly limited to those that require such knowledge in order that the case may be properly handled.

12 June 1943

G-2 GENERAL INFORMATION BULLETIN NO. 12

1. NOTES ON ENEMY FORCE (ITALIAN).

a. Personalities.

GENERAL ROATTA. The Germans have published the appointment of General Roatta as Chief of the Italian General Staff in place of General Ezio Rosi. The latter succeeded General Ambrosio less than six months ago. The new Chief of Staff relinquishes the command of the Italian 6th Army (Sicily). He was Chief of Staff to the Italian forces in Spain during the Civil War but was relieved of his post as a result of the disaster of Guadalajara. In 1939 he was for a short while Military Attache in Berlin, subsequently becoming Deputy Chief of Staff to General Graziani whom he succeeded as Chief of Staff in March 1941 retaining the position until January 1942. This is therefore his second tenure of the office. He is not considered to be of outstanding military ability but is a pronounced racist and, although never proved to have pro-German learnings, nevertheless has had considerable contacts with German military circles.

ROATTA is described as capable, unscrupulous and unpleasant. He is believed to be disliked by the Germans which may explain why he has been removed from Sicily.

2. HISTORIES OF FIELD DIVISIONS IN SICILY.
(Excerpts from Intelligence Summary No. 1, dated 25 May 43)

4 'LIVORNO' Div.- Home station CUNEO. In August 1940 commanded by General GIODA (later CG X Corps, LIBYA) was stationed in the MONVISO area of N. ITALY and formed part of Italian 1st Army. Does not seem to have played any role of importance during the FRANCO-ITALIAN campaign. November 1941 moved to HOME area, probably under control of XXX Corps (lost in TUNISIA) together with 1 'SUPERGA' and 20 'FRIULI' Divisions. During September 1942 units underwent special training course at LEGHORN, but it is not known how far the T/O of the division was reorganized to justify its new titul of 'ASSAULT LANDING' like 'SUPERGA'. January 1943 was reported to be enroute to TUNISIA via SICILY. The bulk of the division (probably under direct control of 6 Army) has remained in SICILY, with HQ in the CALTANISSETTA area. Though untested in battle, troops of this division are probably of a higher quality than those of the other units on the island.

26 'ASSIETTA' Div.- Home station ASTI. Was in MONGINEVRO-BOUSSON area of the FRENCH frontier in August 1940 and formed part of the IV Corps of ITALIAN 4th Army. When IV Corps moved to ALBANIA in 1941 transferred to control of I Corps and remained in ASTI area. General GIRLANDO became CG at this time. In November 1941 moved to SICILY to replace 29 'PIEMONTE' which had been transferred to GREECE. Div Infantry proved their toughness by marching from N. ITALY to SICILY, taking a month to complete the journey. Probably of fair fighting value a year ago but the standard of the division may have deteriorated after months of comparative inactivity and garrison duties.

28 'AOSTA' Div.- Home station PALERMO. Has remained near its peace-time station under the control of XII Corps since the outbreak of war. Cannot be rated highly as a fighting division and has had no battle experience.

54 'NAPOLI' Div.- Home station CALTANISSETTA. Included in the peace-time station under the control of XII Corps since the outbreak of war. Cannot be rated highly as a fighting division and has had no battle experience.

3. NUCLEI CELERI (MOBILE UNITS)

According to a P/W report the "Nuclei Celeri", of which six have been identified in SICILY, are motorized and have the same armament as infantry. They would be used as "holding" forces in the event of an invasion, and in the case of an attack by parachutiests on an aerodrome would be rushed to its defence.

The No. 1 Nucleo Celere identified at BACELONA appears to consist of:

Special R/35 Tank Co.
A/Tk Co.
M.G. Co.
Inf. Co.
Arty. Co.

4. ITALIAN COASTAL DIVISIONS.
(Excerpts from Intelligence Summary No. 3 and 4 dated, 3 June 43 and 7 June 43, respectively)

a. HISTORY

Territorial battalions were founded two years ago. The defenses of the mainland were then supplemented with two main Army units of the Fascist milita. Personnel came from depots and consisted of men with little training and scanty equipment. The anti-parachutist units of 25 to 50 men are off shoots of territorial battalions. There are now some four to five hundred anti-parachutist units.

In 1941, coastal defenses were included in the responsibility of the territorial battalions. In March 42, over four hundred battalions were identified. They were then formed into regiments and divisions. In the beginning regimental and divisional headquarters were purely administrative; later a nucleous staff was capable of handling the battalions. The development of coastal divisions proceeded more rapidly in SICILY than elsewhere. In 1943 there were 450 coastal battalions with better armor as before. Men are mainly armed with rifles and hand grenades and they now have machine gun corps and artillery, and support of medium artillery from the Corps pool.

Lately the following improvements have been made:

Younger classes of recruits, signal personnel, increase in support weapons (47-32 8T guns, heavy machine guns and mortars), strength increased from 400 to 600 men. While in general the divisions are static and have no field artillery, in SICILY mobile groups have recently been created. They form a mobile reserve for certain divisions.

Coastal divisions have been identified also in France, the Balkans, Russia, North Africa and the Agean Island. The constituents were taken from the less vunerable part of ITALY.

b. ORGANIZATION.

The term "coastal" describes the role of a unit and not its organization. There is only an outline which can be made of coastal division organization.

a. Originally, coastal battalions were like armed home defense battalions made up of troops unfit for front line service. Their T/O was elastic.

The now prevailing standard organization in SICILY is estimated to be as follows: -

HQ Platoon consisting of Administrative section, Signals section, Observer section, Scout section, Supply section and men.
Four Companies.

Each company is organized as follows:
HQ, consisting of services personnal and employed men.
Two rifle platoons, each of three sections.
Two Machine-gun Platoons, each of three (? four) sections.

c. WEAPONS.

24 Light Machine-gun and 28 Heavy Machine-gun per battalion. That means one light machine-gun per rifle section. Four extra machine-guns are supplied in Headquarters. The strength of the battalion is probably about 600. The T/O strength is in the neighborhood of 800. The figure of 600 reported from Sicily represents the effective strength. There were recent steps to bring the SICILIAN coastal battalions up to T/O.

d. Coastal bns seem to be organized in Regiments of two to five bn with anti-tank companies and MG companies.

e. Organization of coastal divisions in SICILY:

Divisional HQ
Two to five coastal regiments
One A/Tk battalion
One or two Machine-gun Battalions
Three of four Coastal Defence batteries
One Mortar Company
Engineers, sub-allotted from field forces
Services

f. In SICILY larger units called "Nuclei Celeri" have been identified. They contain one or more infantry companies, probably motorised, a machine-gun company, an anti-tank company, a company of light tanks and some artillery. It seems that there is one per each coastal division, and that their role is to defend the airdromes.

g. 300 Coastal Bns are in ITALY, SICILY, SARDINIA, CORSICA AND ITALIAN OCCUPIED FRANCE, approximately amounting to 18,000 men if headquarters personnel, supporting arms, services, etc., are included, the figure comes up to 250,000.

h. Morale is described as low. In the last frew months units may have been brought up to strength by reinforcements of younger and more vigorous men. It is also believed that the coastal units are receiving additional weapons in recent months. It is, therefore, presumed that morale is rising and efficiency increasing since last year but these units are still inferior to most other Italian units.

14 June 1943

G-2 GENERAL INFORMATION BULLETIN #14

PHOTO RECONNAISSANCE PLAN ON AND AFTER D DAY
INTERPRETATION OF PHOTOGRAPHS

1. On D Day, a Photo Interpretation Unit composed of five officers and six enlisted men, a photographic laboratory, the 66th Topographic Company, and an Artillery Officer for selecting counter-battery targets, will be located in the vicinity of the airdrome where the flights of photographic reconnaissance aircraft are based (in the vicinity of Tunis).

2. By D Day, each division in the task force will have at its C.P., attached to the G-2 Section, a competent photographic interpreter.

3. It is planned to cover the period D to approximately D+4 with three routine photographic sorties; in general, one at daylight, one during the day, and one in the late afternoon. Special photo missions will be flown in the next flight after receipt.

4. An interpretation report should, under favorable circumstances, reach the headquarters of the unit making the request within six hours of initiating the request.

5. In addition to the foregoing, an Observation Squadron will be available for pin-point observation photography and visual reconnaissance. These flights will be flown upon receipt, subject to priority as determined by XII Air Support Command.

6. Requests for photographic sorties will be handled through channels as follows:

a. JOSS to 3d3 (afloat) to Rear C.P. (ashore) to 3d Photo Group.
b. CENT or DIME to SHARK to 3d3 (afloat) to Rear C.P. (ashore) to 3d Photo Group.
c. There is no objection on the part of G-2, 3d3, for direct communication from JOSS, SHARK, CENT or DIME to Rear C.P. (ashore) direct, if it is technically possible to do so.
d. Copies of prints will be forwarded by water, if possible, after the radio report has been dispatched.

7. The foregoing is the plan for D to D+4. From D+4 to D+8, some photo aircraft will be landed at C.P., 3d3. Some interpreters will be brought over for duty at 3d3; one piece of equipment, capable of two prints only, will be available at C.P., 3d3. Two-way courier service, twice daily, will be instituted, and quantity reproduction of selected prints or sorties will be established at that time. Reproduction is definitely limited. All available stocks in the British Isles are now being diverted to this effort. It has been indicated that the United States is supplying the Pacific and other Allies, and none is available from the United States. If 20 copies of any sortie are required, 6000 prints are necessary. The capacity of the land-based multi-printer is 600 prints per hour.

8. All unit interpreters must be kept informed in reference to particular targets to look for in advance of the attack and must be kept informed as to location of friendly front line units to avoid delays occasioned by generalities.

9. It is understood that requested missions will be only tactical and that should strategic missions be required for any reason, these missions will clear through 14d. No air boundaries are contemplated.

16 June 1943

G-2 GENERAL INFORMATION BULLETIN NO. 16.

I. ITALIAN COAST WATCHING PROCEDURE.

The following captured Italian documents deals with coast watching in LIBYA but is of interest as furnishing a possible indication of Italian practice:

VI (AOSTA) Group of MG Squadron (I Squadron)

Subject: Guard Posts.

THIS PAGE IS UNCLASSIFIED

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

1. Total number of guards watching the coast is 36, six for each post.

2. Location of posts: No. 1 - Homs road 22 km; No. 2 - Homs road 25 km; (Tower of OSTUNI); No. 3 - Homs road 29 km; No. 4 - Homs road 32 km; No. 5 - Homs road 38 km; No. 6 - Homs road 41 km.

3. Distance between sentries and guard posts: No. 1 - about 80 metres; No. 2 - sentries are in the post itself; No. 3 - about 7 metres; No. 4 - about 10 metres; No. 5 - about 20 metres; No. 6 - about 30 metres.

4. Communications - Runner: One Verey pistol for signalling at each post.

5. Arms available at each post: Machine gun and three rifles. Machine gun is in position near sentry.

6. Ammunition consists of 1100 rounds for each MG and six clips for each rifle. MG ammunition belts are kept in the proper boxes which are kept near the MG. Emergency equipment is in covers, and clips for rifles in pouches.

7. Instructions have been given to post commanders to keep in close touch with the sentries, and explain to them their responsibility for the security of the post and in particular, to train their men in the better handling of the weapons on issue to them.

8. Orders have been given to guards that no fires of any description will be lighted except in exceptional circumstances for signalling at night; that in the event of fires breaking out they will be extinguished with sand, water or any other means available.

9. Any orders that may be received from Group Headquarters are at once passed on and explained to post commanders and sentries.

10. Tasks - Inspect the stretch of coast from the 21 km to 42 km mark and all approaches from the sea in the area. Report immediately any possible landing in the area, and in the meantime engage the enemy. Landing will be signalled from the post which gives the alarm by two red rockets - danger signal - two green rockets will be sent up for danger past. Signals will be repeated at intervals until the O.P. in the tower of OSTUNI acknowledges them by sending up the same signals. In the event of the Verey pistols not working, fires will be lighted. From every O.P. periodical inspections will be made in the immediate neighborhood of the coastal area. Sentries will challenge anyone who approaches. The Post Commander will be summoned and will proceed to check identity by demanding the pass-word.

Further, should any post sight possible enemy aircraft, squadron headquarters will be notified by quickest possible means (including emergency equipment). Squadron headquarters will at once pass the information to Group Headquarters in accordance with the latter's instructions.

II. ITALIANS IN THE ATTACK.

The following captured document illustrates a frequent Italian weakness failure to organize a defensive position after a successful advance.

TO ALL OFFICERS

It often happens that an attacking unit, if it attains the objective without having to fight, or barely having to fight, not only passes beyond the objective, but sometimes stops at the objective, considering its action completed. Not only does this break the rules of discipline, but neglects the most elementary precautions of defense and safety, seeing that the men put themselves in full view and break ranks to gape around, and spread out. The consequences that may derive from such inconceivable conduct are evident and comprehensible. It occurs at the very most critical and difficult phase of the action, when enemy reaction is to be expected more or less immediately, either in the form of gun fire or counter-attack.

The regulations in such a case are clear and explicit, and therefore I do not deem it necessary to quote their contents since they constitute the basis of technical professional training, I wish, however, to make quite clear certain tactical exigencies which should be kept in mind and practiced.

(1) During the execution of the attack:
- (a) Cover your exposed flank with the MG platoon.
- (b) Keep flanking units in view and coordinate your fire with theirs.
- (c) See that units don't get mixed up.
- (d) Overcome the tendency to close up.

(2) During rest periods:
- (a) Keep the unit under control.
- (b) Dispose units in the best positions for observation and fire.

(3) When the objective is obtained:
- (a) Proceed immediately and speedily beyond the objective and organize a defensive position (use your sappers).
- (b) Maintain the greatest cohesion, keeping under cover from fire and view.
- (c) Get your weapons into position.
- (d) Re-form the reserves.
- (e) Watch the flanks.

The above reveals implicitly the vital task of the section in infantry fighting, and therefore the application of the above is the specific job of the N.C.O.

Company and platoon commanders will insist, will insist; will insist (sic) in the above, not forgetting, of course, that the training of the individual soldier facilitates the carrying out of these elementary rules, which, if they do nothing else, avoid useless sacrifices.

17 June 1943.

G-2 GENERAL INFORMATION BULLETIN #17

I THE MESSINA FERRY

Compiled from Force 141 Intelligence Summaries Nos. 2, 3 and 4 (30 May - 7 June 1943)

The MESSINA straits are the Sicilian life line across which the bulk of reinforcements of men and material will flow, supplemented by shipping to the Eastern ports of CATANIA, SYRACUSE and AUGUSTA. Traffic to PALERMO and TRAPANI will not be great unless the ports enjoy a long spell of immunity from attack.

Photo reconnaissance reveals that of the five train ferries available on 29 May, only one appeared to be serviceable. One was sunk at one of the MESSINA piers, a second was burnt out and still alongside at MESSINA, two more were under repair at TARANTO, while the fifth is apparently still active, and on 1 June was seen in transit between SAN GIOVANNI and MESSINA.

The breakdown of the ferry service is apparently being felt and causing some rail congestion at both sides of the Straits, as the following number of mixed rolling stock (excluding passenger cars) were seen on 29 May:-

MESSINA	440
GIOVANNI	350
REGGIO	357
	1147

Railway activity at MESSINA was apparently stopped for several days (29 - 30 - 31 May) as a result of air raids, while on 29 May a main coast line railway bridge at REGGIO was seen to have been destroyed.

Photo reconnaissance shows that as a result of air attacks on 21 and 24 May on SAN GIOVANNI, both rail ferry termini at this port were put out of action. A building which believed to contain the mechanism for the ferry termini was completely destroyed.

However, damage to train ferries and ports can be at least partially made up by the use of lighters, which can ply from beach to beach across the Strait. Photo reconnaissance on 1 June showed 8 Siebel Ferries to have arrived at MESSINA while on 3 June 12 Siebels and 5 F-boats were observed along the coast between REGGIO and SAN GIOVANNI. The small amount of shipping seen in the Sicilian ports in recent weeks serves to support the view that the main supply is still across the Straits.

II. ITALIAN COASTAL DEFENSE (Extracted from instructions from C.D. units, from Force 141 Intelligence Summary No. 4)

Sentries are authorized to give the signal of alert only in cases of extreme danger. In other cases the signal of alert will be given by the Commander of the Post. Should the sentry sight a formation of enemy ships approaching the coast, he must immediately call the Sergeant of the guard, who, after having ascertained the actual danger, will immediately give the alert, with green and red rockets. This signal is to be repeated every three minutes. The platoon leader is to be immediately informed and will send the information immediately to the Company Commander by every available means of communication.

When the sentry sees the alert signal fired by other shore patrol posts, he is to inform the Post Commander. The Commander after having ascertained that the alarm signal has been repeated, will answer by firing one green and one red rocket.

18 June 1943

G-2 GENERAL INTELLIGENCE BULLETIN NO. 18.

The following excerpts from Air Intelligence Estimate prepared by A-2 of XII Air Support Command 14 June, are reproduced as additional information, covering Part 2, (a) Enemy Air Situation of G-2 Estimate No. 3, Force 343, dated 9 June.

1. Location Different Types of Enemy Planes.

a. To estimate the effective combat strength of the German and Italian Air Forces on D day of the forthcoming operation, it is not sufficient to state merely how many planes of what type are likely to be located on the airfields of Sicily, Southern Italy, and Sardinia, respectively. A certain number of single-engine fighters, for instance, must be held in Southern Italy at the airdromes around Naples and other important cities for defense of those cities along, where they will be well beyond their normal range for attack on our landing forces. Other fighter planes similarly must be held out of range in Sardinia for the same reason, and can not be brought over to Sicily.

b. Long Range JU 88 Bombers, torpedo bombers, and long range ME 110 and 210 fighters, on the other hand, will be more effective against our forces if they are based out of Sicily on the many large and well dispersed airfields around Naples, Rome, Foggia, Taranto, etc., where they will be less subject to attack and destruction on the ground by our bombing and intruder planes. These bomber bases, combined with those in Southern Sardinia, are strategically well located from an Axis point of view as they all lie within an arc of 280 to 350 miles from the Biscari-Comiso area in Sicily, which is excellent bombing range. Therefore, the number of JU 88's or long range two engine fighters now located in Sicily itself, is of no importance.

c. The single-engine Axis fighters in Sicily, and at Reggio on the toe of Italy, on the other hand, will be an effective striking force within their normal range of the southern beaches, whereas those that must be held in Sardinia, or around Naples, and other parts of Central Italy out of striking range should not be considered as directly affecting operations of XII ASC and Force 343. However, in view of the mobility of fighter squadrons, it is of little importance on what particular Sicilian field such planes are now, or are likely to be, located on D day. Also the airfield at Reggio on the toe of Italy is within 110 miles of the beaches, and should be considered as a part of Sicily from an air point of view.

2. Estimated Changes Now to D Day.

a. It is impossible to estimate accurately how many Axis planes will be destroyed on the gound and in the air by our bombers and fighters between now and D day, but every effort will be made to atempt their fighters to come up and engage in combat.

b. It is impossible also to estimate accurately the general conditions that will exist on the German-Russian front by D day, which will determine how many planes the Axis can bring down from the theatre to the Mediterranean. Every effort will be made, however, to hold many German fighters in France and Germany by means of a steadily increasing concentration of American and British bombing attacks from our bases in England.

c. It is well established, however, that the German Air Force has had a very hard winter, particularly in the Western Desert and in Tunisia, that her overall air strength has been declining, and that she has been scraping the bottom of the barrel of her reserves, with particular difficulty in providing enough trained crews for replacement. It is doubtful, therefore, that she can bring in many air reinforcements from her Western Front, and it is also known that her air strength in such areas as the Balkans has already been reduced to a bare minimum. In that area of Greece, Crete, and the Dodecanese Islands, for instance, latest reports show a total of only 160 aircraft of all types with a serviceability ratio of under 50%. Adequate servicing has been a growing difficulty in all theatres.

d. To be conservative, it is best to estimate that more Axis aircraft will be brought in from the Russian and other fronts, than will be destroyed by our air forces between now and D day. Germany also will try to spring some surprises. For instance, she may have upwards of 50 torpedo bombers with trained crews operating in the past out of Norway against Russian-bound convoys, which she might decide to bring down to Grossetto, Italy, or Sardinian bases for operation against an invasion fleet. Obviously, the Axis is well aware of the great concentration of shipping and invasion barges in North African ports.

3. Reconciliation of "Estimates" with Latest Photo Cover.

a. The following table of D day "Estimates" will show some discrepancies from the reports of the present location of Axis aircraft based on the latest photo cover. Axis fighter strength on the island has been building up from approximately 370 on May 13th, to 450 on May 21st, and 483 on May 31st, plus 27 in Reggio, or a total of 510. Further

C-24

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

build-up before D day to 555 fighters and fighter-bombers would seem to be a fair estimate. Incidentally, distribution on the latest photographic interpretations showed 115 fighters on the three southern Sicilian fields, 179 in the Catania-Gerbini area in the East, and 239 on the Western Sicilian airfields, plus 27 on the toe of Italy at Reggio. All such fighter distribution however, can change over night.

b. Photo reports how that JU 88's have been moving out of Sicily, reducing the total to 73, which is entirely logical in order to place their bomber strength at the effective range and better protection afforded by Southern Sardinia, and the Rome-Naples-Foggia-Taranto area. The reports also show only 21 long range ME 110 and 210 fighter and fighter-bombers still in Sicily. It is estimated below that there will be about 100 of these planes within effective range (280-360 miles) of our landings by D day.

c. Photo reports show 80 miscellaneous and 42 unidentified planes in Sicily, which is not inconsistent with the following estimate of 300 less-important and non-combat types within the whole effective area. Most of the reconnaissance, coastal seaplanes, and miscellaneous types would normally operate back away from the zones of threatened invasion.

4. Estimate of Enemy Air Strength on D Day. (The following table includes only those planes expected to be within their effective operating range of our landing forces. It is arranged by types in the order of estimated importance):

		ESTIMATED QUANTITY	
		Total	Serviceable
a.	Long Range German JU 88 Bombers	* 290	190
b.	Single Engine German ME 109 fighters	200	130
c.	Single Engine Italian fighters (Macchi 200, 202, 205, and RE 2001)	300	130
d.	German two engine ME 110 and 210 fighters	100	66
e.	Single Engine German FW 190 fighter-bombers	55	36
f.	Italian S.M. 79, and S.M. 84 torpedo-bombers	50	22
g.	German JU 88 and HE 111 bomber-recce	35	22
h.	Italian bomber-recce S.M. 79, S.M. 84 CZ. 1007	80	36
i.	Italian coastal Cs 501 and Cs 506	80	36
j.	German JU 87 dive bombers	20	14
k.	German ME 109 Army Co-op	10	6
l.	Italian Army Co-op Cs 311, 312, and 313	25	12
	TOTALS	1245	700

. * Includes perhaps 30-50 torpedo-bombers

5. Reduction of Italian Planes to German Equivalents.

a. The above totals do not show a true picture, as they add German planes and Italian planes together, whereas it may safely be stated that all German types are superior to their counterpart in the Italian Air Force, and that many of the Italian types are obsolescent. Opinions will vary as to relative effectiveness, but for the purpose of this "estimate", an overall ration of 50% might not be far off; at least, it would be much closer to the facts than any figures which gave equal weight to Italian and German planes alike. This would reduce the above overall total of 1,245 planes to 977, of which 582 might be considered serviceable at any one time.

b. Even these totals, however, should be further broken down to separate the effective combat types from the non-combat and miscellaneous, as follows:

	TOTAL	SERVICEABLE
(1) Bombers, fighters, and fighter-bombers	800	490
(2) Recce, coastal, and miscellaneous	177	92

19 June 1943

G-2 GENERAL INFORMATION BULLETIN #21

COUNTERINTELLIGENCE CORPS PLAN, OPERATION HUSKY

1. PLAN.

a. Division CIC sections will land with assault troops on D-Day and accomplish CI missions assigned by the C.O.'s of their respective divisions, based on a directive from this headquarters and supplemented by specific missions assigned by this headquarters.

b. Corps CIC sections will be coordinated with Division sections at the discretion and direction of the C.O. of the Corps and will relieve Division sections of static responsibility, thus freeing them for movement with their divisions.

c. Port Sections "A" and "B", Force 343, will land on D-Day with assault troops of LION at FIBULA and with assault troops of TIGER at FEDERAL.

These Port Sections will:

(1) Assume responsibility for Port Security. NOTE: This will include close cooperation with the 1st Engineer Special Brigade and will cover security of "over the beach" supply which is their responsibility.
(2) Relieve LION, TIGER or SHARK sections of Port Security responsibility.
(3) Make and maintain close liaison with ONI or Navy personnel present, and AMGOT representatives.

d. Field Section, Force 343, will land on D-Day at FIBULA, reinforce the Port Section if necessary, assume responsibility for C.I. coverage in FIBULA, and support movement to west or north as required.

e. Port Security Special Detail (3 men) will land on D-Day at discretion and direction of C.O. and will assist in Port Security missions at LADBROKE.

f. Port Security sections will be maintained on an extremely flexible basis in order to cover all ports which may be taken subsequent to D-Day. These sections remain under the direct supervision of Force 343.

2. OPERATION

a. Information, papers, charges, etc., secured by CIC sections, will reach Headquarters Force 343 through regular G-2 channels. Information of tactical or strategic importance will clear through the unit G-2 and will be dispatched to Headquarters Force 343.

b. The Port sections landing at FIBULA and FEDERAL will assume responsibility for Port Security at the earliest possible moment. Subsequent to organization of the port for security, each section will be organized into two separate sections. One of these will be alerted for immediate movement (if required) at any time after D plus 3.

c. On D plus (dependent on progress), when attack on JARROCKS is imminent, one-half of Port Section "A", at FIBULA, will move west and assume responsibility for Port Security upon occupation of JARROCKS. This will relieve CI Section, LION, for movement. Additional personnel from Field Section - Force 343, will move west and support LION section in attack on FLOODLE, which should develop at about the same time. Personnel from Port Section "B", at FEDERAL, will move to FIBULA as replacement. NOTE: This is based on assumption that FIBULA develops into more important supply road than FEDERAL. If over the beach supply becomes of paramount importance, the two port sections will coordinate their efforts in collaboration with the security requirements of 1st Engineer Special Brigade, which is responsible for supply and which will form the foundation for the Base Section which will follow.

d. The same Port Section procedure, of placing additional personnel in support of attacks on ports, will be followed on D plus (dependent on progress) when attack develops (west of JARROCKS) on INVINCIBLE. This same procedure will be followed at a much later D plus date, when attacks develop on north coast at NORMFIED on ports in front of DIME and CENT forces.

3. GENERAL.

a Countersigns and Paroles.

A countersign and parole, with alternate, will be issued by this headquarters for use from 1800B, D-1, to 1800, D+1. Thereafter, the use of countersigns and paroles will be as directed by sub-task commanders.

20 June 1943

G-2 GENERAL INFORMATION BULLETIN #22

OBSERVATION AND PHOTOGRAPHIC RECONNAISSANCE MISSIONS

I. GENERAL.

The two organizations that will be available for aerial reconnaissance are, first, the 3d North African Photographic Reconnaissance Wing, which uses planes similar to our P-38s, and the other, for visual observation, is the 111th Observation Squadron, using type T-51 planes. As described below, the communication and command channels are different.

II. 111th OBSERVATION SQUADRON.

1. Administrative Details.

a. Nine missions, composed of 18 sorties per day, will be available.

b. Planes will be based on Cape Bon. This will also be the location of the Rear CP of the XII Air Support Command. The 111th Observation Squadron will be under the direct command of the XII A.S.C. and all missions will be flown on their order. Sometime after D+2, and possibly before D+5, the squadron will be based on HORNFIED.

c. One mission (two sorties) reserved for JOSS, two missions (four sorties) reserved for SHARK, daily until noon, unless advised otherwise by this Headquarters if and when available.

2. Requests for Missions.

a. The normal procedure will be for units to place their requests with their Air Support Party, which will, in turn, radio XII A.S.C. at CP of Task Force 343. The priorities of missions will be determined by representatives of G-2, G-3, Force 343, and XII A.S.C.

b. Urgent missions may be flown on three hours' notice.

3. Procedure of Obtaining results.

a. Direct radio to CP 343, giving sketchy reply from plane while in the air.

b. Radio from landing field on Cape Bon to CP, 343, after initial interrogation of the pilot.

c. Radio from the landing field to CP, 343, after interrogation and initial interpretation of the photograph, if taken, by photo interpreters at the landing field.

d. Photographs, if taken, will also be flown to Photo Interpretation Section, Hq. 343, located at La Marsa, where they will be interpreted, and a further final report, if anything new is discovered, will proceed through normal channels from the Rear CP, 343, to Forward CP, 343.

4. Pre-Planned Missions.

a. See overlay for missions requested by Hq. 343 to XII A.S.C. at Corps and Division Headquarters.

b. See memorandum, this Hq., dated 19 June 1943, on air observation to Commanding General, XII Air Support Comd, showing the actual missions requested.

c. All units, in asking their requests, will make certain that the mission they require is not included amongst the daily missions shown in letter, this Hq., 19 June 1943.

d. Night observation missions as shown in letter 19 June referred to above.

THIS PAGE IS UNCLASSIFIED

III. PHOTOGRAPHIC RECONNAISSANCE MISSIONS.

1. Administrative Procedure.

The North African Photographic Reconnaissance Wing will fly four missions per day from La Marsa airfield. Hq. Task Force 343 Photographic Interpretation Unit and the Photo Laboratory will be established at this field. Photographs will be developed, interpreted, and the information radioed to the Forward CP as fast as received. It is estimated that an average of six hours will be required for the whole process.

2. Pre-Planned Missions.

a. See overlay dated 20 June for routine missions at CPs of Corps and Divisions.

b. See Annex to G-2 Bulletin #22, this Hq., 17 June 1943, listing sorties that will be flown automatically.

IV. NIGHT PHOTOGRAPHIC MISSIONS.

Any shift of troops disclosed in the late afternoon photographic missions will be followed by night photography.

V. MAPS

1. The map to be used for identifying targets throughout the task force will be the 1/100,000 map of HORRIFIED. Missions requested will be further identified by the use of the British Grid system.

17 June 1943

ANNEX TO G-2 BULLETIN #22.

VI. PHOTOGRAPHIC RECONNAISSANCE UNIT - ROUTINE MISSIONS.

a. D Day.
(1) Flown after 1400B. Three sorties commencing at 5000 yards inland from AGRIGENTO - ARAGONA to general line POZZALLO - RAGUSA - VIZZINI, all exclusive.

b. D/1.
(1) Flown in morning. Three sorties commencing at 5000 yards inland from AGRIGENTO - ARAGONA to general line POZZALLO - RAGUSA - VIZZINI, all exclusive.
(2) The fourth sortie D/1 to be flown after 1400B, parallel to coast to overlap inland morning sortie further north.

c. D/2. Early Mission.
(1) Two parallel; northern one to embrace and include highway VIZZINI - CALTAGIRONE - PIAZZA ARMERINA - CALTANISSETTA - AGRIGENTO - PORTO EMPEDOCLE.
(2) The third sortie from LICATA on the coastal road to CASTELVETRANO.

d. D/3.
(1) Same as first flight, D/2, along general route VIZZINI - CALTANISSETTA - AGRIGENTO.
(2) Main highway CALTANISSETTA, road junction LERCARAFREDDI, then south on secondary road to AGRIGENTO.
(3) Main highway AGRIGENTO - PALERMO.

e. D/4.
(1) one sortie CALTANISSETTA - ENNA - LEONFORTE - SPERLINGA - PEFALAIA toward TERMINI IMMERSE.
(2) Three sorties each originating at AGRIGENTO:
(i) North through LERCARAFREDDI, thence east on main highway toward CALTANISSETTA.
(ii) CALTANISSETTA - AGRIGENTO thence northwest on main road toward PALERMO.
(iii) AGRIGENTO toward CASTELVETRANO.

f. D/5 -

Same as e above (D/4).

19 June 1943

SUBJECT : Request for Observation Missions.

TO : Commanding General, XII Air Support Command.

1. Daily observation missions to locate troop movements are requested.

a. Observations on D-day are listed in order of priority below. On D/1 and each day thereafter eliminate the first two missions below and perform the balance in the same priority. See overlay. Night missions nightly beginning night of D/1, D/2, are shown on the same overlay.

(1) Request visual reconnaissance of beach from LICATA to POZZALLO supplemented by low oblique photo strip if feasable. Required: landing progress and approximate depth of penetration of our troops between points designated. Report mission not later than 1000B. This mission to be flown D-day only.

(2) Repeat No. 1 mission at 1100B. Report required not later than 1300B, D-day.

(3) Request visual reconnaissance - road CANICATTI - CAMPOBELLO - LICATA as to any enemy concentrations or troop movements south, giving size and type (foot, motorized, armored, etc). Take oblique photo strip of all enemy observed. Report by 1100B. Photos to have first priority.

(The above reconnaissance will be applicalbe to the following missions as to information and time of reporting.)

(4) Request visual reconnaissance of the PIAZZA ARMERINA - GELA road movement South.

(5) Request visual reconnaissance of the RAGUSA - COMISO - VITTORIA road, as far west as the ACATE river. Report any movement West.

(6) Request visual reconnaissance of the AGRIGENTO - PALMA DI MONTECHIARO - LICATA road. Report any movement Southeast.

(7) Request visual reconnaissance of the S. MICHELE - CALTAGIRONE - GRAMMICHELE - VIZZINI road. Report any movement East or West.

(8) Request visual reconnaissance of the CANICATTI - SERRADIFALCO - S. CATALDO - CALTANISSETTA - PIAZZA ARMERINA road, East or West.

(9) Request visual reconnaissance of the SCIACCA - RIBERA - PORTO EMPEDOCLE road, southeast.

(10) Request visual reconnaissance of the main road running Northwest from AGRIGENTO through RAFFADALI - S. STEFANO. Report any movement to the South.

19 June 1943

SUBJECT : Request for Observation Missions.

TO : Commanding General, XII Air Support Command.

1. Daily observation missions to locate troop movements are requested.

a. Observations on D-day are listed in order of priority below. On D/1 and each day thereafter eliminate the first two missions below and perform the balance in the same priority. See overlay. Night missions nightly beginning night of D/1, D/2, are shown on the same overlay.

(1) Request visual reconnaissance of beach from LICATA to POZZALLO supplemented by low oblique photo strip if feasable. Required: landing progress and approximate depth of penetration of our troops between points designated. Report mission not later than 1000B. This mission to be flown D-day only.

(2) Repeat No. 1 mission at 1100B. Report required not later than 1300B, D-day.

(3) Request visual reconnaissance - road CANICATTI - CAMPOBELLO - LICATA as to any enemy concentrations or troop movements south, giving size and type (foot, motorized, armored, etc). Take oblique photo strip of all enemy observed. Report by 1100B. Photos to have first priority.

(The above reconnaissance will be applicable to the following missions as to information and time of reporting.)

(4) Request visual reconnaissance of the PIAZZA ARMERINA - GELA road movement South.

(5) Request visual reconnaissance of the RAGUSA - COMISO - VITTORIA road, as far west as the ACATE river. Report any movement West.

(6) Request visual reconnaissance of the AGRIGENTO - PALMA DI MONTECHIARO * LICATA road. Report any movement Southeast.

(7) Request visual reconnaissance of the S. MICHELE - CALTAGIRONE - GRAMMICHELE - VIZZINI road. Report any movement East or West.

(8) Request visual reconnaissance of the CANICATTI - SERRADIFALCO - S. CATALDO - CALTANISSETTA - PIAZZA ARMERINA road, East or West.

(9) Request visual reconnaissance of the SCIACCA - RIBERA - PORTO EMPEDOCLE road, southeast.

(10) Request visual reconnaissance of the main road running Northwest from AGRIGENTO through RAFFADALI - S. STEFANO. Report any movement to the South.

b. Night Observation.

(1) D Day: (night of)

(a) Road junction at H-330450
(b) Road junction at H-276376
(c) Road junction at G-940345
(d) Road junction at H-538175
(e) Road at western edge of VITTORIA - H-465182.

(2) D/1, D/2, D/3, D/4: (nightly)

(a) Road junction at eastern edge of PALMA DI MONTECHIARO - G-795438.
(b) Road junction at CAMPOBELLO - G-925508.
(c) Road Junction at CANICATTI - G-865623.
(d) Road junction at CALTANISSETTA - H-050770.
(e) Road junction at H-328645.
(f) Road junction at H-330450.
(g) Road junction at H-465485 - CALTAGIRONE.
(h) Road junction at H-670410 - VIZZINI.
(i) Road junction at H-625265 - CHIARAMONTE.

By command of Lieutenant General PATTON:

/s/ W. G. CALDWELL,
Lt. Col., A.G.D.
Adjutant General.

20 June 1943

G-2 GENERAL INFORMATION BULLETIN #23
(Supersedes G-2 General Information Bulletin #4 and supplements 1, 2 & 3.)

Extracted from COMNAVNAW - Operation Plan No. 2-43, Annex A.

FINAL BEACH EVALUATION

1. BEACH 73 - PUNTA DI GAFFI.

Coordinates : G 85453790 - G 872360
Length : 2800 yds
Width : 5 - 20 yds

Sea approach clear. The beach lies in the shallow cove between PUNTI DI GAFFI and ROCCA SAN NICOLA; 2 miles southeastward about 200 yds east of PUNTA DI GAFFI, is a prominent tower 60' high close to the edge of a 60' cliff. ROCCA SAN NICOLA is 100' high. These points should serve as leading marks for close approach. The 3-fathom contour is 600 yds off PUNTA DI GAFFI and about 750 yds off the beach. The inshore gradient is estimated to be about 1:100.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

The narrow beach, of mixed sand and shingle, is backed by a cliff 30 - 60 ft high. Near the northwest end of the beach there is a break in the cliff at a stream mouth and near the southeast end a depression extends to the beach. About halfway between these two breaks in the cliff is SORGENTE DEL PISCIOTTO, believed to be a spring from which an aqueduct runs to LICATA. At this place there is a conspicuous building at the top of the cliff (60 ft high) and halfway down the cliff, another building. Also visible from seaward are the mouths of tunnels in the cliff in the vicinity apparently serving as caches for wells, but which could also serve as machine gun positions. Concrete blocks have been placed along the beach in the vicinity as a protection against coast erosion. Behind the entire beach, the immediate hinterland is cultivated with vineyards.

EXITS: Between the stream mouth and TORRE DI GAFFI, three foot paths wind up the cliff and lead a short distance to unpaved roads. Infantry could undoubtly work their way up the stream bed. From the break in the cliff at the southeast end of the beach, a path or undeveloped road leads inland over a highly cultivated area. With some development, this offers some possibilities for exit of vehicles. For tanks, vehicles or maintenance, this beach is considered to be very poor.

2. BEACH 72 - STA. MOLLARELLA (2)

Coordinates : G 88923420 - G 89073390.
Length : 400 yds. (entrance 350 yds. wide)
Width : 20 yds.

The distant sea approach is clear but both ends of beach are flanked by rocks. ROCCA MOLLARELLA (MUDDAFEDDA), 82' high, and connected to mainland by low sandy isthmus should be prominent land mark on approach from westward. The shore from the northern end of the beach to ROCCA SAN NICOLA (about 1 mi) is rockbound except for one small sandy cove about halfway. Estimated gradient about 1;50.

EXITS: Off the northern end of the beach, the land rises steeply to a small plateau with elevation 273' at MT. POLISCIA. Skirting this feature, on the southern side, a minor track runs from near the center of the beach over partial cultivation and consolidated sand dunes to join the old stream bed from Beach 71 and other tracks leading to the MONTECHIARO - LICATA highway about 3000 yds inland.

3. BEACH 71 - STA. MOLLARELLA (1)

Coordinates : G892338 - G 896338.
Length : 450 yds (but approach only 200 yds wide)
Width : 40 yds.

Sea approach clear but unless ROCCA MOLLARELLA (MUDDAFEDDA) can be clearly identified, near approach is hazardous because of rocky shores and underwater rocks flanking both sides of the entrance. The cove is well sheltered for daytime use.

Depths inside the cove are probably about 10 ft. with average gradient to the beach about 1:65.

The beach is of soft sand and the old stream bed which empties into the cove at the Eastern end is also soft sand which would be difficult for vehicles. The stream bed is dry in summer.

EXITS: At the extreme eastern end of the cove there is a fairly steep track which joins the undeveloped road leading over ground rising to 350 ft. and over-looking LICATA from westward. The dry stream bed is crossed by other tracks a short distance inland. The main MONTECHIARO - LICATA road is about 3000 yds inland.

4. BEACH 70-B - FALCONARA (2)

Coordinates : G 982346 - H 00403475.
Length : 2800 yds
Width : 20 - 60 yds.

Seaward approach is clear. The 3-fathom contour is about 1200 yds. offshore. There is an irregular cusped bar about 300 ft. offshore with irregular depths over it. Near the western end of the beach the gradient out to a point 650 ft is estimated as about 1:60.

The beach is of soft sand drifted into low sand dunes. It is backed by low land which increases slightly in height toward the eastern end, and by cultivation (mostly vineyards); many small paths lead across the cultivation to the main road. Three small stream beds (probably dry) open onto the beach, the largest near the eastern end. Just to eastward of the eastern end of the beach there is a steeply rising hill 115 ft high.

EXITS: By paths across beach and cultivation to Road No. 115 which is the main road between GELA and LICATA. The road roughly parallels the beach, being inland 350 yds at the western end and about 175 yds at the eastern end.

The standard gauge LICATA - GELA railroad is just inland of the highway at the ends of the beach but curves inland to pass back of slight hill backing the left-center of the beach.

5. BEACH 70-A - FALCONARA (1).

Coordinates : H 013347 - H 027345.
Length : 1600 yds
Width : 30 - 50 yds.

The 5-fathom curve is about 1500 yds offshore. Seaward approach is clear. There are charted rocks close in shore between this beach and No. 70B. The rocky patch is near the mouth of the gorge which is marked by the steeply rising hill about 115' high on its western coastal bank. About 500 yds eastward of this beach is PUNTA DEI DUE ROCCHI which consists of 2 conspicuous above-water rocks connected by sandy spit to mainland. Submerged reefs and underwater rocks with less than 10 ft cover extend about 500 yds in the area marked by PUNTA DEI DUE ROCCHI.

The bar or "false beach" is not very evident in front of this beach and gradients out to first recorded soundings run from 1;65 to 1;100.

The beach is of fairly firm sand, becoming stony toward the eastern end. A large stream in a fairly deep gorge enters onto the beach a little to east of its center. Westward from this point the beach is backed by a low steep bank and to the eastward by low sand dunes.

EXITS: Over barren land dotted with isolated small trees to main GELA - LICATA road about 250 yds inland at western end of beach to 550 yds where the road loops inland to cross the gorge and back to about 450 yds at the eastern end of the beach which is marked by a small stream bed, probably dry. The railroad is just inland of the highway and roughly parallels it. Along the stretch it is built on an embankment which is probably visible to ships close inshore.

6. BEACH 69-B - COMUNELLE.

Coordinates : H09453434 - H 10363401.
Length : 1050 yds
Width : 20 yds.

Seaward approach clear. Five-fathom curve about 1 mile offshore; 3-fathom curve about 1200 yds. There is a bar off the entire beach which is probably near the surface since waves break on it in a light wind. There are soundings of 3 ft just outside the bar at the eastern end of the beach. The bar is 150-200 yds offshore. The gradient inside the bar to the beach is estimated to be 1:80, but unless gaps are found in the bar LST's would probably ground some distance outside the bar. TORRENTO ROZZUTO, probably dry in summer, has its mouth about the center of the beach, while TORRENTE COMUNELLE, a much larger stream, which probably does not go dry, empties just to eastward of the beach. There are no distinctive landmarks of probable aid in finding the beach at night.

EXITS: The beach is sandy backed by sand dunes up to 30 ft high and partly covered with scrub. Inland of this strip of dunes, which extends 200-300 yds, is a zone of cultivated partly consolidated sand in which tracks commence leading inland to the LICATA - GELA highway about 1 2/3 miles inland.

7. BEACH 69-A - ARENA.

Coordinates : H 13703327 - H 15483251.
Length : 2100 yds
Width : 15 - 50 yds.

Seaward approach clear. Five-fathom curve about 1 mile offshore; 3-fathom curve about 800 yds at western and 450 yds at eastern end of beach. Estimated gradient about 1:100. About 500 yds east of the beach, below MT. LUNGO cliff, there are rock patches or reefs at about surface level and extending about 250 yds offshore. PIZZO DEL ARENA, a sharp pointed hill 100 ft high, is located close behind and a little to east of the center of the beach. This is the most prominent land-mark, although just to eastward of the beach is MT. LUNGO plateau, 220 ft. high.

The beach is of fine sand with sand dunes 10-15 ft high, merging into partly cultivated sandy ridges and dunes inland of the beach. A stream bed, probably dry, empties near the western end of the beach.

EXITS: No tracks or roads lead to the beach. Exits must be over the dunes partly consolidated sandy soil around either side of PIZZO DEL ARENA to the LICATA - GELA highway about 700 - 800 yds inland.

8. BEACH 69 - GELA (2)

Coordinates : H 184313 - H 192308.
Length : 1000 yds.
Width : 5 - 10 yds.

Seaward approach clear except for submerged rocks or reef patch flanking each end of the beach. On a course from southwest the beach will be the center of the low shoreline between MT. LUNGO, 220 ft high, and GELA PLATEAU. No other landmarks for night use are apparent. The 3-fathom contour is 800-900 yds offshore. The estimated inshore gradient is 1:80 to 1:100. The southeastern portion of the beach may have a bar as "false beach" about 200 yds offshore near the center of the beach, decreasing to 100 yds at the end. The beach is of firm sand. Back of the narrow sand strip is an extensive sand dune and reclaimed sandy area.

EXITS: Near the center of the beach a track goes inland to join the LICATA-GELA highway 800 yds inland. Otherwise, the only exits are across cultivated partly consolidated sand dune area.

9. BEACH 68 - GELA

Coordinates : H 21662982 - H 22502944.
Length : 1000 yds (500 yds on either side of pier)
Width : 50 - 60 yds west of pier.
80 - 100 yds east of pier.

Seaward approach is clear. Conspicuous objects are the lighthouse at the head of the pier; the cupola of the Cattedrale (in Piazza Umberto I); the campanile of Chiesa del Carmine (south of the Cattedrale) and a factory chimney in the extreme west of town. In the distance is MONTE FORMAGGIO (2100 ft) located 12½ mi. north of GELA. The pier at the center of the beach extends 980 ft perpendicularly from the water line. In summer time the sand washes up so that depths along the center of the pier are about 6 ft and at the head of the pier about 9 - 10 ft.

Out to 6 ft depth the gradient is about 1:80 to 1:100 with bars more evident to eastward toward the FIUME GELA mouth.

Sand of the beach appears to be firm.

EXITS: GELA is built on a plateau 130-150 ft high. The face of the plateau back of the beach is steep and the only promising exit for vehicles is the steep main road up to the town, which starts near the root of the pier, curves east for 120 yds, west for 120 yds, east for 180 yds, then runs directly into Piazza Umberto I. Several steep paths and tracks go up the cliffs but do not appear fit for vehicles.

10. BEACH 67 - LAGO DI BIVIERE.

Coordinates : H 245280 - H 280249
Length : 5100 yds
Width : 10 - 30 yds

Seaward approach without navigational dangers but straight coastline and lack of landmarks will make any particular portion of the beach difficult to locate. On approach from southwestward toward center of beach, hills about 2 miles inland rise to 433 ft with successively higher hills further inland. The broad valley of the FIUME GELA and FIUME MAROGLIO, though backed by hills inland should give the area immediately back of the northwest end of the beach a lower silhouette. The 5-fathom line is about 1-3/4 mi at the northwest and 1 mi offshore at the southeast end of the beach. The 3-fathom line is 1300 yds off the central portion of the beach and about 800 yds at the ends. There is a bar of "false beach" about 140-150 yds offshore. Off the mouth of FIUME GELA there is only 4 ft over the bar but this depth increases to southeastward and it is believed that from a point 1800 yds below the mouth of the river there is at least 10-11 ft over the bar. The gradient inside the bar is believed to be about 1:75.

The beach is of fine sand mixed with stones and is backed by a sandy area with many dunes, on the northwestern portion partly covered with scrub. The whole area back of the beach is sparsely developed.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

EXITS: The only track leading inland from the beach is at the extreme northwestern end. Considerable road construction will be necessary for exit of vehicles over sand dunes, partially reclaimed land and sparse cultivation. The GELA - VITTORIA highway is about 1200 yeds from the northwest end of the beach close inland of GELA - SYRACUSE railway.

11. BEACH 66-B - SAFAGLIONE.

Coordinates : H 302227 - H 342177.
Length : 6900 yds
Width : 20 - 30 yds.

APPROACHES: There are rocks close offshore off PUNTA ZAFAGLIONE, but elsewhere the seaward approaches to the beach are clear of danger. The 6-fathom contour is 1 to 3/4 mile offshore. There is a bar or "false beach" along this entire stretch of coast. For about 1 mile eastward from the mouth of FIUME ACATE the bar is double though the inner one is so near shore and the water so shallow (probably 1 fathom or under) that it is not likely to be significant except as an irregularity of the bottom . The outer bar which extends the entire length of the beach is 150-200 yds offshore. Waves break on it in rough weather but the depth over it is probably very irregular, being greatest to eastward. The gradient is gentle, averaging 1:80 to 1:115 but where gaps are found in the "false beach" the inshore gradient of the true beach is probably steeper.

This beach is of soft sand. There may be portions with a steeply sloping bank of sand about 2 ft high at the waterline. It is backed throughout its length by snad dunes 40 - 80 ft high in various stages of consolidation in a belt 900-1000 yds wide.

There are no distinctive landmarks and location of any particular portion will be difficult from sea. To the westward the mouth of the FIUME ACATE forms a break in the coastline; a little to left of center a small cluster of houses about 800 yds inland is remarkable; while the eastern portion of the beach is backed, about 1000 yds inland, by a strip of thick scrub.

EXITS: An unpaved road leads inland along the southeast bank of FIUME ACATE. Apart from this, all movement inland is across the dune area to undeveloped cart tracks leading to the main GELA - VITTORIA road about 3 mi inland. Two cart tracks roughly parallel the coast 300 yds and 500 yds inland and a somewhat better track follows the inland edge of the dune area. From this one several tracks branch inland to the main highway but very few tracks cross the dunes perpendicularly to the coast.

12. BEACH 66-A - ANCILLA.

Coordinates : H377118 - H 378511135.
Length : 500 yds
Width : 20 yds

Seaward approach clear but there are rock patches on each flank of the beach. There are no distinctive navigational landmarks. The gradient is estimated about 1:90. There is probably a low bank or ledge backing the beach. The beach is soft sand.

EXITS: Through vineyards to a minor road about 400 yds inland leading to SCOGLITTI.

13. BEACH 66 - SCOGLITTI.

Coordinates : H 38181057 - H 38201049.
Length : 75 yds.
Width : 50 yds.

The beaching facilities here consist of two small coves with rockbound entrances. The more accessible one is considered here. Seaward approach is clear. Ships anchor off the village on sand bottom, good holding ground. The 6-fathom line is charted 1/2 mi offshore and the 10-fathom line about 1 1/4 mi offshore. The village is on a 12' rise directly back of the beach.

Entrance is about 50 yds between underwater rocks. Depths in the cove are probably 8 ft and less. Gradient estimated 1:60. Air photographs show the beach filled with local boats beached there.

EXITS: The beach is fairly steep and abuts directly on to the village from which a good road leads to VITTORIA.

14. BEACH 65-D - CAMERINA.

Coordinates : H 389097 - H 391090.
Length : 700 yds
Width : 50 yds.

Seaward approaches clear of danger. PUNTA DELLA CAMERINA is a rocky danger at the southern end. The 10-fathom line is about 1½ mi offshore and the 5-fathom line about 1/2 mi. The gradient is estimated about 1:80. The beach is of soft sand, backed by extensive sand dunes.

EXITS: Appear to be suitable for infantry only. From the norther end of the beach exit would be a scramble up a 50 ft embankment and then on a lane leading into SCOGLITTI.

15. BEACH 65-C - BRANCO GRANDE.

Coordinates : H 40650495 - H 40850409.
Length : 950 yds.
Width : 10 - 20 yds.

Seaward approach clear except for rock patch separating this beach from 65 B. The 3-fathom line is about 350 yds offshore. The water inshore is shallow and there appears to be a bar, with probably not less than 6 ft over it. The estimated gradient is 1:75. Beach is of soft sand.

EXITS: The entire beach is backed by an extensive area of soft sand dunes partially consolidated along their seaward edge. Exit very poor for vehicles and would require much road construction. Exit for personnel on to the solid headlands of PUNTA BRANCO GRANDE and thence by farm paths to S. CROCE CAMERINA, about 3 mi distant.

16. BEACH 65-B - CONTRA CORRIDORE.

Coordinates : H 40950350 - H 41020315.
Length : 400 yds
Width : 10 - 20 yds.

Seaward approach clear except for rocky patch separating this beach from 65 C. The 3-fathom line is about 350 yds offshore. There appears to be a bar which probably has not less than 6 ft over it. The estimated gradient is 1:85.

The beach is of soft sand backed by an extensive area of soft dunes partially consolidated along the seaward edge.

EXITS: Exits for vehicles would require extensive road construction. Personnel could make their way up the cliffy headland of PUNTA BRACCETTO and thence by farm paths to S. CROCE CAMERINA, about 3 mi. distant.

17. BEACH 65-A - BRACETTO.

Coordinates : H 41200218 - H 41600 208.
Length : 475 yds.
Width : about 10 yds.

Seaward approach clear but there are rocky patches on each flank of the beach. The beach faces south and at the western end is a dry stream bed. Sand is probably soft. Estimated gradient about 1:85. There appears to be a bar 60-120 yds offshore.

EXITS: Over a low bank back of the beach, across 200 yds of cultivated land to a lane which leads to S. CROCE CAMERINA.

18. BEACH 65 - SCALAMERI.

Coordinates: N 44079890.
Length : 90 yds in small boat harbor protected by off-lying reef with adjoining 200 yds separated from this cove by small rocky patch.
Width : About 50 yds.

Seaward approach clear. At CAPO SCALAMERI, the coast, where it changes direction from south-east to east, is rock bound. A lighthouse and the village of PUNTA SECCA stand on the point. The 3-fathom line is about 400 yds offshore.

Estimated gradient 1:75.

EXITS: From both beaches at west end on to two lanes which lead close east of the lighthouse into the village, and to the secondary road leading to S. CROCE CAMERINA.

19. BEACH 64 - MARINA DI RAGUSA

Coordinates: N 49509845

MARINA DI RAGUSA (1000 Pop.) stands on a low cliff (about 10 ft. high). It is fronted by a rocky shore with small sandy beaches between the rocks. Many boats are beached there. Landing places on this beach are confined to two small coves in front of the village, each with an entrance about 25 yds wide and to a 200 yd stretch at N 510982; the rest of the "beach" being rock fringed. All three are exposed to southward and would be hard to locate. The 6-fathom line is 1500 yds offshore and the seaward approach is clear. Estimated gradient 1:80.

EXITS: Road exit through the village by secondary road to S. CROCE CAMERINA.

20. BEACH 63-A - IRMINIO

Coordinates: N 533973 - N 54659695
Length : 1500 yds.
Width : 10-20 yds.

The seaward approaches are clear. TORRE GIARDINELLI, a tower standing 700 yds behind the shore and 500 yds east of FIUME IRMINIO, should assist in finding the beach. The general terrain is barren and featureless, rising toward the interior. There are clumps of trees around the mouth of FIUME IRMINIO, which mark it when close enough to distinguish them.

Reconnaissance of this beach inidcated a coastwise current setting eastward .5 to .8 knot influenced by the wind. From one line of soundings near the center of the beach the gradient to 10 ft. depth was 1:40 but the average is believed to be flatter. Underwater rocks and a rocky coast commence at the eastern end of the beach.

EXITS: Beach is firm sand backed by a bank or cliff 6-10 ft. high. Exit is over this bank and inland through vineyards 1/2 mile to secondary road leading to DONNALUCATA. Vehicle exit will require considerable road construction.

21. BEACH 63 - DONNALUCATA.

Coordinates: N 565965 - N 56709635.
Length : 300 yds.
Width : 20 - 100 yds.

Approaches from southwest and south are clear of danger. The 3-fathom line is charted 300 yds. offshore and the 6-fathom line 3/4 mile. West to east of the beach is the village of DONNALUCATA (Pop. 800) on a low rock-fringed cliff. Open anchorage off the village with sand bottom.

The beach is sandy, triangular shaped, with the broad side toward the village. There is a bar off this beach but it appears to be of minor importance. The gradient is estimated to be about 1:60.

EXITS: At the extreme southeast end of the beach the main street of the village (a continuation of the SCICLI road runs west-northwestward on to the beach). Northeastward of this street a low wall separates the beach from the village.

1 August 1943

G-2 GENERAL INFORMATION BULLETIN #28

CAPTURED G-2 ESTIMATE
1 JULY 1943

The following is a translation of an Intelligence Bulletin from the Italian Command Headquarters of Armed Forces of Sicily, Sixth Army, Intelligence Office, dated 5 P.M., July 1, 1943:

Intelligence Bulletin No. 2

I. Enemy situation in the Central-Western Mediterranean.

From the Allied situation comes the following:

1. The mass of the forces and material of the Anlo-Americans distributed in the Mediterranean, which is (60% for Aviation, 90% for troops, 96% for landing means), finds itself in the eastern basin and thus, in the sector which directly interests SICILY.

2. The major part of this is in the following zones:
(a) Oran-Algiers (33% Aviation-40% Troops-43% landing means.)
(b) Bougie-Bone (33% Aviation-40% Troops-34% landing means.)
(c) Bizerte-Tunis (33% Aviation-20% Troops-21% landing means.)

3. The landing means, the things which, due to size, give an indication of the intention and capabilities of the enemy, are concentrated in three sections of the above mentioned zones.
L.S.T's and L.S.I's.-major landing means because of capacity and effectiveness-have left for the above zones in the following percentages:
(a) Zone - Oran-Algiers--35%.
(b) Zone - Bougie-Bone--43%.
(c) Zone - Bizerte-Tunis-42%.

4. These given facts, in addition to the unanimous voices of the foreign press, the voices of belligerents and neutral countries, and information from good sources, all confirm the indication which the Anglo-Saxons are preparing to undertake.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

5. The preparation for such an invasion is now ready and complete. The recent entry into the Mediterranean of four battleships and two aircraft-carriers (plus that which is already known, i.e., 2nn. bb. and 2 p.a.) constitutes the final concentration of this preparation.

Also, that period until the end from the first to the tenth of July is especially favorable to the successful approach of enemy vessels on our coast because of the moonless nights.

IN CONCLUSION

The actual waiting period could not be prolonged because delay might hinder the succes of the action the enemy is undertaking. Because of this, we must be ready at any moment for the beginning of this action.

II. Probabilities of enemy operation.

1. SICILY and/or SARDINIA are objectives of the enemy. The major probability is an attack on SICILY.

The fact that the number of troops sent to BIZERTE-TUNIS are inferior in number to the other troops, should not be a deceiving factor in the event of a landing on this island, and therefore, it will represent the first wave moving at dawn to reach the coast of SICILY.

To confirm the efficiency of the wave, the fact is that in BIZERTE-TUNIS, there is 40% of the larger landing means.

In addition, 40% of the total of the troops in ORAN-ALGIERS zone are parachute troops, among them are three airborne divisions, which evidently could be used against SICILY in a surprise attack.

It would be a great error of illusion to believe that the enemy would undertake a secondary attack. For political and moral reasons of exceptional value, the Anglo-Americans will have to attack with all the strength they have.

2. It is understood that an attack of surprise will be undertaken, commando raids immediately followed by tanks and infantry taking advantage of the moonless nights, also air and naval support will aid the landing. It is necessary to be ready to face both possibilities.

The almost daily attacks against REGGIO and MESSINA, that is, against the communications of the aland, are part of this operation.

3. In SICILY, the entire coast could be used as a landing point. In fact, the landing attack will, without doubt, be developed on vast fronts and not only on small stretches-that were pre-selected in the decisive action, but also on vast lateral stretches and also coastal areas so that the enemy could put us into a confusion situation.

The following are the necessary precautions to be followed:

a. To keep strict guard everywhere.

b. To cut short the enemy action during the crises: that is, during the time that the parachutists are dropping and the landing barges are on beaches.

III. 1. Another point to be considered is the fact that from confidential sources, we gather that the intentions of the Anglo-Americans are to employ in their operations in the landing in SICILY the negro units, both from the English Dominion and the United States.

It is to be held in mind that the negro is very sensitive to a swift efficacious military action.

2. The enemy parachute troops in the ORAN area have very often been on jumping maneuvers during the night. It is necessary then to keep strict guard also during the night.

APPENDIX

Experiences gotten from the landings of the Americans on the Island of ATTU.

1. The Americans have successfully made landings only after violent aerial and naval bombing on the coastal defenses.

NOTE: It is very important to construct deep bomb-shelters in order to protect equipment and arms.

2. Smoke bombs have been extensively used. (The bombs are dropped from the planes. They are adjusted to parachutes and when they go off produce a dense smoke.

NOTE: All the fire will be concentrated on the smoked area and behind the area. It is also necessary to attack the enemy as soon as he makes himself visible, i.e. on the moment he comes out the white screen.

3. The landing was carried out by separate groups, corresponding to a reinforced battalion.

NOTE: We must also expect that these groups will be followed by armored units. It is to be understood that the first armored wave could not be of heavy cars: there will be a great many "Bren-carriers" (small, light armored cars) and medium cars, against which our anti-tank guns, especially our 47mm, are very efficient, as we have proved in the TUNISIAN campaign.

4. The Americans aren't very capable in bayonet attacks and are very poor night fighters.

NOTE: It is necessary, therefore, to surprise the enemy with the same means he fears. (A violent counter-attack surprising him in the dark with hand-grenades and bayonets.

ANNEX TO INTELLIGENCE BULLETIN NO. 2
Detailed Report of Enemy Situation in the Central Eastern Mediterranean Basin

I. GROUND FORCES

Gibraltar:
1 Para-troop battalion
1 unit of Commandos
25,000 men in garrison

Morocco:
1 American armored division at CASABLANCA.
1 French armored division
6 French infantry..... In temporary staging area.
2 French motorized divisions

Algeria:
6 American infantry divisions
1 English infantry division
3 French infantry divisions
1 American infantry division
1 French infantry division
3 American airborne divisions
1 English airborne division
1 American marine infantry division
1 D'Afrique Corps
3 French para-troop battalions
2 Rangers-French Units.
4 French Commando Units

Tunisia:
2 English infantry divisions
1 American infantry division
1 English armored brigade

Malta:
3 English para-troop battalions
1 English Commando Unit
30,000 men in garrison

To the above forces the following should be added. At present, the locations are not know.
5 American infantry divisions
4 English infantry divisions
2 French infantry divisions
2 English motorized divisions
1 American armored division
4 English armored divisions
1 English infantry brigade
1 English armored brigade
4-5 Regiments armored cars

In total, the units discussed in North Africa, Gibraltar, and Malta, have a force of about 780,000 men and 4,000 armored cars.

In lybia, estimated forces are valued at 50,000 men.

AIR FORCE

Gibraltar:	250 planes, majority are prusuit.
Morocco:	450 planes of various types.
Algeria), Tunisia):	1500 planes, majority are intercepters and pursuits.
Tripolitania:	900 planes, majority are intercepters and pursuits.
Circnaica:	400 planes, majority are bombers and combat.
Malta:	300 planes, majority are pursuits.

In total there is a force of 3800 planes.

III. LANDING EQUIPMENT

Gibraltar:
6 enbarkation vessels with a capacity to transport 200 men and 100 light armored cars and tanks.

The zone of ORAN:
Mostaganem, Algeria: 238 embarkation vessels, with a capacity to transport 11,000 men, 1400 tanks and half-tracks.

The zone of BUGIE:
Philippeville - Bone: 179 embarkation vessels, with a capacity to transport 18,500 men, 500 tanks and half-tracks.

The zone of BIZERTE;
Tunis: 87 embarkation vessels, with a capacity to transport 8,000 men, 1100 tanks and half-tracks.

Malta: 23 embarkation vessels, with a capacity to transport 900 men, 360 tanks and half-tracks.

Sousse: 15 embarkation vessels, with a capacity to transport 6,000 men, 190 tanks and half-tracks.

Added to the above embarkation vessels with their location not exactly know, 418 vessels, with a capacity to transport 23,000 men, 400 tanks or half-tracks.

In total, in the Central East Mediterranean basin, there are 1400 embarkation vessels, with a capacity to transport 70,000 men, 4000 armored vehicles and trucks.

G-2 GENERAL INFORMATION BULLETIN #29
BATTLE ORDER-SICILY

3 August 1943

Following is a summary of enemy dispositions in Sicily, based on latest information received. Where a unit is "not located", it has been identified but not recently enough to give an indication of its present whereabouts. When a unit is followed by a question mark, it is believed probably present but has not been identified. Changes and additions should be forwarded promptly to this headquarters. In reporting identifications, give as exact a location as possible, together with the date of which identified and any available information on remaining strength. If possible give the parent organization, if the unit designation alone leaves any doubt.

I GERMAN

UNIT	ESTIMATED PRESENT LOCATION	DATE LAST REPORT	REMARKS
15 Pz Gren Div	Central Sector	26/7	Formerly known as Div Sicily, and 19th Pz Div. Many recruits and convalescents from Russia.
1 Gren Regt. (Ens Regt)	Troina-Regalbuto	28/7	Part of Battle Grp. Schmalz. 1/3 under strength. Code name "Birkhun".
1 Bn	" "	1/8	Heavy casualties: CO-Capt. Thorno. Code name "Elizabeth".
2 Bn	" "	27/7	Code name "Totenkopf".
3 Bn	" "	23/7	Code name "Kinderfest".
115 Pz Gren Regt.	8 Army Front		Formerly known as 2 Gren Regt of 15 Div. CO-Col Koerner. Code name "Diplomat".
1 Bn	SE of Catenanuova	27/7	CO-Maj Kluge. Code name "Theater".
2 Bn	Catania area	27/7	Code name "Erwin".
3 Bn	Catania area	27/7	Formerly Bn "Messina" and 70 March Bn. Heavy losses. Code name "Seitgenesse".
3 Gren Regt (Fullriede Regt.)	Troina area	28/7	Rumored moving N and E. Code name "Gaukler".
1 Bn	Capizzi area	28/7	CO-Tornoff(?) Code name "Hermann".
2 Bn -	Capizzi-Troina		Code name "Ebenholz".
3 Bn	Capizzi-Troina		CO-Maj Strever. Code name "Hedwig".
215 Tank Bn	Cesaro area	28/7	1/2-2/3 strength-36 tanks, no MK VI's left. CO-Capt. Ciraga. Code name "Indianer".
116 Tank Bn	?	26/7	Existence doubtful. Reported by 1 PW as part of the 15 Div Tank Regt.
33 Arty Regt	No locations	26/7	Formerly known merely as Div Sicily Artillery.
Rcn Bn	Regalbuto area	26/7	
999 Sig Bn	No locations		Identified in Canicatti area on 17 July.
71 Nebel-werfer Regt.	Regalbuto area	24/7	150 mm and 210 mm multi-barrelled mortars. Compressed air, smoke and HE shells.
69 Marsch Bn "REGGIO"	Sferro area	31/7	Attached to 15 PG Div.
Light AA Bn	No location		Last reported at Piazza Armerina on 14 July.
382 Gren Regt			Attached to 15 Div.
1 Bn	Troina-Regalbut	30/7	
2 Bn	" "	1/8

171 Blackshirt Bn	Coastal Area	29/7	
54 NAPOLI DIV			Reported totally destroyed.
MISC UNITS ITALIAN			
131 Tank Regt			
102 Bn	Not Located	21/7	R-35 tanks. 101 Bn broken up into autonomous units and since partially destroyed. At least 17 of 54 tanks of 102 Bn destroyed. Last reported at Roccapalumba on 21/7.

G-2 GENERAL INFORMATION BULLETIN #31
(Taken from Enemy Documents Captured in Sicily)

1. Extract of Regulations Governing German P/W Camp for officers.
(Translated from French)

"1. All German officers on duty are superior to any prisoner of war.....

"4. All conversation unless on business, with officers, soldiers or civilian personnel of the German Army is strictly forbidden. All infractions will be punished.....

"5. All claims are to be presented without exception in the German language during the morning roll-call by the intermediary of the PW commander of the company.....

"13. All material of the Camp (including construction material, bricks and everything in general) taken by the Prisoners of War will be reimbursed at the rate of ten times the value.....

"14. .....When men are playing with a ball, and this ball falls behind the fence of barbed wire it is necessary to act as follows: The prisoner of war, identified by a white cap, can pass the barbed wire after having warned the sentries of the number 1, and 2, posts. To make the sentries understand his intention this prisoner of war will make a signal with a white flag. The two sentries will show in return a white flag showing that they understand. The Prisoner of War can pass the barbed wire only after being convinced that the two sentries understand his intention. As soon as the ball is returned the Prisoner of War will make again a signal until the sentries show that they understand, and brought back their white flag.

"18. It is forbidden to go to bed without taking the shoes off.....

"27. It is forbidden to sing patriotic songs or songs having a national character or to make speeches on politics, etc.....

"38. Until further order the Prisoners of War have the right to write two letters and two post-cards per month....."

2. Extracts from German Daily Bulletins.

a. "C.O. German Armed Forces
PALERMO
Palermo, 22 May 1943

"No Wearing of Uniform in Rome
The German liaison officer with headquarters of the Italian armed forces reminds all military personnel of the regulation forbidding the wearing of uniforms in Rome, according to order O.K.W. No. 144/43 Secret, W.Z. (II) dated 19 April 1943. It is therefore advisable to take civilian clothes on official trips to Rome."

b. "C.O. German Armed Forces
PALERMO
Palermo, 20 June 1943

"Pass Regulations
Effective at once, members of the armed forces may leave their quarters only in groups of at least two and must carry their bayonets and firearms."

3. Translation of German Document, found 29 July 1943 in Castelo Utveggio, Palermo (undated).

"WEMC: Fighting Parachute Troops with infantry Weapons.

1. General. A surprise attack by enemy parachute troops is to be expected at any time.

Our troops must be trained to attack the parachute troops with their weapons during their actual descent. Consequently the element of surprise, and the speed of landing of the parachute troops must be taken into account.

Parachute troops either jump from heights of 3,000 feet or higher and drop to about 900 feet before opening their parachutes, or they jump from a height of about 360 - 300 feet, when the parachutes open after they have fallen about 90 feet. The speed of fall is about 15 - 18 feet/sec. While parachute troops dropping by the first method are spread over a wide area, a platoon of parachute troops dropping by the second method have a horizontal spread, while in the air, of 1200 - 2100 feet, a depth of 900 feet, and a height interval between single jumpers of about 45 - 60 feet.

2. The following principles are to be adopted in attacking parachute troops with infantry weapons.

In principle, fire will only be opened on command of the responsible leader (leader of Gruppe, Leader of Zug). The fire must be directed at the parachutists; it is useless to fire at the parachute.

The best moment for attacking parachutists is at the moment of landing, while he is helpless and without his weapons, which are usually dropped separately. At this moment all are to engage in the attack.

Ground Defense exerts a strong effect on the Morale of the Parachutist, and is for this reason of great importance.

In Detail

Rifle Attack: Parachutists will be attacked with rifles as soon as they reach the "near range" (1200 feet). With slight wind (up to 9 feet/sec) aiming point is the target center. With stronger winds the regulations for firing at moving targets apply. The sight will not be altered during fire. Ammunition pouches will be carried. A standing or kneeling (freehand) position should be adopted where possible. If under enemy fire, a lying position may be adopted. Distribution of fire is impossible. Each soldier will shoot at the nearest parachutist. With the usual adopted method of jumping, from a height of 360 - 300 feet, no more than five aimed shots can be fired."

4. Italian General Officers Captured in Sicily by Seventh Army.

a. Brigadier General Ambrosia di Laurentus, CO, 207 Coastal Div. Agrigento.
b. Rear Admiral Guiseppe Manfredi, Commander Naval Base, Trapani.
c. Major General Egisto Conti, C.G. 230 Coastal Division, Trapani.
d. Major General Corrado de Franchis, C.G. Sicilian Territorial Engineers.
e. Brigadier General Angelo Agro, C.G. Military Territorial Zone Palermo.
f. Major General Giovanni Marciani, C.G. 208 Coastal Division Palermo.
g. Brigadier General Giovanni Batista Allori, C.G. Military Zone Palermo.
h. Major General Guiseppe Molinero, C.G. Palermo Port Defenses.
i. Lt. General Francesco Traina, Deputy Judge Advocate General, Italian Army.

11 August 1943

CAPTURED GERMAN DOCUMENT
(Unit and date of capture not known)

Captured Field Order of the Hermann Goering Division, Division Order # 31, signed: CO, Hermann Goering Div., 2 August 1943.

C-30

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

Retreat to the shortened bridgehead position (position "C"). Night 2/3 August Hermann Goering Div. falls back to position "C". Strong rear guards to be left at position "B". The paratroop Reg't composed of Pz. Jr. Abt. is Division reserve. It will fall back to PIEDIMONTE - SAN ANTONIA and make contact with Battle Group "Paulus." Division position 6 Klms east of RANDAZZO and 1200 meters southwest of STAZIONE DI MOJO.

Division Artillery: One Btry of II and 2 btrys of IV will fall back to the mainland. All ammunition goes to the remainder of Division artillery. The 17-cm Btry attached to Schmaltz's Battle Group will move to REGGIO and the mainland. It will report there to the mainland Commandant (Heidrich). The other 18-cm btry remains with Battle Group "Paulus." Likewise the II Btry of the Arty Reg't will remain with Paulus.

Appendix: The enemy pursues haltingly.

Appendix: Instructions for further fighting in SICILY:

1. No road blocks or demolitions will be manned by Italians.

2. No German soldiers forced to go to the mainland will do so without their individual weapon, these weapons are "tickets" (Fahrscheine) for passage. Every soldier is to carry all the ammunition he possibly can.

3. No Italian troops will be allowed to disturb troop movements, civilians or soldiers. Every Italian and all Italian equipment is to be cleared from the streets (except those Italians who have been fighting and who will still fight).

4. Destroy all materials which cannot be carried. Burning material is forbidden on account of hostile aircraft. The best procedure is to blow the material.

5. The strictest discipline must govern. Shoot all who fail to obey.

6. All bombed areas in towns will be cleared for traffic.

7. All soldiers will take one days rations and the gov't Iron ration.

/s/ Division Commander.

G-2 PERIODIC REPORT

No. 1.

Map - G.S.G.S. No. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally two to four miles inland from LICATA (0953h) to Army boundary vicinity of POZZALLO (N7593).

b. Defensive Organization: Considerable Teller land mines found along the beaches. Numerous pill boxes, etc., in general as shown on collation map.

c. Units in contact:

(1) In LICATA area units identified by PWs: 1 Co. 12 MG Bn, 711 Sep MG Co., 384 Coastal Bn, 390 Coastal Bn, 419 Coastal Bn, one PH. 12 Engr Regt.

(2) GELA area: 159 Bn of 134 Coastal Regt.

(3) SCOGLITTI area: 289 Bn of 134 Coastal Regt, SCOGLITTI to ACATE river, 420 Coastal Bn, 207 Coastal Division.

(4) Other areas: 206, 207 Coastal Divs., identified as normal. 11 Bn assault Engr Bn, 72 Bn of 10 Bersaglieri.

Personalities: 139 Coastal Regt: Col. Galfo.
207 Coastal Div : Comdr Gen Schreiber

d. Artillery - Location and Calibers: In LICATA area: 24 Arty, Regt. incl. 198 Bn and 486 Btry.

e. Reserves: Not located.

2. ENEMY OPERATIONS DURING PERIOD.

a. General summary: Reaction of enemy indicates high degree of surprise obtained. Light resistance met on beaches proper except isolated strong point G 8437.

3. MISCELLANEOUS.

Weather cool, sea calm, visibility good. No estimate of the enemy losses. Several hundred prisoners reported taken.

4. ENEMY CAPABILITIES.

Situation obscure, probably delay in successive positions inland along lower reaches of ridges perpendicular to coast, strong local defenses on favorable terrain in plains areas, to await developments to determine location main effort.

G-2 PERIODIC REPORT

No. 2.

Map - G. S. G. S. No. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Extends from shore west of PALMA DI MONTECHIARO (9804), north of NARO (0825), and CAMPOBELLO (0925) and RIESI (H754). Enemy line before II Corps extends from 1 1/2 miles west of GELA in an arc 4 miles north of GELA and then south to BOCHIURI (H2931) northeast to TERRANA (H4131), COMISO airfield, RAGUSA. All exclusive.

b. Defensive Organization: No recognizable organized defensive system. Road blocks and prepared demolitions and mine fields up to depth approximately seven miles parallel to coast taken from captured maps.

c. Units in contact:

(1) LICATA area:

177 Bersaglieri Regt.
525 Bn - POZZO EMPEDOCLE
526 Bn - ARAGONA
527 Bn - FAVARA

223 Skoda Bn 100/22 guns
76 Bersaglieri Regt. AGRIGENTO
138 Bn.
104 AT Co.
1 Co.

(2) GELA area:

134 Coastal Regt.
429 Coastal Bn.

134 Mixed Engr Regt.

4 HG Pz. Regt. Post POLGRO 6724

2. ENEMY OPERATIONS DURING PERIOD.

a. Enemy resistance stiffening with German support.

b. In LICATA area artillery fire received south of CAMPOBELLO with estimated 88 caliber north of NARO.

c. Elements of a German Panzer unit reported moving south from PALERMO with forward elements at SAN STEFANO DI QUISQUINI. Concentration of estimated twenty hostile tanks north of GELA between MAZZARINA and NISCEMI (1100) attacked and repulsed (1130).

3. MISCELLANEOUS.

a. Weather cool, visibility good. Ground haze to 0900.

b. In LICATA area approximately 3,600 prisoners taken. (Complete count not available.) PW states Germans held anti-invasion exercises GELA area 4 and 5 July, forces estimated as 600 men with armored cars. Considerable AP and vehicular mines encountered in GELA.

c. In the LICATA area no organization of units larger than a battalion identified. PWs taken indicate that Italian units have been broken up into small detachments and scattered over a wide area and explains the identification of these small units in widely separated spots.

d. Confirmed information from captured documents.

739 Btry Mtz 105mm recently AGRIGENTO, LICATA, CANICATTI.
507th Flak Regt. was at SAN PIETRO.
131st Flak Regt. in SICILY.
809th Searchlight Btry last in ACIREALE.
200th Regt. last identified at COMISO.
Hq. LUFTWAFFE last identified at TAORMINA.

4. ENEMY CAPABILITIES.

a. General situation obscure.

b. Continue withdrawal to successive positions until main defensive positions are reached and counterattack by local reserves.

G-2 PERIODIC REPORT

No. 3.

Map - G. S. G. S. No. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: About 4 miles west of PALMI DI MONTECHIARO (9804). North of NARO (0825) and CANICATTI to RIESI (H085). Through the II Corps Sector extending from H1939 - H2038 - H2639 - H2737 - H3332 and H4521 - H5024 - H5426 - H5925 - H6226.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

b. Defensive Organization: Enemy resistance remains light. Still a delaying action. In LICATA area no contact with any organized system of defenses. In GELA - SCOGLITTI area main resistance north of GELA.

c. Units in contact:

(1) 3d Grenadier Regt, Div Sicily.
1094th Engr Co (believed all captured).
535th Coastal Btry, 139 Regt.
Elements of the 4th Livorno Regt and the HQ Div in GELA Sector.
54th Napoli Divisional elements.
104 Mantovia Divisional elements in BISCARI CHIARAMONTE Sector.

d. Artillery - Location and Calibers: Light Arty fires encountered by patrols about 6 miles east of AGRIGENTO at 0700 B. 88 mm and tank fire was encountered by patrol south of CANICATTI (G8859).

e. Reserves: Not located.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: In the LICATA Sector the delaying action has caused the deployment of XXX force over extended front. Enemy resistance consists of MG and rifle fire. Action on the west flank has been largely confined to patrol reconnaissance. Main resistance still in center north of GELA and vicinity of NISCEMI. Enemy aerial activity on considerably reduced scale. At 1135 B twenty hostile tanks were moving south in vicinity of CASTELTIMINI.

3. MISCELLANEOUS.

Weather cool, sea calm, visibility good. 50 MK III and IV tanks attacked just north of GELA at about 1135 B, toward H 2932. 13 of which were destroyed. COMISO A/D captured by 45th Infantry Division at 111850 B.

4. ENEMY CAPABILITIES.

(1) Attacking generally south along the NISCEMI - GELA road.

(2) Continued delaying action on all fronts with the object of falling back to the high ground in vicinity of PIAZZA ARMERINA, for center pivot.

The second capability is favored due to the probable lack of gasoline and other supply limitations.

G-2 PERIODIC REPORT

No. 4.

Map - G. S. G. S. No. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: PALMA DI MONTSCHIARO - NARO, 5 miles north of CANICATTI - BUTERA - NISCEMI - south of BISCARI airfield - VIZZINI.

b. Defensive Organization: On western sector north of LICATA resistance confined almost to patrol activities. Similarly, in the eastern front north of SCOGLITTI resistance decreasing. Main enemy resistance still in center in vicinity of NISCEMI.

c. Units in contact:

(1) HG Div elements in center near H 4540 probably about an armored regt and few 88 mm guns.

Elements Div Sicily
Arty 28 Regt, 4th Livorno Division
Other scattered Italian units not definitely identified

2. ENEMY OPERATIONS DURING PERIOD.

a. Main enemy effort in center generally in area east and west of NISCEMI. Counter attacks were made with tanks but all were repulsed.

3. MISCELLANEOUS.

a. Large fires observed at CANICATTI and at the PONTE OLIVO Valley. Tanks destroyed on 11 July were marked with two concentric circles painted in white on left side and rear. Aerial reconnaissance reported large bivouac 1 1/2 miles west of SAMBUCO H 2903. Tanks destroyed in II Corps Sector to date 25 Mk III and IV, 5 MK VI, 22 R 35. Reports indicate that prisoners taken by II Corps now stand at 6289 of which 175 are officers and 124 are German enlisted men.

b. Identifications:

153 (?) MG Bn
101 Tank Bn (131 Tk Regt)
12 Engr Regt (Corps troops XII Corps)
12 Arty Raggruppamento (Corps troops XII Corps)
18 Coastal Brigade
134 Coastal Regt
429 Coastal Bn
I, II, III Bns PGR 2, Hoerman Goering Division
2 Bn, HG Panzer Regt
3 Co, HG Reconnaissance Bn
200 Air Signal Regt

4. ENEMY CAPABILITIES.

(1) To delay in successive positions with the final position along the CALTANISSETTA - CALTAGIRONE ridge covering the withdrawals with armored regiments in the NISCEMI area.

(2) To counterattack with main effort on left (east) using armored (NISCEMI) elements for wide invelopment or exploitation of success.

(3) To defend along present positions and counterattack with armored (NISCEMI) regiments.

(4) To attack along the general line PALMA MONTECHIARO - NARO - CANICATTI - and combine with capability (3).

Capability (3) is favored due chiefly to the fact that the enemy is still unorganized and probably lacks supplies.

No. 5.

Map - G. S. G. S. No. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally G 8043 - PALMA DI MONTECHIARO - CANICATTI - WEST - H 0854 - MAZZARIO - H 3448 - H 5040 - VIZZINI - RAGUSA (Excl) - POZZALLO.

b. Defensive Organization: Pocket resistance areas noted. One at H 3932 early morning. Counter attack at 1300 with 20 to 30 tanks of Mark III, IV and VI at H 5343 from the 2d Bn of the 8th Regt, HG Division. Activity in the west confined to delaying action. On the east the enemy was withdrawing to the north from route 124.

c. Units in contact: Hoerman Goering infantry vicinity H 5727. 33 Inf. Regt from 4th Livorno Division in BUTERA area. 2d Bn 75 Inf in extreme eastern flank.

d. Artillery: NESCEMI shelled at 0550 B. 28th Field Artillery at BUTERA 0330 B. Enemy fire from H 5140 noted at 1920 B.

e. Identifications:

28th Arty Regt 3d Bn at GRAMMICHELE
1 Btry 54 Arty Regt at SCORDIA
2d Btry 54 Arty Regt at ISPICA N 8199
215th Tank Bn Div Sicily at ENNA (Unconfirmed)
1st Bn 75th Inf at CANICATTI BAGNI
2d Bn 76 Inf CARLENTINI
3d Panzer Grenadier Regt CANICATTI - AGRIGENTO
75th Inf Regt Hq at PALAZZOLO
76th Inf Regt 1st Bn at RAMACCA
76th Inf Regt 3d Bn at SCORDIA
34th Inf Regt 2d Bn at GRAMMICHELE

2. ENEMY OPERATIONS DURING PERIOD.

Air reported during the night that all vehicles seen were moving toward the CATANIA plain. During the day the main resistance was again in the center area north of GELA. By 1430 B the Hoerman Goering units had begun to withdraw to the north from the area H 4140.

A pocket of resistance was located at H3838 at 1725 B. Enemy activity still generally delaying.

3. MISCELLANEOUS.

a. Prisoners: Estimated over 13,000 to date.

b. Air fields: BISCARI air field pitted but repairable. Damaged craft, 1 JU 88, 29 ME 109, 6 other unidentified. Air field taken at 140800 B.

c. Effect of air bombing: 24 planes PATERNO 1410 B. 11 A-36 bombed railroad at MISILMERI H 5138; 5 railway cars damaged, 2 locomotives hit, 1 exploded, time 1553 B. Concentration of vehicles at LEONFORTE (H3393) bombed at 1474. 10 vehicles attacked between ENNA H 2405 and VALLELUNGA G 8598, 1474 B.

d. Morale: Air reports illuminated victory sign during the night at H 5739.

4. ENEMY CAPABILITIES.

(1) To defend general line AGRIGENTO - RACALMUTO (G76) - BARRAFRANCA - CALTAGIRONE - GRAMMICHELE.

(2) To delay in successive positions to northwest.

(3) Defend general line RACAMUTO - BARRAFRANCA - GRAMMICHELE and counterattack along general line AGRIGENTO - RACALMUTO.

(4) Capability No. (1) plus counterattack to southwest from S. MICHELE (H35) - CALTAGIRONE area.

Capability (3) is favored and except for lack of movement observed in the direction from which counterattack may be expected may be executed at any time.

G-2 PERIODIC REPORT

No. 6.

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally AGRIGENTO - RACALMUTO G 7767 - 4 miles south of CALTANISSETTA - PIETRAPERZIA - S. CONO H 3353 CALTAGIRONE.

b. Defensive Organization: Anti-tank ditch located at G 1578 to G 1678. Pillboxes and wire at G 1879.

c. Units in contact: Herman Goering Division in contact in our central area with Italian infantry units on Eastern and Western flanks.

d. Artillery: Fire by large caliber enemy artillery received from vicinity H 1261, with OP at H 1260. All advancing units subjected to intermittent, light artillery fire during the day.

e. Identifications: (Not previously reported). 1st Panzer Grenadier Bn Brindisi at GRAMMICHELE. 5th Co., 19th Cav. Regt. vicinity CALTAGIRONE. 11th Arty Regt in AGRIGENTO area. Div. Sicily (15th Armored), 3d Bn, 3d Regt CANICATTI area. Division Sicily, 2d Bn, 3d Regt. CANICATTI area. 169 Ragusa Blackshirt Legion - CALTAGIRONE - VIZZINI area. 6th Arty Raggruppamento, 25th Bn, and 73d Btry - CALTAGIRONE area. 32d Air Signal Regt Luftwaffe Headquarters - TAORMINA area. 4th Motorcycle Bn, 4th Div, northwest of CALTAGIRONE. 380th Coastal Bn, AGRIGENTO area. 1st Bn, 34th Inf. - RIESI area. 3d Inf Regt - northwest CALTAGIRONE. 1st Bn, 1st Panzer Gren Regt, VITTORIA area (during initial landing, 2d and 3d Corps almost wiped out). 3d Co, 102d AT Bn - RAGUSA area. 3d Co, 103 AT Bn - vicinity CALTAGIRONE. 18th Coastal Brig composed of 429th Bn, 378th Bn, 384 Bn in THALA area. 378th Bn, 18th Coastal Brig - GELA area.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: In general, the enemy continued to delay in successive positions, employing the method of local counterattacks, especially in central area, both East and West of CALTAGIRONE, using tanks as the spearhead in each case.

b. Operations of Component Units. Heavy antiaircraft of medium intensity fire was received at 1415B to 1615B from the Western part of the CATANIA plain. Light fire received West of AGRIGENTO at 1500B but none in the morning in that area. No antiaircraft fire received from CALTANISSETTA - PIAZZA ARMERINA area. Enemy bombing attack made on PONTE OLIVO airfield at 2400B, starting several fires in buildings in the town. No reported damage to the field.

3. MISCELLANEOUS.

a. Morale: Morale of German prisoners interrogated indicates it is low and is of a defeatist nature. Morale of Italian prisoners is apparently higher than that of their combat soldiers, while native populations have invariably welcomed the advance of American troops.

b. Supply and Equipment. No indications of failure of supply and equipment has been noted.

c. Terrain. Enemy bridges destroyed by enemy in rear areas, especially to the West and North of AGRIGENTO.

4. ENEMY CAPABILITIES.

(1) Defend along general line AGRIGENTO - RACALMUTO (G7667)- PIETRAPERZIA (H1269) - PIAZZA ARMERINA - CALTAGIRONE.

(2) Same as (1) with ARMORED COUNTER ATTACK to Southwest from PIAZZA ARMERINA.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

(3) Same as (1) with counter attack along general line RAFFADALI (G5867) - ARAGONA (G6668, - RACALMUTO (G7668).

(4) To withdraw main forces to North and East, from CALTANISSETTA - PIAZZA ARMERINA area, leaving delaying force in contact with our troops and counter attacking with either or both forces indicated in capabilities #2 and #3.

Capability No. (4) is favored as counter attacks would relieve pressure now being exerted by this Army to the north in the center and permit a withdrawal either to north or east, such movement being indicated by motor movements in those directions.

KOCH
AC of S, G-2

G-2 PERIODIC REPORT

No. 7

Map - U.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally REALMONTE (G-5247) - ARAGONA (G6668) - BEMPENSIERE (G-8175) - SERRADIFALCO (G-8973) - PIETRAPERZIA (H-1369) - PIAZZA ARMERINA (H-3365).

b. Defensive Organization: Machine gun nest just out of BARRAFRANCA, H-1824, held up advance at 1000 hours.

c. Units in contact: 207th Italian Coastal Division on left flank; 4th Livorno Division and Herman Goering Division in contact in our central area, with elements of 54th Napoli Division on our right flank.

d. Artillery: Battery of enemy artillery supported local counterattack at 1500B from the area vicinity G-9973, with their OP located at G-9568. Air action destroyed this OP at 1228B.

e. Identifications: (Not previously reported): 923 Fortress Battalion in Seventh Army sector. 6th Battalion of 76th Werfer Regiment - MAZZARINO area. 6th Battery, 557th Battalion, Division Sicily Artillery Regiment - CALTANISSETTA - ENNA area.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: In general, enemy resistance during the period was slight. Local counterattacks in central area, supported by tanks, aided the enemy's withdrawal to the north.

b. Operations of Component Units: Heavy concentration of motor transport noted at 1007300 in the area SCIACCA, RIBERA, BIVONA, CORLEONE. Sixteen tanks made strong counterattack at 1610000 south of BARRAFRANCA. At least two enemy tanks were destroyed in the attack, which was repulsed at 1200B. Anti-aircraft fire reported from Western CATANIA plain, in Square H-67, at 1516008, of medium caliber, heavy intensity. No anti-aircraft fire received from CALTANISSETTA area during the period. No anti-aircraft fire reported, although a considerable number of air missions were flown over the rear of the combat area.

3. MISCELLANEOUS.

a. Supplies and Equipment: Permanent type ammunition dump, consisting of about 25 small buildings, surrounded by blast walls, located at B-6902, and huts located at B-7110 and B-7109.

b. Statistics: Estimated total of 17,000 prisoners of war. 200,000 gallons of gasoline and over 2000 bombs, from 250 pounders to include 1000 pounders, captured to date.

c. Intelligence Information Received from Captured Documents:

(1) See attached chart of organization Division Sicily Artillery Regt.

(2) See attached chart of organization of Herman Goering Division.

4. ENEMY CAPABILITIES.

(1) Defend along the general ridge CATTOLICA (G-4672) - CASTELTERMINI (G-6882) - CALTANISSETTA - ENNA.

(2) Same as (1), with counterattack along general line CATTOLICA - CASTELTERMINI.

(3) Withdrawal of main forces to north and east from CALTANISSETTA - S. CATERINA (H-0388) - ENNA area, leaving delaying force in contact.

Combination of (1) and (3) is favored. Lack of movement away from our northern front in past 24 hours indicates that (3) is already partially accomplished. As motor movement in Northwestern Sicily toward South and East was great, according to night aerial reconnaissance night of 15-16 July, but failed to materialize in major counterattack during period of this report, that movement probably by-passed to the east. Hence, a defensive attitude is indicated.

G-2 PERIODIC REPORT

No. 8.

Map - U.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally REALMONTE (G-5256) - ARAGONA (G-6668) - BEMPENSIERE (G-8175) - 2 miles north of SERRADIFALCO (G-8973) - 1 mile north of S. CATALDO (G-9976) - south of CANTANISSETTA (H-0577) - then east to Army boundary at (H-2874).

b. Defensive organization: At end of period, indications are that enemy has organized defensive area South and southeast of CALTANISSETTA along the SALSO river with what is believed to be one regiment of P.G.R., reinforced with tanks.

c. Units in contact: On the left flank, northwest of AGRIGENTO, are now elements of the 26th Assietta Division. On our central (CALTANISSETTA) front are elements of the 4th Livorno Division and Herman Goering Division.

d. Artillery: Enemy artillery is located at G-7277, just north of MILENA at G-7675 - G-9480, area south of CALTANISSETTA and at point H-2674.

e. Identifications: (not previously reported):

Western Sector Seventh Army: 1st and 2d Bn., 30th Inf. Regt., 26th Assietta Division.
17th & 18th Blackshirt Bns, of 17th Blackshirt Legion.
161st Motorcycle Troop.
Elements of 19th Artillery Group, Armored.
4th Inf. Regt., 28th Aosta Division.

Eastern Sector Seventh Army: Barrafranca area - 1st, 2d, and 3d Cos., 1st Bn., 1st P.G.R., 15th Panzer Division.
11th Co., 1st P.G.R.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Enemy withdrew during the night of July 16/17 from the area BARRAFRANCA to the north, and contact was not regained until 1020 hours, morning of the 17th. In the Western sector, opposition was light. The 3d Division captured AGRIGENTO night of 16/17 July.

b. Operation of Component Units: At 171020, tanks and heavy weapons were encountered in the vicinity of H-1575. Photo mission flown 161600 hours over AGRIGENTO shows no military activity on roads or town. No gun installations observed. At 171650, air reported heavy traffic TAORMINI south toward CATANIA; also on roads and area ADRANO (H-7397) - RIPOSTO (H-0604) - CATANIA, moving toward CATANIA. No movement sighted CASTELVETRANO - CHIUSA (G-3697) - SCLAFANI area. At 1720, air reports no movement on roads from CASTELTERMINI to LERCARA (B-6505) - FRIDDI to BISACQUINA (B-3501) to RIBERA (G-3678) and SCIACCA (G-1878). Air reports light general movement in area H-7680, including 4 88-mm guns at 1717400B. At 1721450, four ME 109s shot down in area 9554 by 2d Armored Division.

3. MISCELLANEOUS.

a. Supplies and Equipment: Enemy ammunition dump located at H-193653.

b. Concentrations: Air reports large bivouac area camouflaged as haystacks at H-3015.

c. Minefields: Road mining by enemy, during last 24 hours, is increasing. CALTANISSETTA road mined from 055710 northward at 171520B.

d. Intelligence Information Received from Prisoner of War: Brigadier General AUGUST LANGKEITLISS, Commanding General, 207th Coastal Division, stated his division consisted of two regiments of three battalions each, plus 10th Bersaglieri Regiment, and, according to his statement, 12 to 24 75-mm, 12 100-mm, and 12 149-mm guns. Assumed command 12 July, replacing Schreiber, who went to XII Corps. This General stated he had been charged with planning and execution of defenses of CASTELVETRANO airfield, which, due to our bombing, is now unserviceable. He was placed in command of the 26th Assietta Division 10 July before assuming command of the coastal division. He stated that great confusion exists in the High Command with changes of commanders, and, when captured, had on his person complete Battle Order of 26th Division, which he had prepared for his own information.

4. ENEMY CAPABILITIES.

(1) To defend along the general line CASTELTERMINI (G-6883) - MUSSOMELI (G-7886) - MARIANOPOLI (G-9387) - CATTOLICA (G-4672) - ENNA.

(2) To continue withdrawal to north from CALTANISSETTA - S. CATERINA (H-0388) - ENNA area, with local counterattacks.

(3) To bolster defense in the west by moving elements of the 26th Assietta Division from SCIACCA area.

No. (1) is favored. The attitude is defensive, and no movements into the Seventh Army theater are noted. In general, the situation appears that northeast part of the island, CATANIA - REGALBUTO (H-5795) - NICOSIA (G-3506) - S. STEFANO (G-3160) is the area to which troops have withdrawn for ultimate defense. Recent lack of German identifications tends to indicate the withdrawal of the major portion of those troops.

G-2 PERIODIC REPORT

No. 9

Map - U.S.G.S. 4164, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Situation in front of the Seventh Army on this date was of such fluid nature as to preclude the location of enemy front lines. Last contact was along general line SICLIA (G-4861) - North of S. CATERINA (H-0388) - North of ALTAFARNERA (H-3578).

b. Defensive Organization: None, except large bivouac area north of S. CATERINA in vicinity of ENNA, and heavy artillery installations are reported Southeast of ENNA, vicinity H-2684.

c. Identifications (not previously reported): None.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: During the night of July 17/18, enemy withdrew from contact along the entire line, and only light resistance was offered to general advance of all units of the Seventh Army. A convoy estimated at one thousand troops with some tanks was reported moving east from H-1587 to H-1289.

3. MISCELLANEOUS.

a. Supplies and equipment: German PW states some difficulty being experienced with supplies due to rapid collapse of the Italian Army.

b. Concentrations: Enemy concentrations noted vicinity north of COMITINI (G-6866) and northwest of VILLAROSA (H-1588). It is believed that these concentrations are bivouac areas occupied preparatory to withdrawal to the north and west.

c. Minefields: Minefields and booby traps are being encountered with greater frequency along the entire front.

4. ENEMY CAPABILITIES.

(1) To defend along the general line ENNA (H26) - MUSSOMELI (G78) - BIVONA (G59) - CATTOLICA (G47).

(2) Same as (1) and counterattack against the west (left flank) with major Italian elements reinforced by German armor.

(3) To delay in successive positions along our general front to the north and west, with local counterattacks to relieve the pressure during withdrawal.

Capability (1) is favored. Italian reaction has been purely defensive. What aggressive action has been taken against this Army has been by German elements, which it is believed, with exception of portions (elements of the 15th Panzer Division) remaining in the ENNA - SAN CATERINA area, have been withdrawn along our front. A final defensive position will very likely be taken in the difficult terrain leading to the MESSINA peninsula, in an effort to either launch vigorous counterattack from that general direction at a later date or to permit withdrawal of German units to the Italian mainland. Sacrifice of the Italian troops in the west to fulfill that mission is indicated.

G-2 PERIODIC REPORT

No. 10.

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally RIBERA (G-3678) - east to CIANCIANA (G-5560) - CASTELTERMINI (G-6882) - MARIANOPOLI (G-9288) - V. NAROSA (H-1587) - Road Junction H-1979 - Road Junction H-3175.

b. Defensive Organization: No organized resistance encountered except in the vicinity of ENNA, where remnants of one German Battalion of infantry and an artillery regiment are located between our forces and Canadian forces of the XXX Corps, general area H-2580.

c. Identifications (not previously reported): 1st, 2d, 3d Bns, 1st PGR, ENNA area.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Generally light opposition to the advance of entire Seventh Army, with mostly bridge and road demolitions and minefields, on the western half of the zone.

b. Operations of Component Units:

(1) Observation by air reports: 50-60 trucks parked at CORLEONE (B-3813) at 1045B, camouflaged. Troops marching and trucks with some towed guns on road SCIACCA - CASTELVETRANO, at 1911&0B. Head of column CASTELVETRANO. Columns of 50 to 60 tanks and trucks moving from LEONFORTE towards ENNA at 1917308. 50 MT on road three miles southwest of ALIMENA (H-1099). Head of column at H-1595, moving northwest 1908&0B. Column 10 miles long moving north; head B-9113 at 1205B. No movement sighted 190900B on roadnet area G-8686 - B-5230 - B-3250 - G-2080. At 1015B, Radar station at G-1278 strafed. Light traffic ALIA (B-7509) - LERCARA (B-6506).

(2) Small arms and mortar fire was encountered 191200B at a point about five miles north of S. CATERINA (H-0388).

(3) Contact with the enemy west of ENNA along line H-1387 - H-1390.

(4) Minefields: Mines along road RAFFADALI (G-5867) - CIANCIANA (G-5080).

(5) Antiaircraft: Light and heavy AA over area B-7509. Very intense at H-1297. At 191830B, air reconnaissance patrols report intense antiaircraft at road junction north and east of LEONFORTE. At 191600B, four AA guns south edge of Lake PIANA DEGRICI (B-3733). Inaccurate heavy AA fire at BIANCAVILLA (B-7694).

(6) Artillery: Artillery battery reported vicinity H-1487, at 1915&5B. Air reports at 191600B two batteries, each four guns, 40-mm, at G-1593 and G-1788.

3. MISCELLANEOUS.

a. Supplies and Equipment: Ammunition dump and seven enemy planes, two in good condition, reported H-2174.

b. Intelligence Information Received from Prisoners of War: PW states 17 July elements 26th Assietta Division, 3d Battalion, 30th Regiment moved out of S. CATALDO for PALERMO via CALTANISSETTA and S. CATERINA. PW from 420th Coastal Battalion, vicinity RIBERTA (G-3678), states all Germans reported west of SCIACCA.

c. Intelligence Information from Captured Documents: Captured overlay, prepared by 3d Settore Costiero di Brigata, showing probable plans for invasion, shows following three areas suitable for concentration of counterattack. Force 1: SALEMI (A-9115) - GIBELLINA; Force 2: LERCARA FRIDDI (B-6305); Force 3: GRAMMICHELE (H-5745).

d. Statistics: Estimated prisoners to date: 26,000 and about 6500 enemy killed and wounded.

4. ENEMY CAPABILITIES.

(1) To defend on general line CALTABELLOTTA (G-38) - BIVONA (G-59) - VALLEDOLMO (B-80) - HILL 1332 (C-20).

(2) To withdraw to the northwest to the general areas SALEMI (A-91) - GIBELLINA (B-11), and LERCARA FRIDDI (B-60), and from those areas dispose for final defense.

(3) Same as (2), accompanied by delaying action in ENNA area.

No. (3) is favored. Elements of the 15th Panzer Division (specifically 3d PGR), are identified in the ENNA area. Contact in the western portion has been lost, and advance of our forces has been delayed principally by demolitions of roads and bridges. No movement of appreciable size, other than a column moving northwest toward CASTELVETRANO from the SCIACCA area, has been noted in this period in the Seventh Army zone. Laterally, movement has been observed from CORLEONE to the east.

G-2 PERIODIC REPORT

No. 11

Map - G.S.G.S. 4164, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally MENFI (G-1990) - SAMBUCA (G-2195) - BIVONA (G-5091) - S. STEFANO (G-5592) - CASTRONOVO (G-6598) - VALLELUNGA (G-8598). ALIMENA (H-1099) - LEONFORTE (H-3493).

b. Defensive Organization: No organized resistance was encountered in 7th Army zone of operations.

c. Identifications (Not previously reported): Elements of the 386th Bn of the 202d Coastal Division identified in SCIACCA area.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: No opposition was encountered by our forces with the exception of 2 R-35 tanks at Vallelunga (G-8798) and three Italian Cos in the SE vicinity of that town. Enemy artillery fired from vicinity G-7195 and the impact landed at G-7185.

b. Minefields: Reported East and West of RIBERA (G-3578) on highway 115. Removed by our troops. Minefield reported vicinity G-2178.

c. Demolitions: Air reports girder bridge on main road at G-7295 is out.

d. Anti-Aircraft: Light anti-aircraft, heavy caliber over Villabate (B50&0). Light AA Northeast of Calstelvetrano. No AA South of Corleone B-3813; intense heavy AA at Leonforte H-3&9&.

3. MISCELLANEOUS.

a. Statistics: Killed and wounded to date 6,600; PW 27,000; total 3&,600. Material captured or destroyed 196 aircraft, 86 tanks all types, 139 guns, 75-mm or larger.

b. Enemy Materiel: Military and civilian store houses ordered destroyed by Italian High Command were turned over intact in Caltanissetta when town was taken.

c. Air Reports: Much activity on road running both ways between ASSORA (H-3792) and NICOSIA (C-3505); no foot troops up to NICOSIA. Gun emplacements at H-2594; 50 German fighter planes observed on airfield G-1692; no personnel observed.

4. ENEMY CAPABILITIES.

(1) To withdraw to west of bank of BELICE River and defend on general line CAP GRANITOLA (G-58) - CASTELVETRANO (F-99) - GIBELLINI (B-11) - ROCCAMENA (B-21) MARINEO (B-43) - CACAMO (B-72).

(2) To defend along general line BELICE RIVER (G-09) to (B-1005) - M. BARRACU (B-4&05) - VALLEDOLMO (B-8505) - NICOSIA (C-30).

(3) To defend on general ridge CAPE S. VITO LA CAPO (A-85) - LE ROCHE (A-92) - S. NINFA (B-01) - BISACQUINO (B-30) - CIMMINA (B-62).

(4) Delay in successive positions along line Cap #2, #1, and #3 in that general order.

No. (4) is favored.

From : 202400B Jul 43
To : 212400B Jul 43
Issuing Unit : Seventh Army
Place : In the Field

G-2 PERIODIC REPORT

No. 12

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally GRANITOLA (G-8187) - CASTELVETRANO (F-9398) - S. MARGHERITA (B-1100) - PALAZZO (G-4598) - CASTRONUVO (G-6598) - VALLELUNGA (G-8598) - ALIMENA (H-1099) - AGIRA (H-4795).

b. Defensive Organization: No organized defense encountered.

c. Identifications (not previously reported): 126th Provisional Mortar Bn. 102d Bn, 131 Regt in area north of VALLELUNGA. PWs of the 29th and 30th Inf Regt and 2d Bn, 6th Inf Regt normally of the 26th Division, claim that these units are attached to the 26th Division.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Some enemy resistance was encountered on our eastern (II Corps) front, but in the other zones of the Seventh Army no organized resistance was encountered. Advance on CASTELVETRANO was slowed up by the destruction of bridges.

b. Armor: 15 enemy tanks were reported moving north out of ALEMINA (H-1099) at 0600.

c. Artillery: 2 guns east of road ALEMINA (H-1099) - LOCATI (C-0704) were observed firing on our troops.

d. Air: 2 ME-109's were flying at 2000 feet eastwards over ALEMINA at 1010 apparently on reconnaissance. The road PETRALIA (C-0811) to NICOSIA (C-3505) reported heavy traffic moving east; another report said that the traffic on that road was both ways. Comment: Shuttling may be indicated thereby.

3. MISCELLANEOUS.

a. Statistics: The estimated total of enemy prisoners is 28,900, up to 212400B Jul, and the killed and wounded amount to 6620. The total score of destroyed or captured material is: 226 airplanes, 139 77-mm (and larger) guns, 114 tanks of all types.

b. Marking of enemy vehicles: Friendly air has been instructed to attack motor vehicles marked with white circle and star if they are beyond our bombline and not yet definitely identified as ours.

4. ENEMY CAPABILITIES.

(1) To defend along the general line GRANITOLA (G-8187) - SALEMI (A-91) - PALAZZO (G-4598) - CASTRONOVO (G-6598) - VALLELUNGA (G-8598) - ALIMENA (H-1099).

(2) To defend along line (1) and delay in successive position in the direction of PALERMO.

(3) Same as (1) and defend the corridor between the line CASTRONOVO (G-6598) - VALLEDOLMO (B-8505) - ALIMENA (H-1099) and the north coast.

Capability number (3) is favored.

From PW identifications it is indicated that elements of the 28th Division (initially in the PALERMO - TRAPANI - MARSALA area) have reinforced the 26th Division. It is also indicated that remnants of the 54th (initially opposing and destoyred by the Eighth Army) have been moved to the west (being now with the 26th Division). This tends to confirm the belief that the Italians are massed under Italian command charged with the defense of the northwestern part of SICILY. By the execution of numberous road demolitions (including some close in to PALERMO), and ones not under pressure of our advance, a clearly defensive attitude is indicated.

It must be presumed that the capture of PALERMO will be resisted with the means at hand. However, should this be a token resistance some plan is no doubt evolved whereby the Italian troops still in the west may be moved to the northeast corner for the defense of MESSINA. All indications are that the Germans are so disposed as to organize a defensive position along the general line SAN STEFANO (C-33) - NICOSIA (C-30) - REGALBUTO (H-59) - PATERNO (H-82) - CATANIA and it may be anticipated that the corridor referred to in capability number (3) will be kept open as long as possible to evacuate troops and supplies from the west should the PALERMO forces fall.

Should PALERMO fall it is presumed that the forces in the western part of the island may capitulate if movement to the east is denied.

Place : In the Field

G-2 PERIODIC REPORT

No. 13

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: With the break through to the north coast of SICILY in the western zone of Seventh Army, the enemy front line in this area would be generally MAZZARA DEL VALLO (F76) to north western edge of PALERMO. In the eastern zone the enemy line is from TERMINI IMERESE (B-7432) - PETRALIA (C-0812) - ALIMENA (H-1099) - LEONFORTE (H-3594).

b. Defensive Organization: No organized defensive encountered in the western zone while in the eastern zone of Seventh Army, advance was made against continued light enemy opposition.

c. Identifications: 28Oth Cavalry Troop, 11th Cav Regt; 102d Bn, 131st Regt in AREA ROCCOPALUMBA (B-6812) - CEFDA (B-8524), 21 July. 4 Btry, 12 Arty Bn (Corps Arty) in area ROCCOPALUMBA (B-6813) - NICOSIA (B-3505), 21 July. 17 Blackshirt Legion ALIMENA area (C-1010). 259th MG Co, (DS from 26th Div) used to reinforce 207th Coastal Division. Headquarters Sixth Army reported to be NOVARA DI SICILIA (G-9935). 3d Co, 3d Bn, Regt Fullriede, 2 kms south BOMPIETRO (C-0905), 22 July. Also,1st Bn, FGR (29th Mtn Div) reported at AGIRA (H-49), on 21 July, by Eighth Army.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Opposition to the advance of Seventh Army was light during period. Slight increase in enemy artillery fire took place between ROCCAPALUMBA (B-6812) and LEONFORTE (C-3393). The 28th Aosta Division is disposed in defensive position generally along the line CALTAVUTURO (B-9014) - PETRALIA (C-0812), thence southeast to LEONFORTE (H-3493) engaged in the defensive action.

b. Concentrations: Germans are concentrating between REGALBUTO (H-5795) - CATENANUOVA (H-6186).

c. Demolitions: Artillery fire reported falling VILLAROSA (H-1587), at 221200B July.

3. MISCELLANEOUS.

a. Statistics: Estimated enemy killed and wounded to date: 6,800. PW's, 36,000. Total 42,800. Materiel captured or destroyed: 226 A/C; 140 tanks, all types; 147 guns, 75mm or larger.

b. Air Reports: 300 vehicles moving west CESARO (C-6417) at 220730B hours. 70 vehicles moving west RANDAZZO (C-8120) - NICOSIA (C-3505) road before noon.

c. Information from Prisoners of War: Germans moved ALIMENA (C-1099) to PETRALIA (C-0811), 20 July. States 30 tanks and some artillery in the column. Destroyed bridges behind them. Left Italians holding high ground south of ALIMENA. Prisoners of War from 3 PGR states 15 Panzer has 30-40 tanks.

4. ENEMY CAPABILITIES.

a. West of Palermo: As the fall of Palermo was reported without details of units captured or surrendered, the situation in the western part, viz: MAZARO DEL VALLO (F79) - MARSALA (F61) - TRAPANI (A63) - ALCAMO (B03) - PARTINICO (B23) is obscure. Sporadic and isolated centers of resistance may be expected in those areas.

b. East of Palermo: (In Seventh Army Area)

(1) To withdraw to the east of general line S. STEFANO (C33) - NICOSIA (C30).

(2) To defend on general line CEFALU (C03) - GANGI (C11) - NICOSIA (C30) - AGIRA (H19).

(3) To delay in successive positions at position along line in capability (2), pivoting on AGIRA and final position along line in capability (1).

Capability No. (3) is favored. By movements to the northwest noted some days ago, it became apparent that the general line S. FRATELLO (C53) - TROINA (C50) - CENTURIPE (H69) - CATANIA (H97) might become a final defensive line with organized defensive positions. Stubborn resistance to the Eighth Army advance in the south portion tends to confirm this. Sufficient time has elapsed to permit organization of the ground in the northern sector. The element of surprise of the landing prevented organized inland defense, and it may be anticipated that none now will exist until that line is reached.

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: B-8030 - CALTAVUTURA (B-9013) - PETRALIA (C-0813) - H-1894 - LEONFORTE (H-3595).

b. Defensive Organization: No organized defensives encountered in the western zone of the Seventh Army while slight resistance was met in the central zone south of NICOSIA (C-3506). Highways entering PALERMO within area heavily mined and large craters at critical points. The enemy has been extensively sabotaging their fuel, ammunition dumps and equipment.

c. Identifications: Rcn Bn of the 29th Motorized Div (Gerbini M77) 23 July reported by the British. New location of previously identified units. Elements of 26 Assietta Div reported moving on highway 120 probably vicinity of PETRALIA (C01). PW states the 10th Motor Transport Regt was at CORLEONE (B3813) on or about 20 July.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Extensive demolition of road bridges, construction of AT ditches and road blocks on CALTAVUTURO - TERMINI road and PETRALIA - ALIMENIA road. Opposition to the advance of the Seventh Army was light during period. Slight increase in enemy resistance is being made southeast of TERMINI IMERESE, our troops in BOMPIETRO (C0905) received artillery fire. Italian parachutists of 111th Co, 10th Regt landed at H0737, 20 July for bridge and RR demolitions. Captured H0638 at 231500B.

3. MISCELLANEOUS.

a. Statistics: Estimated enemy killed and wounded to date: 6,840. PW's 48,000. Total: 54,840. Materiel captured or destoyred: 227 A/C; 140 tanks, all types; 197 guns, 75mm or larger, exclusive of material captured PALERMO and west. Enemy ammunition dumps located at C33964. Size estimated at 200 tons (approx.). Have taken prisoner at PALERMO, General Giovanni Marciani, Commanding General of all Coastal Defenses in Western Sicily.

b. Air Reports: Intense light accurate AA east of TERMINI (C7432). Air observation north and east of PETRALIA (C0812), CASTELBUONO (C0826) indicates considerable troop movement in this area with the RJ at NICOSIA (C3408) as a key crossroad. One JU 88 shot down 25 miles NW GELA.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

4. ENEMY CAPABILITIES.

(1) To defend on general line CEFALU (C03) - GANGI (C11) - NICOSIA (C30) - AGIRA (H19).

(2) To withdraw east of the general line S. STEFANO (C33) - NICOSIA (C30).

(3) To delay in successive positions from line in Capability (1), pivoting on AGIRA, with final position along line in Capability (2).

(4) To counterattack with the 15th Panzer Division and/or the 29th Motorized Division in the vicinity of LEONFORTE (H39) in the general direction CARLIANO (CL0) - CALASCIBETTA (H28).

Capability No. (3) is favored, implemented by Capability (4). Recent movements to the northwest indicate that the general line S. FRATELLO (C53) - TROINA (C50) - CENTURIPE (H69) - CATANIA (H97) might become a final defensive line with organized positions. Stubborn resistance to the Eighth Army advance in the south portion tends to confirm this. Sufficient time has elapsed to permit organization of the ground in the Northern Sector. The surprise of the landing prevented organized inland defense, and it may be anticipated that none now will exist until that line is reached. The counterattack capability is discounted because of the lack of sustaining support and its vulnerability to encirclement by the US 1st Division and the British 30th Corps.

G-2 PERIODIC REPORT

No. 15

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: B9335 - B9725 - C2043 - C3203 - NICOSIA C3506.

b. Identifications: All three Bns of 3rd PGR (German) were identified in area north of ALIMENA (C-10) - LEONFORTE (H-39).

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Seven Italian parachutists landed at H-0737 on July 20, and were captured H-0438 at 231500B. Their objectives were bridge and railroad demolitions and were identified as the 111th Co., 10th Regt. (Italian).

Prisoners of War reported three Bns in area C-0807 were moving north during night 22 - 23 July.

Prisoners of War confirms reconnaissance by Germans on 22 July in area CASTELBUONO at C-0826.

b. Photo Interpretation: Photo Interpretation shows seven GO 242 gliders on beach 2½ miles west of Cape PZLORO (C-46) at 231030B.

c. Air: 50 truck convoy going east between NICOSIA (C-3605) and TROINA (C-5310) at 240645B.

3. MISCELLANEOUS.

a. Chemical Warfare: Chemical Warfare examination of German and Italian CWS documents and dumps indicate no stocks of toxic chemical agents and no indications of their proposed use.

b. Possible Sabotage: At 240400B railway cars broke loose above LICATA (0933) and rolled down grade into ammunition cars resulting in fire and damage.

c. Prisoners of War: Major General Dosero Antonio was taken prisoner by the 82d Airborne Division. Only three days ago, he had been sent to Trapani to take command. Strong anti-Fascist. Commanded Alecci Division before arrival in Sicily. Admiral Guiseppe Manfredi has also been taken prisoner by the 82d Airborne Division. He commanded the Naval Defenses of Western Sicily with Headquarters at Trapani which command he relinquised in favor of Major General Sodero Antonio.

4. ENEMY CAPABILITIES.

(1) To defend on general line CEFALU (C03) - GANGI (C11) - NICOSIA (C30) - AGIRA (H19).

(2) To withdraw east of the general line S. STEFANO (C33) - NICOSIA (C30).

(3) To delay in successive positions from line in Capability (1), pivoting on AGIRA, with final position along line in Capability (2).

(4) To counterattack with the 15th Panzer Division and/or the 29th Motorized Division in the vicinity of LEONFORTE (H39) in the general direction CARLIANO (CL0) - CALASCIBETTA (H28).

Capability No. (3) is favored, implemented by Capability (4). Recent movements to the northwest indicate that the general line S. FRATELLO (C53) - TROINA (C50) - CENTURIPE (H69) - CATANIA (H97) might become a final defensive line with organized positions. Stubborn resistance to the Eighth Army advance in the south portion tends to confirm this. Sufficient time has elapsed to permit organization of the ground in the Northern Sector. The surprise of the landing prevented organized inland defense, and it may be anticipated that none now will exist until that line is reached. The counterattack capability is discounted because of the lack of sustaining support and its vulnerability to encirclement by the US 1st Division and the British 30th Corps.

G-2 PERIODIC REPORT

No. 16

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: C-1635 - CASTELBUONO (C-0826) - C-2410 - NICOSIA (C-3506) - AGIRA (C-4695).

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Enemy drove 26th Infantry (1st Div.) from hill 937 (C-2710) on morning of 25 July, but counterattack restored the position. In other sectors enemy resistance is light with rear guard action continuing.

b. Air: Between 0645 and 0735, vehicle columns, some as large as 30, noted on North coast road and CAPE ORLANDO - RANDAZZO - CESARO road. 60 vehicles were noted in PALTI (C-8549) area. Light inaccurate A.A. at C-4012. Very intense, light and medium A.A. at C-9350, D-1000, D-0225, C-7210. Light, mobile A.A. at C-5120. Several gun positions noted at D-1158 and C-7080. Railroad bridges at BROLO (C-7251) bombed and destroyed.

c. Naval: Fourteen unidentified vessels, four of which believed to be cruisers, reported off CAMPO FELICE (B-9032). Threat of enemy landing in rear delayed advance of 45th Division. Check on identity of ships in progress.

3. MISCELLANEOUS.

a. Prisoners of War: General Conti Egisto and Chief of Staff captured by Rangers. Maj. General Molinero Giovanni, Maj. General Marciani Guiseppe, Brig. General Aguo, Consul (Brig. General of Militia) Allori and one unidentified General captured by 3d Division.

4. ENEMY CAPABILITIES.

(1) To defend on general line POLLINA RIVER (C-1535) to GERACI - SICULO (C-1317) - GANGI (C-1811) - NICOSIA (C-3505) - AGIRA (H-4695).

(2) To withdraw east of the general line S. STEFANO (C-33) - NICOSIA (C-30).

(3) To delay in successive positions from line in Capability (1), pivoting on AGIRA, with final position along line in Capability (2).

Capability No. (3) is favored. Recent movements to the northwest indicate that the general line S. FRATELLO (C-53) - TROINA (C-50) - CENTURIPE (H-69) - CATANIA (H-97) might become a final defensive line with organized positions. Unconfirmed reports of reinforcements arriving along the Northern coast in this sector emphasize the probability of determined resistance by the enemy in this sector as our forces move east.

G-2 PERIODIC REPORT

No. 17

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: C-1635, C-2412, LEONFORTE (H-3494), H-4892.

b. Defensive Organization: Civilian informant, considered very reliable, arriving at NICOSIA (C-3506) at 261400B, reports Germans in position east of CICERA, vicinity (C-2709) enemy caves. Approximately two companies in this area at 260500B. Supplied by trail from the main road to hill 807. West of SPERLINGA (C-3107), Germans digging in all night on hill 794 (C-3108), hill 776 (C-3202), and hill 749 (C-312063).

c. Identifications: Six PW's taken from a small boat, vicinity of C-0137, were from Flak Bn. 334, Italian. Enemy tanks and armored cars still West NICOSIA (C-3506) at 261300B hours. Probably rear guard battle group 15 Panzer Div., German.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Our 91st Rcn, at VILLAROSA (H-1587), was strafed 251400B by six planes, believed to be ME 109's. Enemy blew bridges at C-0536 and C-1327. Enemy's counterattack on hill 937 repulsed and hill reoccupied. Fourteen vessels, four of which believed to be cruisers, off CAMPO FELICE (B-9032); identification unknown, 262230B. At 260830B, reports indicated that N.E. out of NICOSIA (C-3506), 12 vehicles with field pieces were moving N. at C-365214, at 260735B. Ten vehicles towing guns, appeared to be 88-mm guns, going N.E. at C-311214, at 260750B. Indications of additional reinforcements observed by air rcn. at 261330B were 22 M/T at CATANIA, and one large ship and ten barges at 0233L. Three barges and one ferry moving N. from MESSINA (D-3757) and REGGIO (D-4446). Many barges on beach at 262000B.

b. Artillery: II Corps reports positive proof Germans have a 240-mm rocket, which may be confused with long-range heavy artillery. Artillery fire reported at C-2819.

c. Air: Report light traffic from CESARO (C-6316) to TROINA (C-5310). Heavy flak encountered at PATTI (C-8549), 261500B. Heavy traffic road between REGALBUTO (H-5795) and LEONFORTE (H-3343), 261600B July.

3. MISCELLANEOUS.

a. Statistics: Total PW's to date: 58,000. Enemy dead and wounded: 7,100, and total tanks: 166.

b. Although not officially confirmed, MUSSOLINI reported resigned at 252200B, and Marshal BADOGLIO reported as successor(*).

4. ENEMY CAPABILITIES.

(1) To defend on general line POLLINA River (C-1535) to GERACI - SICULO (C-1317) - GANAI (C-1811) - NICOSIA (C-3505) - AGIRA (H-4695).

(2) To withdraw east of the general line S. STEFANO (C-33) - NICOSIA (C-30).

(3) To delay in successive positions from line in Capability (1), pivoting on AGIRA, with final position along line in Capability (2).

Capability No. (3) is favored. Recent movements to the northwest indicate that the general line given in Capability (1) considered enemy outpost line of resistance. Line in Capability (2) considered main line of resistance, with area eastward to defensive line S. FRATELLO (C-53) - TROINA (C-51) - REGALBUTO (H-59) - CATANIA.

KOCH
AC of S, G-2

(*) - The release of the Government controlled by MUSSOLINI to Marshal BADOGLIO has significance of undetermined character at this time. By interrogation of high-ranking Army and Navy officials, who in a number of instances refused detailed interrogation by the undersigned, showed no reluctance in voicing their disgust for MUSSOLINI personally and the Fascist Party and Government.

The Psychological Warfare Sub-Section of this Section has requested policies to be followed reference that turn of events, and pending such advice, the reactions of higher authority cannot be given.

It is historical that BADOGLIO was relieved by MUSSOLINI some time ago. Some reasons included his military popularity, which might affect MUSSOLINI'S standing within his Government. If that is considered as an indication, it may be assumed that BADOGLIO has a support of the armed forces which MUSSOLINI was losing and which may attribute to the nature of the defense of SICILY, which definitely was without spirit. Should that be the case, it may be further assumed that Italian resistance encountered henceforth may be greater, particularly after the fall of SICILY.

The local population of PALERMO reacts very favorably to the change. Newspapers and radio, the former of which is operative, and the latter, which will be operative in the matter of a few days, are being held pending polices to be announced by higher headquarters.

THIS PAGE IS DECLASSIFIED IAW EO 13526

b. Defensive Organization: Enemy MG and Inf on south slope of hill 1333 vicinity C-2306. Our patrols met small arms fire on approaching point C-2307. Also engaged with small arms fire at C-2509.

c. Identifications: No new identifications.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Entire coast patrolled by our planes to beyond STEFANO C-3135 all day yesterday. Ships previously thought to be enemy craft off Campo Felici (B-0732) are identified as friendly mine sweepers. No enemy Navy present. 1st Div sector contactin rear guard action by enemy with considerable movement North and Northeast out of NICOSIA (C-3506). Enemy resistance in vicinity. Inf OP reports enemy withdrawing this area. 30 German PW's were captured vicinity hill 987 C-2400 and were isolated and pocketed in caves. PW indicated 500 to 600 Germans SPERLINGA (C-3207 and NICOSIA C-3506 area. 10 light tanks and 2 heavy guns east of SPERLINGA C-3207. Enemy resistance on northern flank increasing. Column 30-40 vehicles including tanks and halftracks with trailers at C-9821, 20-30 were destroyed. Visual Recn of MARETTINO A33 and FAVIGNANA A52 islands reveal no activity or emplacements. 271215B very little shipping MESSINA STRAITS (D-3555). Intensive flak over town. 5 ME 210 over 1st Div area dropping delayed action bombs. No material damage, one bomb dropped by four JU 88's at C2112.

b. Artillery: Four batteries observed at C-3109, C-2711, C-3008 and C-2906.

c. Air: Four twin motored planes believed to be JU 88's dive bombed II Corps front line at 271820B. Damage not known.

3. MISCELLANEOUS.

a. Statistics: Total PW's to date: 60,900. Enemy dead and wounded: 7,027 and total tanks: 169 captured or destroyed.

4. ENEMY CAPABILITIES.

(1) To defend West of general line MOTTO D'AFFERMO (C-33) - CASTEL DI LUCIO (C-22) NICOSIA (C-30) - AGIRA (H-49).

(2) To defend on high ground East of S. STEFANO (C-33) - MISTRETTA (C-22) - NICOSIA (C-30) - AGIRA (H-49).

(3) To delay in successive positions, first position as capability (1), second position as capability (2) working back along ridges to general line S. FRATELLO (C-35) - TROINA (C-51) - REGALBUTO (H-59) - CATANANUOVA (H-68).

Capability (1) is favored.

The identification of units of the 29th Motorized Division on the North flank now opposing our 45th Division plus activities including digging in West of NICOSIA (C-30) indicates a defensive attitude. An early study made of the terrain and indications of moving into but rarely out of the area bounded on the East by the line S. FRATELLO (C-35) - TROINA (C-51) - REGALBUTO (H-59) leads to the conclusion that an organization of defensive positions has been taking place for about ten days with rear guard action opposing our advance from the general line PALERMO (B-4546) - ENNA (H-2586). From captured documents in which it is ordered by the Italians that animals be requisitioned for the use of remnants of the 26th and 28th Divisions it may be anticipated that many and scattered small groups of resistance will be encountered in the rugged terrain in the zone of advance of the Seventh Army. From the enemy viewpoint, main lateral roads connecting S. STEFANO (C-33) - NICOSIA (C-30) - S. FRATELLO (C-35) - CESARO (C-62) and CAPO D'ORLANDO (C-65) - RANDAZZO (C-82), form principal cross corridors and so lend themselves well to organized defense.

The defensive zone may, therefore, be assumed to consist of an outpost line of resistance West of S. STEFANO (C-33) - NICOSIA (C-30) road with an organized main line of resistance East of it and close enough to it to deny that road to the Seventh Army once it is denied to the enemy. It may further be assumed that the area bounded by the road network S. STEFANO (C-33) - S. FRATELLO (C-35) - TROINA (C-51) - NICOSIA (C-30), lends itself well for organization of a defensive position in depth. Photo reconnaissance of these areas has been made and will be published as collated maps as of 2h00B 27 July. Thereafter, constant photographic missions will be flown of the zone of advance to determine the exact locations of the anticipated defenses.

G-2 PERIODIC REPORT

No. 19

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along line C-2534 - NICOSIA (C-3606) - AGIRA (H-4095) - CATENANUOVA (H-6186) to a point south of CATANIA at H-9670.

b. Defensive Organization: No organized defense encountered during period. Civilian informant reports road net in the S. STEFANO (C-3035) area has considerable enemy fortifications, including pillboxes and three 90-mm self-propelled guns.

c. Identifications: (1) German. 17 prisoners taken east of NICOSIA (C-3505) July 27, from 1st P.W.H., 15th Armored Division. (2) Italian. 6th Company 71st Regiment (Battalion CP at S. STEFANO (C-3035). PW taken vicinity TUSA (C-2132) states his battalion moving up from MESSINA (D-3655). 6th Regiment, 28th Division (450 Italians taken prisoner July 27) in general area C-2713.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Generally light resistance along the entire Seventh Army front, with blowing of bridges and placing of mines in front of the bridges contributing most of the delay. Reports received of German soldiers in civilian clothes sniping in rear area.

b. Artillery: Enemy 170-mm gun believed to be located at C-3837, 271637B hours. Air reports heavy gun emplacements appear to be at C-7822 at 281000B hours. Battery of 88-mm along coast road east of TUSA (C-2132) at 272h00B hours.

c. Air: Air reports heavy traffic from TROINA (C-5410) to RANDAZZO (C-8320) morning of July 28; also light traffic between S. STEFANO (C-3136) and PATTI (C-8549) at 280630B hours. Concentration of 150-200 MT in and around CESARO (C-6316) at 280630B hours. Air reconnaissance reports general movement towards the east as far as RANDAZZO (C-8320). Enemy air activity increased over forward area zone of Seventh Army. Twenty planes reported between 2300B and 2h00B July 27.

3. MISCELLANEOUS.

a. Information from Prisoners of War: PW states on July 27, 2d Battalion, 1st F.U.M. completely destoyed; also that 20 Italians had been shot that day for refusal to fight.

b. Captured Materiel: Dumps containing substantial quantities of four type large caliber rockets located at H-220615. Ordnance investigation in process and report will follow.

c. Supply Route: Indications are that enery is supplying a large proportion of the troops in Northeastern SICILY by sea to MESSINA (D-3655), then via coast roads toward CATANIA (H-9680) and S. STEFANO (C-3035).

d. Roads: Coastal road vicinity CASTEL di TUSA (C-2235) blocked by landslide believed from natural causes.

4. ENEMY CAPABILITIES.

(1) To defend along the general line west of S. STEFANO (C-33) - MISTRETTO (C-26) - M. MERCAVANTE (C-3807) - AGIRA (H-49).

(2) To defend high ground east of general line in capability (1).

(3) To delay in successive positions with first position general line as capability (1), the second position as capability (2) falling back over North-South cross ridges to general line S. FRATELLO (C-35) - TROINA (C-51) - REGALBUTO (H-59) - CANTENANUOVA (H-68).

Capability (3) is favored.

The interest of the 29th Wtz Division, accompanied by reports of defenses being erected and demolitions being executed manifests concern of the threat against the northern flank. The continuous bombing of motor convoys must play an important part in the retrograde movement affecting supplies. It may be deduced that the forces opposing the Seventh Army are hard pressed in their front and lack support from their rear, and that supply lines are being shortened by delaying actions to the east.

KOCH

G-2 PERIODIC REPORT

No. 20

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along line C-2735 - West of MISTRETTA (C-26) - C-4010 - C-4500 - CATENANUOVA (H-6186) - H-8074 to a point south of CATANIA at H-9672.

b. Defensive Organization: Entrenched infantry encountered coastal area west of S. STEFANO (C-3036). Minefields located at C-326030 and four road craters at same location.

c. Identifications: (1) German. 12 Co, 15th PGR south of MISTRETTA (C-3226); 2d Bn, 71st Regt west of S. STEFANO (C-3036). (2) Italian. 171st Blackshirt Bn in coastal area west of S. STEFANO (C-3036).

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Increased resistance encountered west of S. STEFANO (C-3036) as far south as MISTRETTA (C-3226). In the southern zone of the Seventh Army, patrols encountered no resistance north and northeast of NICOSIA (C-3505) during night 28/29 July. SPERLINGA (C-3107), NICOSIA (C-3505) and AGIRA (H4695) are clear of enemy troops. A general retirement east and northeast is in process. Bridge blown at C-297090 in withdrawal. Germans are reported to have pulled out rapidly from SPERLINGA (C-3107) leaving many Germans dead, considerable equipment and German graves. Three battalions of German infantry withdrew through NICOSIA (C-3505) during the night and early morning of July 28/29. Isolated groups of Germans now reported east and southeast of NICOSIA (C-3505). A typical German trick of waving a white flag in surrender and then firing on our troops in their approach has been employed north of LEONFORTE (H-3494).

b. Armor: It is reported that in withdrawing through NICOSIA (C-3505) the Germans had five tanks and three armored cars. Three or four tanks reported moving northeast on road (C-3850099) at 282015B hours.

c. Artillery: Three light batteries, one heavy battery, six rocket guns and four 88-mm guns were withdrawn through NICOSIA (C-3505) during the night July 28/29.

d. Air: Enemy air activity decreased during period. Air reconnaissance within Seventh Army zone as far east as MILAZZO (D-0959) morning of 29 July reports light traffic, no definite direction.

3. MISCELLANEOUS.

a. Information from Prisoners of War: PW states that 50% of 28th Aosta Division (Sicilians) have returned to their homes, and that he believes its strength now less than 50%.

b. Captured Material: Fourteen German rubber assault boats found in warehouse outskirts of PALERMO.

4. ENEMY CAPABILITIES.

(1) To defend high ground east of general line S. STEFANO (C-33) - MISTRETTO (C-26) - M. MERCAVANTE (C-3807) - AGIRA (H-49).

(2) To continue delaying tactics in the S. STEFANO (C-3135) - M. MERCAVANTE (C-3806) - TROINA (C-5209) - S. FRATELLO (C-5336) area retarding our advance by possible local counterattacks from the northeast.

(3) To initiate a general withdrawal east to a general line S. FRATELLO (C-35) - TROINA (C-51) - REGALBUTO (H-59) - CANTENANUOVA with rear guard action.

Capability (3) is favored.

G-2 PERIODIC REPORT

No. 21

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along line C-2734 - East of MISTRETTA (C-3225) - west of CAPIZZI (C-4216) - C-4300 - H-5396 - CATENANUOVA (H-6186) - H-8074 to a point south of CATANIA at H-9670.

b. Defensive Organization: Road blacks encountered along north-south road into S. STEFANO (C-3036), 2 km south of town. Estimated one battalion entrenched in caves along general line C-3955G2 - C-3751L3. Civilian reports that Germans are preparing defenses along line S. AGATA (C-5541) - S. FRATELLO (C-5236) - CESARO (C-6316). Bridges destroyed 1000 yds east and west of S. STEFANO (C-3036) on coast road.

c. Identifications: (1) German. PW taken on the coast confirms presence of 71st Infantry in S. STEFANO (C-3036) area.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Continued resistance encountered west of S. STEFANO (C-3036). Enemy forced to withdraw northeast from MISTRETTA (C-3226). Intense rear guard action in progress east and northeast of NICOSIA (C-3505). At 301530B, it is reported that 200 Germans are covering the town of GAGLIANA (C-4701). Islands off west coast of TRAPANI, FAVIGNANA, MARETTIMO, LEVANZA, capitulated 29 July.

C-37

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

b. Artillery: Self-propelled guns reported vicinity CERAMI (C-4513). Approximately one battalion of artillery is in action against our forces in the S. STEFANO (C-3036) area, firing has been accurate and effective. Four coastal defense guns mounted on railway flat cars were inspected on the outskirts of PALERMO 29 July on siding at TOMMASO NATALE (B-3855). Civilian states they arrived 22 July. The train consists of two locomotives, four guns, 2 each, 152-A91, 1895; 1 each, 152-40A, 1899, and 1 each, 152-A99, 1903 and one carload of ammunition.

c. Photo Interpretation: Probable bivouac area in woods northwest CESARO (C-6313) with the appearance of wire near main road surrounding the woods. Light motor transports moving in and out. Air photos indicate 29th aircraft of all types, majority being fighters, on twelve southern Italian airports 21 July.

d. Air: Moderate heavy A.A. encountered over CESARO (C-6316) area July 29. 40 motor transports moving east from TROINA (C-5310) - CESARO (C-6316) at 301250B hours. Enemy plane dropped two bombs northwest COMISO airport (H-5416) at 232230B hours.

3. MISCELLANEOUS.

a. Statistics: 823 prisoners, mostly Italian, taken during occupation of NICOSIA (C-3935). Estimated total PW taken to date by Seventh Army, 79,500, by Eighth Army, 27,000; total, 106,500.

b. Captured Material: Numerous artillery pieces are being found in enemy field fortifications with ammunition dumps still intact.

c. Ordnance: Civilian reports ammunition dumps in vicinity S. AGATA (C-5541), also ammunition dump along highway between CAPO ORLANDO (C-6551) and NASO (C-6947).

4. ENEMY CAPABILITIES.

No change from those given in Periodic Report No. 20 which were:

(1) To defend high ground east of general line S. STEFANO (C-33) - MISTRETTA (C-26) - M. MERCAVANTE (C-3807) - AGIRA (H-49).

(2) To continue delaying tactics in the S. STEFANO (C-33) - M. MERCAVANTE (C-3806) - TROINA (C-5209) - S. FRATELLO (C-5336) area retarding our advance by possible local counterattacks from the northeast.

(3) To initiate a general withdrawal east to a general line S. FRATELLO (C-35) - TROINA (C-51) - REGALBUTO (H-59) - CANTENANUOVA with rear guard action.

Capability (3) is favored.

G-2 PERIODIC REPORT

No. 22

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along line east of S. STEFANO (C-33) - REITANO (C-33) - east of MISTRETTA (C-32) - CAPIZZI (C-41) - CERAMI (C-41) - east of GAGLIANO (C-40) - REGALBUTO (H-59) - west of CATENANUOVA (H-68) - H-8074 to a point south of CATANIA at H-9670.

b. Defensive Organization: No organized defense other than blown bridges, minefields, and undefended road blocks encountered along Seventh Army front. Enemy observed digging in east of CERAMI (C-4612) at 311200B hours.

c. Identifications: (1) Italian. Captured documents show four Italian A.A. battalions armed with German 88-mm guns in MESSINA area. These appear to be attached to the German A. A. organization. Organization is as follows: 88 BN (Battery unknown); 89 Bn (11406-7-8, 1501, 1506 Batteries); 90 Bn (1115, 1510, 411-12-13 Batteries); 91 Bn (11414-16-17-18-19 Batteries). In addition, 1403-4-5-9 Batteries are in the MESSINA area. 1409 A.A. Bn has been identified in MESSINA from captured mail. 549 Co., 24th Artillery Regiment identified in the MESSINA area.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Enemy withdrew from S. STEFANO (C-33) during night July 30/31. Town of MISTRETTA (C-33) was also evacuated during night of July 30/31. No contact has been made with enemy along coast road during 31 July. The towns of CAPIZZI (C-41) and CERAMI (C-41) were taken this day. These towns were held by one Company at each place. After stubborn resistance by a German rear guard company, GAGLIANO (C-00) was taken at 311600B. Small mixed units were observed moving northeast from TROINA (C-51) during the day. The enemy continues to evacuate north and east along the entire front of the Seventh Army.

b. Artillery: Enemy artillery moving east continued to interdict our vehicles along coast road.

c. Photo Interpretation: As of 27 July, a total of 283 enemy planes, all types, were identified on twelve southern Italian airports.

d. Air: 65 motor transports moving east-on road from CESARO (C-6316) towards RANDAZZO (C-82) at 310645B hours. Large concentration of personnel observed in bivouac at C-7018 at 310700B hours. 50 motor transports observed moving west with head of column at C-4427 at 311100B hours.

3. MISCELLANEOUS.

a. Statistics: Estimated enemy killed and wounded to date 6,200; aircraft destroyed or captured 235; guns, 75-mm or larger, destroyed or captured 263, and tanks, all types, 181. 200 Italian PW and 40 fully loaded motorcycles taken in the capture of MISTRETTA (C-32).

4. ENEMY CAPABILITIES.

(1) To continue delaying action to a general line S. FRATELLO (C-53) - TROINA (C-51) - REGALBUTO (H-59) - CATANENUOVA (H-68) - CATANIA with local rear guard actions.

(2) To withdraw east to a general line NASO (C-64) - TORTORICI (C-73) - RANDAZZO (C-82) - CATANIA.

(3) To delay in successive positions, first position as shown in capability (1), second as indicated in capability (2) and final position to the eastward, now obscure.

Capability (3) is favored.

Although time has been ample for the organization of defensive positions, photo reconnaissance fails to reveal it. Tactics employed recently are definitely of the delay in successive position type, holding critical terrain as long as possible and then falling back. Just where the final position is cannot be determined. By resting flanks on Mt. Etna, shortening of the front is accomplished but lateral roads are also lost. The attitude is entirely defensive. Appearance of German units in the north indicate the importance attached to the presence of the Seventh Army. PW taken from Italian units still in action are extremely fatigued, as these units continue in action their fighting capacity decreases. As more and more Italian units are destroyed or forced to retire to the rear areas, the 29th German Motorized Division will be forced to extend its front south to join the 15th Panzer. This extension favors further rear guard action east until the enemy opposing the Seventh Army can anchor its southern flank on Mt. Etna. If the line S. FRATELLO (C-53) and CESARO (C-61) is evacuated the only remaining north-south road, NASO (C-64) - UCRIA (C-73) - RANDAZZO (C-82), must be defended.

G-2 PERIODIC REPORT

No. 23

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along the line C3236 East of S. STEFANO (C33) - MISTRETTA (C32) - CAPIZZI (C41) - C4911 - West of REGALBUTO (H59) East of CATENANUOVA (H68) - H8074 to a point south of CATANIA H9670.

b. Defensive Organization: Extensive mining along the coast road East of S. STEFANO (C33) continued. Enemy blew bridge at C4923B6 at 310750B hours. Bridges are reported blown at C4201l6 and C4311l20. Road block reported along coast road at C5334O4.

c. Identifications: (1) German. PW states two battalions are opposing Eighth Army advance from CATENANUOVA. PW officer reports that the 3d battalion carried out unsuccessful counter-attack against 231st Brigade at 311030B hours. Additional 35 PW's from 923 Fortress Bn taken by Eighth Army. 25 PWs captured from 1st and 5th A.A. Btrys attached to HG Division. 2d Co., 29th Engr Bn east of S. STEFANO.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Enemy continues to fight a delaying rear guard action along the coast road east of S. STEFANO (C33). Considerable motor traffic observed moving south from S. FRATELLO (C5336) during the day. Reinforcements in Artillery concentrations in the TROINA (C5310) area during the day slowed our advance toward TROINA (C5310). The CESARO (C6316) - BROWTE (C7210) - RANDAZZO (C8120) area found continuous motor movement. Bivouac area appears to be main concentration area of enemy reserves north of Mount Etna.

b. Armor: Two tanks observed at C4l2373.

c. Artillery: Batteries observed firing C5840l9l and C6340l79 believed to be 170-mm guns. Ammunition captured vicinity C3790l2 believed to be 17-mm.

d. Photo Interpretation: As of 29 July, a total of 257 enemy planes, all types, of which 154 were fighters, were identified on Southern Italy airdromes.

e. Air: German aircraft raided PALERMO (B5546) harbor and docks from 0410B to 0515B August 1st. 25 to 35 planes participated. At least four were shot down; two JU 88's by A.A. fire, and two Dornier 217's by Spitfires. A German aviator picked up the the sea six miles east of PALERMO at 0107.30B hours stated that he was a member of the crew of a JU 88; that 10 JU 88's participated in the raid leaving BARI, Southern Italy, at 0300B, arrived over target at 0400B and were shot down at 0500B. 5 ME 109's strafied S. STEFANO at 0730B August 1st.

3. MISCELLANEOUS.

a. Statistics: Estimated total PW taken by Seventh Army to date: 80,000.

b. Morale: (1) Signor Steiner (a propaganda officer in the Italian Army) who arrived in SICILY from MILAN, informed PWB that Italians are now scrawling the letter "L" on walls throughout ITALY. This stands for "LIBERTA", and is an imitation of our own "V" propaganda.

(2) Interrogations reveal wide-spread reception of PWB radio programs from TUNIS, called "Voice of the United Nations". This daily feature in SICILY has been even more popular than in ITALY where sets have been few and anti-Fascists organised a word-of-mouth dissemination.

c. Prisoner of War Reports: (1) Large minefield C370380 laid July 30. (2) Minefield at C7015l0 laid July 31.

d. Civilian Reports: Germans entrenched S. AGATA (C54) to S. FRATELLO (C547). General outpost line vicinity C430369.

4. ENEMY CAPABILITIES.

No change from those given in Periodic Report No. 22, which were:

(1) To continue delaying action to a general line S. FRATELLO (C53) - TROINA (C51) - REGALBUTO (H59) - CATANENUOVA (H68) - CATANIA with local rear guard actions.

(2) To withdraw east to a general line NASO (C64) - TORTORICI (C73) - RANDAZZO (C82) - CATANIA.

(3) To delay in successive positions, first position as shown in capability (1), second as indicated in capability (2) and final position to the eastward, now obscure.

Capability (3) is favored.

See G-2 Estimate of the Enemy Situation #6 dated 1 August 1943 for long-range capabilities.

G-2 PERIODIC REPORT

No. 24

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: CARONIA (C39) - C5015 - TROINA (C51) - REGALBUTO (H59) - CENTURIPE (H69) - 3 miles east of CATENANUOVA (H68) - H8074 to a point south of CATANIA at H9670.

b. Defensive Organization: Road block reported by air at C5334O4 at 010730B hours. Road north of GAGLIANA (C40) heavily mined and cratered. Minefields reported vicinity C4906.

c. Identifications: (1) German: 1 Bn, 15th PGR, 29th Mtz Division GAGLIANA (C40) area. 2d Bn, 382d PGR GAGLIANA area.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Strong resistance around TROINA (C51) continued all day 1 August and morning 2 August. At dusk August 1, the enemy counter attacked hill at C5018 by an estimated 200 men. Our forces withdrew at 2035B. August 2 our forces were again in contact and receiving small arms and mortar fire in this area. Along the coast road east of STEFANO (C33) only light contact with the enemy. Advance delayed by blown bridges, badly damaged road and heavy minefields.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Air reports railroad bridge at C5A41 and road bridge at C5330B intact at C107CB hours. At 0715B heavy traffic observed moving south on RANDAZZO (C82) - ORLANDO (C65?) - SAN AGATA (C5A) road. At 1030B little traffic some road. Air reconnaissance of roads CESARO (C61) - RANDAZZO and ORLANDO - S. FRATELLO (C53) at C111430B observed little activity and no A.A. Also little traffic on road TROINA to CESARO at 1800B.

b. Artillery: Sporadic artillery fire in TROINA area during night 1/2 August.

c. Air: Enemy air activity increased considerably on traffic and artillery positions. Estimated 40 enemy planes over 1st Division during the day August 1. Air reconnaissance reports 50 invasion barges and one large transport off coast (DL065) at 0211008 hours.

d. Naval: Naval patrols off north coast as far east as CAPE MILAZZO (C07C4) night 31 July, 1 August. Reports no enemy waterborne activity. Lights east side CAPE ORLANDO (C65) noted.

3. MISCELLANEOUS.

a. Statistics: Estimated total PW taken by Seventh Army to date 88,500; enemy dead and wounded 7,000; guns, 75-mm and larger, destroyed or captured 267, tanks, all types, destroyed or captured 101.

4. ENEMY CAPABILITIES.

For enemy capabilities see G-2 Estimate No. 6 dated 1 August 1943.

Continued blowing of bridges and laying of minefields in the north and a movement south of elements of the German 29th Motorized Division indicates a strong defense of the CESARO - BRONTE (C71) - ADRANO (H79) area. Also, the identification of the 3d Parachute Regiment east of CENTURIPE (H69) further emphasizes the importance of this area to the enemy in respect to allied intentions. Captured German documents show the final defensive position of the Herman Goering Division to be along the general line ADRANO - NICCOLOSI (H79) to ACIREALE (J09). On the north coast road, the extent and nature of demolitions is no doubt intended to retard progress only, the main effort inthe Seventh Army zone presumably being anticipated east along Highway 120.

Issuing Unit: Seventh Army
Place : In the Field

G-2 PERIODIC REPORT

No. 23

Map - U.S.G.S. 1264, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along line C5Q23 - C5A18 - C5A16-C4910 - BRONTE - East of CENTURIPE (H69) - H8074 to a point south of CATANIA at H9670.

b. Defensive Organization: Extensive mining and continued blowing of bridges between CAPOMIA (C53) and S. AGATA (C5A) continued along the coast road. Single railway tracks were used in preparing demolitions for bridges.

c. Identifications: (1) German: PW from 8th Co., 71st Regiment, 29th Division taken vicinity C 4437 August 2. PW from 12 Co., 4GR Regiment taken east of S. STEFANO. (2) Italian: 26th Italian Field Artillery reported in MESSINA area. Presence of 12Tht Blackshirt Battalion in coast area vicinity S. AGATA (C5A) confirmed.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Enemy continued delaying action east along coast road to S. AGATA (C5A). Mines and blown bridges delayed our advance but the mining was not extensive as was encountered in the S. STEFANO area. The enemy stubbornly resisted throughout the day around TROINA (C61). Elements southwest of TROINA slowly withdrew in the face of pressure. The enemy apparently built up field artillery concentrations in the general area C6120. At 0216458 heavy traffic was seen on road from TROINA to CESARO (C61), moving west and west. 30 trucks observed moving west on unimproved road between C5727 and C7221 at 0308008 hours. Generally, resistance in the north was light throughout the day. South of C5230 to include TROINA, the enemy is definitely on the defensive with hard infantry fighting throughout the area. In the Eight Army sector the Canadians have taken CENTURIPE (H69) but are making slow progress northeast against the 3rd German Parachute Regiment.

b. Armor: Tanks located at C4981L3 at 0216008 hours.

c. Artillery: Enemy heavily shelled vicinity of C4A83 to C4C4117 at 0418308 hours. Two enemy batteries were located at C5370A4; C5A172 and C4985L5. Rocket gun reported at C507C85. Some heavy artillery fell in the S. STEFANO area from battery believed located at C4937.

d. Air: Two German aircraft were shot down over 1st Division area August 2. Air reconnaissance reports bivouac area located between CESARO (C61) and RANDAZZO (C82) at C7820. One JU 88 on reconnaissance west of PALERMO.

3. MISCELLANEOUS.

a. Statistics: Estimated PW taken by Seventh Army to date 90,500; aircraft destroyed, all types, 238, estimated enemy casualties dead and wounded 7,300.

b. Ordnance: German or Italian egg grenades painted blue around the top were found in the CENTURIPE area. These grenades have no delaying fuse and explode instantaneously as booby traps when knob is pulled. Warn all troops.

d. Captured documents: Document taken from Commanding Officer of 4th Bn, Hq Arty, Herman Goering Division dated 30 July was marked with three lines showing successive stages of withdrawal of the Herman Goering Division. These withdrawal lines were designated A, B and bridgehead position. The bridgehead position runs from M6A5985 to include ALESANDO (H79) and BIANCAVILLA (H79) and then generally east to J0A0904 north of ACIREALE (J09). The two intermediate lines roughly parallel this line at about five mile intervals with line A running just south of CATANIA and line B five miles north. Lines A and B pivot on a point just southeast of CENTURIPE. G-2 Estimate of Enemy strength by units to 31 July as follows:

	HQS	GUNS	TANKS
29th MTZ (G)	6	48	60 T/D
26th ASSIETTA (I)	2	24	
28th AOSTIA (I)	4	24	
15th PZR (G)	6	48	40
4th LIVORNO (I)	2	12	
54th NAPOLI (I)	1		
H. GOERING (G)	3	30	50
MISC. (G)	6	42	
	30	228	150 (100 max)
1 Coastal Division	9	36	18

4. ENEMY CAPABILITIES.

No change. See G-2 Estimate No. 6, 1 August 1943.

The continued defense of the TROINA - CESARO - ADRANO - CENTURIPE area with reinforcements being moved north from CATANIA emphasizes the importance attached by the enemy to the allied threat along Highways 120 and 121. Captured documents reveal a planned withdrawal if forced north of CATANIA. Photographic reconnaissance still fails to reveal a final defensive position.

G-2 PERIODIC REPORT

No. 26

Map - U.S.G.S. 1264, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along the line C5A6 - west of S. FRATELLO (C53) - west of TROINA (C61) - C6300 - east of CENTURIPE (H69) - H8074 to a point south of CATANIA at H9670.

b. Defensive Organization: Railroad bridge was destroyed at C6250. Probable minefields located at RANDAZZO (C5A5) along coastal highway and railroad. Probable minefields also located vicinity southwest of ZAFFULLA (C63A).

c. Identifications: (1) Italian: PW taken vicinity south of TROINA 2 August were identified from Headquarters Co, 6th Regiment, AOSTA Division. Comment: the 6th Regiment AOSTA was reported destroyed by II Corps on 30 July; therefore, these may be stragglers. However, if the units still exist this indicates a southward movement. Other identifications of AOSTA Division remnants are on the north coast. (2) German: 1st Bn, 3d PZR Regiment, 15th Panzer Division reported in vicinity of C5L15. 2d Bn, 3d PZR vicinity C502).

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Our troops moving east along coast road encountered light opposition, mortar and artillery fire. A local counterattack in vicinity of C5112 at 0320308 failed to accomplish its mission. Around the TROINA area, the enemy stubbornly resisted our advance. Generally along the Seventh Army front, rear guard action has been encountered along the coast road with some increase in the use of artillery. South of S. FRATELLO to include TROINA, enemy is retiring slowly but only after hard infantry fighting. Thirty motor transports were observed moving from S. FRATELLO (C53) north to the coast road at 0306038 hours. Approximately 30 motor transports moved south to NASO (C64) on the ORLANDO (C65) - NASO road morning of August 3. Heavy road movements were observed 0316008 both ways between PATTI (C4G) and BARCELLONA (H15).

b. Armor: Ten tanks approximately 22 feet long were seen stationary on road north of BRONTE (C71) at 0310308 hours. Comment: probably Mark VI's. At least five and probably eight tanks were observed on the BRONTE to ADRANO road between C7205 to C7300. Three Mark IV tanks used as self-propelled artillery reported in the TROINA area.

c. Artillery: Considerable artillery fire received in vicinity C4922 at 0313458 hours. A four gun enemy battery fired from position C5330J during night 2/3 August. Gun position believed east of road at C5923. Four probable anti-aircraft guns at C690L observed 0213458 hours. Two batteries, large mortar, supporting 3d PZR in vicinity of C5L910B.

d. Photo Interpretation: At 0312508 hours, photos showed a dump at C7330, bivouac and anti-aircraft guns in vicinity.

e. Air: Our air bombed road at C5823 and C5822. Road is believed temporarily blocked at both places. Air reconnaissance located a fuel or ammunition dump at C7330. Estimated 30 planes plus, raided PALERMO harbor, docks and airfield from 0206L0B to 0620458 causing little damage. One enemy aircraft destroyed by night fighters and three probably destroyed by anti-aircraft. Destroyer Schulrick severely damaged outside harbor.

f. Naval: MILAZZO harbor was empty of shipping at 0207h0B hours.

3. MISCELLANEOUS.

a. Summary of an Interrogation Report, AFHQ, 2 August 1943, is attached as an annex to this report.

b. Information from Prisoners of War: PW states that location of 15th Panzer Division Headquarters still believed to be three miles northwest of BRONTE (C71). A deserter from the 1st Bn, 115th PZR, 15th Panzer Division stated that on the 1st of August his battalion commander held an command that they were to withdraw to MESSINA and then to Sicily leaving one company as rear guard. Route of the withdrawal was to be west and north of Mt. ETNA to avoid naval bombardment on the coastal road. Comment: use of this route has been confirmed by air reports. PW of 3d PZR August 3 stated he had heard orders that officer who withdrew would be shot. PW stated that the position at TROINA is the outpost line of resistance and the main line of resistance is 20 kilometers to the East. Also, the six 75-mm A.T. guns of the 2d Regiment had been withdrawn east to the main line of resistance. Morale is low, food is bad and artillery lack ammunition. PW further stated that PZR 2 is with the German Goering Division, and that PZR 3 relieved PZR 1 at SPERLINGA (C51).

4. ENEMY CAPABILITIES.

(1) To continue delaying action in the north with artillery support and to defend in depth from TROINA (C61) east along Highway 120.

(2) To withdraw to the general line S. FRATELLO - CESARO - ADRANO - CATANIA, deliberately in the north and from S. FRATELLO south, when forced.

(3) To withdraw to the line NASO (C64) - TORTORICI (C73) - CESARO (C61) - ADRANO (H79) - ACIREALE (D09) leaving a shell of Italian units under German control to protect the withdrawal.

Capability (2) is favored.

In the period covered by this report, it is indicated that some movement is taking place. Identification of Italian units on north coast bears some weight in the supposition that Italian units will be used for defensive, and that defensive purpose of considerable minor nature only, such as defending, road blocks, demolitions, etc, and that the German elements will offer the real resistance to the withdrawal.

Inasmuch as there has been no evidence of movement on roads in the past few days it is indicated that the withdrawal may have been taking place over night. Activity in the vicinity of the Straits of MESSINA lends credence to this and the entire action may consist largely of delaying action to cover the evacuation of, particularly, German troops.

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

The rear guard action with reports of prepared demolitions sporadically, indicates that along the north coast major engagement is not to be expected, and that stubborn resistance and defenses astride route 120 is to serve to keep open the line of communication around the base of Mt. ETNA until the evacuation has been completed from that area.

3 August 1943

MEMORANDUM TO : All Staff Sections.

SUBJECT : Summary of Interrogation Report, A.F.H.Q., 2 August 1943.

The following information was obtained by interrogation of two members of a JU 88 shot down off PALERMO, about 0445B, August 1st. The raid started from a field in southern ITALY, with the mission of attacking shipping believed to be west of PALERMO. Planes were armed with 2 500 kg. bombs and carried 10 parachute flares. The Squadron, of which these pilots were part, was to be over the objective at 0440 hrs, at which time they expected the convoy to be west of CAPE GALLO. It crossed ITALY at a height of 6900 feet, crossed a few feet above the sea until nearing PALERMO, and then climbed to 600 feet, noted a large fire in PALERMO, but continued search for their target. Finding no ships they turned northeast to bomb the ships located in the harbor area. About ten miles north of PALERMO a suitable ship was identified but an antiaircraft hit in the left engine caused the crew to bail out. It was assumed that 30 - 35 planes were involved in the operation. Members of the crew believe that Germany will win the war but their morale can only be described as fair. They were gloomy about Germanys' present position in ITALY and were notably bitter in referring to the ITALIANS, and to the resignation of MUSSOLINI, of which they had been told nothing except the fact that he had resigned.

By command of Lieutenant General PATTON:

EDWARD FOX
Major, A.G.D.
Asst Adjutant General

G-2 PERIODIC REPORT

No. 27

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along the line C5240 - S. FRATELLO (C53) - C5022 - C5511 - C5010 - C6300 - H7096 - PATERNO (H88) - north of MISTERBIANCO (H88) - north of CATANIA.

b. Defensive Organization: Enemy tank trap 200 yards along river bed paralleling railroad bridge vicinity C495380.

c. Identifications: (1) German: 8th Co, 71st PGR, 29th Division in S. SGATA (C54) area August 4. (2) Italian: 29th Regiment, 26th Assietta S. FRATELLO (C53) area August 4.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: The enemy continues to fight a rear guard action in the north slowing our advance by liberal use of mines and demolitions. Artillery support in this area has increased. From S. FRATELLO south to MT. PELATO (C4922) the enemy is withdrawing when forced. The line from MT. PELATO south to MT. ACUTO (C5017) is well organized and is strongly supported by heavy mortar and artillery fire. There is no report of any organization of the MT. BASCILIO (C5314) area. The major defensive effort of the enemy during the day was the defense of TROINA. The enemy positions follow a horseshoe formation from MT. DELLACROCE (C5611), then west of the town to MT. GREGERIO (C5405). On the south, this area is well defended, organized in depth, and occupied by determined enemy. In the Eighth Army sector, the Canadians have forced the enemy east of the TROINA river. The XII Corps (British) captured CATANIA and MISTERBIANCO with patrol action as far north as PATERNO (H78).

b. Artillery: S. STEFANO (C33) was shelled by reported 170-mm gun at 05 0100B hours. Enemy artillery supported in vicinity of S. AGATA by artillery mounted on railway cars moving in and out of tunnels, making counter battery fire ineffective.

c. Photo Interpretation: P.I. reports nine railroad bridges out between C5215 and C6347. Extensive minefields along beach at TERRANOVA (C5944). Nine fires observed burning between C5814J3 and C6214J9 August 3. Minefields on beach C7050 at 0403030B hours.

d. Air: At 0323000B, nine enemy planes bombed ammunition dump and road junction in vicinity of B3714.

e. Naval: Air reconnaissance at 0411000B observed much shipping activity along the coast between GANZIRRI (B4163) to the north and MESSINA to the south. The following vessels were noted: one liner - 500', one train ferry, one vessel - 220', one vessel - 150', five Siebel Ferries, one liner- 400', one vessel - 250', three vessels - 200' and seven troop landing craft.

3. MISCELLANEOUS.

a. Statistics: Estimated total Prisoners of War taken by Seventh Army 91,600, enemy casualties, dead and wounded, 7,700, guns, 75-mm and larger, destoyred or captured, 276; all figures to August 5, 1943.

b. Chemical Warfare: Captured permit issued by 1st Bn, 15th PGR, 29th Motorized Division (German) authorizing the holder to travel without a gas mask because the unit had none in stock. Comment: this unit was still in France on this date, May 6, 1943.

c. Sabotage: Indications that enemy may be broadcasting false information on our radio channels August 1.

d. Information from Prisoners of War: Prisoners of War taken in the CATANIA area 2/3 August all state that the bulk of German forces have withdrawn to ACIREALE (J09) area.

4. ENEMY CAPABILITIES.

(1) To delay in successive positions, first position west of S. FRATELLO (C53) - CESARO (C62) - ADERNO (H79) - ACIREALE (J09), second position west of general line NASO (C64) - RANDAZZO (C82) - MT. ETNA - ACIREALE (J09), third position west of the general line FURNARI (C94) - FRANCOVILLA (D02) - FIUME FREDDO (D01).

(2) To withdraw to the north astride highway 113 (coast road), highway 120 TROINA (C51) - RANDAZZO road), highway 121 (REGALBUTO (H59) - ADERNO (H79) - BRONTE (C71) - RANDAZZO) and coast road 114, CATANIA to northeast.

(3) To accompany with capability (1) or (2) with evacuation to the mainland from the general MESSINA Straits area.

Capability (2) is favored augmented by (3).

In the past twenty-four hours, matters of significance have taken place, CATANIA has fallen, TROINA offers extremely stiff resistance, the north coast road impedes progress by demolitions, shipping has been noted in the MESSINA Straits of large vessels. The north ports of MILAZZO are reported empty of craft. There is considerable movement on roads between TROINA and CESARO.

From the foregoing, it is indicated that withdrawal and in all probability evacuation is taking place. Certainly the attitude is entirely defensive and the road network to the east of TROINA is vital to the withdrawal of troops finding themselves to the southwest of MT. ETNA. Delay, therefore, of our advance along highway 120 is imperative to permit the last minute withdrawal of the troops. With the fall of CATANIA the coast road to north will probably take place. The shortest and best likely for final defense is the general line listed under capability (2), second delaying position, once the area to the southwest and south of MT. ETNA is lost.

The entire operation from the enemy viewpoint, therefore, is to delay advance against time. The delay of time probably is a play being made in connection with both the political and militarh situation in the Italian mainland, developments of which are unknown.

G-2 PERIODIC REPORT

No. 28

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Enemy holds general line from C5340 - S. FRATELLO (C54) - east of TROINA (C61) - ADERNO - PATERNO - north of MISTERBIANCA (H88) and CATANIA.

b. Defensive Organization: Ridge at 4880 heavily mined. Coast road and railroad bridges west of S. FRATELLO all appear to be blown. Bridges to the east remain intact, air reconnaissance 5 August.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Enemy continued to hold S. AGATA (C54) and S. FRATELLO in the north. Seventh Army advance slowed by use of mines, demolitions and booby traps. TROINA (C50) was captured at 0608208. The enemy forced out of TROINA and east along highway 120 towards CESARO (C61) by combined land and air attack. Heavy traffic was observed during the afternoon of August 5 between TROINA and CESARO. Concentration of over 200 vehicles observed in bivouac east of NOVARA (C93) at 0508308. In the Eighth Army Zone, the defensive effort of the enemy is north of the TROINA river. The battle for ADERNO continues. PATERNO (C78) was captured during the morning of August 6.

b. Artillery: During the afternoon of August 5 heavy enemy artillery concentrations on the hills west of TROINA. A reported rocket gun searched the valleys south of the road CERAMI (C41) to TROINA afternoon August 5.

c. Air: Enemy reconnaissance planes were over PALERMO harbor, some flares, at 0604308 hours.

3. ENEMY CAPABILITIES.

No change from last report, which was:

(1) To delay in successive positions, first position west of S. FRATELLO (C53) - CESARO (C62) - ADERNO (H79) - ACIREALE (J09), second position west of general line NASO (C64) - RANDAZZO (C82) - MT. ETNA - ACIREALE (J09), third position west of the general line FURNARI (C94) - FRANCOVILLA (D02) - FIUME FREDDO (D01).

(2) To withdraw to the north astride highway 113 (coast road), highway 120 (TROINA (C51) - RANDAZZO road), highway 121 (REGALBUTO (H59) - ADERNO (H79) - BRONTE (C71) - RANDAZZO) and coast road 114, CATANIA to northeast.

(3) To accompany with capability (1) or (2) with evacuation to the mainland from the general MESSINA Straits area.

Capability (2) is favored augmented by (3).

G-2 PERIODIC REPORT

No. 29

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Enemy holds general line S. AGATA (C54) - S. FRATELLO (C53) - C5722 - east of ADERNO (H79) - BELPASSO (H88) to a point north of CATANIA at J0480.

b. Defensive Organization: Enemy defensive position around S. FRATELLO estimated strength of 700 men at 0615008. Road bridges demolished at C5613G, C5813B August 6. Road blocks located at C5L22 and C7553 August 6. Extensive wire entanglements and minefields have been encountered throughout the TROINA area. An estimated battalion strongpoint one mile east of TROINA astride highway 120 was reported at 0709008. Air reconnaissance reported minefields on beach between C9714J9 and C9795B5 at 0703455.

c. Identifications: (1) German: Interrogation of PW reveals regiments of the 15th Panzer Division have been redesignated as follows: PGR 1, now called PGR 104, PGR 2 now PGR 115, PGR 3 now PGR 112. PW reports 2d Bn, 71st PGR, 29th Motorized Division north of S. FRATELLO.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Along the coast the enemy continued his stubborn resistance supported by heavy concentrations of artillery, mortar and machine gun fire. A local counterattack at 0619008 north of S. FRATELLO prevented any further advance during the day of August 6. Since that time he has engaged in stubborn rear guard action and is retiring under pressure towards CESARO (C61). Eighth Army zone, the enemy lost ADERNO (H79) - BIANCAVILLA and S. MARIA during morning of August 7. Along the east coast road the enemy has been forced to retire under heavy pressure towards ACIREALE (J09) to J0488 at 0616008.

b. Armor: Six enemy tanks were taken under fire near C6208 at 0620158.

c. Artillery: PW states two 150-mm batteries are located at C5942 August 6. Civilian engineers report gun batteries at C631098 and C5668096 on August 5. Air reports anti-aircraft fire encountered during past few days in the MESSINA Straits area to be more intense than that over the RUHR valley.

d. Photo Interpretation: Minefields on beaches vicinity C9748 August 6.

e. Naval: Air reports at 0610308 the sinking of numberous barges engaged in beach to beach shuttling across the Straits of MESSINA.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

3. MISCELLANEOUS.

a. Sabotage: At 0600CLB a saboteur was apprehended cutting field wire west of PALERMO. Two like offenses of this nature occured afternoon of August 6 in the PALERMO area.

b. Information from captured documents: From a map captured at TROINA in possession of officer PW on 6 August, it appears that the enemy's new defense position will be 0562l - 05718 - 05814 - 06010 - 06409 - 06501 - 06707 - 06850.

4. ENEMY CAPABILITIES.

(1) To continue to defend the general line S. FRATELLO - CESARO (062) - BRONTE (071).

(2) To defend the general line NASO (065) - RANDAZZO (082) - MT. ETNA - ACIREALE (J09).

(3) To evacuate, giving German troops priority while covering evacuation by delaying actions on either of these two lines.

Capability (3) is favored.

The determined resistance in the S. FRATELLO - TROINA area is probably the result of planned withdrawal along the west side of MT. ETNA from ADRANO through BRONTE to RANDAZZO. By such movement the defense in capability (2) is strengthened. All movement will be, no doubt, characterized by strong centers of resistance and maximum use of demolitions and mining. While this is taking place, the defense on the east of MT. ETNA will continue to be stubborn denying progress to the north until such time as the general line NASO - RANDAZZO - FIUME FREDDO can be held.

The report of shipping in the northern reaches of the Straits of MESSINA reported a few days ago as having been seen there on 4 August indicates movement into the CALABRIA Peninsula by probably a longer voyage and that transshipment of evacuees because of the political situation in Italy is probably being made in probably the central or northern ports of Italy in the vicinity of NAPLES or to the north.

The reported sinking by the RAF of many barges in the Straits of MESSINA would indicate that these are for shorter shipments and that they will be used in the evacuation, first, of such supplies as require shorter hauls or the probable later evacuation of Italian troops to the Italian mainland. The latter is doubtful at this time because of the nature of resistance being offered. It must be appreciated that the assembling of craft along the MESSINA Straits and coast is an invitation to early destruction by active Allied bombing.

G-2 PERIODIC REPORT

No. 30

Map - G.S.G.S. 4164, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Enemy holds general line S. MARCO (C64) - C5427 - east of CESARO (C61) - northeast of BRONTE (C71) - northeast NICOLOSI (H99) to a point south of ACIREALE at J0388.

b. Defensive organization: Air reconnaissance on August 7 report railroad bridge at FALCONE (C9545) as destroyed. Other railroad bridges reported blown at C5040 and H7398. The road from CESARO to RANDAZZO is reported heavily mined.

c. Identifications: (1) German: PW reports 1st and 2d bn, 71st PGR 29th Motorized Division in S. MARCO area. 3d Bn reported at BARCELLONA (D05) August 6. 15th PGR, 29th Motorized Division is reported 30 km east of S. AGATA on coast road to MESSINA on August 7.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: During the night of August 7/8, the enemy withdrew from S. FRATELLO and was forced out of S. AGATA towards the east at 081400B. S. MARCO (C64) was lost the morning of August 8 when American troops successfully landed during the night. Only isolated pockets of resistance remain between S. MARCO and S. AGATA. Enemy forces were driven east of CESARO at 080800B. The road from CESARO to RANDAZZO has been heavily mined. Resistance during the day has been confined to light rear guard action: In the Eighth Army zone, the enemy lost BRONTE 081020B, and began a rapid retreat towards RANDAZZO. At 081600B forward elements of the 78th DIVISION (British) had reached C8118 only 3 km southwest of RANDAZZO. NICOLOSI (H99) and BELPASSO (H88) were lost during the morning of August 8. Further to the east enemy is evacuating towards ACIREALE.

b. Armor: Thirty tanks were reported by aerial reconnaissance moving southwest in vicinity of BRONTE at 070925B. Two Mark VI and one Mark IV tanks operating east of S. AGATA retreated southwest in face of our landing force on the morning of August 8.

c. Artillery: An estimated 26 artillery pieces are in support of enemy force east of S. AGATA and S. FRATELLO.

d. Photo Interpretation: Many congested areas consisting of troops, bivouacs supply dumps and trucks located in the area TORTORICI (C73), UCRIA, FIORESTA at 0606CB.

e. Naval: USTICA Island surrendered unconditionally on August 5 to a combined naval and military landing force. Germans shd departed 11 July, destroying the wireless and telegraph station which also appeared to have been bombed. Five enemy E-boats made an unsuccessful attack on PALERMO harbor at 0600468 being driven off by destroyers. Air reconnaissance of August 6 observed a 7000 ton ship tied to west side docks MESSINA, also many small craft at 84540 and 84730.

f. Air: 16-20 FW-190s and ME-109s were encountered ten miles north of CAPE ORLANDO approaching from northeast carrying bombs. Three FW-190s were destroyed, one probably destroyed. Enemy jettisoned their bombs. Did not reach our shipping.

3. MISCELLANEOUS.

a. Statistics: PW taken in the occupation of USTICA Island included two officers, 84 soldiers, 13 sailors, all Italians, 7 machine guns and 1100 small arms were captured. 216 civilprisoners and guards were on the Island. Seventh Army: Estimated PW 93,300, dead and wounded 8,500, aircraft destroyed, all types, 245, tanks, all types, 185; all figures to August 8 inclusive.

b. Information from Prisoners of War: PW taken along the TROINA - CESARO road on August 7 reveals that all of their units are badly depleted in strength and that food and ammunition had not reached their forward elements since the 3d of August.

4. ENEMY CAPABILITIES.

(1) To defend the general line NASO (C65) - RANDAZZO (C82) - MT. ETNA - ACIREALE (J09).

(2) To retire to the general line PATTI (C85) - MONTALBANO (C83) - CASTAGLION (C92) - FIUME FREDDO (D01) with delaying action.

(3) To continue rear guard action to a beachhead position extending from FALCONE (C94) - NOVARO (C93) - FRANCAVILLA (C92) - FIUME FREDDO (D01).

(4) To accompany all of the above by evacuation of troops to the Italian mainland from CAPE MILAZZA and MESSINA giving German troops priority.

Capability (2) augmented by (4) is favored.

G-2 PERIODIC REPORT

No. 31

Map - G.S.G.S. 4164, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Enemy defends the general line C6348 - C6823 - Southwest of RANDAZZO (C82) - MT. ETNA. East of MT. ETNA enemy line runs generally north of PEDARO (H99) - north of ACIREALE (J09).

b. Defensive organization: Coast road northeast of S. MARCO (C54) mined. Highway 120 from CESARO to RANDAZZO mined and bridges blown. Indications that enemy defense line exists west of road NASO (C64) to RANDAZZO (C82). Some bridges east of RANDAZZO reported blown at 082400B. Other bridges reported blown: Two at 0629170, 0636157, 0597146, 0609143, 0617146.

c. Identifications: (1) German: Elements 1st Bn, 71st PGR, 29th Motorized Division, 29th Engineers, 29th Signal Bn captured vicinity S. MARCO (C64) August 8. (2) Italian: 439th Bn, 179th Regt, 213th Coastal Division destroyed. Elements of 75th A.A. Bn and 29th Regiment, 26th ASSIETTA Division all captured or destroyed August 8 by landing forces in the vicinity of S. MARCO and S. AGATA.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Enemy forces in north coast sector withdrew east of ZAPPULA river and continued delaying action supported by mortar fire during the day. The road from S. FRATELLO south to CESARO has been evacuated. This route was left mined but undefended. On the road to RANDAZZO, enemy has been forced to retire each of the SIMETO river and from this position has slowed our advance by mortar and artillery fire. The enemy conducted a continuous rear guard action along the entire front of the Seventh Army. In the Eighth Army zone at 091600B the enemy continued to hold RANDAZZO but east of MT. ETNA the towns of PEDARA, TRECASTAGNI (H99) and ACI REALE were lost.

b. Armor: Fire was received from enemy tanks at C6716 at 081620B. Eighth Army PWs reported approximately 50 tanks were in MESSINA on the 5th of August.

c. Artillery: Sporadic artillery fire received from area west of S. MARCO during the night of August 8/9. An artillery concentration area containing 280-cm howitzer and approximately two battalions of artillery, 105 and 105-cm is reported five to seven km northeast of RANDAZZO August 8.

d. Photo Interpretation: PI shows 115 bomb craters on highway 116 between NASO (C64) and RANDAZZO. Photographs taken August 6 show 515 planes of all types on southern Italian airfields of which 204 are bombers. Comment: This shows a considerable increase in bomber strength since August 1.

e. Air: Thirty bombers raided BIZERTE on August 7. Twenty bombs were dropped in harbor resulting in near misses on one motor vessel. Two enemy aircraft shot down by A.A.

f. Naval: Air reconnaissance observed two merchant ships, probably tankers, in MILAZZO harbor at 081035B. Air reports increased landing craft activity in the MESSINA Straits on August 7. Approximately 40 craft were seen. At 091135B air reconnaissance observed two Seibel Ferries operating three miles northeast of MESSINA small boats crossing the Straits towards Italy and 20 small craft beached four miles north of MESSINA.

3. MISCELLANEOUS.

a. Statistics: Approximately 1300 PW of which 144 were Germans were captured as a result of a successful sea envelopment in the vicinity of S. MARCO. Estimated 94,800 PW taken by Seventh Army to date.

b. Sabotage: Two tunnels reported filled with ammunition located two miles east of CAPOREALE (B22) were blown 8 August.

c. Information from Prisoners of War: PW taken vicinity CESARO August 7 reported the Germans had stripped remnants of the 28th AOSTA Division (Italian) of all artillery. Civilian reports that four batteries of field artillery withdrew night of August 6/7 along unmapped road from C5725 to C7321.

4. ENEMY CAPABILITIES.

(1) To defend the general line NASO (C65) - RANDAZZO (C82) - MT. Etna - ZEFFERANA (C90) - J0699.

(2) To retire to the general line PATTI (C85) - MONTALBANO (C83) - CASTAGLIONE (C92) - FIUME FREDDO (D01) with delaying action.

(3) To continue rear guard action to a beachhead position extending from FALCONE (C94) - NOVARO (C93) - FRANCAVILLA (C92) - Fiume FREDDO (D01).

(4) To accompany all of the above by evacuation of troops to the Italian mainland from CAPE MILAZZA and MESSINA giving German troops priority.

Capability (2) augmented by (4) is favored.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Enemy holds positions generally from C6448 - C6539 C6321 - east of the SIMETO River at C7115 - north of MALETTO (C71) - MT. ETNA - north of PADARA (H99) to a point on the coast south of RIPOSTO at D0502.

b. Defensive organization: High ground west of NASO. This position commands the coast road. Heavy and intense A.A. fire received from MILAZZO at 091725B. The volume and accuracy of A.A. fire from the MESSINA Straits area has increased the past two days. Heavy A.A. received from CAPE TINDARI at 091730B. Comment: This increase in A.A. indicates the importance given by the enemy to possible evacuation points or points of resupply.

c. Identifications: (1) German: Indications that the 15th and 71st Regiment of the 29th Motorized Division have withdrawn to the vicinity of PATTI (C84). The 3d Parachute Regiment and a battalion of the 382d PGR are defending the road to RANDAZZO east of the SIMETO River.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Some isolated pockets of resistance still exist in the coastal sector between S. MARCO (C64) and the ZAPPULA River. The enemy continued to effect rear guard action supported by mortar fire during the day. At 101600B the enemy had withdrawn west of the ZAPPULA River and had occupied the high ground west of NASO. There was no indication of organized defensive positions in the coastal sector. On the road to RANDAZZO the enemy has withdrawn east of the SIMET River and continues stubborn rear guard action eastward. Extensive minefields including both Teller and anti-personnel mines, and numerous demolitions of culver and bridges slowed our progress considerably along Highway 120 from CESARO. The enemy continues rear guard action along the entire front of the Seventh Army with his major effort directed towards the defense of RANDAZZO.

b. Armor: Two Mark IV tanks and one Italian light tank were destroyed in S. AGATA (C54) on the morning of August 8. Continued reports that the enemy tanks in the vicinity of C6450 at 080630B.

c. Artillery: The enemy abandoned three 149-mm guns near bridge across ROSMARINA River (5943) on August 8. The decrease in the volume and accuracy of artillery fire received in the north coast sector indicates that the bulk of the enemy artillery now to be Italian. Depleted artillery positions are believed to be in the proximity of C5928, C6628, C6928, C7122. PW statements indicate that both the Herman Goering Division artillery and the 15th Panzer Division artillery are short of ammunition.

d. Photo Interpretation: PI on August 9th shows bridges blown at C836208, C7181l6; 4-gun battery at C813187; road breached at C748111, C749116.

e. Air: Enemy planes flying west to east dropped fourteen bombs on the Allied warships lying three miles off of S. AGATA causing no damage on August 8. ME 109s bombed and strafed the coastal area vicinity C4538 slightly damaging one LST. Enemy air reconnaissance during the night of August 10 was considerably increased.

f. Naval: Air reconnaissance at 091355B observed medium size ship in MILAZZO harbor. Forty fishing boats sited beached at C9848, five boats D0351, ten boats at D0553 by air reconnaissance 100700B. Thirty-five small craft were observed in MESSINA harbor at 100920B. There was in increase of Seibel Ferry service carrying considerable deck cargo throughout the day of August 9th, in the Messina Straits.

3. MISCELLANEOUS

a. Statistics: 95,000 PW, 10,100 enemy dead and wounded, 188 tanks, all types destroyed or captured by Seventh Army to date.

b. Ordnance: Enemy ammunition dump located at C5263A9 on August 8th. An ammunition point is reported six km east of RANDAZZO on the road to CASTIGLIONE on August 8th.

c. Roads: From various sources including PW and friendly civilians, it appeared fairly certain that the enemy has been using extensively roads not shown on the map running generally from C5528 - C6239 - C6627 - C7322. There is a fork on this road at approximately C6627 towards C7318 and then towards FIORESTA (C8633). It also appears that German and Italian engineers have completed a road between LONGI (C663) and GALATI-MAMERTINO (C6737).

d. Battle Order: The following is a G-2 Estimate of the remaining enemy strength on the Island. Possible evacuation during the past week is not considered in the Estimate.

German

	Inf Bns	Guns	Tanks
29th Mtz Div.	6	36 - 48	30
15th Pz Div	6	48	30
H.G. Div.	4	48 - 60	
3d Para Regt	3	12	
4th Para Regt	2		

Italian

4th Livorno	1		
26th Assietta	2		
28th Aosta	2		
54th Napoli	1 (?)		
213th Coastal	7	36 - 48	18 (?)
Tactical Gp Schreiber	1 (?)		
Total	35	216	78

4. ENEMY CAPABILITIES.

(1) To delay in successive positions: first position NASO - RANDAZZO - FIUME FREDDO, second position general line PATTI (C84) - RANDAZZO, and final position west of general line FURNARI (C94) - NOVARA (C93) - FIUME FREDDO (D11).

(2) To defend along general line shown as the final delaying position in capability (1).

(3) To evacuate while executing delays in capability (1).

Capability (3) is favored.

The recent appearance of some fishing craft both west and east of the CAPO DI MILAZZO as well as in the Straits of MESSINA as covered in detail on the report may be interpreted in two ways, first that the craft are coming in with useable cargo but no troop reinforcements, and second that troops are being evacuated. The lack of identification precludes a definite deduction as to what remnants are on the Island to retard the advance of the allied forces. Judging by artillery fire encountered in the zone of the Seventh Army, it may be presumed that the small craft reported operating around CAPO DI MILAZZO may be carrying ammunition and on the return trip evacuating troops.

The lack of identification in the RANDAZZO area does not indicate what troops are being withdrawn or what have been evacuated through that area. With the earlier cutting of the CATANIA - BRONTE road, it must be assumed that troops to the north that as well as those opposing the advance of the right flank of the Seventh Army along the CASARO - RANDAZZO road have converged in the RANDAZZO area.

It may be anticipated that along the coastal road the withdrawal will continue to be effected by mines and demolitions but with the absence of resisting troops in the center due to convergence of the 15 th Panzer Division, elements of the Herman Goering Division, and portions of the 3d Parachute Divisions. Stubborn troop resistance may be expected. It may further assumed, however, that the major elements of the 15th Panzer Division have withdrawn from the RANDAZZO area.

G-2 PERIODIC REPORT

No. 33

Map - U.S.C.G.S. 4164, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: The enemy defends the general line CAPO ORLANDO (C6552) - C6727 - astride highway 120 at C7618 - MT. ETNA - to a point south of RIPOSTS at D0303.

b. Defensive Organization: Ninety per cent of the Teller mines located in the vicity of C538398 were booby trapped. The high ground west of NASO (C64) afforded excellent observation for artillery fire on our forces advancing across the ZAPPULA River. The enemy continued to occupy this position throughout the day of August 11.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: The enemy position on the high ground west of NASO was outflanked during the night by successful landing operation to the east during the night of August 10/11. Enemy action on CAPO ORLANDO consisted of observed artillery, mortar and machine gun fire against our troops advancing east along the coast road, and local counterattacks against the beachhead position at C7050 which was captured by successful landing forces during the early morning of August 11. At 111600B no attempt to evacuate south along the NASO - RANDAZZO road had been made. The enemy continues rear guard action along Highway 120 to RANDAZZO using mines and demolitions to slow our advance. Although indicated in earlier reports, no strong defensive position northwest of RANDAZZO has been located by our troops moving in from the northwest. Other than isolated pockets of resistance in the vicinity of NASO, which are almost surrounded, the enemy continues a rear guard action along the entire front of the Seventh Army. In the Eighth Army sector, the enemy continued to defend his routes of evacuation west of RANDAZZO and south of RIPOSTO. Otherwise no change.

b. Armor: Five enemy tanks approached our landing force from the west during the morning of August 11 but made no attack.

c. Artillery: Artillery fire from positions west of NASO has been extremely effective throughout the day. Twelve artillery pieces are believed located at C8Q36Q9, caliber is not known. Air reconnaissance observed an intense heavy AA belt in the RANDAZZO area extending five miles eastward of 101138B.

d. Photo Interpretation: Air photos of August 10 show: Six or seven groups of 6-7 rowboats each along the beach from C9948 to D0453. The bridge at RANDAZZO formerly damaged by bombs has now been repaired. Some motor traffic moving both ways between RANDAZZO and LINGUAGLOSSA (C81) at 101200B. Bridges have been blown at C7701R4, C7241?3, C7261?0 and C7111?9. A probable minefield exits on the beach from C990?95 to C990494.

e. Air: Enemy air reconnaissance during the night 10/11 August was continuous over the rear areas.

3. MISCELLANEOUS.

a. Statistics: Abandoned equipment captured August 5 to 10 include four 75-mm guns, four 150-mm guns, two 88-mm guns and one 149/13 gun. PW 95,900, enemy dead and wounded 10,300, guns, 75-mm and larger destroyed or captured 287; all inclusive to August 11 by Seventh Army.

b. Information from Prisoners of War: PW captured August 9th states that a large fuel dump exists immediately south of PUNTAZ at C984156. A PW reports that the 129th Battalion, Panzer Grenadier, are equipped with special self-propelled guns, that this unit arrived in Sicily from Bordeaux, France about two weeks ago and were informed that this unit was to help evacuate troops across the Straits of MESSINA. Summary of Interrogation, German PW, August 9th: PW is of Polish origin and speaks German with a foreign accent. He is a native of the formerly Polish part of Upper Silesia. He took part in the Polish campaign in fall 1939 as a private in a Polish Signal unit. After having been a PW in Germany he was drafted into the German Army. PW states that Germans would not force all Poles into the German Army, but only the Poles from the Upper Silesia and the so-called Carthegau. All other Poles now serving in the German Army would be volunteers.

For further information from Prisoners of War see Annex No. 1 to this report.

4. ENEMY CAPABILITIES.

No change from last report, which was:

(1) To delay in successive positions: first position NASO - RANDAZZO - FIUME - FREDDO, second position general line PATTI (C84) - RANDAZZO, and final position west of general line FURNARI (C94) - NOVARA (C93) - FIUME FREDDO (D11).

(2) To defend along general line shown as the final delaying position in capability (1).

(3) To evacuate while executing delays in capability (1).

Capability (3) is favored

AC of S, G-2

Annex No. 1 to G-2 Periodic
Report No. 33 dated 11 Aug 43.

10 August 1943

GENERAL INTELLIGENCE SUMMARY

1. Increased German Planes in Southern Italy.

a. Photographic coverage of Southern Italian Airfields shows a marked increase in German JU-88's and other combat type planes between

C-42

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

August 2 and August 6. The number of JU-88's increased from 24 on August 2 to 184 on August 6, practically all of which were concentrated in the FOGGIA area on dispersed satellite landing fields. This is within effective JU-88 range of most of our airfields in SICILY, and the flat terrain around FOGGIA allows a wide dispersal of aircraft, also substitution of new satellite landing strips for those we render unserviceable from bombing. In addition to the above figure of 184 JU-88's on Southern Italian Fields, there were 46 indicated by Photo coverage of Northern Italian Fields as of the same date - August 6.

b. Between the same two dates the estimated number of German and Italian Single-Engine Fighters on Southern Italian Fields increased from 90 to 160, of which perhaps 50% are German.

c. Total of all types, including many Italian planes which are ineffective for combat, increased from 257 to 515, or an increase of 28 in addition to the increases as above in JU-88's and estimated Single-Engined Fighters.

2. Extracts from Prisoner of War Reports.

a. An Italian pilot reported in regard to the JU87 or "Stuka" dive-bomber, "These German machines are very old. He maintained stoutly that they were not fitted with any wireless whatsoever, and furthermore that armament and speed were most unsatisfactory. He stated that he now realises that it is suicide to operate them." Later on this same PW expressed his personal opinion, "The sooner we occupy Italy the better it will be for everybody."

b. A German JU-88 pilot recently captured stated, - Theoretically Polz's tactics of bringing all his bombers over the target to swamp the defenses may be very sound, but under present conditions the Luftwaffe is not in a position to operate sufficient aircraft at once to overcome any AA defenses in the Mediterranean area. As a result losses are rising rather than falling and most of the old experienced crews have been lost. I/KG 76, who arrived in FOGGIA on 10 June with 28 crews had shrunk to six crews by the 10th of July. The only experienced pilot left in the I/KG is Oberfeldwebel BRUCHELOS, the rest of the crews are all inexperienced with only one or two operational flights to their credit.

c. The interrogation report on another German pilot includes the following: "About the end of June 1943, German Air Crews were shown a report and given a lecture on the tactical and technical details of the P-47, "Thunderbolt", based on the statements made by a U.S. Air Force Captain who was taken prisoner in French occupied territory." (The moral of this story is obvious. Air personnel who are unfortunate enough to be taken prisoner from here on should be courteous to their captors, but say absolutely nothing except, - "My name is _____, my rank is _____, and my serial number is _____." They may add, "I am sorry, but I am still a member of the U. S. Armed Forces, and it is contrary to any regulations for me to say anything more whatever on any subject of a non-military nature as well as military.")

3. Radio Berlin's Report on the August 4, PALERMO Raid.

"A large group of heavy bombers attacked the harbor of PALERMO, which was full of shipping. In addition to numerous heavy bomb hits on harbor establishments, two Merchantment totaling 13,000 tons, and one Destroyer were sunk. A light Cruiser, three Destroyers, and eight Merchantment were damaged." (Total actual damage was one direct hit on a Destroyer with 5 men killed and 16 injured, but the Destroyer itself was not seriously damaged. One direct hit on a crane in the dock area. That was all.)

4. Enemy Ground Strength left in Sicily.

This was estimated recently at not over 15,000 Germans, and 10,000 Italians still under arms. Food and ammunition supply may be presumed to be inadequate.

5. Booby Traps.

The Third Division reports that a Luger Pistol was "Booby Trapped" on a table. A recuit picked it up resulting in two killed and 14 wounded.

6. MESSINA STRAITS.

Anti-aircraft fire encountered during the past few days in the MESSINA STRAITS is reported as more intense than that over the RUHR Valley. This is probably in preparation for the evacuation of SICILY, but anti-aircraft is a poor substitute for adequate air cover, which the Axis probably expects it be unable to provide and maintain.

7. German Fighter Pilot Moral.

a. From another CSDIC Interrogation report dated 5 August 1943 on an ME-109 pilot comes the following: "PW states that in the week preceeding his capture 19 pilots were lost from his Gruppe, leaving only 18 serviceable aircraft as of July 12." He continues, "At the beginning of July a special order of the day was issued by Major General GALLAND stating that the following conditions must be fulfilled by all GAF fighter pilots in the Mediterranean Area.

(a) An enemy must be shot down, or
(b) Hits must be visible in the A/C to show that the pilot had been engaged in combat, or
(c) The pilot must be shot down himself.

In future no excuses would be accepted and a pilot who did not fulfill one or more of these conditions would be made the subject of an immediate Court of Inquiry with a Court Martial to follow. It was further expected of each formation of fighters who took off that they would shoot down at least one enemy aircraft.

b. According to a prisoner, Reichsmarshall GOERING recently issued the following order of the day to the GAF fighter units in the Mediterranean area. "Together with the Fighter pilots in FRANCE, NORWAY and RUSSIA, I can only regard you with contempt. I want an immediate improvement and expect that all pilots will show an improvement in fighting spirit. If this improvement is not forthcoming, flying personnel from the Kommodore downwards must expect to be reduced to the ranks and transferred to the Eastern Front to serve on the ground." As a result of these proclamations a strong feeling of defeatism is prevalent amongst fighter units, and many pilots, including Staffel-Kapitane have been heard to say that it is better to become prisoners than return to base to face a court martial.

NOTE: This would seem to be an extraordinary manifestation of jittered war nerves extending up through to the top leaders of the Luftwaffe. It is like racking with spurs the flanks of a winded race horse, and its effect on German or any Nationality of high-strung fighter pilots cannot ve favorable. It should prejudice their best judgment, and tempt them to bale out over territory on any provocation, as the lesser of evils. Germany may have still up to 300 Divisions in her ground forces, but her airforce may be close to defeat.

8. Air Support for the Ground Forces in SICILY.

Under date of 4 August a G-2 Summary by the Second Corps describes the general situation at D plus 3 as follows: "The enemy suffered heavily in his rear areas from our strafing and bombing attacks, and there was evidence that his supply situation was disorganized. Thus all enemy forces opposing Second Corps entered into a period of general retreat, from which they had not recovered at the close of the period 31 July."

G-2 PERIODIC REPORT

No. 34

Map - G.S.G.S. 4164, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Enemy defends the general line PATTI (C85) - TORTORICI (C73) - east of FICRESTA (C83) - west of RANDAZZO - MT. ETNA - GIARRE (D00).

b. Defensive organization: Very dense minefields and many demolitions encountered along CESARO - RANDAZZO road. No organized defensive position encountered along the front of the Seventh Army.

c. Identifications: (1) German: PW 3d battalion, 71st PGR, 29th Motorized Division NASO area. PW reports his battalion almost intact has withdrawn to the TORTORICI area. 926th Fortress Battalion west of RANDAZZO. PW captured August 10 states his unit was covering withdrawl of the 15th Panzer Division withdrawing to MESSINA. (2) Italian: Very young PWs of the 3d Battery, 12th Artillery Regiment, 28th AOSTA Division captured north of RANDAZZO. PWs report they were covering the withdrawal of Italian forces north from RANDAZZO.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: The enemy offered only light opposition to our landing forces at EROLO (C75) on morning of August 11. Later during the day two unsuccessful counterattacks were made using tanks. Enemy forces have withdrawn east of PATTI breaking contact [illegible] night August 11/12. No contact with enemy forces at C7632. The defense of RANDAZZO continues consisting mainly of mined roads covered by artillery, mortar and long range small arms fire. Generally in the Seventh Army zone the enemy continued delaying action in the north; in the center he has evacuated FICRESTA and is withdrawing east of the NAZO - RANDAZZO road, and around RANDAZZO is retiring slowly east under pressure. In the Eighth Army sector the enemy is retreating north along the coastal network. The enemy's retrograde movement in this sector has reached RIPOSTA with no indications of an organized defense yet being encountered. Enemy evacuation of SICILY has begun on a large scale. Air photos covering the MESSINA Straits on August 11 show 33 craft including 10 Seibel Ferries. All eastbound traffic was fully loaded and westbound boats were empty.

b. Artillery: Long range artillery fire encountered along the CESARO RANDAZZO road effectively slowed our progress eastward. Along the coast sector only harassing artillery fire has been received throughout the day. Artillery concentration area at C8118 previously reported was active during the night of August 11/12. An artillery battery reported firing at C805315 at 112240B.

c. Photo Interpretation: PI of August 11 show gun batteries at C992425, C974247, C999468 C933219, D082643 and D343585. Photos August 11 show 100 motor transports between D321588 and D347620 stationary at 1400B. 40 Motor transports, some with trailers, were observed between D364574 and D366584; at 111400B. Approximately 100 motor transports were noted moving east from SPADAFORA (D25) towards MESSINA at 1400B.

d. Air: Four ME-205s and FW-190s dive bombed NASO (C64) at 111230B. Two were shot down. Eight ME-109s were intercepted off CAPE ORLANDO attempting to bomb our shipping. All bombs fell wide of ships. One FW-190 destroyed and one seen to crash into the sea.

e. Naval: Air reconnaissance reports three large transports at D4365 morning of August 11. British submarine, Simoon, reports two hits on 7600 ton, 6" Italian cruiser of the Luigi di Savia class in the Gulf of Genoa on August 9th.

3. MISCELLANEOUS.

a. Statistics: Seventh Army: PW 96,000, enemy dead and wounded 10,500, aircraft destroyed, all types 253, guns, 75-mm and larger, destroyed or captured 293, August 12 inclusive. Eighth Army: PW 30,000, tanks, all types, destroyed or captured 53, artillery pieces destroyed or captured 174 to August 10.

4. ENEMY CAPABILITIES.

(1) To delay in successive positions: first PATTI (C84) - RANDAZZO - FIUME FREDDO (D11), second position west of general line FURNARI (C94) - NOVARA (C93) - FIUME FREDDO, and final beachhead position generally BARCELLONA (D05) - TAORMINA (D11).

(2) To defend along the general line shown as the second delaying position in capability (1).

(3) To evacuate on an increasing scale while executing delays in capability (1).

Capability (3) is favored.

The attempt by the enemy to break contact along the coast indicates his desire to salvage as much as possible of his remaining rear guard forces for future use. The ever increasing number of craft including large ships operating in the MESSINA Straits give evidence to a speedy evacuation of the island with MESSINA the principal debarkation point.

The probability of a strong defense at any of the positions of capability (1) is not indicated. However, the enemy with forces available can delay at any of these positions, using time gained to evacuate the bulk of his forces from SICILY to the mainland.

No. 35

Map - G.S.G.S. 4164, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

A. Enemy front line: Generally along line PATTI (C85) to east of RANDAZZO (C82) - MT. ETNA - north of RIPOSTO (D00).

THIS PAGE IS UNCLASSIFIED

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

b. Defensive organization: No organized defensive positions Seventh Army front other than continued demolitions and minefields. Air reconnaissance reports pillboxes at C8014. Friendly civilian reports tunnel at C8065 has been mined and is ready to be blown up. At CASTIGLIONE (C92) road blown for approximately fifty feet at C9919. Main road east of RANDAZZO blown. Minefields located at C8133. Bridge out at C8132. Bad crater at C8119.

c. Identifications: (1) German: 3d Company, 926th Fortress Battalion, This battalion is the only recent arrival on the Island having crossed over on 5th of August. A PW taken northwest of RANDAZZO states that the battalion's mission was to cover withdrawal of the 15th Division artillery. 3d Battalion, 71st Grenadier Regiment, 29th Motorized Division previously reported in reserve at BARCELLONA now identified NASO (C64) area. It is presumably a fresh battalion covering the withdrawal of other units of the 29th Motorized Division.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Little contact with the enemy along the coast road west of PATTI. Our advance delayed by demolitions and minefields. Indications of general withdrawal and enemy disorganization in this area. In the area vicinity RANDAZZO the enemy withdrew under cover of darkness supported by occasional artillery and mortar fire night 12/13 August. No contact with the enemy morning 13th August as our troops entered RANDAZZO. In this area heavy demolitions and minefields were executed by the enemy during withdrawal. No information available of advance in British sector beyond RIPOSTO. Large concentration of motor transports observed vicinity MESSINA probably aiding evacuation. Air reconnaissance reports no movement sighted RANDAZZO - PATTI road 130745B. At the same time, three small freighters and thirty small boats observed at PORTO d'OLIVERI (C9248).

b. Artillery: Little artillery activity encountered due to lack of contact with the enemy.

c. Anti-aircraft: 12 August, enemy anti-aircraft heavy and accurate both sides MESSINA Straits. Heavy and intense at FALCONE (C94). Slight heavy at C9432 (reported supply dump). Little anti-aircraft area BARCELLONA (D05). Light heavy anti-aircraft at CAPE MILAZZO reported 131230B.

d. Photo Interpretation: Extensive bivouac area reported south of MILAZZO vicinity D1055 at 130250B.

e. Air: Little enemy activity 12/13 August other than two bombs dropped vicinity CAPE ORLANDO at 121155B and straffing mission along coast highway F. ROSMARINO at 131205B and east of BROLO at 121830B.

f. Naval: Much enemy naval activity observed by air on 12 August in MESSINA Straits consisting of Seibel ferries, barges, motor launches and two transports vicinity MESSINA. See Photo Interpretation Report Nos. 58 and 59.

3. ENEMY CAPABILITIES.

(1) To delay in successive positions, first position general line C. TINDARI (C95) - MONTALBANO (C83) - ROCCELLA (C82) - MT. ETNA - FIUME FREDDO (D01), second position west of general line FUNARI (C94) - NOVARA (C93) - FIUME FREDDO and final beachhead position generally BARCELLONA (D05) - TAORMINA (D11).

(2) To defend along the general line shown as the second delaying position in capability (1).

(3) To evacuate on an increasing scale while executing delays in capability (1) Capability (3) is favored.

G-2 PERIODIC REPORT

No. 36

Map - G.S.G.S. 4164, 1:100,000, Sicily.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Generally along line C0050 - West of NAVARA (C93)-C9323 - CASTIGLIONE (C92) - CATALABIANO (D01).

b. Defensive organization: No organized defensive positions encountered entire front Seventh Army. Physical road blocks, blown bridges and minefields constituted the main enemy defensive effort. Bridge at C930202 was destroyed with the surrounding area heavily mined and booby trapped. Further bridges reported blown at C92322, C942235 and C928227.

c. Identifications: (1) German: 3d Battalion, 71st FGR, 29th Motorized Division believed to constitute the rear guard in the north coast sector, was formerly identified at PATTI and is reported to have retired east of FUNARI. The 3d Parachute Regiment supported by one battalion of Hermann Goering artillery constitutes the rear guard on south coast. A deserter of the 129th FGR states his unit is scheduled to arrive at MESSINA on August 15. (a) Italian: Reggio battalion is in support of 3d Parachute Regiment along south coast.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: The enemy evacuated east of FALCONE (C94) during the night of 13/14 August. Light contact was gained at 141200B northwest of FUNARI. MONTALBANO (C83) was evacuated night of August 13/14. Reconnaissance elements moving east of RANDAZZO were halted by approximately 100 Germans at C9220. Bridges on principal reads east of RANDAZZO have been demolished with a bulk of the rear guard believed to be withdrawn vicinity of RANCAVILLA (D02). The majority of the remaining troops on the Island have withdrawn to MESSINA where evacuation continues. Over 300 motor transports observed in this area.

Evacuation on a smaller scale is in progress at MILAZZO, air reconnaissance reports two troop transports in MILAZZA harbor at 140715B. In the Eighth Army sector the enemy continues rear guard action north of FIUME FREDDO (D01).

b. Artillery: No enemy artillery activity was reported during the period. Air photos of August 13 show one 4-gun medium battery at D318413, four gun coastal defense battery at D318505 and air reports heavy accurate anti-aircraft fire over SPADAFORA (D25) 132000B, and continued heavy and intense anti-aircraft fire over the MESSINA area.

c. Photo Interpretation: Photo of 13 August show GESSO (D26) to be traffic control point of vehicular movement in the enemy evacuation plan. Some increase in Seibel ferry and landing craft activity in the MESSINA Straits noted. For details see Photographic Interpretation Report No. 60, HQ Seventh Army dated 13 Aug 43.

d. Naval: A road guard reports an unidentified submarine surfaced at 132030B east of CEFALU in the vicinity of C1636.

3. MISCELLANEOUS.

a. Statistics: PW 97,200, enemy dead and wounded 11,200, aircraft, all types, destroyed or captured 263, guns, 75-mm and larger, destroyed or captured 293, all figures to August 14 by Seventh Army.

b. Information from Prisoners of War: PW taken in the vicinity of PATTI reports that enemy withdrawal was ordered to start on 8 August, that another order to withdraw to MESSINA on August 13 was changed to August 12. This information confirms orders reported by PWs taken in the RANDAZZO area. PW of the 29th Artillery Regt states that the unit has only six guns remaining and that evacuation to Italy was ordered on August 8 with priority to vehicles. PWs taken in the Eighth Army sector are extremely fatigued and state that men are willing to surrender but officers are not.

4. ENEMY CAPABILITIES.

(1) To execute rear guard actions along the north and south coast roads with delaying positions on the north, west of BARCELLONA (D15) - west of SPADAFORA (D25) - and a final position defense of MESSINA; to utilize available cross ridges on the south coast line of retreat.

(2) To defend the MESSINA area supported by long range artillery from the Italian mainland.

(3) To continue evacuation from MILAZZO and MESSINA during the time gained by delaying action of capability (1).

Capability (3) is favored augmented by (1).

With only a three mile strait to cross a capability of two trips per craft per night can be assumed. A number of craft are capable of making beach landings, so the evacuation of material over beaches is entirely practicable. Using present shipping facilities the enemy can evacuate 400 guns or vehicles and over 10,000 troops per night. Assuming appropriate deductions for dead, captured and deserted (in civilian clothes), it is doubtful if the combined German-Italian evacuation force would total as much as 75,000. Since some evacuation activity has been observed for at least ten days, and if present facilities were fully exploited, the entire estimated force could be moved in seven days. It is, therefore, reasonable to believe that the bulk of the enemy force has already reached the Italian mainland.

Map - G.S.G.S. 4164, 1:100,000, SICILY

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Enemy holds no general line on the Island of Sicily.

b. Defensive organization: No organized defense encountered. Minefields and demolitions previously completed but undefended were encountered along north coast road today.

c. Identifications: (1) Italian: Fifty PWs from the 101st Battalion, 140th Coastal Regiment were captured S of MILAZZO on 14 August.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: The enemy has evacuated east of SPADAFORA (D25). No contact with enemy at SPADAFORA at 151230. Only light enemy resistance encountered in capture of BARCELLONA at 151000B. Considerable activity was observed in the MESSINA Straits at 151211B. This activity was probably the evacuation of remaining rear guard troops left on the Island. The enemy lost four craft in the MESSINA Straits due to our air action. In the Eighth Army sector, CASTAGLIONE and 100 Italian defenders, all asleep, was lost by the enemy at 1000B. TORMINI (D11) was also lost. Remaining German elements on the south coast area reported by civilians to have withdrawn to S. THERESA (D2028). The headquarters Hermann Goering Division is reported to be located at S. LUCIA (D4657) on the CALABRIA mainland.

b. Artillery: The enemy is reported to have at least twelve long range coast defense batteries employed from CAPE DELL ARMI north covering the MESSINA Straits. Air photos show battery locations at: four guns at D463497, 6 guns D448506, 4 guns D433555, 6 guns D444590, 2 guns D443599; all defense locations as 12 July. Somechange of gun positions may be expected.

3. MISCELLANEOUS.

a. Information from civilians: Civilians report that the coast defenses of CAPE MILAZZO have been abandoned by the 24th Artillery Regiment, Italian, and that BARCELLONA is clear of the enemy; the latter has been confirmed.

b. Information from captured documents: Papers formerly belonging to the 3d MF Troops, 29th Motorized Division, German, reveal that the 2d Battalion, 71st FGR 7th and 9th Batteries of the 3d battalion, 29th Artillery Regiment crossed to SICILY on the 14th and 23d of July, embarking at GALLICO MARINA (D4454). All units except the 7th Battery have been identified by combat. This information indicates that GALLICO may also be utilized as a disembarkation point.

4. ENEMY CAPABILITIES.

(1) To defend the MESSINA area supported by long range artillery fire from the Italian mainland.

(2) To evacuate remaining rear guard elements by light craft under cover of darkness, after a series of rear guard actions.

(3) To harass forward Allied troops within range by long range artillery fire from positions on the CALABRIA Peninsula.

Capability (2) is favored.

The absence of enemy forces along the north coast as far east as SPADAFORA strongly indicates that the enemy considers no further defense of SICILY. Evacuation across the MESSINA Straits continues. It may be assumed that this activity is a movement of units assigned for rear guards action. While the enemy is capable of a fortress defense of MESSINA, this evacuation does not indicate such an action. If delaying elements still remain along the east coast, evacuation of these elements can be accomplished from any point north of S. THERESA (D2128) by light craft and may even now be in progress.

G-2 PERIODIC REPORT

No. 38

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: Rear guard resistance D2762 and north of SAVOCA (EL3).

b. Defensive organization: No organized defense encountered. Demolitions and minefields encountered east of SPADAFORA today.

c. Identifications: (1) German: PWs of the 29th Engineer Battalion, 29th Motorized Division were taken east of SPADAFORA today.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Light enemy resistance east of SPADAFORA slowed our advance. Enemy rear guard elements at 161400B have withdrawn east of D2761 covering their withdrawal by artillery fire. Enemy artillery destroyed a German ammunition train abandoned just east of SPADAFORA. CAPO DI MILAZZO and the town of MILAZZO are both completely evacuated. Approximately 150 motor transports were left undemolished and no serious effort was made to destroy fixed guns. In the Eighth Army sector, the enemy has retreated north of SAVOCA. Continued activity in MESSINA Straits was observed. An unestimated number of vessels, mostly barges, landing craft, and Seibel ferries, were reported. All craft moving east were heavily loaded. Air reports three ships, one of 5000 tons sighted near MESSINA at 151230B. Enemy positions in MESSINA were under long range American artillery fire during the night of August 15/16.

b. Artillery: Some enemy artillery still remains in Sicily. Reliable sources indicate element of the 2nd Battalion, HD artillery are still on the Island.

c. Photo Interpretation: Air Photos of 151930B show supply dumps sunk in the sand of dry river beds on the CALABRIA peninsula. One dump extends from D460545 to D465541; a second dump extends from D453522 to D460529. A four gun light battery was noted at D325649 on August 15.

d. Air: Fighter activity over the MESSINA Straits has increased.

3. MISCELLANEOUS.

a. Statistics: PW 97400 enemy dead and wounded 11,500, aircraft, all types destroyed or captured 267; all figures to August 16 by Seventh Army.

b. Information from Prisoners of War: An Italian officer captured at MALVAGNA (C9325) stated that the Germans offered to evacuate some Italian officers and soldiers to the mainland but that the bulk of Italian troops were refused passage. Civilians report that the 29th Engr. Bn. of the 29th Motorized Division, German, has withdrawn to MESSINA. This has been confirmed by combat.

SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

4. Enemy CAPABILITIES:

No change from last report, which was:

(1) to defend the MESSINA area supported by long range artillery fire from the Italian mainland.

(2) To evacuate remaining rear guard elements by light craft under cover of darkness after a series of rear guard actions.

(3) To harass forward Allied troops within range by long range artillery fire from positions on the CALABRIA peninsula.

Capability (2) is favored.

G-2 PERIODIC REPORT

No. 39

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

a. Enemy front line: CALABRIA Peninsula.

b. Defensive organization: No enemy defenses remain on the Island of Sicily The enemy's first line of defense is now the sea coast of the Italian mainland, for details not previously reported see Photographic Interpretation Report No. 62, HQ Seventh Army dated 15 August 43.

c. Identifications: (1) German: Final delaying action MESSINA area was fought by the 29th Engineer Battalion, 29th Motorized Division. Elements of the Herman Goering Engineer Battalion constituted the final enemy opposition to the Eighth Army.

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: The enemy concluded delaying action on the Island by withdrawing east of GESSO (D26) into the MESSINA area and embarking for the Italian mainland on the night of August 16/17. Strong American patrols entered MESSINA at 162320B. Light small arms fire and long range artillery fire from the mainland was the only enemy resistance. Official entry into the city of MESSINA at 171000B was unopposed. American troops mopping up north of MESSINA encountered no opposition. In the Eighth Army Sector, SCALETTA (D24) was successfully occupied by a British landing force on the night of 15/16 August. The coast area north of SCALETTA to D3050 is the only remaining territory not controlled by Allied Forces; however, this zone is believed to be devoid of German or Italian troops.

b. Artillery: All known enemy artillery positions in Sicily are now occupied by our troops. Enemy artillery on the Italian mainland delivered harassing fire during the period. These positions are now under counter battery fire from American artillery.

3. MISCELLANEOUS.

a. Statistics: PW 98,600, enemy dead and wounded 11,600, aircraft, all types, destroyed or captured 267, guns, 75-mm and larger, destroyed or captured 298, tanks all types, destroyed or captured 188; all figures by Seventh Army to 17 August 1943. The above statistics do not include the final mopping up activity in the MESSINA area.

b. Information from captured documents: Captured German field orders reveal that the following evacuation priorities were followed in withdrawing German units to the mainland: Herman Goering Division from the 1st of August; 15th Panzer Division from the 12th of August, and the 29th Motorized Division from the 15th of August.

c. Terrain: A road, D00313 - M30385, (Not shown on map) is suitable for jeeps for 13 miles, thereafter is passable only to animals.

4. ENEMY CAPABILITIES.

None. The following possible enemy activities are listed for consideration:

(1) To harass troops within range by long range artillery fire from the Italian mainland.

(2) To sabotage military installations in Sicily. This sabotage to be directed by local Fascists not yet apprehended and by agents purposely left or later infiltrated from Italy.

(3) To conduct spot raids, either naval or commando.

The complete evacuation of Sicily by German troops strongly indicates a defensive enemy attitude. Air photos of the CALABRIA peninsula reveal many strong defensive positions along the coast. The continued absence of the Italian Navy from Sicilian waters and the lack of activity by Axis aircraft is further evidence that the enemy considers the Sicilian campaign finished. Isolated groups, Germans in civilian clothes, and Sicilians still loyal to the Fascist regime constitute a menace that cannot be over-looked. However, no further offensive military operations may be expected.

G-2 PERIODIC REPORT

No. 40

Map - G.S.G.S. 4164, 1:100,000, SICILY.

1. ENEMY SITUATION AT END OF PERIOD.

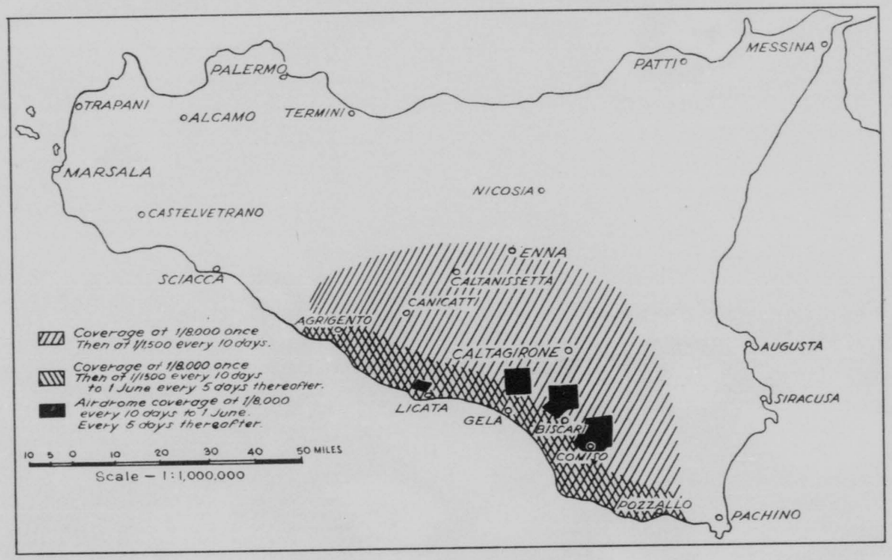
a. Enemy front line: CALABRIA Peninsula.

b. Defensive Organization: None

2. ENEMY OPERATIONS DURING PERIOD.

a. General Summary: Intermittent artillery fire from the Italian mainland was received in the MESSINA area. Elements of the British Eighth Army made contact with American troops at MESSINA. All enemy resistance on the Island has ceased. No report received of enemy shipping activity in the MESSINA Straits during the period.

b. Artillery: The following battery locations on the CALABRIA Peninsula that can probably fire on Sicily were noted by air reconnaissance of 14 August. (NOTE: DP - Dual Purpose, CD - Coast Defense). Five DP or possible 152-mm CD at 438366, 6 CD probably light at 459435, 4 DP at 452666, 4 DP at 461495, 4 CD possible 280-mm at 462497, 6 DP at 449505, 4 DP at 433555, 4 DP at 436567, 6 DP 445900. Four DP at 440597, 2 CD possibly 280-mm at 443599, 4 DP at 444598, 4 DP at 462599, 4 light CD at 447604. Six forts which may contain guns at 462495, 44553, 452551, 450600, 470599 and 471608.



3. MISCELLANEOUS.

a. Statistics: PW 98,900, enemy dead and wounded 11,700; by Seventh Army to 18 August 1943.

Sortie 123/140

STRAITS OF MESSINA

Short stretches of coast on the West and East sides of the Straits are photographed. F boat and Seibel Ferry activity is noted (a) in the vicinity of PARADISO where 3 Seibel Ferries and 1 F boat are ramped to shore and 1 F boat lies off; (b) off GALLICO MARINA where 2 Seibel Ferries, 1 F boat and a number of small craft are ramped to shore and 1 F boat lies off; (c) off CANNITELLO where one Seibel Ferry and one Seibel Ferry and one F boat are ramped to shore and 3 Seibel ferries lie off shore. At time of photography 3 small landing boats are approaching and one landing boat is leaving CANNITELLO. A train ferry lies off shore between PARADISO and S. SALVATORE DEI GRECI. (Photos 3061, 3062, 3066, 3067)

MILAZZO
There is no active shipping present.
One Z501 (probably unserviceable) remains moored in the harbor. (Photo 3099)

BEACH INTELLIGENCE REPORTS OF LANDINGS BEHIND THE ENEMY LINES

5 August 1943

HEADQUARTERS SEVENTH ARMY AND CTF 88
JOINT REPORT OF BEACHES AND DEFENSES, ETC., IN SPECIAL AREA

I. CHARACTERISTICS OF THE THEATER OF OPERATIONS.

NOTE: 1. Beach "A" is the same as Beaches "Red 1" and "Green 1".

2. Beach "B" is the same as Beach "Red 2".

3. Beach "D" is the same as Beach "#4".

BEACHES AND OFFSHORE HYDROGRAPHY

1. General.

(a) Remarks and References.

i. The beaches are presented in order, from west to east; the numbering of the beaches considered are A, B, and D; or Red 1, Green 1, Red 2 and 4, respectively.

ii. Gradients and measurements have been estimated and evaluated from snap-charts, aerial photos, and miscellaneous sources. They are not to be construed as infallible - particularly as regards measurements pertaining to under-water obstacles.

iii. References.

Map Series Used:- G.S.G.S. 4229, 1/50,000.
G.S.G.S. 4228, 1/25,000.

Map Sheets Used:- 252 - I, II and III, 1/50,000.
253 - I, SW and IV, SE, 1/25,000 (composite sheet).
253 - II and III, 1/50,000.

Photographic Cover:- 125/106, 1-8-43, 1/12,400.
125/100, 30-7-43, 1/11,000.
158B/66, 28-7-43, oblique.

Other Material:- U.S.I.S. Report on SICILY, C.B. 4096 H(3 Special Interpretation Report KY 38.

Note: There are no large-scale charts of this stretch of coast. Italian Chart 188, the largest scale chart available, is only 1:150,000.

(b) Coast - General.

a. The piece of coast in question stretches from CAPO MILAZZO (C.094577) to the mouth of T. HUZZA (C.125376). In general, there are narrow strips of alluvial plain, backed inland by narrow coastal terraces, behind which is a continuous belt of mountains. Between these strips of plain, the mountains reach the sea.

b. The beaches are for the most part sandy and are suitable for landing of tracked and untracked vehicles in many places. Men could be landed almost anywhere along this strip of coast.

c. For the most part, the coast of SICILY is clear to the 5-fathom line, which hugs the coast, usually within a mile or two of shore. The nearshore hydrography is quite rocky along the Northern shore, but apparently the approach is clear to the 30-ft depth, which lies even closer to shore than along the Southern coast.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

2. Beaches.

(a) (Note: Total length of clear beach is approximately 10,800 yards, divided for convenience into two separate beaches, Red 1 westward, and Green 1 eastward.

BEACH "A" (Westernmost) (Red 1 and Green 1)

i. LOCATION a. Grid Coordinates:

Red 1: C.5834?7 - C.618478; Green 1: C.620480 - C.650517.

b. Center:

Red 1: ((App) C.602454 (Lat. 38-06-05, Lo. 14-41-30E)) Green 1: ((App) C.638498 (Lat. 38-08-28; Lo 14-43-38)

c. Names:

Red 1 : TERRANOVA.
Green 1 : FIANA di NASO

d. Landmarks: A rocky reef extends westward for about 1/2 mile from the castle on CAPO d'ORLANDO. Three rocks of this reef show above water, the westernmost lying about 330 yds offshore immediately opposite the spot described below under "vi" (Details of beach), 600 yds from the castle. CAPO d'ORLANDO, 300 ft high, is conical in appearance when seen from the NW. On its summit is a walled sanctuary and church, which, from a distance, looks like a castle. On a protrusion from the NW side of this conical hill is a building (this castle is taken as zero for the distance measurements in the tabular vi, "Details of beach"), named CASTELLO on Italian Chart 266. The inshore end of the reef SCOGLI d'ORLANDO is at the foot of this protrusion.

At the north foot of the conical hill stands CAPO d'ORLANDO lighthouse, at a height of 88 ft.

ii. Length: yards - Red 1 : 5,200
Green 1 : 5,000

iii. Width : feet - Red 1 : About 300 ft.
Green 1 ; About 250 ft.

iv. Physical consistency of beach - Red 1: Sandy (reported on Aug. 3, 1943, to be possibly soft, possibly not suitable for vehicles), backed by cultivated fields and orchards. Green 1: Sandy (reported on Aug. 3, 1943, to be firm, suitable for vehicles), backed by cultivated fields.

v. Approaches: From seaward, both Red 1 and Green 1 - free of rocks, except rocks at both ends of Green 1.

Red 1 - To the right of the centerline, approaching from seaward, the 2-fathom curve runs 266 yds off the beach. To the left of the centerline, the 2-fathom curve runs 266 yds off the beach for a distance of 2000 yds, where the bottom at that point suddenly raises to one fathom practically for the balance of the distance eastward.

The six-fathom curve runs fairly consistently for a distance of 500 yds off the beach.

Green 1 - To the right and left of the centerline, approaching from seaward, The 2-fathom curve runs fairly consistently parallel to the beach distant 266 yds, except that at the point 1500 yds eastward, the water is 5-fathoms deep, gradually receding a distance of 750 yds either side of the 1500 yds point.

The beach faces northwestward, with unobstructed approaches, and is unsheltered from westerly and northerly winds. The 5-meter depth line lies 2000 ft offshore. Anchorage may be had, with favorable winds, close westward of CAPO d'ORLANDO.

vi. Gradient.

Details of Beach

	Distance S.W. from CAPO d'ORLANDO Castle (Yards)	Width of Beach (Yards)	Charted Bottom Gradient from Depths of 13 to 18 ft. to Water Line.
1.	5700	---	1:39
2.	5300	80	1:60
3.	4400	110	1:60
4.	3600	70	1:57
5.	2600	70	1:48
6.	1600	80	1:65
7.	600	70	1:36

Remarks:

1. At the mouth of the FIUMARA di ZAFALLA.

2. Southwest end of a narrow beach lane, which runs behind beach into CAPO d'ORLANDO.

3. Large walled stream flows across FIANA di NASO hereabouts.

4. R.R. 180 yds and main road 1000 yds behind beach (a secondary road, branching from the main road, runs 650 yds behind beach). Houses along narrow lane behind beach begin to be almost continuous.

5. Large, walled-in stream hereabouts. Beach lane broadens to secondary road.

6. Beach lane 40 yds., R.R. 200 yds., Main road 600 yds., behind beach. Two roads, perpendicular to shore, run under R.R., and connect beach lane with branch and main road.

7. Opposite middle of town. (Caution: Approach to this spot only just clear the rocks SCOGLI d'ORLANDO.

vii. Nature of bottom - sand, mud.

viii. Reefs, Rocks, Shoals, and other hazards: None, except rocks at both ends of beach.

Green 1: See "Landmarks".

Caution: CAPO d'ORLANDO is notorious for the sudden squalls and large sea which are often encountered near it.

ix. Hydrography: a. SURF AREA: One line of breakers is apparent which breaks on the beach.

b. WAVES, SURF and SWELLS: The prevailing direction of wave approach along the western and northern shores of SICILY is apparently from the west and northwest, in line with the prevailing winds. The steep offshore slope along most of the coast of SICILY results in heavy surf whenever waves are running. Many of the beaches are relatively unsheltered. So that presumably landings along open beaches will depend, to a large extent, upon wave conditions.

c. CURRENTS: Currents in the region about SICILY are generally weak and variable, and are controlled, to a large extent, by prevailing winds. A current usually flows eastward along the northern coast of the island, although a westward current from 0.3 to 0.75 knot is also reported.

d. DEPTHS: In many places, foul ground extends a short distance from the shore, but nowhere is the 10-fathom contour more than a mile from the shore, and usually is considerably less. Outside the 10-fathom contour, the approaches to the coast are clear of danger. Depths increase fairly regularly to the 100-fathom contour, which lies 14 miles offshore off CAPO d'ORLANDO.

x. Defenses on the Beach.

a. General Survey.

Beach "A" - Red 1

Possible Mine field

(1) C.605457 - C.581435 - C.581432
(2) C.583435 - C.586430 - C.581423
(3) C.609456 - C.608471 in zig-zag form.
(4) C.597451 - C.593410 - C.593413
(5) C.599409 - C.596408

Pill Boxes - 573429
M.G's. - 587437
535409
572428
4-gun AA - 552408
Probable CD - 2-gun CD on 514385
Wire - Probably runs along extent of beach.
Heavy AA - C.570412 - 3-gun battery in bends of road.

Beach "A" - Green 1

1. Pillboxes at: - C.653518
C.649514
C.648513
C.638502
C.636492
C.657519 (Probable)

2. Possible minefields at:-

C.623471 to C.620471 and from C.621479 and C.618475 inland to railway bridge at C.622475.

3. Wire from C.654513 to C.633494.

4. A.A. position at C.657517 (3-gun light)

5. M.G. at C.657519; C.657509; C.657515.

6. Road blocks at C.655513; C.657512; C.655511; C.661508.

7. Demolitions: R.R. bridges behind beach probably demolished.

xi. Exits:

	P	AFV	MT
Red 1	Yes	Yes	Yes
Green 1	Yes	Yes	Yes

Red 1: Many trails leading to beach. Coastal road is about 3000 ft behind beach. Land for 3000 ft inland, flat to coastal road. R.R. between coast road and main road is obstacle, as it is built of fill-in-places and bridges over streams. There are many places it can be crossed.

At C.591439 and C.597446, the R.R. crosses a stream, and under these bridges, small tanks and MT could pass, joining a minor road at C.592438 and C.598445, respectively, and thence by North, South roads to the main coast road.

Approximately 280 yds east of bridge (C.591439) there is a culvert which might be suitable for small MT and a good road leading on to the main road. The embankment is also breached by four smaller culverts.

Tanks and MT could also gain access to the main coast road by passing under R.R. bridge at C.581431 and thence by bed of stream to either track approximately C.585428 and track C.581425.

Green 1: 1. At the extreme northern end, by road, approximately 22 ft. wide, which joins the main coast road at C.657513.

2. By a series of culverts and bridges of varying width through R.R. embankment.

3. That at C.652513 is from 12 ft to 14 ft wide, access to it is by various roads off the beach, and road eventually joins the main road at C.649506.

4. Culvert approx. 450 yds S.W. suitable for small MT and joins main coastal road also at C.649506.

5. Bridge at C.636486 is from 10 to 12 ft wide and carries R.R. overstream. Bed of stream is now dry. Traffic would join secondary road between R.R. and main coast road, leading eventually to the main coast road.

6. Approximately 1200 yds SW of bridge, at C.632513, there is a level crossing suitable for light traffic and 1 mile further SW another similar. Access to main road by tracks and secondary road parallel to coast.

7. A culvert suitable for small MT, 350 yds NE of R.R. bridge (C.622475), then to C.631471, and left, right, or straight on for the main coastal road.

8. Exit for small MT at S.W. extremity of beach, under R.R. bridge, C.622475, and thence immediately turning N.E. by track to main coastal road.

9. There are several culverts useful as exits, possibly for infantry. A minor road runs entire length of beach, bordered by houses towards its northern extremity.

10. There is also a good secondary road running parallel to the coast between R.R. and main coast road. R.R. embankment for entire length of beach forming tank obstacle.

SECRET

THIS PAGE IS UNCLASSIFIED

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

11. Main coast road is built up on its seaward side along its entire length and access to it by MT would only be by existing roads. To tanks, however, it would prove no obstruction except N.E. from road fork, C.649506.

12. Two "roads" shown on map, sheet 252 (1st and 2nd editions), as joining the main road to the beach at ref. 630491 and 638501, are in fact streams carried across the plain by means of built-up banks. (A road passes underneath one of these stream at ref. 636487.)

13. The R.R. line runs close to the coast on a low embankment.

xii. Anchorage.

There are no good anchorages off this stretch of coast. Local craft anchor in a few regular anchorages at Green 1, about a cable west of the westernmost rock of SCOGLI d'ORLANDO, in 8 to 9 fathoms, sand bottom, good holding ground, but this anchorage is unsafe, with onshore winds. Local craft also anchor east of CAPO d'ORLANDO on a sand and mud bottom, good holding ground.

(b) BEACH "B", "C", "Red 2".

i. Location (a) Grid Coordinates C.692506
C.745524

(b) Center: C (approx.)
Lat. : 38-49-25 N.
Lon. : 14-49-09 E.

(c) Name : BROLO

(d) Landmarks : A rock about 450 to 600 yards offshore of the point C.723517; useful for a landing craft approach guide. This rounded rock is 46 ft high. The coast is clean except "SCOGLIO BROLO", just mentioned, and a ledge of rocks off PUNTA di TESTA di MONACO, on the western edge of the beach limit.

ii. Length (Yards): 6,000 yds.

iii. Width (Feet) : 200 ft.

iv. Physical Consistency of Beach - Along this coast is a sandy beach 40-100 yds wide, behind which lies a stretch of alluvial country, broken only where the village BROLO is built on a small rocky hill at ref. 722514.

v. Approaches: The approach is clear except for "SCOGLIO BROLO", mentioned above, which serves as a help in the approach. At the centerline nearest the beach and for about 450 yds offshore, the depth is 3-fathoms. This depth increases on the port hand to 5-fathoms about 790 yds from centerline, and on the right at approximately the same distance, the depth becomes four fathoms.

The 10-fathom contour is charted 2000 yds. offshore at the PUNTA di TESTA di MONACO end, closing gradually to 1000 yds. off the CAPO PIRAINO end.

vi. Gradient (estimated): Charted below-water gradient (from small-scale chart): the 18-foot depth contour is charted parallel to the shore and about 300 yards offshore (gradient 1:55).

vii. Nature of bottom: Sand, mud.

viii. Reefs, Rocks, Shoals, and other Hazards: "SCOGLIO BROLO", as mentioned above, and ledge of rocks off the PUNTA di TESTA di MONACO, western beach limit. The CAPO PIRAINO is high, rugged, and fringed with rocks.

Caution: CAPO d'ORLANDO is notorious for the sudden squalls and large seas which are often encountered near it.

ix. Hydrography: a. Surf Area: One line of breakers is apparent, which breaks on the beach.

b. Waves, Surf, and Swells: The prevailing direction of wave approach along the western and northern shores of SICILY is apparently from the west and northwest, in line with the prevailing winds. The steep offshore slope along most of the coast of SICILY results in heavy surf whenever waves are running. Many of the beaches are relatively unsheltered, so that presumably landings along open beaches will depend, to a large extent, upon wave conditions.

c. Current: Currents in the region about SICILY are generally weak and variable, and are controlled, to a large extent, by prevailing winds. A current usually flows westward along the northern coast of the island, although a westward current from 0.3 to 0.75 knot is also reported.

d. Depth: In many places, foul ground extends a short distance from the shore, but nowhere is the 10-fathom contour more than a mile from the shore, and usually is considerably less. Outside the 10-fathom contour, the approaches to the coast are clear of danger. Depths increase fairly regularly to the 100-fathom contour, which lies 1½ miles offshore off CAPO d'ORLANDO.

x. Defenses on the Beach:

Pillboxes : 2 at C.699508
2 at C.713513
2 at C.717515
1 at C.735520

M.G. Possible positions at:
C.724517
C.686509

Wire : From C.690507 to
C.743523

Minefields : Probably East of CAPO d'ORLANDO, from C.699509 to C.7043523.

Note : See overlay to follow.

xi. Exits from the Beach:- (a) The coastal plain is planted largely with orchards. The main East-West road, which is never more than 800 yds. from the sea, runs along the foot of a steep escarpment, except where it crosses five small rivers flowing towards the sea, and in the stretch of country between two of the rivers at ref 7251. The R.R. line, mainly embanked, skirts the coast. The best exit from the beach is towards BROLO, at ref. 725517; others are at refs. 739522 and 743523.

The beach is backed for most of its length by low ground, cultivated and with low walls. The railway emerges from a tunnel at the PUNTA di TESTA di MONACO end, and runs eastward on an embankment; as far as just east of FIUME di S. ANGELO, it is parallel to an about 100 yds from the beach, and thereafter it runs along the edge of the beach. The main coastal road (Route 4) is close inshore of the R.R. at the PUNTA di TESTA di MONACO end, but soon afterwards trends inland, until it is about 600 yds inland of the R.R. at FIUMARA di NASO; it remains from 350 to 600 yds from the R.R. until it crosses FIUMARA di S. ANGELO, after which it gradually closes the coast. Between BROLO and CAPO PIRAINO, a few lanes or tracks lead from the beach, under the R.R., to the main road. The ground between the R.R. and road is cultivated with vineyards and orchards.

Exit for infantry would be by the lanes or tracks mentioned above; elsewhere, it would be over cultivated grounds, over the R.R. embankment, and through the vineyards and orchards to the main road. Behind the road, the ground rises steeply to about 700 ft.

During the summer, the beds of the rivers and streams could be used. Exit would be under the R.R. bridges and on to the road near the road bridges; the road bridge over FIUMARA di S. ANGELO, however, is high, and lies at the entrance of a gorge.

(b)

	P	AFV	MT.
Red two:-	Yes	Yes	Yes

xii. Anchorage: Anchorage can be obtained anywhere off this stretch of coast on good holding ground of sand and mud. When fresh offshore winds are blowing, violent squalls come down from the hills.

3. Daylight and Darkness Tables.

Corrections to Section 1:

1. Page 1, sub-paragraph ii, under 1. (a)., second line, the word "snap" should read "map".

2. Page 3, paragraph 2, under "Remarks", add: "railroad 300 yds behind beach."

3. On page 8, "moon rise", under date of August 10, should read 1351.

ANNEX 12
OFFICERS SECURITY MEMORANDUM

25 March 1943

SUBJECT : Operation HIGOT, Security Instructions.

TO : "XO" and "YO" Officers, Headquarters I Armored Corps.

1. GENERAL

a. The planning of this operation is taking place in an area much less secure than Washington or London. All members of this staff are therefore cautioned to be discreet in their conversation and handling of documents to a point where they will not be suspected of being members of a planning staff.

b. Experience has shown that the three main threats to security are:

(1) Thoughtlessness, which can be prevented by carefully considering the security aspect before taking action.

(2) Carelessness, which can be remedied by disciplinary action.

(3) Failure to follow instructions, which is often due to failure to read the instructions issued.

c. It cannot be too strongly emphasized that even the smallest items of information regarding Operation HIGOT are of a MOST SECRET nature.

2. CLASSIFICATION

a. All officers whose duties require knowledge of the operation will be classified in two lists known as the "XO" and "YO" Lists.

(1) The "XO" List will be maintained for those officers whose duties require fully detailed knowledge of the entire plan. "XO" list officers will have access to the Plans Room and to the Situation Room.

(2) The "YO" List will be maintained for those officers whose duties require only knowledge that an operation is being planned. "YO" officers will have access to the Plans Room ONLY. "YO" officers will receive data pertinent to the operation only at such time and in such degree as required by their duties. "YO" officers will NOT know:

(a) Full details of the objective.
(b) The date.
(c) Full details of the forces involved.
(d) Full details of the methods to be employed.

"YO" officers are cautioned against curiosity regarding details which have not been released to them officially.

(3) "XO" officers will not take "YO" officers into Situation Room without authority in each and every case from Chief of Staff or the Commanding General.

(4) When an officer finds it necessary to consult a section concerning the operation, he will first ascertain which officer in that section is on the required classification list.

(5) The "XO" or "YO" classification of an officer or officers present will be determined before any discussion is opened regarding the operation. This should be done by a direct question, "How are you classified"; to which the reply is "XO" or "YO" as the case may be.

3. CLERKS

Only officers will be classified, but in each section one clerk will be specially detailed to handle typing and filing of HIGOT papers. Clerks will not discuss the operation with other than their own section's

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

classified officers. Each Section Chief is responsible for the selection and supervision of his clerk.

4. MAPS

a. Maps should be kept covered when not in use.
b. Maps should be placed in positions where they cannot be observed through street level windows or windows which can be overlooked.
c. Care should be taken that maps indicating exact areas are not in a position where they can be observed by unauthorized personnel.
d. Maps should be requested in a manner which does not indicate the operation to the map supply personnel.
e. Issue of, and requests for, maps should be held to the minimum.
f. Each map drawn will be marked to indicate the section or branch using the same and a record made of its issue.
g. Code names should be used for pertinent areas, cities and countries to avoid habitual use of names which might disclose the operation.

5. RESPONSIBILITY

a. Chiefs of Sections are responsible for ensuring,
(1) That instructions contained herein are observed.
(2) That all other necessary precautions are taken in every instance.
(3) That their offices are secure at every hour of the day from unauthorized entry.
(4) That any documents to be distributed by their section do not fall into unauthorized hands.

6. VIOLATIONS

a. All violations of security will be reported to the Security Officer without delay.
b. Rumors or remarks concerning the operation overheard or reported in or out of the military establishment should also be brought to the attention of the Security Officer.

ANNEX 13

SAMPLE OF PSYCHOLOGICAL WARFARE BRANCH LEAFLETS

LA GUERRA CONTINUA

Gli alleati vi hanno ripetuto parecchie volte che per ottenere la pace l'Italia deve :

1) SBARAZZARSI DEL FASCISMO.
2) CESSARE DI AIUTARE LA GERMANIA.

Sebbene il regime fascista sia stato abbattuto, tuttavia il nuovo governo italiano continua ad aiutare i tedeschi.

Il Presidente degli Stati Uniti ed il Primo Ministro del Regno Unito Britannico, si sono congratulati con il popolo italiano per l'essersi saputo sbarazzare dell'uomo che lo trascino nella guerra.

Il Generale Eisenhower promise che noi avremmo ridata la libertà alle centinaia di migliaia di prigionieri italiani catturati in Tunisia ed in Sicilia, qualora voi aveste impedito che i prigionieri alleati in Italia venissero trasferiti in Germania.

Gli Alleati speravano che il vostro nuovo governo avrebbe accettato queste condizioni onorevoli.

Per alcuni giorni dopo la caduta di Mussolini, gli Alleati sospesero i bombardamenti delle città italiane. Ora il vostro governo continua a combattere la guerra tedesca. Siamo perciò costretti a proseguire la guerra contro l'Italia con tutti i mezzi a nostra disposizione. Le città italiane saranno bombardate con maggiore intensità.

VOI SOLDATI ITALIANI CHE VI TROVATE IN QUESTO LEMBO DELLA SICILIA SARETE SCHIACCIATI COME LO FURONO LE POTENTI ARMATE DELL'ASSE IN TUNISIA.

Però il popolo italiano ripone tutte le speranze in voi Soldati d'Italia.

Se volete porre fine a questa inutile distruzione dovete agire in modo tale da costringere il vostro governo a rompere l'alleanza con la Germania Nazista.

Vi siete sbarazzati di Mussolini ! Noi crediamo fermamente che vi sbarazzerete pure dei tedeschi e salverete così l'Italia ed i suoi figli da una ulteriore distruzione e sacrificio inutile.

I Governi Alleati hanno offerto all'Italia il mezzo di ritirarsi dalla guerra. Il Popolo Italiano vuole, senza dubbio, accettare questa offerta.

Tuttavia la guerra continua.....

A CHI LA COLPA ?

Translation of Italian Leaflet I. K.

(Front)

THE WAR CONTINUES

The Allies have repeatedly warned you that to obtain peace Italy must :
1. Get rid of Fascism.
2. Cease to aid Germany.

The Fascist regime has been overthrown but the new Italian Government continues to assist the Germans.

The President of the United States and the Prime Minister of Great Britain have congratulated the Italian people on having rid themselves of the man who dragged them into the war. General Eisenhower declared we would release the hundreds of thousands of Italian prisoners captured in Tunisia and Sicily provided your government prevented the Allied prisoners in Italy being transferred to Germany. The Allies hoped your government would accept these honourable conditions.

For some days after Mussolini's fall the Allies stopped bombing Italian towns. Now your government is continuing to fight Germany's war. Therefore we are compelled to continue the war against Italy, with all the means at our disposal. Italian cities will be bombed on an ever greater scale.

You, in this corner of Sicily, will be crushed as were the large Axis armies in Tunisia. The Italian people place all their hopes on you soldiers of Italy.

If you wish to put an end to this needless destruction you must act and speak so that your government is forced to break the alliance with Nazi Germany. You have got rid of Mussolini. We believe you can also get rid of the Germans, and so save Italy and her sons from further useless destruction and sacrifice !

The Allied governments have offered Italy a way out of the war. The Italian people want to accept this offer.

But the war continues.....

WHO IS TO BLAME ?

ITALIEN STEHT JETZT GEGEN EUCH

DEUTSCHE SOLDATEN !

Hier sind die Tatsachen !

Tatsachen, die die ganze Welt kennt.

Sind sie EUCH bekannt ?

ROM : Mussolini wurde gestuerzt. Die Faschistische Partei ist amtlich aufgeloest. Alle faschistischen Hoheitszeichen wurden entfernt.

MAILAND UND TURIN : Antifaschistische Organisationen uebernehmen in beiden Staedten die Macht. Revolutionaere Parteien haben saemtliche Zeitungen, oeffentliche Gebaeude und die Verkehrsmittel uebernommen. Streikende Arbeiter haben die Kriegsfabriken stillgelegt. Die Faschisten verbergen sich. Massendemonstrationen ziehen durch die Strassen. Sie verlangen Separatfrieden. Ihr Ruf ist : Werft die Deutschen hinaus !

SCHWEIZER GRENZE : Die Gestapo verlaesst fluchtartig Italien. Eine deutsche Flak-Batterie wurde von der bewaffneten Menge beschossen und entwaffnet. Die Schweizer Behoerden verweigern den gefluechteten Faschisten den Uebertritt auf schweizerischen Boden.

PALERMO : Die in die Hauptstadt einrueckenden amerikanischen Truppen wurden von der ganzen Bevoelkerung als Befreier umjubelt. Mit Blumen und Wein wurden sie begruesst.

BERLIN : Als Hitler in der letzten Woche von seiner Unterredung mit Mussolini zurueckkehrte erklaerte er, dass Italien der Achse treu bleiben wird. Der Fuehrer hat sich wieder einmal geirrt.

Translation of German Leaflet G. C.

(Front)

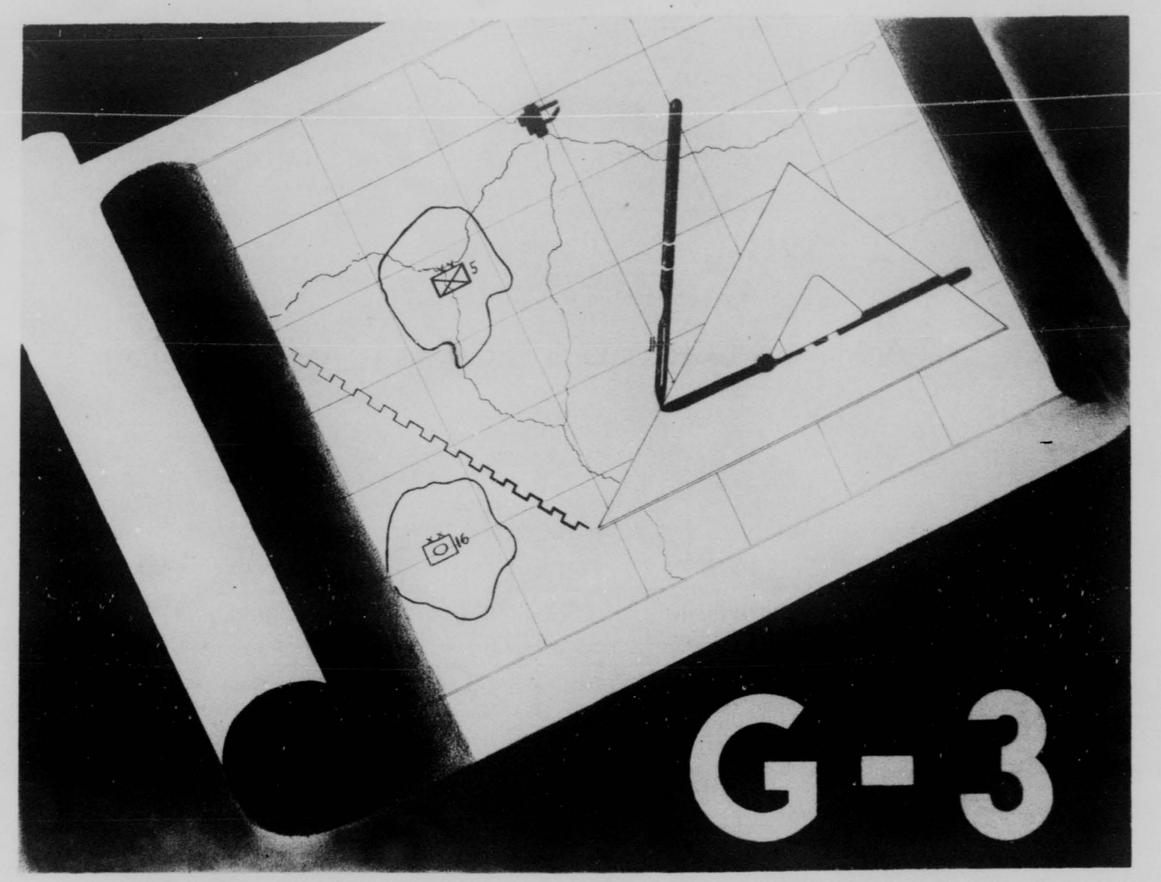
ITALY IS NOW AGAINST YOU

German Soldiers !
Here are the facts !
Facts which the whole world knows.
Are they known to you ?

ROME : Mussolini has been deposed. The Fascist Party has been officially dissolved. All Fascist emblems are being removed.

MILAN AND TURIN : Anti-Fascist organizations are taking over power in both cities. Revolutionary parties have seized control of all newspapers, public buildings, and communications. Striking workers have closed down the war plants. The Fascists are in hiding. Huge demonstrations demand a separate peace. Their cry is : « Throw the Germans out ! »

Swiss Border : The Gestapo is fleeing Italy. A German anti-aircraft battery was fired upon by an armed mob and disarmed. The Swiss authorities are refusing entry upon Swiss soil to fugitive Fascists.



PALERMO : American troops entering the capital were hailed by the inhabitants as liberators. They were greeted with flowers and wine.

BERLIN : When Hitler returned last week from his conference with Mussolini, he declared that Italy would remain true to the Axis. Once again, Der Fuehrer has been mistaken.

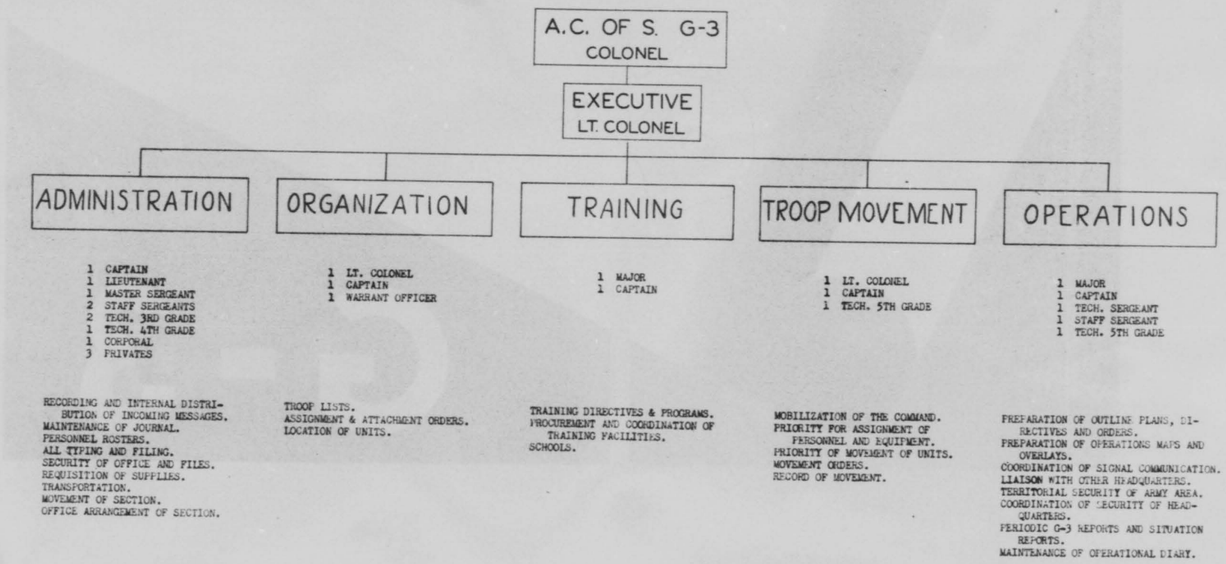
REPORT OF THE A.C. OF S. G-3

(OPERATIONS & TRAINING)



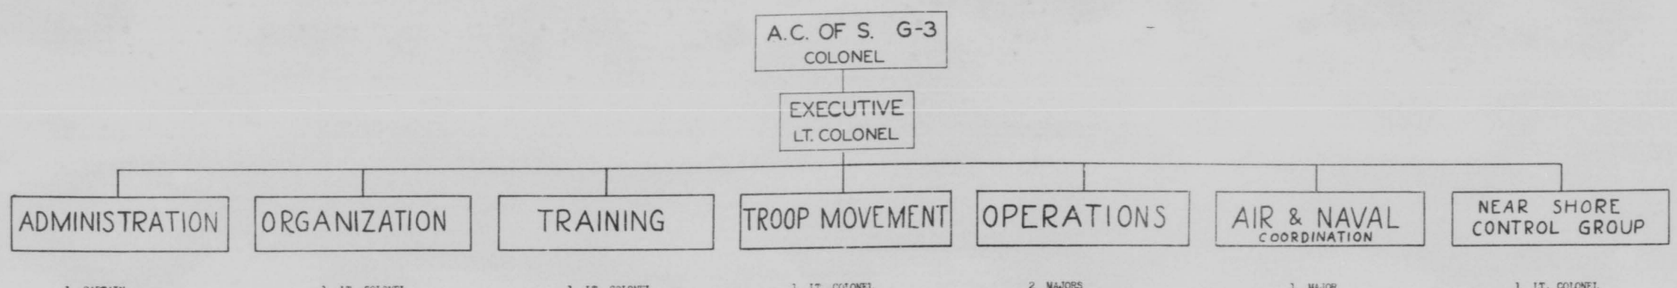
INDEX

I	ORGANIZATIONAL CHARTS	VII	AIR SUPPORT
II	ADMINISTRATION	VIII	NAVAL SUPPORT
III	ORGANIZATION	IX	NEAR SHORE CONTROL GROUP
IV	TRAINING	X	ORDERS AND DIRECTIVES
V	TROOP MOVEMENTS	XI	CONCLUSIONS
VI	OPERATIONS	XII	RECOMMENDATIONS

I. ORGANIZATIONAL CHARTS

The G-3 Section was organized for the planning and operational phases as shown in the charts below. Certain changes in functions from planning to operations necessitated regrouping personnel as indicated.

I ARMORED CORPS G-3 SECTION PLANNING PHASE



SECRET

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

SEVENTH ARMY G-3 SECTION

OPERATIONAL PHASE

THIS PAGE IS UNCLASSIFIED

II. ADMINISTRATION

PLANNING PHASE

In the initial planning phase for Operation "HUSKY", the G-3 Section consisted of four officers and seven enlisted men. During this early planning phase, it was necessary because of security reasons to separate planning from the normal functions of the various staff sections of this Headquarters. As a result, there were only two officers who devoted their full time to the routine functions of the G-3 Section.

On 27 April 1943, Headquarters I Armored Corps, Reinforced, moved to Mostaganem, Algeria. The section was then increased to seven officers and seven enlisted men. During the first two weeks in June (less than 30 days from D Day), eight additional officers and seven enlisted men were assigned or attached to the section.

Meanwhile, the quantity of incoming material had been steadily increasing. This, coupled with the administrative work required for the movement of troops to assembly and mounting areas, the development of the final troop list and the preparation of final plans and orders placed a burden on the administrative sub-section for which it was ill prepared.

OPERATIONAL PHASE

On 23 June four officers of the section boarded LST 325 at Mostaganem and did not rejoin the section until 12 July, when the CP was established at Gela, Sicily. On 28 June the "near-shore control group" of the G-3 Section, composed of five officers and three enlisted men, moved to Bizerte. With this group was the greater part of the files, office equipment and supplies.

On 29 June our Main Headquarters boarded the "Monrovia" at Algiers. Due to limited space, this Headquarters was reduced to the minimum personnel necessary to operate. The G-3 Section was limited to four officers, one warrant officer and five enlisted men. Only the few files, supplies and equipment absolutely necessary for the operation of the section in the field for a limited period of time were carried.

On 12 July Headquarters Seventh Army moved ashore; the advance CP was established one mile east of Gela. This advance CP consisted of the Command Group, Chief of Staff Section, and the G-2 and G-3 Sections. The remainder of the forward echelon set up in the town of Gela. This division of the forward echelon was continued throughout the Sicilian Campaign. The "near-shore control group" and the rear echelon, Headquarters Seventh Army were in Bizerte.

Administration in the field, as compared to that during the planning phase, was relatively simple, since the amount of administrative detail was materially reduced.

III. ORGANIZATION

PLANNING PHASE

This section was charged with the duty of maintaining an accurate list of units under command of the Army showing the exact location, assignment and/or attachment of such units.

Upon receipt of a list of units which were to be available for the operation, a card file system was set up utilizing a 4 x 6 card on which was typed the designation of the unit, the T/O under which it was organized, the location, the next higher headquarters to which it was assigned or attached, and the T/O strength in personnel and vehicles. These cards were arranged under headings according to arm or service and were further arranged numerically under those headings. The next step was to set up a troop list making certain units and parts of units available to sub-task force commanders. This was done at a meeting of all Section Chiefs. At this meeting each Chief of Special Staff Section was asked to nominate the units of his particular arm or service which should be attached to each sub-task force in order to form a balanced force. Units not included in sub-task forces were grouped under the heading of "Army Troops".

After the list of units to be made available to sub-task force commanders was finally approved, the card file referred to above was improved by making an additional set of cards, each card containing only the unit designation. This set was arranged under sub-task force headings.

A 1:200,000 map of North Africa from Bizerte to Casablanca was prepared and location of all units on the troop list within that area were shown using various colored tabs; a color for each of the sub-task force units, and a color for Army Troops. This map proved invaluable in following the progress of movement of units to training, staging, and concentration areas. The final number of troops assigned to Seventh Army for operation "HUSKY" was approximately 230,000.

Another part of the system of maintaining the records was the "Document File". This file contained the authority for all changes in location or status of units. When a change was made on the card of a unit, no erasure was made; instead the old information was lined out in red but was still legible for future reference. The new information was typed on and following was a notation of the "document" authorizing the change. These documents were numbered consecutively and consisted of movement orders, assignment and attachment orders, radios, etc. They were bound in blocks of 100 and were invaluable for reference.

Since changes occurred daily, due to amendments to outline plans, movements of units, or changes in assignments and attachments, it was necessary that the organization sub-section work very closely with the troop movement sub-section as one could not function efficiently without the other.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS UNCLASSIFIED

OPERATIONAL PHASE

The system of operation of the organization sub-section during the actual operation was much the same as during the planning phase. The one additional duty was to keep a record of troops as they were landed and to be able to tell at a glance just how much of a unit was in Sicily and how much in Africa. It was found advisable to have a member of the organization sub-section act as liaison between the Seventh Army G-3 Section and AFHQ Movement and Transportation Section to assist in coordinating the movement of follow-up units to Ports of Embarkation.

IV. TRAINING

PLANNING PHASE

Training for Operation "HUSKY" consisted of two principal phases: A brief period of refresher training for all units, followed by special amphibious training and a final rehearsal for each sub-task force. This rehearsal included the loading and landing of the assault units and the establishment of an initial beachhead, under conditions approximating those anticipated for the initial attack.

The training policy of Seventh Army for Operation "HUSKY" was to provide the facilities for training and to prescribe only the objectives to be attained. The Fifth Army Invasion Training Center at Port-Aux-Poules, Algeria, on the Gulf of Arzew, was made available for the amphibious training. This training center was controlled by, and under the command of Fifth Army. The Commanding General, Seventh Army, was responsible for arranging the priority in which units would be trained at the FAITC. All technical and tactical details of amphibious training and supervision of such training were the responsibility of the FAITC. While cordial relations existed between the staff of Seventh Army and the FAITC throughout the training period, this division of responsibility proved to be undesirable.

The Training Center course consisted principally of practice in loading personnel and equipment on ships and craft, approaching a selected beach, and debarking under simulated combat conditions, both in daylight and in darkness. In conjunction with amphibious training, the Training Center also conducted exercises for small units in special operations, including street fighting and night attack. Where appropriate, live ammunition was used and battle conditions approximated.

The Training Center was originally intended to train one regimental combat team at a time for a period of two weeks. Due to time limitations it was subsequently necessary to modify this plan and during the latter phase of training as many as three RCT's were training concurrently.

The 1st Engineer Special Brigade at Port-Aux-Poules conducted training of all Engineer Shore Regiments in the operation. This included training of Engineer, Signal, QM, Medical and all other personnel in normal beach groups. In addition, this Brigade trained all drivers of DUKWS (2½-ton amphibian trucks) used in the operation. The Brigade relieved Seventh Army of all details of this type of training except establishing the priority of units undergoing training.

The work of the FAITC and the 1st Engineer Special Brigade was outstanding. The success of the landing operation proved the soundness of training methods, especially since most of the landing craft, the DUKWS, and other special equipment used in this operation had never been used by any of the sub-task forces previously.

The Training Sub-Section of the G-3 Section was responsible for coordinating the order in which units and selected cadres attended training at the FAITC and the 1st Engineer Special Brigade.

OPERATIONAL PHASE

The conclusion of the rehearsals by the sub-task forces marked the end of training for the campaign. The training sub-section accordingly suspended its normal functions. Part of the personnel assumed operational duties and the remainder proceeded to Bizerte where it operated the G-3 Section for the "near-shore control group" of the Seventh Army.

V. TROOP MOVEMENTS

PLANNING PHASE

This sub-section worked in the same room with the Organization Sub-Section in order to obtain the close coordination which is necessary. The mobilization of the sub-task forces began prior to the completion of the Tunisian Campaign. Units were scattered from Casablanca, French Morocco, to the Tunisian battle front; some units were in the United States, and others had not been activated.

AFHQ made available an initial list of troops which included many unnamed units, i.e., units whose numerical or alphabetical designation had not been indicated. Final nomination and assignment of all units was eventually obtained as the result of many conferences, telephone calls, and radio messages.

Dates by which service units were to be released for movement was left to "mutual agreement" of this Headquarters and the various headquarters to which the units were attached. This policy caused uncertainty and delay in the movement of many units.

As the units were nominated and dates of release agreed upon, this headquarters submitted requests to AFHQ for authority to move the units to join their proper sub-task forces. Authority was given by G-3, AFHQ, to this Headquarters to move the unit on or about a certain date. The necessary additional transportation was allocated by G-4 Movements and Transportation, AFHQ, and actually furnished by SOS, NATOUSA, through its various Base Sections. This involved the coordination of motor, rail, water and air transportation. Our Headquarters then issued movement orders to the units concerned.

Initially it was necessary to assemble as many units of a sub-task force as possible in the sub-task force training area, and later move the sub-task force to its final staging area. SOS, NATOUSA, through its Base Sections issued the necessary orders for the movement from the final staging areas to ports of embarkation. Ports of embarkation used were Oran, Algiers, Bizerte, and Tunis for the seaborne elements, and Kairouan for the airborne elements.

Thus the 3rd Infantry Division was moved from Port Lyautey, French Morocco to Port-Aux-Poules, Algeria where additional units joined it for training; it was then moved to the vicinity of Bizerte, (in the closing stages of the Tunisian Campaign) back to Jemmapes, Tunisia, and again to vicinity of Bizerte where its final assembly and embarkation took place. The 2nd Armored Division was moved from Rabat, French Morocco to Port-Aux-Poules, where additional units joined it for training; one combat command was then moved overland and by water to Bizerte for embarkation, while the remainder of the division and assault units assembled and embarked from Oran and Arzew, Algeria. The 1st Infantry Division was released upon completion of the Tunisian Campaign, moved from vicinity of Bizerte to Arzew, Algeria where additional units joined it for training, and was assembled at Algiers for final embarkation of assault units. Its follow-up troops embarked from Oran, Algiers, and Tunis. The 9th Infantry Division was released upon completion of the Tunisian Campaign and moved from vicinity of Bizerte to Chanzy, Algeria for training. One RCT and the division artillery then moved to Bizerte for embarkation, the remainder of the division embarking from Oran. The 45th Infantry Division arrived at Oran from the United States, moved to Arzew vicinity for training and then to Oran for embarkation of assault units. Its follow-up troops were embarked from Tunis. The 82nd Airborne Division moved from Casablanca to Oujda, French Morocco for training, then moved to Kairouan, Tunisia by plane, road, and rail for final assembly prior to the assault. Its follow-up troops were moved by plane from Kairouan and by sea from Bizerte.

The final ports of embarkation were not determined until after some units had been nominated and moved to join their sub-task forces. This resulted in some unnecessary movements of units.

A movement and mounting schedule was prepared and published to all headquarters concerned. Although some units did not arrive at destinations as soon as desirable, all units arrived in time to embark on schedule. For the most part, the excellent coordination of these moves was a result of the efficient organization and personal supervision of the G-4 Movements and Transportation Section, AFHQ.

Orders for the movement of units were prepared by this sub-section and issued by radio, letter, or orally. Orders for the movement of service units were coordinated with the staff section concerned. Orders were addressed to the headquarters to which a unit was attached and contained date of movement, destination, transportation facilities available, and new status of unit upon arrival. Information copies of all such orders were sent to the special staff section concerned as well as to all headquarters involved in the movement.

It is vital that a check system be maintained on the movement and arrival of all units. This was accomplished by requiring sub-task forces to report dates and hour of arrival of all units in their assembly areas, and by making a full use of the various special staff sections in supervising the movements of their units. A simple record was kept in the sub-section, which indicated whether or not a unit had finally reached its destination.

Difficulty was encountered in insuring that orders once issued were actually received by the unit concerned; this was caused by the wide dispersion of units and inadequate communication facilities available. This was in part solved by the use of officer couriers travelling in Cub planes.

OPERATIONAL PHASE

The procedure followed by the Troop Movements Sub-Section remained essentially the same as in the planning phase.

Prior to departure of this Headquarters from North Africa a tentative priority list for the movement of units from the staging areas to the battle area was prepared; copies were given to the "near shore control group" and to all higher headquarters concerned. This list was an estimate of the order in which units would be needed in the successive phases of the operation. Although this list was changed to conform to the necessities resulting from the progress of actual operations, it proved to be of great assistance in the movement of units to their staging areas.

After the assault convoy had sailed, G-4 Movements and Transportation, AFHQ, coordinated the movement of all units to the various staging areas where they were embarked by SOS, NATOUSA acting through the Base Section concerned.

Orders were issued by radio, by letter, and in many cases orally for the movement of units within the battle area. All such orders contained the date and hour units were to move, the route, destination, and the place at which the unit passed to the control of the new commander. Staff officers were used to supervise the execution of movement orders wherever possible.

The reports received from the Rear Echelon as to units shipped were often at variance with reports from beach group commanders as to units arriving. The special staff sections proved to be of great assistance in confirming the actual presence of units as they arrived in the battle area. A final check was obtained from the G-3 Reports of subordinate units, which showed that the unit or part of the unit had actually arrived and had come under the control of the proper headquarters. In order that the commander may know exactly which units and parts of units are available to him in the battle area, some such system of records must be maintained.

VI. OPERATIONS

PLANNING PHASE

The duties of the Operations Sub-Section during the planning phase included the study and analysis of all directives, outline plans, and operational instructions of higher headquarters, the Navy and Air Force. Applicable portions of the above were posted on the planning map maintained in the "War Room" available for use of the Commanding General and planning staff. Based upon the commander's decision, Seventh Army outline plans, operational memoranda, and field orders were prepared and published.

Detailed study of outline plans and field orders of all subordinate headquarters was made, and their contents were posted on an operations map available for the use of the entire G-3 Section.

The orientation and instruction of officers who were to be assigned to higher headquarters and adjacent units as liaison officers was also a function of this sub-section.

In preparation for moving aboard the Headquarters Ship and into the field where it would be necessary to operate with reduced personnel and equipment, the records and equipment of the Operations Sub-Section were reduced to a minimum. A separate file was set up which contained copies of those documents of an operational nature which were considered necessary for reference during the initial phase of the operation. Equipment consisted of one small file box, one small box of drafting and map material, two map boards and extra map sheets of the area surrounding the assault beaches.

OPERATIONAL PHASE

Upon moving aboard the Headquarters Ship "Monrovia", a survey was made to determine the existing facilities and arrangements for working space for the combined Army-Navy-Air staffs. As a result of many conferences with ships personnel and navy and air staffs, allocation of all available space was finally made. The space available was entirely inadequate. The G-3 operations map, the G-2 situation map, the Navy operational charts, and the Air Force warning system chart occupied one small war room. This caused the war room to be so crowded that the efficient operation of any one of the staffs was quite difficult.

The Headquarters Ship departed with the assault convoy from Algiers on 6 July. The planning phase ended and the operational phase opened with the breaking of radio silence at H hour on 10 July. The time enroute was used to improve the operational procedure of the joint staffs.

In anticipation of future tactical developments, check lists were made to be used in the preparation of orders for the employment of the floating reserve, the reserve awaiting call from North Africa, and the remainder of the airborne division. During the later rush of events, these check lists proved to be of great assistance in the preparation of orders.

Seventh Army Headquarters functioned on the "Monrovia", standing off the Gela beaches from 10 July until 12 July. During this period the overburdened communications facilities caused considerable delay in the issuance of orders and reception of information. This situation was partially corrected by the establishment of command liaison with the units ashore. Since speedboats were not available, landing craft were used for this purpose.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

SECRET

Upon moving ashore on 12 July the Advance CP was set up near Gela where the section was joined by four officers and five enlisted men who had arrived on the Headquarters LST. This additional personnel reduced the burden and permitted the resumption of normal sub-section division of duties.

Beginning with D Day, a daily Situation Report (SITREP), transmitted by radio or TWX, and a written G-3 Report with overlay were prepared and distributed. These reports were closed as of 1600 hours daily.

Daily G-3 Reports were dispatched to higher headquarters by air courier. The regularity of these reports was carefully maintained; they were augmented by frequent special reports as the situation warranted.

An example of a SITREP and a G-3 Report with overlay follows.

A 1:500,000 road map of Sicily was initially issued on the basis of one per officer, one per vehicle, and an additional generous issue to all units. This map was found to be ideally suited as an operations map to accompany directives and field orders due to its convenient size, and widespread use throughout the Army.

Full use was made of liaison officers between this headquarters, and adjacent and higher headquarters during the operation. The use of additional radio facilities and planes made this possible. Liaison officers travelling between this headquarters and subordinate headquarters were often delayed by poor roads and the distances involved. Liaison officers with radio equipment for communication with their own headquarters would have improved liaison with our subordinate units. Also the availability of Cub planes for the use of liaison officers when needed would have increased their effectiveness.

The "J" Service (radio intercept) was established to monitor the command nets of subordinate and adjacent units. Using current division radio codes and frequencies, this service was able to intercept messages of subordinate units which furnished operational information much sooner than this same information would have reached Army Headquarters through normal command channels.

VII. AIR SUPPORT

The XII Air Support Command, North African Tactical Air Force, had the mission of furnishing air support for the Seventh Army in Operation "HUSKY". This unit set up a planning staff with Headquarters I Armored Corps at Mostaganem for purposes of planning the air assault on Sicily prior to D Day, and the support of ground forces beginning D Day. The XII ASC maintained an advance CP with the Seventh Army Advance CP until 2 days before the end of the campaign when it was evident that no more close support missions would be requested.

Air support parties were sent to each division in the assault and an air control party to the II Corps Headquarters. These air support parties accompanied the divisions throughout the campaign during the time they were engaged with the enemy. The procedure prescribed in FM 31-35 was followed.

In addition, pilots with mobile SCR 522 Radios (mounted in light trucks) were sent to combat divisions at various times during the campaign in an effort to improve close support technique by contacting planes in flight. While results obtained were not conclusive, it is felt that this technique warrants further study.

The overall Air Force plan for the operation contemplated only general support during the early phases and until Axis air forces had been neutralized sufficiently to establish definite air superiority over the island. Any diversion to other tasks was to be considered only in exceptional circumstances. The soundness of this plan proved itself as the campaign progressed, and ground troops were able to operate with a reasonable immunity from hostile air attacks. This immunity was maintained during the final phase of the campaign (the advance to MESSINA) and at such an economy of air strength as to make fighter and light bomber planes available for numerous close support missions.

An officer from the G-3 Section was assigned to coordinate all matters pertaining to Air Support with the XII ASC.

Air support for the operation consisted in the main of:

(1) Bombing of selected targets prior to D Day.
(2) General support of the operation by bombing targets in rear of enemy positions.
(3) Close support of the operation by bombing and strafing targets impeding the advance of our ground forces.
(4) Tactical reconnaissance.
(5) Air cover - protection of shipping and troop movements.

To accomplish these, the XII ASC had one reconnaissance squadron and a varying number of fighter-bomber groups. The fighter-bomber groups did not come under the control of XII ASC until D Day. Bomber missions flown before D Day were flown by the Tactical Air Force upon request. The Tactical Air Force continued to fly general support missions throughout the campaign upon request of the XII ASC.

Forty-four close support missions were requested by Seventh Army units during the campaign, and approximately 40 general support missions. Of these, 14 close support missions were refused by the Air Corps because of faulty target designation, lack of planes available, or insufficient time in which to brief and prepare pilots. These close support missions represented only a small part of the activity of the XII ASC, as most of its missions were flown on targets in rear of the enemy front line positions.

VIII. NAVAL SUPPORT

VIII. NAVAL SUPPORT

During the planning phase, the Western Naval Task Force set up a planning staff at Algiers and established liaison with Headquarters I Armored Corps at Mostaganem. While this liaison was beneficial to both Army and Navy planning staffs, it was not sufficient because it did not provide all the close coordination necessary. The development of the final plans could have been expedited and last minute changes avoided if the Naval Planning Staff had been physically present with the Army and Air staffs. After the start of the operation, an officer from the G-3 Section was given the responsibility of coordinating Naval fire support, special landing operations, and use of craft in ferrying troops and supplies along the coastline.

Shore fire control parties from each artillery battalion of each division were given limited training in observing and controlling Naval gunfire on shore targets. Naval liaison officers accompanied each of the regimental combat teams in the assault and remained with them until Naval gunfire support was no longer needed. These officers remained with the ground units advancing westward along the southern coast, and rejoined for the advance eastward along the north coast. The duties of these officers were to maintain radio contact with the Naval force, arrange radio frequencies and details of maps, call signs, etc., and to advise the supported unit on matters of Naval gunfire support.

A Naval officer from Task Force 88 was detailed as Naval Liaison with Seventh Army during the advance along the north coast. No liaison officer from the Navy was present with Seventh Army Headquarters during the southern phase of the campaign.

After landing the assault forces, Naval support consisted of Naval gunfire on shore installations and counter-attacks threatening the operation. Naval gunfire, adjusted by shore fire control parties, greatly assisted in breaking up an enemy counter-attack of infantry and tanks north of Gela on D + 1. In its capture of Agrigento and Porto Empedocle, the 3rd Infantry Division was supported by very effective Naval gunfire.

An idea of the volume of Naval fire used may be gained from the fact that 48 missions were fired during the period August 6 - 12 by Task Force 88 in support of the advance of the 3rd Division eastward along the north coast. These missions varied from 3 to 240 rounds each. Six-inch high capacity (high explosive content) shells were used in most cases, five-inch shells in others. At this time, Task Force 88 consisted of 2 cruisers and 4 destroyers.

IX. NEAR-SHORE CONTROL GROUP

A near-shore control group for Seventh Army was organized at BIZERTE, TUNISIA. Due to lack of personnel it was not possible to assemble this group until July 1st (D-9), after the Army Headquarters at MOSTAGANEM had closed and the forward echelon (reduced) had moved to ALGIERS.

All general and special staff sections were represented. In accordance with plans, however, most of these representatives departed for SICILY on the second (D/8) follow up convoy. Consequently the major part of the work and decisions for all special staff sections were accomplished by the G-1, G-3 and G-4 representatives, who continued to function until the operation had progressed to where there was no further need for such a headquarters.

Procedures and techniques for handling the many details of near-shore control after the start of the operation had to be improvised as problems developed.

Liaison officers from all Sub-Task Forces and from the Navy and Air Force with a full knowledge of the plans and requirements of their particular organizations are necessary to the near-shore headquarters. It was found necessary to keep liaison officers from the near-shore headquarters with the British "Q" movements staff and with Eastern Base Section Headquarters at MATEUR. The G-4 representative kept in daily communication with these officers.

A priority list based on anticipated troop requirements was issued by the G-3 Section during the planning phase. This list, subject to changes made necessary by the situation, was to govern the order in which all units were to embark as craft became available. Certain organizations were indicated as being subject to immediate shipment on call of the Task Force Commander. This list greatly assisted the planning of the transport quartermaster headquarters (pre-stowage planning) established by Eastern Base Section in loading the shipping provided by the Navy.

Complete coordination between the G-3 representative and the transport quartermaster in meeting requirements for troops for the follow up convoys is essential. This was achieved, and calls for the emergency shipment of units ahead of schedule were met without delay or confusion.

X. ORDERS & DIRECTIVES

After the initial assault on 10 July, certain directives and orders were issued in accordance with the directives of higher headquarters.

In connection with the second lift of the 82d Airborne Division scheduled for the night of 11th - 12th July, the following orders were issued:

OUTGOING MESSAGE

CHIEF OF STAFF — 11 JULY 1943

SECRET — URGENT

TO: COMMANDING GENERALS: II CORPS
45TH INF DIV
1ST INF DIV
3RD INF DIV
2ND ARMD DIV

HEADQUARTERS SEVENTH ARMY
APO #758

15 July 1943

SUBJECT: Directive.

TO : Commanding General, II Corps
Commanding General, Provisional Corps
Commanding General, 3rd Infantry Division
Commanding General, 2nd Armored Division
Commanding General, 82nd Airborne Division
Commanding General, XII Air Support Command
Commanding Officer, 1st Engineer Special Brigade
Commanding Officer, 39th R.C.T.

1. Instructions from higher headquarters have turned the direction of effort of the Seventh Army to the Northwest. A new boundary line is established between the American Seventh Army and the British Eighth Army as follows: VIZZINI - CALTAGIRONE - PIAZZA ARMERINA - ENNA - S. STEFANO, inclusive to the British Eighth Army. Highways 124 and 117, connecting these towns, are assigned to the British Eighth Army.

2. The initial objective of the Fifteenth Army Group (American Seventh Army and British Eighth Army) will be the securing of the line CATANIA - PALMA DI MONTECHIARO with a view to future operations.

3. a. The British Eighth Army, moving within its zone of action, will establish itself on the line CATANIA - ENNA.

b. The American Seventh Army, moving within its zone of action, will establish itself on the line CALTANISSETTA - PALMA DI MONTECHIARO.

c. Upon establishment of the Fifteenth Army Group, as in a and b above, further operations will be directed.

4. Movement of the Seventh Army to the line indicated in 3 b above will be effected as follows:

(See Operations Map attached for zones of action)

a. II CORPS - (Lieut General O.N. Bradley, Commanding)

Mission - Complete present assigned tasks, capture CALTANISSETTA and secure Highway 122 within its zone of action, and be prepared for further effort by dark 19 July.

Troops - As now assigned, less attached elements of the 2nd Armored Division and 83rd Chemical Weapons Battalion.

b. PROVISIONAL CORPS - (Major General G. Keyes, Commanding)

(1) 3rd Infantry Division

Mission - Continue present assigned mission, secure Highway 122 within its zone of action, and be prepared for further effort by dark 17 July.

Troops - As now assigned.

Less: Combat Command "A", which reverts to control of 2nd Armored Division.
Bn, 77th FA Regiment
Bn, 5th Armored FA Group
Co, 47th QM Truck Battalion

(2) 82nd Airborne Division

Mission - Assemble with attached troops in PALMA DI MONTECHIARO area, relieve elements of 3rd DIVISION therein by dark 19 July, prepared to advance west.

Troops - Elements of 82nd Airborne Division now in this theater.
83rd Chemical Weapons Battalion attached
Bn, 77th FA Regiment attached
Bn, 5th Armored FA Group attached
Co, 47th QM Battalion Truck attached
39th R.C.T. with Bn, 155 Howitzer (9th Div) attached

c. RESERVE

2nd Armored Division

Mission - Initially assemble CAMPOBELLO - LICATA area in SEVENTH Army Reserve by dark 19 July.

Troops - All elements 2nd Armored Division assigned or attached and in this theater.

Less: 83rd Chemical Weapons Battalion

d. XII AIR SUPPORT COMMAND

Mission - Continue with present assigned support mission.

5. a. Seventh Army will take over operation of beaches and small ports by dark 18 July.

b. Army reserved or controlled roads will be designated in Administrative Order to follow.

6. a. Axis of communication Seventh Army initially GELA - LICATA - CANICATTI.

b. Axes of other units to be reported.

18 July 1943

SUBJECT: Directive

TO : Commanding General, II Corps
Commanding General, Provisional Corps
Commanding General, 2nd Armored Division
Commanding Officer, 1st Engineer Special Brigade
Commanding General, XII Air Support Command

1. Higher headquarters directs that:
   a. The British Eighth Army will drive the enemy into the Messina Peninsula, advancing by three main roads. (See Map)
   b. The American Seventh Army, upon securing a strong base in the ENNA - CALTANISSETTA area, will drive rapidly to the North and Northwest and capture PALERMO.

2. Scheme of Maneuver.
Seventh Army
   a. Secure base in vicinity of ENNA - CALTANISSETTA - S. CATERINA.
   b. Advance to the North and NorthWest, disrupt enemy communications by cutting Highways 121, 120 and 113.
   c. A powerful armored striking force to follow the advance on the west flank prepared to exploit a break-through or extend envelopment to the West.

3. Plan.
   a. II Corps
   Mission - (1) Secure strong base in rear of British Eighth Army as indicated (See Map).
   (2) Advance within its zone to the North and Northwest, cut Highways 121, 120 and 113, and be prepared to attack PALERMO from the East. (See Map)
   b. Provisional Corps
   Mission - Advance within its zone to Northwest, prepared to ATTACK PALERMO from the South and Southwest. (See Map)
   c. 2nd Armored Division, Reinforced (Army Reserve)
   Mission - Initially follow advance of Provisional Corps prepared to exploit a break-through or extend envelopment to the West.
   d. XII Air Support Command
   Mission - Close support of advance of the Seventh Army.
   e. 1st Engineer Special Brigade
   Mission - As outlined in previous directive.
   x. (1) The above plan will be designated as Plan A, to be executed on Seventh Army order.
   (2) The final assault on PALERMO will be coordinated by Seventh Army. Corps will notify Army when they are in position ready to make this attack.
   (3) Reports will be made on reaching phaselines (See Map). Units will not stop on phase lines unless so ordered by Army.

4. See Administrative Instructions.

5. Seventh Army axis communications. See map. Corps' axes and CP's to be reported.

The following radiogram of 20 July from 15th Army Group further confirmed the plan of action agreed upon in the conference of 17 July:

210415 M/C 734H
C 1124

TO: 7TH ARMY 8TH ARMY

FROM: 15 ARMY GROUP G-181 20TH

MOST SECRET. 8TH ARMY HAS MET HEAVY RESISTANCE IN THE CATANIA PLAIN BUT SUCCEEDED IN ESTABLISHING A BRIDGEHEAD OVER DITTAINO RIVER. IT'S AXES OF ADVANCE ARE DIRECTED NORTHWEST AGAINST CATANIA MISTERBIANCO PATERNO AND EASTWARDS AGAINST ADRANO. IT NOW APPEARS THAT ALL GERMAN FORCES HAVE WITHDRAWN INTO NORTHEAST CORNER OF SICILY THE MAJORITY OPPOSING THE RIGHT FLANK OF 8TH ARMY IN THE AREA CATANIA. 7TH ARMY WHEN IT REACHES THE COAST ROAD NORTH OF PETRALIA SHOULD SEND STRONG RECONNAISSANCES TO THE EAST ALONG THE COASTAL ROAD AND THE ROAD PETRALIA-NICOSIA-CESARO, WHICH WILL BE INCLUSIVE TO 7TH ARMY. IF THE SITUATION PERMITS THESE RECONNAISSANCES SHOULD BE BACKED UP IN STRENGTH. AT THE SAME TIME 7TH ARMY WILL TAKE ADVANTAGE OF THE DEMORALIZATION OF THE ITALIANS IN THE WEST TO THRUST TOWARDS PALERMO WITH THE OBJECT OF TAKING THE PORT SECURING ITS LEFT FLANK ON GENERAL LINE SAN GUISEPPE-CORLEONE-SCIACCA. FUTURE OPERATION IS TO MAKE PALERMO THE MAIN AXIS OF SUPPLY FOR 7TH ARMY AND TO DEVELOP A COMBINED OFFENSIVE AGAINST THE GERMANS BY BRINGING AMERICAN FORCES INTO LINE WITH 8TH ARMY WITH A VIEW TO BREAKING THROUGH TO MESSINA. ACKNOWLEDGE.

Following the capture of Palermo and the end of organized resistance in Western Sicily, the following radiogram from 15th Army Group, dated 23 July, was received:

M/C No 1285H CIPHER NO 1220 "O"

TO: SEVEN ARMY (R) 8 ARMY C IN C MED MAC

FROM 15 ARMY GROUP 0/211 23 JULY MOST SECRET

EIGHT ARMY IS MEETING CONTINUED HEAVY AND STUBBORN RESISTANCE BY GERMAN FORCES ON A GENERAL LINE FROM THE BRIDGEHEAD OVER R SIMETO THENCE ALONG THE RAILWAY TO CATENANUOVA H6186 AGIRA 4695. TO DELAY THE ENEMY RATE OF BUILD UP THE AIR FORCES ARE BEING DIRECTED TO HAMPER ENEMY RAIL AND ROAD MOVEMENT BY BOMBING KEY POINTS ON THE COMMUNICATION SYSTEM IN THE N E CORNER OF THE ISLAND ON A CAREFULLY CONTROLLED PLAN. YOUR TASK WILL BE TO TRANSFER YOUR AXES OF SUPPLY TO PALERMO AS RAPIDLY AS POSSIBLE. YOU WILL LEAVE SUFFICIENT FORCES IN THE WEST OF THE ISLAND TO MOP UP THE REMAINING ENEMY ELEMENTS AND TO MAINTAIN ORDER IN THE AREA. IN YOUR THRUST EASTWARD ALONG THE COAST ROAD AND ROAD TO NICOSIA TROINA CESARO YOU WILL EMPLOY THE MAXIMUM STRENGTH THAT YOU CAN MAINTAIN. IN ORDER TO BRING ABOUT THE RAPID COLLAPSE OF THE GERMAN FORCES LEFT IN SICILY IT IS IMPERATIVE THAT YOU EXERT STRONG PRESSURE ON THEIR NORTHERN FLANK AND MAINTAIN THIS PRESSURE CONTINUOUSLY. TO COORDINATE THE ACTION OF THE 7 AND 8 ARMIES THIS EFFORT SHOULD START AS EARLY AS POSSIBLE AND IN ANY EVENT BY 1 AUGUST.

Upon receipt of the above radiogram, orders were issued moving all non-divisional artillery units to the II Corps. This movement was completed on 27 July. Warning orders were issued for the movement of the 3rd Infantry Division, and the 9th Infantry Division (upon arrival in Sicily) to the II Corps sector. This regrouping having been made, on 31 July Seventh Army issued the following directive confirming all previous instructions:

COPY NO ___

HEADQUARTERS SEVENTH ARMY
APO #758

: S E C R E T :
: Auth: CG 7 Army :
: Initials: :
: Date: 31 July 43 :

31 July 1943

SUBJECT: Directive

TO : Commanding General, II Corps
Commanding General, Provisional Corps
Commanding General, XII ASC
Commanding Officer, 1st Engineer Special Brigade
Commanding General, 34th AAA Brigade
Commanding Officer, Ranger Force

1. Higher Headquarters has directed that Seventh Army:
a. Attack eastward along the north coast road (Highway 113), and the road NICOSIA-TROINA-CESARO-RANDAZZO (Highway 120), thence northeastward on MESSINA, driving the enemy out of the MESSINA Peninsula, in conjunction with the British Eighth Army on the right.

2. Scheme of maneuver (See map)
a. Advance eastward on MESSINA on two axes within zone of action.
b. Operate in close conjunction with British Eighth Army in driving the enemy from the MESSINA Peninsula.

3. Plan
a. II Corps:
Troops: 1st Inf Div, 9th Inf Div, 3rd Inf Div, 70th Tank Bn (L), 753rd Tank Bn (M), 4th Tabor (Goums), 91st Recn Sq, 19th Engr Regt, 39th Engr Regt, 36th FA Regt, 17th FA Regt, 179th FA Regt (- 1 Bn), 77th FA Regt, 5th Armored FA Group, 2nd Cml Wpns Bn, 3rd Cml Wpns Bn, 106th CA Group (AAA), Supporting Service Units

Mission:
Advance eastward on two axes, i.e., along Highway 113 and Highway 120 maintaining a sustained, relentless drive until the enemy is decisively defeated. Maintain close contact with the left flank elements of the British Eighth Army.

Time of attack:
1 August 1943.

Line of Departure:
S. STEFANO-MISTRETTA-NICOSIA.

Corps Rear Boundary:
ROAD CAMPOFELICE - COLLESANO - PALIZZI - PETRALIA - ALIMENA - VILLAROSA - ENNA, inclusive to II Corps.

b. Provisional Corps:
Troops: 45th Inf Div
2nd Armd Div
82nd Airborne Div
83rd Cml Bn (Sep)
Supporting Service Units

Mission:
(1) Organize and secure the western portion of SICILY. (See Opn Map)
(2) Protect the Port of PALERMO and the rear of II Corps.
(3) Be prepared to support the advance of II Corps by moving reinforcing troops to the East in II Corps zone.

c. XII Air Support Command:
Mission:
Close support of advance of Seventh Army with particular attention to the disruption of hostile supply routes and communications. Reconnaissance over entire sector. Air cover for Naval Task Force 88.

d. 1st Engineer Special Brigade:
Mission:
Continue on present assigned mission.

e. 34th AAA Brigade:
Mission:
Continue on present assigned mission.

f. Ranger Force:
(1st, 3rd and 4th Ranger Battalions)
Mission:
Secure the CALTANISSETTA area and perform such other missions as directed by this Headquarters.

g. Navy:
Naval Task Force 88, consisting of two cruisers and four to six destroyers will be operating off north coast of SICILY. This Task Force will support advance of troops along Highway 113 with Naval gunfire upon request.

x. Army boundary, road GELA - PIAZZA ARMERINA - ENNA - LEONFORTE - NICOSIA - TROINA - CESARO - RANDAZZO (all inclusive to Seventh Army) - Road RANDAZZO to RJ at C 9120 (jointly with Eighth Army) thence NE (Opn Map).

4. See separate administrative instructions.

5. a. Seventh Army axes of communications - Highway 113.

b. Command Posts:
(1) Seventh Army - initially PALERMO.
(2) Corps CP's to be reported.

OPERATION MAP TO ACCOMPANY
DIRECTIVE H.Q. SEVENTH ARMY
31 JULY 1943

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

On 2 August, the following letter of instructions was issued:

: S E C R E T :
: Auth: CG, 7 Army :
: Initials: :
: Date: 3 Aug 1943 :

HEADQUARTERS SEVENTH ARMY
APO #758

Copy No ____ 2 August 1943

300 - C

SUBJECT: Special Operation.

TO : Commanding General, II Corps.

1. Enclosed herewith estimate, G-2 Seventh Army, indicating probable defensive positions of enemy during current phase of operations.

2. In order to expedite the advance eastward along the Axis Highway 113, it is believed that a small amphibious task force might well be employed behind the enemy's main defensive line to attack westward and assist in quickly reducing a strongly held position that might be retarding our advance.

3. The employment of such a task force should be carefully coordinated as to time and place of landing in order to effect decisive results in the minimum amount of time.

4. The following craft are available to lift a force of approximately a reinforced Infantry Battalion:
2 - LST (each carrying 6 LCV(P))
7 - LCT
6 - LCI (L)

5. Naval Task Force 88 and XII Air Support Command will furnish cover for the embarkation and voyage of this force and will cooperate to the fullest extent in supporting the landing and subsequent operation ashore.

6. Maj. General G. KEYES has been designated to coordinate the various Army agencies as well as the Navy and XII ASC involved and is ordered to report to you for temporary duty in connection with this operation.

By command of Lieutenant General PATTON:

W. G. CALDWELL,
Lt. Col., A.G.D.,
Adjutant General.

(G-2 Estimate referred to in paragraph 1, above, is reproduced in the G-2 Section Report)

(For map to accompany above directive, see page D-16)

In order to intercept and block the enemy retrograde movement to the east along the northern coast, the Commanding General decided to employ a special amphibious landing force, assisted by an airborne task force, to land in the area between Falcone and Barcellona. The directive for this operation follows.

D-15

: S E C R E T :
: Auth: CG, 7 Army :
: Initials: :
: Date: 12 Aug 43 :

HEADQUARTERS SEVENTH ARMY
APO #758

Copy No. ____. 12 August 1943

SUBJECT: Directive.

TO: Commanding General, II Corps.
Commanding General, Provisional Corps.
Commanding Officer, 2nd Bn, 509th Procht Inf Regt.

1. The 157th RCT, having been designated by the Commanding General, Provisional Corps, will form part of a special Task Force to operate under Seventh Army control according to the provisions of the following directive. The troops listed in Par. 3 below are attached to the 157th RCT, with the exception that the 2nd Bn of the 509th Procht Inf is attached only when contact has been made after landing on the night of D-1 Day.

2. a. The enemy is conducting an organized retrograde movement eastward into the MESSINA Peninsula. See current G-2 estimates and periodic reports.
b. II Corps will continue to attack eastward along Highway 113 and Highway 120, with the mission of driving the enemy from the MESSINA Peninsula, in conjunction with the British 30th and 13th Corps operating on its right.

3. A Special Task Force, designated Task Force "X" commanded by Colonel Ankorn, 157th Inf, supported by Naval Task Force 88 and XII ASC, will engage in a combined operation to block the enemy retrograde movement to the East.

Troops:
157 Regt Combat Team
2nd Bn, 509th Procht Inf Regt
One Co, 753rd Tk Bn (M)
One Co, 83rd Chem Bn (Mtr)

4. See Operations Overlay.
a. Task Force "X" will move by sea and by air to the areas indicated, landing under cover of darkness; cut Highway 113 between FALCONE and BARCELLONA and cut the road running south through MAZZARRA - NOVARA - FRANCAVILLA; attack westward on Highway 113 as an axis to join with the 3rd Inf Div attacking eastward along the same axis; prevent any attempt of the enemy to move reinforcements westwards on Highway 113.
(1) 157 RCT, 45th Div, with one Company, 753rd Tk Bn (M) and one company 83d Chem Bn (MTZ) attached, will land at 0300B hours D Day on the beach indicated (See Opn Overlay), establish a beachhead and gain contact with 2nd Bn, 509th Procht Inf.
(2) 2nd Bn, 509th Procht Inf will move from its present location by airborne lift, landing at approximately 2000B hrs, D-1 Day, in selected drop-zone in the vicinity of BARCELLONA. It will proceed at once to secure Highway 113 in the vicinity of BARCELLONA. Upon contact being made, it will be attached to 157 RCT, 45th Div.
b. Naval Task Force 88 provide escort and protection for 157 RCT, 45th Div, plus attachments, support and protect its landing and provide Naval gunfire in support of troops ashore.
c. XII ASC provide necessary air support and air cover for the operation.
d. D Day to be a day between August 14 and August 18, both inclusive, actual date to be announced.
e. Upon gaining contact with the 3rd Division after landing, Task Force "X" will be attached to the 3rd Division.

5. Flights of twin-engine transport aircraft, carrying 2nd Bn, 509th Procht Regt, will fly over a specified lane, at 1000 ft altitude, within designated hours on D-1 Day. All commanders will take necessary steps to prohibit all anti-aircraft fire within this lane during the hours to be designated later.

XI CONCLUSIONS

The actual mechanics of maintaining troop status records proved to be sound and met the requirements for this operation. The card file was used by every section of the headquarters. A small portable Kardex File is considered valuable as it would save wear and tear on the cards. By use of a Kardex File information could be obtained rapidly without handling the cards.

The organization sub-section and the troop movements sub-section must operate very closely together as one is dependent upon the other and the personnel should be interchangeable.

The additional training necessary to prepare a combat team for an amphibious operation is mostly of a technical nature involving loading on craft, waterproofing vehicles and materiel, debarking on beaches, and crossing or removing beach obstacles.

The use of the existing facilities at the Fifth Army Invasion Training Center and the 1st Engineer Special Brigade enabled combat team commanders to complete their amphibious training in the limited time available.

Before plans may be made for the movement and equipping of units, the force commander must know what units are available to him for the operation, their location, and the ports of embarkation for the various sub-task forces. Armed with the above information, the commander can then make the final assignment of units to sub-task forces. If this is done, many unnecessary movements of units will be avoided.

Accurate records of the dates units joined their sub-task forces must be maintained; any record or chart which becomes complicated will not be kept accurately. Sub-task forces must be informed early in the planning phase just what records and reports are required. The use of prepared forms will facilitate consolidation and will assist in obtaining the required information in the form desired.

Sufficient traffic control personnel should be provided at critical points in the battle area in the early stages of the operation in order to properly coordinate and control troop movements.

The need for continuous liaison between headquarters is sufficient to warrant the establishment of a separate Liaison Section in Army Headquarters. The section should be organized under a section chief early in the planning phase. Officers should be carefully selected and thoroughly trained prior to the beginning of the operation.

The efficiency of air support parties would have been greatly improved if they had been formed earlier in the planning phase and given opportunity for training as a team before the start of the operation.

A near-shore control group is essential for amphibious operations. It should continue to function until the force commander can predict well in advance the definite order in which units will be needed. At this point, hirher headquarters should assume the responsibility for the shipment of units.

XII. RECOMMENDATIONS

Each staff section should be brought to full strength at the very beginning of the planning phase of an operation.

When the facilities of a special training installation are used, this installation should be under the direct control of the task force commander for the duration of the training period.

Whenever possible, the training section should be composed of officers experienced in amphibious operations.

After the final assignment of units has been made, the dates by which they are to be made available should be determined by higher headquarters and not left to the "mutual agreement" of subordinate headquarters.

The G-3 Section should be responsible only for establishing the priority of movement of units, and the G-4 Transportation Section, or a separate Movements Section, should be responsible for issuing detailed orders, providing the necessary additional means, and coordinating and controlling the movement.

A staff officer, for coordination of air support, should be assigned to the G-3 Section of all divisions and higher units. He should be from the Air Force, preferably of field grade, and thoroughly trained in ground-air support.

Air support parties should be organized and equipped early in the planning phase of an operation, in order to permit proper training.

The technique of communication between personnel on the ground and planes in flight during the execution of a close support mission should be further developed.

More thorough training in ground-air and air-ground recognition should be given to both air and ground forces to prevent firing on one another.

Army, Navy, and Air Force planning staffs should be located in close proximity to one another throughout the entire planning phase.

During the actual operation, a Naval liaison officer should be on duty with the Army Headquarters at all times when the ground forces are being supported by the Navy.

Shore fire control parties and Naval liaison officers should be given thorough training in arranging, coordinating and controlling Naval gunfire from the shore. This training should include actual firing by Naval vessels on ground targets. In preparation for amphibious operations, regimental combat team commanders and all artillery commanders should become thoroughly familiar with the proper employment of Naval gunfire support.

The near-shore control group should be organized early in order to insure that it will be prepared to function efficiently upon the departure of the Main Headquarters.

CHAPTER I

I INTRODUCTION

The book of experience on the planning and operation of supply activities during the initial landings of the Western Task Force in FRENCH MOROCCO (TORCH Operation) had scarcely been fully completed when word was given for the start of a new volume called "HUSKY".

At that time the G-4 Section, I Armored Corps Reinforced (Force 343), consisted of a handful of officers and enlisted personnel of practically all branches of the service. Most of the officers had gone through the TORCH Operation, one officer was on duty at the TUNISIAN front, but most important of all, the majority of officers in the section had spent some time on duty with troops and were thus better able to visualize future supply operations from the standpoint of the soldier.

The section was organized as follows: G-4, Executive Officer, Administrative, Supply, Automotive, Fiscal Sections, and a Transportation Section of one officer.

The details involved in the planning and execution of the supply mission during the initial landings and subsequent operations covered diverse fields and are too numerous to relate. The remarks that follow are therefore of necessity general in character and cover all elements of the G-4 Section excepting the following: FISCAL SECTION - (See Chapter II); TRANSPORTATION SECTION - (See Chapter III).

II PLANNING

PERSONNEL

As Tables of Organization for a reinforced corps, or even for a field army, do not make provision for sufficient personnel for G-4 Section responsibilities in a landing operation, it was necessary to immediately request additional officer personnel.

It became necessary by D-Day to add a Statistical Section to keep for higher headquarters and the Commanding General of the Army the up-to-date statistics on losses, captured material, and other supply data. Statistical report on major items from 10 July to 17 August 1943 is shown as Appendix "B".

On 24 February there was no Transportation Section set up for this force. There was, however, one officer designated as Transportation Officer in the G-4 Section. He was experienced in water, rail, and motor transportation. After much difficulty, officers trained in highway, rail, and water transportation were added to the section, and later, an officer experienced in petroleum supplies. Most of these officers arrived too late for the planning stage. By 31 August, the Transportation Section consisted of a Chief of Transportation, Highway, Rail, Water, Pack, and Petroleum Sections — a total of approximately fifteen officers and nineteen enlisted men. Air transportation personnel were also attached to the section. Experience has taught us in this campaign that one of the most valuable sections, in a field army is the Transportation Section.

To provide the Army Commander with an additional headquarters to later operate a base of supply, a request was sent to the War Department for a base area group which was to function directly under the control of the Commanding General, Seventh Army, and to be later turned over to a higher headquarters when the Army had moved sufficiently far away from the base as to be no longer able to control its operation. The Base Area Group, as it was known, was formed in the United States, but unfortunately did not arrive until just before departure of the Assault Convoy to Sicily. One-third of the Base Area Group was attached to the 1st Engineer Special Brigade upon arrival in North Africa and moved to Sicily under that headquarters. The entire Base Area Group closed on Sicily by 6 August.

SUPPLY REQUIREMENTS

The initial directive for HUSKY was received the middle of February. The Third Outline Maintenance Project, from Headquarters Force 141, later 15th Army Group, dated 15 April 1943 and amended on 26 April 1943, was based on American troops landing east and west of Palermo and one division landing in the southwestern part of the island in the vicinity of Sciacca. (See Appendix "C").

The American division mounted direct from the United States was to be provided with twenty-one (21) days maintenance and ten (10) units of fire. American troops mounted from North Africa were to be provided with a total of twenty-one (21) days supply for the assault and seven (7) units of fire — these supplies to be carried in the assault, first and second follow-ups. Provisions were to be made for beach maintenance for about thirty days. UGS-11 Convoy, consisting of twenty-one (21) days maintenance and four (4) units of fire, was to arrive in Palermo as soon after D plus 14 as practicable, depending upon the tactical situation. This was the basis for the first Administrative Plan of Headquarters I Armored Corps Reinforced, (Force 343).

In early April a Rear Echelon Headquarters, I Armored Corps, was established in Oran (to be near and work with Headquarters, SOS NATOUSA) where work continued, with a skeleton force of personnel, on requisitions on SOS for all anticipated requirements for the operation up to D plus 165, or the UGS 19 and 20 Convoys from the United States.

CHAPTER I

I ---------- INTRODUCTION.

II ---------- PLANNING.

III ---------- OPERATION.

IV ---------- CONCLUSIONS.

V ---------- RECOMMENDATIONS.

On May 20th, a conference was held at the Rear Echelon Headquarters, with representatives of SOS, the G-4's of all sub-task forces, G-4 of Headquarters I Armored Corps, and others. The "latest" troop list had that day been put into the hands of the sub-task force commanders. SOS representatives required that phase requisitions for the D-Day convoys be in their hands by May 24th, and those for the first and second follow-ups (D plus 4 and D plus 8 convoys) by May 26th. The sub-task forces were therefore required to submit by May 22, their data as to numbers of personnel, numbers and types of vehicles, weapons, radios, and special Engineer heavy equipment that they expected to lift on their assault convoys, and the same information by May 24th for the two follow-ups. This data was necessary for bases for phased requisitions. It was brought to light at this conference that the letter, subject: "Unit Alert Plans - Preparation for Movements by Water", published by Headquarters, NATOUSA, 15 April 1943, had not been distributed to all units. It was vital for the information called for by these plans to be in the hands of sub-task force commanders so that they could prepare their mounting plans based on the shipping allocated to them.

Since SOS, NATOUSA, insisted that in order to meet their already tight transportation schedule they had to have phased requisitions by their set deadlines of May 24th and May 26th, and since it was obviously impossible under the circumstances for the sub-task forces to submit the required information in time, the rear echelon submitted phased requisitions based on the maximum lift in personnel, vehicles, and tanks, of the allotted shipping (to include craft) to each of the sub-task forces at each of their mounting (embarkation) areas. The two later elements, the shipping allocation and the mounting areas, were, at that time, those least subject to major changes prior to D-day. With added "safety factors" to cover later changes in sub-task forces' troop lists and to cover possible losses, phased requisitions were submitted on schedule for CENT, DIME, JOSS, KOOL, the 82nd Airborne, the 9th Infantry Division (the NA Reserve), and a reserve supply for one reinforced Regimental Combat Team to be flown in in an emergency. As information came in from the sub-task forces, substitutions and additions, particularly in ammunition, were made.

Efforts were pushed to get "Unit Alert Plans" into the hands of the proper sub-task force. Units on the troop list arriving in North Africa late were issued copies of Alert Plans and directed to expedite their submission. The issue of T/BA equipment, particularly transportation, on priority, was coordinated with the Mediterranean Base Section.

The middle of May the entire tactical plan was changed but the work done in planning the requirements initially for the I Armored Corps Reinforced (Force 343), such as supply requirements from the United States, was not changed. This new plan called for the American troops to land on the south coast of Sicily at JOSS, DIME, and CENT Beaches. The general overall plan of supply for I Armored Corps Reinforced (Force 343), based on the new tactical plan, is shown in Appendix "C", with extracts from the detailed Administrative Plan for DIME as shown in Appendix "D". Similar detailed plans were prepared for the other sub-task forces. The basic idea in the plan was to provide the soldier with the essentials for combat and not overload him or the beaches with unnecessary supplies. These plans formed the basis for all phased requisitions for supplies from North Africa up to D plus 14, with reserves on the ground at Bizerte and Kairouan to be moved to Sicily on call. That part of the G-4 Section, Seventh Army Rear, in Bizerte, was responsible to call on Eastern Base Section or Headquarters SOS NATOUSA for movement of these supplies. The details of this plan were published in an Administrative Plan on 31 May 1943, and distributed to all headquarters, including SOS NATOUSA.

EQUIPPING OF UNITS

Priority list on equipping of all units for this operation was furnished Headquarters Allied Force by Headquarters I Armored Corps Reinforced (Force 343), and copies sent to all Base Sections, Corps, and divisions. To eliminate the difficulties experienced in mounting the TORCH Operation in the United States, in that secrecy prevented many non-divisional units from knowing just what force they belonged to and when and how they were to be equipped, officers of Headquarters I Armored Corps Reinforced (Force 343) from the services concerned were sent to these various units with instructions to give the commander the general information that his unit was to be a part of a certain force, who the commander of that force was, when and where they were to be equipped, how long they would probably stay in their present location, and, during the visit, to determine the status of equipment of the unit concerned and its readiness for combat. It is believed that these visits by officers of Headquarters I Armored Corps Reinforced (Force 343) eliminated some confusion in the minds of the commanders of small units regarding their future missions.

GENERAL PLAN FOR THE EXECUTION OF SUPPLY MISSION.

This was covered by Memoranda and Administrative Orders from Headquarters I Armored Corps Reinforced (Force 343) to all concerned. Copy of Administrative Order No. 1, with all Annexes, is attached herewith as Appendix "E".

Sub-task Force Commanders were to be responsible for their own supply from ships and other landing craft over the beaches or through any sub-ports, to include the operation of all beach heads until that duty was taken over by Force 343 (Seventh Army). The 82nd Airborne Division was to be supplied by air-drop or through DIME Beaches. See Appendix "C" for location of beaches. Sub-task Forces were built around the following headquarters: JOSS - 3rd Infantry Division; SHARK - II Corps; DIME - 1st Infantry Division; CENT - 45th Infantry Division; KOOL - 2nd Armored Division. Additional service units were allocated to all sub-task forces to assist in their supply mission.

When the supply activities were to be taken over by the Commanding General, Force 343 (Seventh Army), the Commander, 1st Engineer Special Brigade, would assume command of the beach groups and of all non-divisional and non-corps units attached thereto and such other necessary service units as might be attached by the Commanding General, Force 343 (Seventh Army), and would be responsible for the execution of all supply plans within the theater of operations emanating from Force 343 (Seventh Army), including the operation of any seized ports. Force 343 (Seventh Army) was to be responsible for the coordination with Headquarters SOS NATOUSA in the assembling of supplies at various ports of embarkation and their transportation to the theater of operations, and that, supplies would be obtained from SOS NATOUSA and forwarded on an automatic basis or on special request by Task Force and Sub-Task Force Commanders.

The Administrative channel for supply was to be from the Sub-Task Force Commanders and Army troops direct to Force 343 (Seventh Army). The II Corps was to have no administrative functions other than those pertaining to its Corps troops, except in emergency.

LIAISON

During all the stages of planning the mounting of the operation, liaison was maintained with AFHQ, Headquarters Force 141 (15th Army Group), and Headquarters SOS NATOUSA, and also with the Navy. Many problems such as shipping and supply details were discussed and policies determined by conference.

III OPERATION

EXECUTION OF SUPPLY MISSION FROM D-DAY, 10 JULY, THROUGH 31 AUGUST 1943.

On D-Day vehicles and supplies were unloaded over the beaches and supply points opened in the vicinity of Vittoria, Gela and Licata under direction of the Sub-Task Forces. Sub-Task Force KOOL unloaded through the DIME Beaches in the vicinity of Gela. As soon as the beach heads were established, troops began to move to the north and northwest. (See Appendix "F" for details).

By 17 July, the 1st Engineer Special Brigade had taken over the operation of all beaches in the south from the Sub-Task Forces and were operating the supply services in that area under the Seventh Army. New supply points were opened as troops advanced, the main axis of supply being to the north and northwest. Maximum use was made of rail, motor and water transportation.

THIS PAGE IS DECLASSIFIED IAW EO 13526

THIS PAGE IS DECLASSIFIED IAW EO 13526

Records show that during the period 10 July to 31 July, approximately 104,134 deadweight tons were moved through beaches in Southern Sicily. The daily average tonnage discharged was 4,733 deadweight tons. The greatest daily tonnage discharged on the south shore was 6,638 tons on 18 July. The lowest daily tonnage was 2,090 tons on 28 July, at which time ships were being diverted to the northern part of Sicily.

After the capture of Palermo, the general plan for the execution of the supply mission (See Appendix "F", for details), prepared by G-4 Seventh Army, on 27th of July, to support future operations to the east in the direction of Messina, was in substance as follows:

The main axis of supply was to be transferred from the south and southwestern part of Sicily to the port of Palermo as quickly as practicable. During the period of transition, until depot stocks in the south had been reduced, the 1st Engineer Special Brigade was to be responsible for supply to the north in the direction of Caltanissetta, making maximum use of motor and rail facilities, and to the northwest in the direction of Alessandria and Sciacca, making maximum use of motor and water facilities.

When the main port of Palermo was in operation, troops were to be supplied to the east from Palermo, making the maximum use of motor, rail, water and animal transportation. Supply activities from the Palermo Area were to be under direct control of Headquarters Seventh Army, in coordination with the G-4 Seventh Army, and Commanding Officer, 1st Engineer Special Brigade.

To summarize -- troops moving east were to be supplied from two directions. From the south through the Gela, Licata, Agrigento Areas and from the west through the Palermo Area, the entire operation being coordinated through G-4, Seventh Army.

The Port of Palermo was opened to Army shipping on the 28th of July with the arrival of six coasters from the D plus 14 Convoy. Two of these coasters were sent to Termini to be discharged. Five personnel ships from the 9th Infantry Division convoy were completed 1 August. Seven ships carrying 9th Infantry Division cargo arrived 1 August.

Details as to the operation of the Port of Palermo have been covered by the Transportation Section (Chapter III). Following is a summary of the port working and development from 28 July: When the Port of Palermo was taken over on 28 July, its capacity was only 30% due to the presence of forty-four vessels, craft and barges being sunk alongside of moles and in the channels. With the aid of engineers who bridged wrecks and cleared the harbor the operating capacity of the port was raised to 60% by the 29th of August. During the period 28 July to 31 August, the Port of Palermo received forty-eight ships, excluding craft, consisting of five personnel ships, thirty-two Liberty ships and eleven coasters. During that same period, 120,706 deadweight tons were discharged at this port. The daily average tonnage was 3,658 tons. The largest tonnage discharged up to 31 August, was 5,718 tons on 12 August.

After the Port of Palermo was in operation, supply points were established along the north coast of Sicily as shown in Appendix "F". Supplies were moved by rail, motor and craft to unloading points at Termini, San Stefano, Brolo and Barcellona Beach. Some supplies, such as artillery and mortar ammunition, were moved from the south coast by water in coasters and craft while other essential supplies, such as rations and motor fuel were moved directly from North Africa or out of Palermo in craft and unloaded over the beaches. The 540th Engineer Regiment (Shore) operated all unloading beaches on the north coast during this period.

Rail lines were extended until on the 23d of August they were in operation as shown in Appendix "F". Details as to rail and highway operations are included in Chapter III.

Five officers and two enlisted men of G-4 Section moved on 6 August to the Forward Echelon of the Seventh Army, south of San Stefano. These officers maintained close contact with the tactical units in the forward areas by telephone and personal visits. They also acted as G-4 representatives in the coordination of supply points in these areas. Examples of the operation of supply points in the forward areas are as follows:

Ammunition Supply Point No. 17 and Supply Point No. 14 for rations and motor fuel were opened at San Stefano between 5 August and 8 August. Supplies were initially moved by truck from the railhead at Tusa. On 12 August the rail line from Tusa to San Stefano was opened and supplies were brought in by rail. This area was also supplied by water, using LST's, LCT's and small schooners. Ammunition Supply Point No. 18, at Brolo, was opened on 15 August and supplied entirely by water transportation except for one hundred truckloads of critical ammunition which was moved overland from Palermo.

Approximately fifteen miles east of Brolo the entire road was blown from the face of the cliff for about forty yards. Troops were supplied forward of this point by water, supplies being unloaded at Barcellona Beach. Moving these supplies around by water made possible the continued forward movement of troops, at the same time decreasing heavy truck traffic over the small bridge which had been constructed over the blown area of the road on the side of the cliff.

During the movement forward of troops it was necessary to open a supply point at Cesaro on 12 August. This supply point contained Class I and III supplies for normal Corps requirements.

When the campaign ended with the capture of Messina on 17 August, plans were under way for the establishment of an additional supply point at Randazzo but no supplies were moved forward due to the sudden enemy collapse and anticipated movement of troops to the west.

Immediately after the campaign ended, troops began to move to the south in the direction of Licata and to the west in the direction of Palermo. As much rations and motor fuel as required were issued to troops before departure.

New supply points were then set up, based on Administrative Order No. 4, Headquarters Seventh Army, 23 August 1943. (See Appendix "G"). These supply points, with the exception of No. 6 at Scala, were all on rail lines to make them more flexible and cut down the use of motor transportation. The supply point at Scala was a truckhead to be used in connection with a special operation.

The general plan of supply after the 23d of August, as prescribed in Administrative Order No. 4, was essentially as follows:

All supplies were to be concentrated in supply points shown in Appendix "G".

Palermo was to be developed as a reserve depot and all surplus stocks not required to maintain troops at supply points in other parts of the Seventh Army Area were to be concentrated in the Palermo depot area as quickly as transportation facilities and circumstances would permit.

The main axis of supply for the Seventh Army was to be via Palermo port which was to be worked to full capacity. Plans were immediately put into execution for the re-equipping and resupply of certain units for future operations.

On 31 August, orders were issued inactivating the 6625th Base Area Group of the Seventh Army and reconstituting it as an Island Base Section on the Island of Sicily, with headquarters at Palermo. This Island Base Section was to be under the direct command and control of the Commanding General, NATOUSA. On that same date, all base section supply functions were in the process of being turned over by the Seventh Army to the Island Base Section.

The credit for whatever degree of success history may determine has been attained by the Seventh Army in the execution of its Sicilian campaign supply mission is due to the officers and enlisted men of the transportation units and the services who worked night and day under the most difficult conditions, including enemy action, to provide the private soldier at the front with the means for victory.

IV CONCLUSIONS

1. Present Tables of Organization for reinforced corps or a field army do not provide sufficient personnel in a G-4 Section to properly carry out the supply mission in an amphibious task force operation.

2. A Transportation Section, as an additional Special Staff Section, is essential to the successful operation of the supply functions of a modern corps, field army, or amphibious task force.

3. A base area group or rear service echelon should be provided early in the planning stages of any contemplated overseas operation.

4. Constant liaison must be maintained with all supply agencies of higher and subordinate headquarters, Air Force and the Navy during the planning and operational stages of an amphibious operation.

5. It should not be necessary for a Task Force planning staff, with its limited personnel, to have to submit detailed requisitions on the SOS to include all items of all classes of supply for the entire Task Force and for the entire operation, projecting such requirements as far as five (5) months beyond D Day.

6. The troop list of units to be allotted to sub-task forces must be made final as early as possible, without waiting for the nomination of specific units, so that sub-task force planning staffs can compile and submit sufficient data on which reasonable estimates can be made as to the quantities and types of supplies that should be distributed at each of the mounting places for each phase of the movement.

7. All units on the troop list must be directed to submit up-to-date copies of their "Unit Alert Plans", with accurate information, to the headquarters of the sub-task force, or to their next superior headquarters as soon as their assignment is known. This should include Air Corps service units, Naval shore parties and advance bases.

8. Prescribed "scales" of equipment to be carried by units, depending on the phase of the operation in which they are to be committed and on their individual missions, should be made standard for all units of all types in our Army. Such scales as "assault scale", "light scale", "full scale" could then be prescribed in orders, obviating the multitudinous questions as to what will or will not be taken, and also giving planning staffs specific bases on which to initiate computations for all types of units assigned.

9. It is believed that not enough attention is paid to the selection of personnel in transportation and service units.

10. Supply and administrative installation units must be pushed as far forward as the tactical situation will permit.

11. Modern warfare is a question of transportation. Supplies must be transported to front line troops where and when needed.

12. The pack animal still has a definite roll to play in modern warfare.

V RECOMMENDATIONS

1. Additional personnel must be made available to the G-4 Section of a reinforced corps or a field army at the earliest possible date to assist in planning the supply mission in an amphibious task force operation.

2. A Transportation Section should be authorized for divisions, corps, and modern field armies. That the section consist of a minimum of twelve (12) officers and nineteen (19) enlisted men, plus attached air transportation personnel in a field army.

3. A base area group or rear service echelon should be provided early in the planning stages and operate under the command of the task force or army commander.

4. Sufficient personnel should be provided to carry out the necessary liaison.

5. Staff officers concerned must visit commanders of small units to acquaint them with the essentials of their contemplated mission.

6. The task force planning staff should immediately submit requisitions on SOS for any special items of supply that may be peculiar to the type of operation and not of normal stockage (such as amphibious equipment). Provision should be made to have in the theater sufficient Class II items, over and above normal maintenance, to replace anticipated combat losses.

7. A troop list containing the maximum number of units by type that it is anticipated can be attached to each sub-task force should be drawn up and given to sub-task force planning staffs at the earliest moment possible in the planning phase. Every effort should be made to restrict changes in this list to the barest minimum, and nominations of specific units on these lists should be made early and left unchanged except in extreme circumstances.

8. A standard alert plan, to include details necessary for preparation for water movement, should be required to be maintained up-to-date by all units whether in a theater of operations or not. Copies of these plans should be available from all units at all times on call. Copies of the plan, to include all T/E or T/BA equipment authorized the unit, should be available at all times regardless of the actual status of the organization's equipment, this in addition to a plan based on current status.

9. It should be determined, and indicated in future publications of Tables of Equipment and Tables of Basic Allowances for every type of unit, what organic equipment should be taken by such unit or part of the unit when ordered to move at "assault scale", "light scale", "full scale", etc. Such scales should be made standard for every type of unit. Commanders could make modifications to fit special plans.

10. Officers and enlisted personnel of transportation and service units must be selected with the same care as those of combat units and must be trained as specialists, but most important of all must be able to function under field conditions.

11. Bakery and laundry units, instead of operating with a base section, must be sent forward to support the combat troops.

12. Transportation units, such as rail operation and truck organizations, should be assigned to the Army initially in such quantities as to insure performance of the supply mission over the most difficult terrain and at the most rapid anticipated rate of advance of the Army.

13. Provisions for pack animal transport units should be included in plans where mountainous terrain is indicated.

CLASS OF SUPPLY	INDIVIDUAL RESERVE	BEACH OR UNIT RESERVE	REMARKS
CLASS I (RATIONS) (ASSAULT: D)	Type "D" — 1; Type "K" — 1. (Not to be consumed on voyage. Additional Type "K" ration for consumption of troops on craft during crossing. One (1) bottle of twenty-four Halazone tablets per individual. One bottle of salt tablets per individual. //Airborne troops- Two rations, one "D" and one "K"; plus Halazone and salt tablets. Responsibility of C.O. Airborne division.// Above issued to each individual prior to embarkation.	Type "C" — 3; Type "K" — 4. Seven days emergency hospital rations, supplemented by soup, fruit and vegetable juices, milk, coffee and sugar; based on medical expectancy of troops in assault. (Hospital supplement to be especially packed - 25 supplementary rations to a box.) To accompany troops or on same convoy.	Rations to be one-man loads, waterproofed packages for rough handling over beaches. Gratuitous issue of tobacco component for each ration to start with first follow-up, including seven days for the assault. Second follow-up to include fourteen days gratuitous issue of tobacco candy and toilet articles for assault and first follow-up. //Provision should be made for rations for Air Force units in area and Naval shore parties; also include 82nd Airborne Division. //Rations en route on all ships except craft — By the Navy. //All craft except LST's — By the Navy.// On LST'S — By the Navy.
(FIRST FOLLOW-UP) (D plus 4)	Same as above.	Two type "C", two type "K", and three type "B" (5-in-1) rations for troops in assault and in first follow-up. Include seven days hospital rations; additional Halazone tablets for troops in assault and first follow-up. // To accompany troops or on same convoy.	
(SECOND FOLLOW-UP) (D plus 8)	Same as above.	Four type "C", ten type "B" (5-in-1) rations for troops in assault, first and second follow-ups. Include fourteen days emergency hospital rations and extra Halazone tablets for troops in assault first and second follow-ups. // To accompany troops or on same convoy.	
CLASS II (QUARTERMASTER) CLASS IV (QUARTERMASTER) (ASSAULT, FIRST AND SECOND FOLLOW-UPS). Individual clothing and equipment; organization clothing and equipment; expendable supplies; pest control material.	Essentials for combat. One (1) 2 oz. bottle insect repellent - issued to individual prior to embarkation. One (1) 2 oz. can insect powder and one (1) tube of ointment, sunburn, per individual — carried as directed by sub-task force commander.	With assault troops — None except assault packs for 5%. Shoes packaged separately. First and second follow-ups — None except assault packs for 3% for two follow-ups. Shoes packed separately. Additional combat maintenance — As basic loads as directed by sub-task force commander. ADDED REMARKS — QUARTERMASTER CLASS II & IV (2) Special combat maintenance in boxes 18x14x 36 in., maximum weight - 70 lbs. Waterproofed and strapped for rough handling over beaches. Boxes to be marked with green corners & contents. (3) Equipment for pack horses or mules to be provided by QM. Force 343 - available in N.A. for shipment after D plus 20. (4) Provision to be made for Air Corps troops in area.	(1) Assault packs to consist of waterproof bag similar to barrack bag, weight not to exceed 50 lbs, with contents approximately as follows: Haversack, w/pack carrier attached, containing complete mess kit, bath towel, 1 "K" ration, salt tablets, Halazone tablets and insect repellent; gas mask, w/protective cover and ointment inside carrier; belt, web, pistol, w/following attached: canteen, w/cup and cover; pouch first aid; pocket, magazine, with two loaded clips; holster, w/pistol and loaded clip. (Approx. half of assault packs to contain submachine gun w/appropriate supplies; jacket, field; helmet, steel, complete; suit, working, HBT, w/2 hdfs, 2 pkgs, cigatettes, matches, socks and toilet paper; undershirt and drawers; blanket. (Clothing items sorted as medium, large or small with bag plainly marked "L" "M", or "S".) Shoes in packages of twelve pairs, assorted sizes.
CLASS II ORDNANCE (ASSAULT, FIRST AND SECOND FOLLOW-UPS) Includes vehicle and weapon replacements.	None except normal T/BA as modified by special authorization to permit loading.	Six to ten percent individual equipment and spare weapons, including machine guns, 60 and 81mm mortars. (Under DIME control).	Vehicles landing over the beach to be waterproofed by organizations under supervision of representatives of SOS. Unused portion of individual equipment and weapons (small calibre) to remain under control of CG, DIME, until DIME clears NA. Balance to then revert to control of CG, Force 343. Replacement of major calibre weapons and vehicles to be supplied from reserve by CG, Force 343 on request of CG, DIME.
Cleaning & Preserving Material	As prescribed by sub-task force commander.	Packages of cleaning and preserving material to be carried by smallest combat unit in sufficient quantity to care for weapons for at least seven days. Each follow-up to carry supplies to maintain level of seven days for all Force troops in HORRIFIED.	Until DIME Force has completely cleared NA, responsibility of CG DIME to maintain level of seven days supplies for all his troops in HORRIFIED.

CLASS OF SUPPLY	INDIVIDUAL RESERVE	BEACH OR UNIT RESERVE	REMARKS
CLASS II ENGINEER (ASSAULT, FIRST AND SECOND FOLLOW-UPS) Includes organizational equipment and expendable supplies	None except T/BA modified for this operation to permit loading.	Assault: One BCT set per battalion combat team. First follow-up: One additional BCT set per battalion combat team in assault. Second follow-up: None. Subsequent follow-ups: Normal Class II maintenance of UGS convoys.	All packages to be one-man loads (under 100#) with the exception of sandbags. Waterproofed packages for rough handling over beaches.
CLASS II MEDICAL CLASS IV MEDICAL (ASSAULT, FIRST AND SECOND FOLLOW-UPS)	None, except T/BA in hands of individuals and unit medical detachments. Individuals: First aid packet with sulfanilamide powder and package of sulfadiazine tablets. Issued to individual prior to embarkation.	Assault: Seven days combat maintenance, augmented by blood plasma, special drugs and biologicals essential for this operation. To accompany troops or on same convoy. First follow-up: Seven days special combat maintenance for troops of assault and first follow-up. Second follow-up: Fourteen days combat maintenance for troops of assault, first and second follow-ups. Subsequent follow-ups—in seven day lots.	Packages to be one-man loads 20x24x30 inches, weight not to exceed seventh lbs. Waterproofed and strapped for rough handling over the beach. Should include Air Force units, Naval shore parties, and airborne troops in area.
CLASS II SIGNAL (ASSAULT FIRST AND SECOND FOLLOW-UPS)	None except T/BA modified for this operation to permit loading.	To accompany troops or on same convoy. Seven days combat maintenance for assault. With first follow-up: seven days maintenance (combat) for troops of assault and first follow-up. With second follow-up: fourteen days combat maintenance for troops of assault, first and second follow-ups. Subsequent follow-ups--in seven day lots.	All packages to be one-man loads, 12x12x24 in. weight not to exceed seventh lbs. Waterproofed and strapped for rough handling over beaches.
CLASS II CHEMICAL WARFARE (ASSAULT, FIRST AND SECOND FOLLOW-UPS)	Essentials for immediate combat. Individuals in assault units furnished with training gas masks will turn service or diaphragm masks in to unit supply for reissue at appropriate time. Protective cover, ointment, protective; eye-shields; and shoe impregnite to be carried by individual. Anti-gas cape will not be carried by U.S. troops	For personal or organizational anti-gas equipment: None, except T/BA and that carried in assault pack. Assault: Seven days maintenance for 4.2 mortars and flame throwers. First follow-up: Seven days maintenance, as in assault. Second follow up: fourteen days maintenance, for 4.2 mortars and flame throwers.	(See note reference Assault Packs — Note 1 under Quartermaster Class II.)
CLASS III (ASSAULT, FIRST AND SECOND FOLLOW-UPS) Motor fuel, lubricants, and diesel fuel. For ground vehicles and Engineer equipment.	Vehicular tanks — 90% filled. Organic motor fuel 5-gal. cans — filled. Oil -- Five (5) qts. in 1-qt or 5-qt. cans for assault. Vehicular grease guns to be filled prior to embarkation.	To accompany vehicles or on same convoy: For Assault: Seven days motor fuel and lubricants based on the following: Wheeled vehicles, 5-gal. (Imp) per day; half-track vehicles, 25-gal. (Imp) per day; half-track vehicles, 50-gal (Imp) per day; plus additional for Navy. First follow-up: Seven days for assault and for first follow-up. Second follow-up: Fourteen days for assault, first and second follow-ups. Subsequent follow-up: Gasoline available for first fifteen days in 5-gal. cans and 55-gal. drums.	(1) Motor fuel and diesel oil to be in 5-gal. cans initially; later in 55-gal drums. Bulk storage to be set up as quickly as practicable. Estimated time — D plus 16. (2) Lubricants and greases — Allowance of engine oils - 5.5 gals. per 100 gal. of motor fuel. Gear oil, one gal. per 100 gal. of motor fuel. Chassis grease - 1.6 lbs per 100 gal. of motor fuel. (3) Oil in 5-gal cans. Grease, except water pump, in 25 lb. pails. Water pump grease in 1 lb. cans. Cans to be plainly marked showing contents.
CLASS IV ORDNANCE Weapons spare parts. Automotive spare parts.	Assault kit of small, fast-moving parts and reduced tool kits to be carried by individual mechanics of all echelons.	Organic loads of fast-moving parts carried by organizations in the assault, first and second follow-ups.	No replacement of spare parts except in emergency by special demand of CG, Force 343. Organic loads to be displaced as heavier transportation becomes available.
CLASS IV ENGINEER	- - - - -	Assault: Materials for beach hards and piers; materials for demolitions; materials for beach fortification. First follow-up: Beach development supplies and additional beach fortification materials. Second follow-up: Construction material at each beach head for particular jobs at each beach head area. Air field materials, bridge materials and water treatment supplies.	- - - -

CLASS OF SUPPLY	INDIVIDUAL RESERVE	BEACH OR UNIT RESERVE	REMARKS
CLASS IV SIGNAL	None except that required by situation.	Materials necessary to execute special wire plan of Force 343 to be packed and held in NA on call by D day.	Batteries in packages, waterproofed for rough handling over the beach and under 70#. Construction material packed in 70# packages or as small a unit as possible.
CLASS V (AMMUNITION)(ORDNANCE) Except Air; including amount to be carried in vehicles and on individuals.	Normal organic loads for individuals and weapons participating.	Assault: 2 1/3 UF. First follow-up: 1 1/6 UF for all troops in assault and first follow-up. Second follow-up: 2 1/3 UF for all troops in assault, first and second follow-ups.	UF as prescribed in Incl. # 2, ltr. AG 471 (2-13-43) OB-S-D-M, Fib. 16, 1943. To include airborne. No toxic chemical munitions to be carried.
Anti-tank mines Anti-personnel mines	Normal organic loads for troops participating.	To be determined.	To be determined.
CLASS V (AMMUNITION)-(CHEMICAL WARFARE) Except air; including 4.2 chemical mortar ammunition (smoke and HE); grenades, incendiary, white and colored smoke; smoke floats; smoke pots: flame thrower refills.	Organic loads for individuals and weapons participating. T/BA allowance modified by Force 343 for all items except 4.2 chemical mortar ammunition.	Same as Ordnance Class V for 4.2 mortar ammunition (HE and WP, 50% each); flamethrower refills (3 UF). Seven days maintenance of grenades, colored smoke (yellow) M16; grenades, incendiary M14; grenades, smoke, hand HCM3; pots, smoke HCM1; floats, smoke HCM4; grenades frangible, M1 (FS and IN) for assault, first and second follow-ups.	UF as in ltr. WD, OC-CWS, Dec. 10, 1942. No toxic chemical munitions to be carried. Colored smoke as in the SOI.
WATER (ASSAULT AND FOLLOW-UP)	Each individual -- One (1) canteen of water. Each vehicle -- Radiators filled. T/BA load of 5-gal. cans in field trains, as directed by sub-task force commander.	Assault: Sufficient for four (4) days at the rate of one gallon per man per day, including vehicles, in 5-gal. cans. To accompany troops or on same convoy. Thereafter: One gallon per man with kitchen on D plus 4. Local sources will be developed by D plus 6. 2,000 gpd distillation units are available to sub-task forces if desired to insure an emergency supply of 1 qt. per man per day.	Engineer water supply company, with well drilling detachment, to develop sources as quickly as possible. Water cans to have some identifying mark on handles, such as strips of tape or wire, so as to distinguish them from motor fuel cans at night.

CHAPTER II

FISCAL SECTION

ORGANIZATION

The Fiscal Officer, Seventh Army, subject to policies and instructions promulgated by higher authority was charged with final responsibility and authority of procurement policy and procedure within his zone of operation.

He was assisted by a staff of 3 officers and 4 enlisted men.

Acting under the above authority, the functions of this section were to enunciate policies, coordinate, supervise and advise lower echelons on matters reference Fiscal Control, Requisitions, Commodity Source and Price Control, Civilian Labor, Real Estate, and Claims.

PLAN

The planning phase of the Sicilian Campaign started at Rabat, French Morocco in the later part of April 1943. Shortly thereafter the headquarters moved to Algeria, the forward echelon establishing its headquarters at Mostaganem, and the rear at Oran. Most, if not all of the Fiscal planning was accomplished at Mostaganem, the rear echelon being mainly concerned with normal procurement functions.

It had been decided that the responsibility for the occupation of Sicily would be jointly British and American, and that it would reflect every characteristic of an Allied undertaking. With that in mind, the plan of the Fiscal Section, Seventh Army, was two-fold:

In coordination with the Special Staff Sections and subject to the approval of the Commanding General, Seventh Army, to issue policies and regulations governing fiscal procedure and the procurement of supplies and services within the assigned Seventh Army Area, and prices to be paid therefor.

Having determined its own policy, to insure a uniform method of operation throughout the American Seventh and British Eighth Armies, and to maintain same until such time as another headquarters assumed control.

With reference to the former, a simple, workable, and expeditious means necessarily had to be devised whereby supplies (Property - public or private, movable or immovable) and services (civilian labor), necessary to accomplish the tactical mission, could be obtained. Having once obtained the required supplies and services, it was then equally important that a uniform policy and method of payment be established. To insure a sound economic policy, commodity prices and wage levels necessarily had to be consistent throughout the island. In short, procurement had to be accomplished by that method of negotiation which would facilitate the prosecution of the war, result in the most efficient award and which, above all, would protect the interests of the Government.

With reference to the latter, the Fiscal Officer made innumerable visits, during the months of May and June 1943, to Headquarters 1&1, ANGOT, and also to Tripoli, Libya, where conferences were held, with the end in view to crystallise and coordinate a common method of procedure throughout the forces under 15th Army Group. Information gained from these conferences resulted in the publication of Annex #7, to Adm O, #1, Hq. Force 343, "Procurement Policies and Procedures, Force 343", dated 11 June 1943. (Adm O. #1, Field Order #1).

One of the principal methods of procurement listed therein is by requisition. The requisition, copy annexed (Annex #1), had to be especially phrased in English, Italian and German, and made applicable to any type of property, public or private. Security reasons necessitated an officer going to Cairo, Egypt to have the booklets printed in triplicate and bound in booklet form consisting of twenty-five requisitions each.

A sufficient number of these requisition books were immediately distributed to all Corps, Division and Brigade Commanders to be used in the manner, and under conditions as directed. Similarly, each of the above Commanders and Special Staff Sections, Seventh Army, were sub-allotted sufficient funds by the Fiscal Officer, Seventh Army, in order to accomplish normal procurement functions.

It was contemplated that as soon as practicable after the reduction of an area, and when the tactical situation would permit, the Fiscal Officer, Seventh Army, will be relieved of the responsibility for the conduct of fiscal and procurement policies within such designated area, except those that directly affect the components of the Seventh Army.

FISCAL OPERATION

The Fiscal Officer, Seventh Army, accompanied the advance Headquarters, Seventh Army Echelon on the Headquarters Ship Monrovia, landed on 10 July 1943, and established his office at Gela, Sicily, on 11 July 1943.

Pursuant to the provisions of Annex #7, Para 3 e (2) Assistant Fiscal Officers, G-4 Section, Seventh Army, were assigned to Sub-Task Forces as Fiscal Liaison Officers to assist in fiscal and procurement functions.

One officer was attached to American Liaison Group, on June 27, 1943, and landed at Syracuse, Sicily, on 21 July 1943.

Another officer was attached to the G-4 Section, Headquarters II Corps, on June 26, 1943, and landed West of Scoglitti, Sicily, on 10 July 1943.

A third officer remained with the Rear Echelon Hq. Seventh Army at Oran, subsequently moved to Bizerte, and later arrived at Licata, Sicily, on 27 July 1943.

The above officers on detached services returned to Headquarters Seventh Army, shortly after the consolidation of our positions in Sicily.

Functions of Fiscal Section

FISCAL CONTROL

The Fiscal Section supervised and coordinated all fiscal operations within Seventh Army and initiated action necessary to effect efficiency and economy.

The Fiscal Section maintained and controlled the records and files pertaining to funds allotted to the Seventh Army Commander for administration of obligations.

Sub-allotments were made as needed and such reports were required as were necessary to insure that the exact status of funds was available to the Commanding General at all times.

REQUISITION CONTROL

As directed by the Fiscal Officer, Seventh Army, one of the principal methods of affecting procurement was by means of the attached requisition. A fully detailed explanation for their use is stated in Annex #7, (Adm O. #1, Field Order #1) in addition to the instructions to both the owner and requisitioning officer on the reverse sides of the duplicate and triplicate copy respectively.

Original copies of all accomplished requisitions were forwarded immediately by the requisitioning officer to the Fiscal Officer, Seventh Army. Each requisition, if proper in form and if it further complied with established policy, was recorded and filed according to its appropriate classification. Information thereon was promptly abstracted and forwarded to the proper supply section, Seventh Army. (Requisitions covering engineer property were abstracted and referred to Engineer, Seventh Army, etc.).

This office then placed a value upon the requisitioned articles, payments for same being made by, or as directed by, the Fiscal Officer, Seventh Army, depending upon the circumstances surrounding the particular requisition.

The following types of property were requisitioned by Seventh Army units in Sicily, originals of which have been forwarded to, and are on file in, the Fiscal Office, Seventh Army.

REAL ESTATE

Theaters	Hotels	Garages	Barracks
Apartment Bldgs	Apartments	Storage Plants	Storerooms
Houses	Warehouses	Factories	Harbors and Docks
Land	Railway System	Bathhouses	Vaults

VEHICLES

Passenger Cars	Trucks (Tires, Tubes and Batteries)	Motorcycles	Bicycles

BOATS

Steamships	Sail Boats	Tug Boats	Floating Derrick

FURNITURE OF ALL KINDS

EQUIPMENT AND SUPPLIES

Picks	Shovels	Saddles	Icebcmns	Wheelbarrows	Water Pumps
Carts	Typewriters	Pressors	Radios	Tubes	Fuel Oil
Grain	Paper	Hay	Straw	Soap	Flour
Fish	Ammonia	Nails	Brushes	Cement	

COMMODITY SOURCE AND PRICE CONTROL

Consistent with the needs of the local population and with a minimum of interference to the local economic situation, the local resources in the theater were fully utilized in connection with the procurement of supplies for the fighting troops.

To further this end, the supply Arms and Services were instructed to exercise the widest liberality, consistent with good judgment in their procurement of local supplies and materials.

Early in the planning phase of the operation, the AMGOT authorities and Fiscal Officer, Seventh Army, studied at great length the Commodity prices then in effect in Sicily. Upon concurrence by AMGOT, this office published Supplement #1 to Annex #7, "Procurement Information and Price Control List", dated 17 June 1943, (Adm. O. #1, Field Order #1) distribution having been made to all Seventh Army Units.

On information from the same source shortly thereafter, this office, on 24 June 1943, had distributed Supplement #2 to Annex #7 (Adm. O. #1, Field Order #1), again to all Seventh Army Units.

However, upon arrival in Sicily a situation existed comparable to that which existed in North Africa shortly after the Allied landings; namely, commodity prices were increasing by leaps and bounds due to the newly arrived troops, with a resulting flourishing black market.

Since prior experience indicated that the only solution would be rigid, firm commodity price control, the Fiscal Section continually consulted with the various Provincial AMGOT and Civil Affairs Representatives in an effort to expedite control of the prices being paid for supplies.

As a result, Supplement #1 to Annex #3 to Adm. O. #1, dated 23 August 1943 (Annex #2, copy annexed), was published and distributed down to companies.

Should a price be desired on any items not covered by directives, procuring officers were informed of same by this office upon request.

Throughout the operation, the Fiscal Officer, Seventh Army, maintained a close liaison with AMGOT for the purpose of determining sources of supply of commodities and of obtaining advice as to proper prices to be paid therefor.

CIVILIAN LABOR

It was the policy of the Seventh Army that a maximum use be made of civilian labor by all U.S. Forces to the end that the American soldier would be used, if possible, in a supervisory capacity, the bulk of the work being done by natives. Every native who was employed reduced the number of American soldiers who must be transported, maintained, fed, clothed, and housed. Furthermore, the payment made to these natives continued to assist the economy of the country.

Procurement of Civilian Labor

It had been agreed upon, in the planning phase, that the Regional Civil Affairs and AMGOT officers would furnish the Fiscal Officer, Seventh Army, with reliable sources of civilian labor throughout Sicily, the rules and regulations governing same and the prevailing wage rates applicable thereto.

Wage Rate Control information was initially published and distributed to all units in Supplement #2 to Annex #7, etc., dated 24 June 1943 (Adm. O. #1, Field Order #1).

Before the Seventh Army labor demands in Palermo reached a considerably high level, this office held numerous conferences with the local AMGOT officer in Charge of Labor, whereby there would be established a labor pool, under AMGOT control and supervision, subject to be drawn upon by using Arm or Service. This was actually accomplished and found to be satisfactory. (See Supplement #3, to Annex #7, dated August 1, 1943) (Adm. O. #1, Field Order #1).

Maintenance of Wage Levels

Closely allied with the maintenance of a firm commodity price level was the control of wages paid to civilian labor. Wages paid to a dock hand in Palermo had to be consistent and comparable with that of a dock hand in Syracuse, taking into consideration any difference in living conditions and costs.

The same directives mentioned above in Procurement of Labor were distributed to all Seventh Army Units, specifying in each the rate of pay, with the condition that the stated wage would not be exceeded, nor any type of labor not mentioned in the directive be paid, without the prior approval of the Fiscal Officer, Seventh Army.

As recent as August 21, 1943, the Fiscal Officer, Seventh Army, with the Labor Officers of the 15th Army Group and British Eighth Army, attended a conference at the office of the AMGOT Headquarters Labor Office. As typical of the types of discussions held and conclusions reached, the minutes of this meeting are annexed hereto. (Annex #3).

THIS PAGE IS DECLASSIFIED IAW EO 13526

SECRET

PROCUREMENT OF BILLETS AND PAYMENT THEREFOR

In conjunction with A. C. of S., G-1, and the Real Estate Section of the Engineer Office, Seventh Army, this office arranged for the procurement and occupancy of all real property and billets of Seventh Army. All requests for billets were directed to the A. C. of S., G-1, who in turn forwarded the said request to this office for further action. The locations were plotted upon a map, and, if in proper form, the request was then indorsed on to the Engineer Real Estate Section where inventories and inspections were accomplished prior to actual requisitioning. The originals of all such requisitions were likewise forwarded to this office.

In connection with the payment for billets and other real property and appurtenances requisitioned, conferences were held with members of the 15th Army Group and the following decisions were put into effect:

1. Billets were not paid for except in cases of undue hardship resulting to the owner-occupant, in which event ex gratia payments in the discretion of the Fiscal Officer were made.

2. In requisitioning hotels where the premises were taken over as a going concern, the proprietor was repaid only for the expenses he incurred in providing those facilities. (Out of pocket expenses).

3. At the time of this report, the question of payment of rentals for all properties other than billets is being held in abeyance pending decisions reached by a Joint Committee on Rents, Purchases and Requisitions to be formed under 15th Army Group, comprising 3 American (including Fiscal Officer, Seventh Army) and 3 British Officers.

Complete payments for requisitioned private property, subject to approval of the Fiscal Officer, Seventh Army, were made at the earliest practicable date, in accordance with established policy.

CLAIMS AGAINST THE GOVERNMENT

All demands for financial redress submitted on account of property damage or personal injury caused by U. S. armed Forces were presented to this office until such time as a representative of the Claims Commission shall be present to handle such matters.

This office assumed the responsibility of sifting the many and varied claims presented, endeavoring to ascertain that only bona fide claims were being retained, and have been able to dispose of many matters in accordance with regular procurement policy. In our opinion, the Claims Commission was relieved of much unnecessary work and effort.

CONCLUSION

1. In summarizing the historical record of the Fiscal Section, Seventh Army, during the Sicilian Campaign, it is clearly evident that the success of the Fiscal operation may be directly attributed to careful planning prior to actual invasion. With the exception of a few changes regarding minor details, no changes in policy were made. The flexible provisions of the directives were phrased so as to cope with the tactical situations that might confront any particular unit under any condition.

2. While the immensities of the new problems have been clearly taken into consideration, it is urged that in any future operation, the appropriate Military Occupation Authorities be impressed with the importance of further expediting the establishment of a firm control over commodity prices and wages in the zone of their operations. Prompter action along those lines in Sicily might well have forestalled the creation of conditions, especially the black market, which continued to flourish for some time at the expense of the Seventh Army. This is not mentioned in any manner of criticism but merely as a suggestion for better operation in the future.

3. From experiences gained from this and prior operations, satisfactory, practicable, and simple solutions were presented for the numerous problems that arose. Above all, it was our express desire that prompt and proper negotiations be carried on, while providing a uniform method of operation throughout the British and American Armies, with the primary purpose always in mind to facilitate operations and provide for the fighting troops.

ANNEX 2

23 August 1943

SUPPLEMENT #1 (To Annex #3, to Adm. O. #4, Hq. Seventh Army).

INSTRUCTIONS TO REQUISITIONING OFFICERS

AUTHORITY: ANNEX ..... TO ADMIN. O. ..... TO F.O. .....
REFERENCES: FM's 27-5, 27-10, and 360-10

All requisitioning officers will thoroughly familiarize themselves with conditions set forth in the above. The requisition will be completed in triplicate by Requisitioning Officer. Requisitioning will normally be made on local civil officials through District Commanders. In case no necessity requisition will be made direct upon the owner of the goods or services. If address of owner is unknown, it will be so stated.

PUBLIC PROPERTY—Information regarding public property occupied or utilized will be entered upon this form in the same manner as private property. The name to be shown as "Owner: State Property" and original and duplicate copies of this form will be forwarded through command channels to Fiscal Div. G-4 Force 243, without delay.

PRIVATE PROPERTY—**Description:** Description of property will contain all necessary information for complete identification, in order to obviate future claims against the United States Government.

Motor Vehicles will be identified by make, year of manufacture, type of body, number of cylinders, motor number, serial number, and condition to be described as good, fair, or poor.

All Other Articles Bearing a Serial Number and a License Number will be so identified, e.g., radios, machinery, bicycles, etc.

Livestock will be identified by class, breed if able to determine, approximate size and weight, color, age, and sex in the case of dairy animals.

Real Property will be identified by full description of type and location, including contents and furnishings. Location will be described by local address, or map co-ordinates in the event the local address is not appropriate.

Miscellaneous Items will be described insofar as possible according to weights and measures systems of the country occupied otherwise by units of U.S. Standard Weights and Measures.

Distribution: The ORIGINAL of the requisition will be forwarded immediately through command channels to Fiscal Div., G-4 Force 243. Where requisition is made direct upon the owner, the DUPLICATE will be delivered to him. The TRIPLICATE will be retained by the officer, and should he be served for any reason, all available information will be shown, and EXTRA copies forwarded as instructed above for original. The triplicate copy will be retained by requisitioning officer.

INSTRUCTIONS TO PROPERTY OWNERS

FAILURE TO COMPLY WITH REQUISITION—Any person who fails to comply with a requisition or who conceals or destroys or alters or removes property subject to requisition without the approval of the Fiscal Officer, Seventh Army, or who otherwise violates any of the provisions of these instructions will be punished by a military tribunal.

PAYMENT—Payment for goods or services requisitioned and taken will be made as soon as practicable. Claims for payment must be presented upon application to the District Commander, United States Army, not another than five (5) days after date of requisitioning, and not later than thirty (30) days after date of requisitioning. This copy of Requisition is your receipt and should be retained in your possession pending final disposition.

ISTRUZIONI AI PROPRIETARI

NON-ADEMPIMENTO DELLA REQUISIZIONE—Qualsiasi persona che non ottemperisca alla seguente richiesta o che nasconda o distrugga di oggetti per evitare ubbidienza a questa richiesta, sarà punita da un tribunale militare.

PAGAMENTO—Pagamento per materiali o servizi requisiti e presi sarà fatto quanto prima per questi materiali o servizi verranno domandati mediante domanda diretta al Comandante Distrettuale, Esercito degli Stati Uniti non prima di cinque (5) giorni dopo la data di requisizione e non più tardi di trenta (30) giorni dopo la data di requisizione. Questa copia di Requisizione è la vostra ricevuta e dovrebbe rimanere in vostro possesso fino su sua disposizione finale.

ANWEISUNGEN FUER DEN BESITZER

ANFORDERUNG NICHT ERFUELLT—Wer einer Anforderung nicht nachkommt oder irgendwelche Gegenstände verbirgt oder vernichtet, beschädigt oder entfernt, ohne Genehmigung der Behörde, an der Anforderung zu entrichten, wird strafrechtlich belangt.

BEZAHLUNG—Das anforderbare Heer wird die Anfrage auf Bezahlung für derartige Gegenstände bzw. über Dienst-und Arbeitsleistungen sobald wie möglich nach Ablauf der Bearbeitung einer Prüfung unterziehen. Diese Anfrage sind frühestens fünf Tage und spätestens dreissig Tage nach dem Datum der Anforderung dem Ortskommandanten des Amerikanischen Heeres einzureichen.

Dieser Anforderungsschein gilt als Quittung und ist bis zum Abschluss des Verfahrens sorgfältig aufzubewahren.

a. No exceptions will be permitted without prior approval of the Fiscal Officer, Seventh Army.

b. This supplement supercedes all prior supplements published by Headquarters I Armored Corps or Seventh Army, pertaining to procurement policies & procedures.

2. A labor pool has been established for Palermo, Sicily, and surrounding territory and, except under emergent conditions, all civilian labor hired by the Seventh Army in this district will be secured through the labor pool.

a. Labor of all classifications will be secured by informing the Labor Advisor, Civilian Supply Branch, AMGOT of such labor requirements.

(1) The above agency can be contacted by phoning 16990 or by making personal call at #22 Via Phillip Parlatore, Palermo, Sicily.

(2) 24 hour service will be maintained by this agency.

(3) Any transportation required will be furnished by the using Arm or Service.

(4) All time keeping, payrolls, and security checks, will be the responsibility of the using Arm or Service.

(5) The above agency will be informed of labor requirements at least 24 hours prior to the time the labor will be required.

b. All civilian labor now employed by the Seventh Army who are not registered with the above agency will be required to register not later than 5 August 1943.

(1) All non-registered civilian labor that may be employed by reason of emergent conditions subsequent to this date, will be required to register within 48 hours after employment.

3. The following rates apply to a day of 8 actual working hours exclusive of meal time or time required to travel to and from the job.

4. Overtime will be paid for all time over 8 hours worked in one day, at the rate of one and one half times the regular rate.

5. All civilian labor will be hired at the minimum rates, for a probationary period of one work week.

a. After working one work week the rate of pay for the civilian employee may be revised within the maximum limit, at the discretion of the employing Arm or Service.

6. Arms or Services hiring and paying civilian employees will make no deductions from the civilians pay for unemployment or sickness benefits or similar reasons.

a. Such payments for the benefit of the work will be made by the worker as, and when he is able to, at his own discretion.

7. Contractors working for components of the Seventh Army will be bound by the labor laws of the areas in which they operate and are not exempt by reason of being employed on military projects.

a. Such contractors will be required to make customary payroll deductions for the workman's unemployment and sickness and similar benefits but will not make any deductions in behalf of any labor organization, or society or for any commission to any organization, society, or individual, or for any similar reason.

8. Wage rates in existing services e.g., railroad, public utility, etc., will be continued unchanged until further notice. In such instances, even when taken over by the Army, the civilian personnel of the organization should not be placed on the Army payroll.

9. RATES OF PAY CIVILIAN LABOR:

II COMMODITY PRICES

1. The following prices are those established by the Allied Military Government of Sicily and were applicable in the Province of Palermo as of 20 August 1943.

2. Effective immediately, all personnel of the Seventh Army WILL NOT pay more than these prices for any article listed hereon.

3a. Commanding Officers of all echelons will bring these prices to the attention of all personnel in their command.

b. Military personnel will immediately report all violations of this price list, or discrepancies between prices posted and prices charged. Report to be made to AMGOT Liaison Officer, Seventh Army, and to contain name, address of offender, price posted, price charged, circumstances of violation, and the name and unit of individual making report.

3. Provincial List of Maximum Prices in effect from August 20th until further notice.

Plus 100 additional copies to G-4, Seventh Army.
" 50 " " " Fiscal Officer, G-4, Seventh Army.

ANNEX 3

Subject: Labor Conference — 21 August 1943.

To: Lt. Col. Seitz.

1. The following is a report on the conference conducted this morning on Army labor matters.

2. Present were: Col. C. Strother, Dep. Director P & L 8th Army (Catania)
Lt. Col. W.E. Lyds, 15th Army Group (ADL)(Civil)
Major L.E. Gooding, HD Transport, Portbase
Major V.D. Finn, Finance, Portbase
Major R.D.K. Jackson, Labor Director, 7th Army
Lt. L. Berger, Ass't - Seventh Army
U.S.N. Commander E.M. Ragsdale, NCB - Palermo
U.S.N. Lt. D.D. Ballantyne - NCB - Palermo

3. Army Wage Scale.

a. 7th and 8th Armies, Navy and A.F. are complying with Army Wage Scale Directive. They are of the view this scale is operating effectively and should not be revised.

b. 8th Army believe maxima should not be paid, but pay reassessments when made should be between the minimum paid and the maximum. Recommended that maxima be reduced. 7th Army disagree. Believe maximum scale should be left unchanged, but will submit memo to AMGOT on question which is then to be referred to 8th Army for comment.

c. All present agreed that Army Wage Scale problems should be submitted to AMGOT for final consideration and over all policy determination. Should act as coordinating and official wage organization.

d. Discussion disclosed conflict in overtime pay policy. 7th Army directive provides for payment time and 1/2 for hours in excess of 8 in a day. 8th Army pays straight time for hours in excess of 8 in a day, though generally employs very few for work over 8 hours. Navy had been paying time and 1/2 for work beyond 48 hours in a week. Navy agreed to revise its policy to accord with 7th Army.

e. All representatives request AMGOT determine Inland policy on overtime, holiday pay, night work compensation etc. (Were advised that study would be initiated so that policy could be established, and that announcement would be made later.)

f. 8th Army has added new wage categories to its directives on labor as follows:

Boat Repairer	60	80
Coxswain		70
Salvage hand		70
Tug Boat Engineer		95
Tug Boat Fireman		70
Master Salvage hand		85
Diver		95
Boat hands		60
Shipwright chargehand		85
Pilots		128
Tug Boat Masters		95
Stevedores, supervisory		85
Draughtsmen		80
Foremen		90

4. Civilian Non Military Wage Scale.

a. 7th and 8th Army and Navy are of opinion that the civilian pay scale for those employed by civilian employers is too low compared to cost of living and should be revised immediately. The black market is a serious threat to stability of Inland and welfare of people and the Army, and should be broken by resort to very drastic means available. (They were advised that problem is under consideration and action being taken).

b. Representatives of Army urge that present Italian basis of supplementing income on basis of so much per child and dependent be abolished, and that a man be paid what he is worth based on cost of living, and other relevant economic considerations. (I have already started a study of this question and will submit recommendations shortly).

c. Col. Strother stated that utility pre-occupation rates of pay are very low, about 55 lire per day, and should be revised. He submitted that Army scale is higher, cost of living higher, and that benefits workers get under old system should be computed, added to base pay and then increase pay to Army scale. Major Jackson of 7th Army concurred. (Agreed to investigate this problem and submit recommendations to AMGOT for appropriate action. Study initiated this P.M.).

5. Inland Resources Board.

a. Col. Strother wants AMGOT to establish a board to which labor contracts and other labor matters would be submitted for approval prior to execution. In emergency, permit execution of contract subject to filing with board. 8th Army at moment has policy of having all contracts filed with it for approval prior to execution, except in emergency. 7th Army strongly disagrees this policy and opposes such a board. Would agree only to filing of contracts with board for its information, but not for its approval. Based on experience states a board would result in type of bureaucracy which would delay and obstruct forces of war rather than help. (Agree to submit its view to AMGOT for consideration).

6. Navy.

a. Interest primarily in operation of shipyard.

b. Approval policy rotating shipyard employees.

c. Raised question of supplying noon-day rations to civilian employees. Were advised that this was contrary to policy. Alternative would be to secure AMGOT approval increase in rations for workers where Navy felt absolutely necessary. 8th Army has followed this policy successfully.

7. Miscellaneous.

a. 7th Army is making study of stevedore wage contract and employment problem. Will submit copy report to this headquarters.

b. 8th Army pays R.R. employees its side of Inland. 7th Army runs R.R. but A.M.G. pays bill. 8th Army desires statement policy this question. (Referred to Transport Office this Hq. for preliminary conference).

c. 8th Army has established rates of pay for civilians injured at work. 7th Army has submitted request to AFHQ for statement policy. View that scale established by 8th too high and that there should be Inland wide policy for Inland. The 8th Army plan which was carried over from Tripolitania is:

1. If person injured gets full pay for 3 months after which can be reviewed again.

2. If person killed the case submitted to AFHQ as a claim.

d. Col. Strother believes imperative to consider and establish rates of pay to be used on mainland in event of occupation. Major Jackson suggests formula be: Payment of prevailing wage rates subject to study and revision after occupation. Col. Strother believes present W.D. scale should be carried over to mainland as is for start.

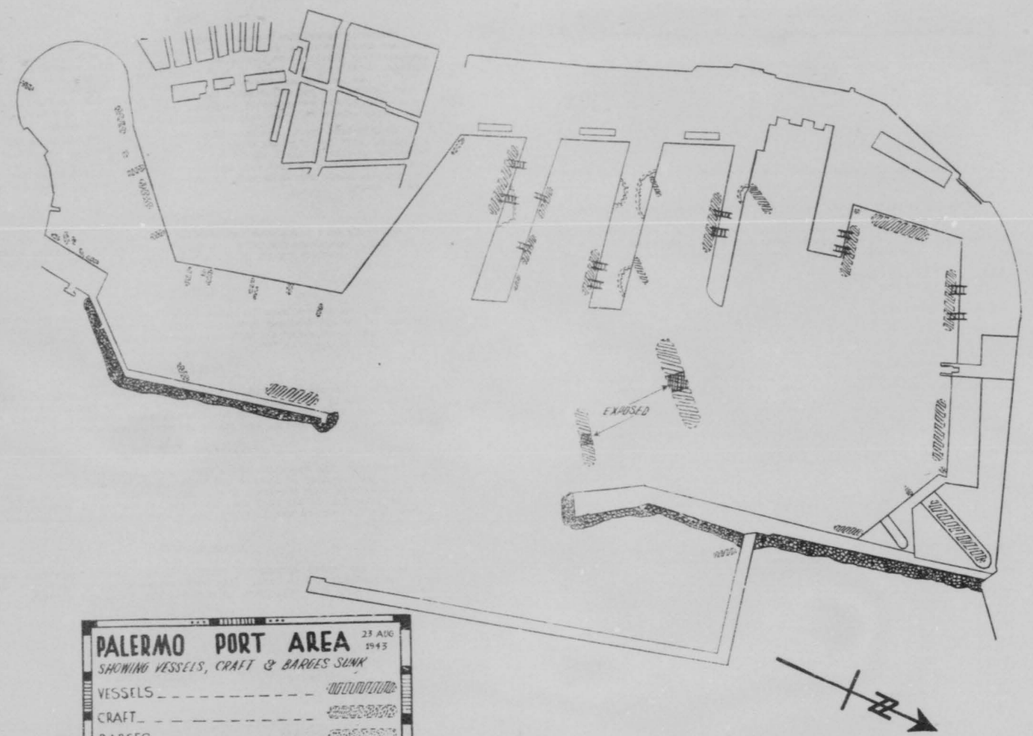
CHAPTER III



TRANSPORTATION REPORT

ORGANIZATION OF TRANSPORTATION DIVISION

Planning for the HUSKY Operation commenced in mid-April, when the I Armored Corps was located in Rabat, French Morocco. The need for a special staff section that thought and dealt only with transportation was at once apparent. Accordingly a Transportation Division in the G-4 Section was organized. Personnel for this division were obtained by transfer from the Base Sections, SOS, from tactical organizations and from replacement centers in North Africa. The majority of these officers had had previous experience in the TORCH Operation and had actual knowledge of conditions in the North African Theater. From the outset, the growth of this organization was slow, as it was extremely difficult to obtain officers possessing the requisite qualifications in training and experience. The molding of these officers into a unified organization was further hampered by a division of the headquarters into a forward and a rear echelon, with part of the officers in Mostaganem and the remainder in Oran. Only when the Seventh Army Headquarters was established in Sicily did the Transportation Division function as an entity. Its organization was as shown in Appendix "A".

GENERAL

The initial disposition of the forces of the Seventh Army contemplated landing three independent forces simultaneously, with a fourth force in floating reserve. Each force was charged with its own maintenance until such time as consolidation could be effected and the Army could resume the responsibility for supply. The 1st Engineer Special Brigade was the agency selected for consolidating and controlling all supply activities as they were relinquished by the several divisions. In effect this Brigade Headquarters functioned as the SOS of the Seventh Army. Initial maintenance was to be over the beaches until such time as a major port could be captured. Plans were accordingly made for continued beach maintenance for a period of at least thirty days. In the event that beach maintenance should prove inadequate, arrangements were made for a partial use of the Port of Syracuse after D+11. A force of 2,500 service troops loaded on one troopship, two MT/Store ships and two LST were scheduled to arrive at Syracuse on D+10. These troops, known as the American Liaison Group, were intended to establish depots in the vicinity of Syracuse and to ship supplies forward to the Seventh Army. However, the success of beach maintenance due in large part to continued good weather, a friendly air superiority which reduced enemy interference to a negligible quantity and allowed ships to lie off the beaches in comparative security, and the dependability and efficiency of the 2-1/2 ton amphibious trucks in lightering cargo, together with the rapid advance of our troops to the northwest made it advisable to continue unloading supplies as close as possible to the combat area and to abandon any thought of basing on Syracuse. Accordingly the vehicles and equipment of this Service Group were moved immediately to the Licata Area after disembarking at Syracuse. The bulk of these service troops, which were on the troop ship, disembarked at Licata. On 17 July the 1st Engineer Special Brigade took over all unloading operations and supply establishments from the 1st Division and 2nd Armored Division at Gela and vicinity. On 18 July the 1st Engineer Special Brigade took over all unloading operations and supply establishments from the 45th Division at Scoglitti. On 19 July the Brigade took over operations of Licata and the adjacent beaches, thus putting under one head all supply activities in the Seventh Army area. Coincident with the transfer of supply responsibility from division to Army, the shore engineers and Army service units which had been initially assigned the several task forces were reassigned and attached to the 1st Engineer Special Brigade. Port Empedocle fell on 16 July. The beach organization formed around the 540th Engineers was then moved from Scoglitti to Port Empedocle. With the advance of the divisions inland the Brigade established supply points at Sciacca, Corleone, Canicatti and Caltanissetta.

The capture of Palermo on 22 July placed in our hands for the first time a deep water port capable of accepting ships bringing stores from the United States. On 24 July the 540th Engineer Regiment (-Gp) moved from Gela to Palermo to open that port. A great amount of work was done in cleaning up the harbor area and piers, opening road exits and bridging over wrecked vessels so as to secure more berthing space. The first ships to enter the harbor were six coasters on 28 July. These coasters had been loaded with maintenance stores in North Africa and were diverted from the south coast. Their arrival was most fortunate as they brought essential food, gasoline and ammunition which heretofore had to be trucked overland from the south coast. However, when the port was initially put into use, it could only be operated at approximately thirty per cent of its full value due to forty-four vessels, crafts and barges that were sunk alongside of moles and in the channel.

Following berths and anchorages have become available for:

	Liberty Ships	Coasters
Alongside Berths	5 (1 of which is 17')	3
Alongside wrecks bridges over	3	3
Anchorage inside harbor	2 or	2

Anchorage inside the outer breakwater has been used for Naval vessels and tankers. The average rate of discharge was 4370 long tons per day. On 1 August operation of the Port of Palermo was taken over by the 10th Port of Embarkation. The 540th Engineers then moved eastward to Termini Imerese and prepared to function as shore engineers directly in support of the thrust along the coast towards Messina.

The main impetus for supply came from the 1st Engineer Special Brigade in the south. At this time the Brigade was relieved from any responsibility for supply operations in and around Palermo, these to be performed directly by the Army. The general plan was for supplies to flow into Niocosia from the south and into Cefalu and later San Stefano from Palermo. Until 8 August rail facilities from Palermo reached only to Cefalu. Terremuso Beach in the vicinity of San Stefano was opened by the 2nd Battalion, 540th Engineers on 3 August and closed on 13 August. During this period two Italian schooners and four LST discharged rations, gasoline and ammunition at San Stefano immediately in rear of the divisions. The schooners had been requisitioned by the Navy in Palermo and were loaded out there. The LST had been loaded on the south coast by the 1st Engineer Special Brigade and sailed around. These coastal movements served two purposes. First they augmented the stocks of rations and ammunition coming off the ships in Palermo and secondly they relieved the demands for hauling by truck. With the advance of the 3rd Division another beach maintenance point was opened at Brolo Beach on 16 August. This remained open until 19 August. During this period one LST was unloaded and a coaster partially discharged. These had also been loaded out on the south coast. Their cargo was principally ammunition.
